J. N. Murphy, Roadmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, 1879.

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., and director, C.P.R., Winnipeg, born at Toronto, May 7, 1860.

W. H. Redmond, District Engineer, Central District, Canadian National Rys., Winnipeg, born at Kingston, Ont., May 16, 1879.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

W. Stapleton, District Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

R. B. Teakle, Manager, Canadian Government Merchant Marine, Montreal, born at Quebec, Que., May 19, 1877.

E. E. Tedford, Marine Superintendent, Canadian Government Merchant Marine, Montreal, born at Yarmouth, N.S., May 21, 1870.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., C.E., Consulting Engineer, Canadian National Rys., Toronto, born at Quebec, May 25, 1855.

C. L. Wilson, Assistant Manager, To-

ronto & York Radial Ry., Toronto, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jet, Me., born at Copenhagen, Denmark, May 14, 1887.

J. M. Woodman, General Superintendent, New Brunswick District, C.P.R., St. John, N.B., born at St. Marys, Ont., May 15, 1866.

C. H. Worby, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Western Lines, Canadian National Rys., Winnipeg, born at London, Ont., May 18, 1885.

Lettering and Marking of Freight Equipment Cars.

The American Railway Association's Mechanical Division has issued the following circular:—It is again necessary to impress upon all owners of cars operating in interchange the importance of preserving the identity of such cars by maintaining distinct initials and numbers, in order to avoid the numerous errors result from indistinct marks. Also, in many cases, one or more figures of the car number or portions of the initials have been omitted when making repairs; in other cases, incorrect numbers or initials have been applied in restencilling the car.

It is urged that all railways and private car owners proceed at once to restencil or brighten the initials and numbers on cars requiring such attention, in order that the desired improvement may be accomplished as early as possible.

Charge for restencilling cars to preserve identity may be made against the owners, except as otherwise provided in the Rules of Interchange. See item 190, rule 101 and rule 102.

Under rule 17, section A, it is permissible to substitute the standard of the Association for lettering and marking cars in lieu of the standard of the car owner, except that the reporting marks assigned by the Transportation Division to be placed between horizontal bars will not be used unless they have been adopted by the car owner.

With reference to the proposition of marking freight equipment cars to show load limit, in a programme of capacity, it has been decided that no action will be taken at this time to require load limit marking on cars. Therefore, it will be proper to stencil new cars, as well as existing cars, in accordance with the present standards of the Association as shown on A. R. A. sheet 26, which provide for nominal capacity markings.

Railway Electrification in South Africa. Electrification of two sections of the South African Government Railways, as the first step in a programme of electrification for certain important parts of the system, has been decided upon by the Railway Administration. These two sections are the suburban line from Cape Town to Simonstown, 22½ miles, and the main line from Durban to Pieter Maritzburg, 45 miles, the latter being the initial part of the electrification of the heavy goods line from Durban to Glencoe, 249 miles. Multiple unit trains are to be used on the suburban line, and electric locomotives on the main line. The estimated capital investment is \$2,245,830 and \$2,400,000 for the two sections respectively (at present rate of exchange). Merz & McLellan, London, Eng., are the consulting engineers.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry. — A press report states that Lac la Biche, Alta., will be the construction base for work on this line during the summer, for which the Alberta Legislature has appropriated \$2,000,000 to be advanced to the company (the directors of which are members of the Alberta Government), from time to time as required, by the Lieutenant Governor in council. The line is completed from Carbondale, the junction with the Edmonton, Dunvegan & British Columbia Ry. to Lac la Biche, 113.2 miles, over which freight and passenger trains are being operated. The line has been graded and track laid to the Clearwater River, 160 miles from Lac la Biche, and traffic is being moved over it by the contractors under special conditions. The uncompleted section of the grading to Fort McMurray is about 20 miles. The route from Lac la Biche to the present end of track is through a low lying country, and the track is not in good shape, owing to lack of drainage and ballast. The principal bridge on this section, over the Christner River, has been washed out every season since the line was put through, and a new bridge is being built. The rehabilitation of this section of the line and its completion into Fort McMurray has been let to the Northern Construction Co., which has assembled large quantities of plan and material in preparation for the work. Two stalls are reported to have been added to the Lac la Biche locomotive house; two steam shovels are in the yard; ties have been distributed along the track, and ballast pits have been located.

The original route between the end of track and Fort McMurray has been abandoned owing to the difficult gradients and the character of the soil through which it was located, and a new route has been laid out along Deep Creek to the Clearwater River flat and then on to Fort McMurray. (Feb., p. 82.)

Calgary & Fernie Ry. Co. has applied to the Dominion Parliament for an extension of time within which to build its projected railway, from Calgary, Alta., through Kananaskis Pass to the head waters of Elk River, B.C., thence along the Elk River valley to Fernie, B.C. (July, 1919, p. 351.)

Canadian Western Ry. Co. has applied to the Dominion Parliament for an extension of time within which to build its projected railways from near Coutts, Alta., on the International Boundary, northerly and westerly to Cardston, thence northwesterly through Pincher Creek to C.P.R. Crownstee Pass line, thence along the north fork of the Old Man River to the south end of the Livingstone Mountains, and thence northeasterly to Calgary, with a line branching off from near the Livingstone Mountains to the Elk River, thence southerly along the Elk River valley to a junction with the Canadian Pacific and the Great Northern Rys. at Michel, B.C. (Sept. 1919, p. 491.)

Calgary South Western Ry. Co. — The Alberta Legislature has extended for two years the time within which the company may build its projected railway from Calgary to the Sheep Creek coal fields district. The company is reported to have cleared some right of way. P. Burns, Calgary, is the principal promoter. (Sept. 1919, p. 536.)

Central Ry. Co. of Canada has applied to the Dominion Parliament for an extension of time within which it may complete its works. C. R. Dobbin, Montreal, is secretary. The company proposed to build a railway from Montreal to the Georgian Bay, and started work near Hawkesbury, Ont. Differences developed between the company and its contractors, and legal actions were taken. The company's affairs have been before the courts frequently during the past few years. In 1919 the Dominion Parliament authorized the company, or the purchaser thereof, in the proceedings pending, in the Exchequer Court, to finish the uncompleted portions of the railway between Rockland and Hawkesbury, between South Indian and Hawkesbury, and Glen Robertson, and between St. Andrews and St. Agathe, within five years. (July, 1919, p. 381.)

Edmonton & Mackenzie River Ry. Co. — The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Fort McMurray on the Athabasca River, the projected terminus of the Alberta & Great Waterways Ry., to the junction of the Jackfish and Peace Rivers, and thence to the Great Slave Lake at the mouth of Hay River. The airline distance between Fort McMurray and the mouth of Hay River is said to be 350 miles. The principal features of the construction of such a line would be the bridges across the Athabasca and Peace Rivers. The promoters of the enterprise are stated to be in Edmonton, and to be interested in oil development in the north.

English River Pulpwood & Limit Ry. We are officially advised that it will not be necessary to locate the railway from Kenora, Ont., to the English River lumber limits in the near future, as E. W. Backus, who secured the limits from the Ontario Government, has first to build his pulp mill and develop the water power. (Feb., p. 82.)

Esquimalt & Nanaimo Ry. — Victoria, B.C. City Council has invited tenders for the steel work on the Johnson St. bridge. The substructure is being built under the direction of F. M. Preston, City Engineer, who has asked for authority to build a derrick scow, at a cost of about \$6,000 in preference to hiring one. The steel work for the bridge includes a bascule span, for the construction and erection of which the Strauss Bascule Bridge Co., Chicago, Ill., are consulting engineers. (Mar., p. 142.)

Essex Terminal Ry. Co. — The Dominion Parliament has granted an extension of time for two years for the commencement, and of five years for the completion of the authorized line from the Detroit River, near Ojibway, to Pelton, Ont. (Jan., p. 16.)

The **Fernie & Elk River Ry. Co.** has been incorporated by the British Columbia Legislature to build a railway from Sparwood, in the Crownstee area, along the Elk River valley to the British Columbia-Alberta boundary near Kananaskis Pass. This projected line corresponds with the B.C. section of the line proposed to be built by the Calgary & Fernie Ry. Co., which is applying to the Dominion Parliament for an extension of time for construction. It was stated that the bill was before the B.C. Legislature that the line as projected by the company would run into Alberta. The bill was opposed by the B.C. Premier, as well as

by the leader of the opposition, and was amended so as to bring it within the terms of the B.C. Railway Act.

Flinlon Mining District. — The New York mining syndicate, which was negotiating for the purchase of the Flinlon mine in Northern Manitoba, did not complete the purchase on April 1, when its option expired. It was reported in Winnipeg, April 2, that the Manitoba Government would ask the syndicate to pay the cost of the surveys made for the construction of a railway from near Pas, to the property, which the syndicate had agreed to do in the event of the option to purchase not being taken advantage of. The company is said to have expended \$200,000 upon the development work on the property. The low price of copper and the highness of the money market are the reasons assigned for the failure of the syndicate to take up the option.

At the same time it was stated that the Mining Corporation of Canada, which is said to have held a quarter interest in the New York Syndicate, had started negotiations for the property. On April 11 it was reported that the Mining Corporation of Canada had bought the property, and that British capital had been secured to work it. J. P. Watson, Vice President of the Mining Corporation of Canada, is reported to have said in Toronto, April 12, that the Winnipeg dispatches of that date had anticipated events, and that the purchase had not been consummated. The Winnipeg dispatch referred to was a reported interview with J. E. Hammett, the majority owner of the property, who had just returned from Prince Albert, Sask., where he had been in consultation with other owners. The Treasurer of Manitoba is reported to have stated, April 13, that the Manitoba Government was prepared to construct the projected railway to the property on the same conditions as had been provided for in the negotiations with the New York syndicate, viz., that an accepted cheque for \$1,000,000 be deposited with the Government as a guarantee that the mine would be worked. (April, p. 186.)

Fort Smith Ry. Co. — Slave Lake Ry. Co. The bills to incorporate companies with these titles came before the House of Commons Railway Committee April 13. Both companies propose to build a railway to connect Smiths Landing on Slave River, with Fort Smith. The committee suggested that the promoters get together and come to an arrangement, so that the incorporation of one company only will be necessary. (April, p. 198.)

High River, Saskatchewan & Hudson Bay Ry. Co. has applied to the Dominion Parliament to extend the time within which it may build its projected railway, authorized in 1919, from a point in any of the townships, 17 to 29, Range 1, west 4th Meridian, Alberta, northeasterly to the Saskatchewan-Manitoba boundary Tps. 52 to 56, thence northeasterly to Pas, Man. (Sept., 1919, p. 491.)

Kettle Valley Ry. — A press report states that it is expected construction will be started this summer on a line from Okanagan Falls, B.C., to the British Columbia demonstration farm below Fairview, B.C., 16.5 miles.

Another report says that track is expected to be laid at an early date on the branch from South Pentticon to Dog

Lake, about 2 miles, the grading of which was completed in 1920. (March, pg. 142.)

Lacombe & North Western Ry.—The Alberta Government has given consideration to a project for the extension of the Lacombe & North Western Ry., which it owns. The Premier is reported to have informed the Legislature that during 1920 grading was gone on with on an extension northerly for about five miles from Rimby to reach some gravel pits and secure ballast. This piece of line would form part of the route of the extension suggested to Edmonton, but the cost of construction is at present so high, and the commitments of the Government in regard to the railways to the north are so heavy, that the utmost caution has to be exercised. The Government engineers made a reconnaissance survey between Rimby and Edmonton and fairly well established the route to follow in the event of the building of the line being undertaken. The total length of a railway from Lacombe to Edmonton would be about 125 miles. (Jan. 1920, pg. 18.)

Luscar Collieries Limited has been authorized by the Alberta Legislature to build about 7 miles of railway from the Canadian National Rys. in the Mountain East Reserve to the Mountain Park Coal Co.'s railway and the latter colliery is owned by a Scotch company.

The Northern Light Rys. Co. applied to the Ontario Legislature at its recent session for authority to build the following lines in addition to those authorized to be built by the statutes of 1920, chap. 152, sec. 2, and described in Canadian Railway and Marine World for April, 1920, pg. 194:—From Swastika station on the Timiskaming & Northern Ontario Ry. westerly and southwesterly to Fort Matachewan, Powell Tp., and branches from this or any of the previously authorized lines, and to connect the same with the T. & N.O.R. or any other railway that may be built; and to build light narrow gauge railways to be operated by any motive power from Little Current to Manitowaning, and from Little Current to Gore Bay, both on Manitoulin Island, the lines authorized on Manitoulin Island to be started before Mar. 1, 1922, and completed within two years thereafter, and unless so started and completed the power to build the lines to be at an end as to any part then uncompleted.

A press report states that the Canadian Light Railway Construction Co., Toronto, is prepared to proceed with construction work on its railway building programme in Northern Ontario. It is stated that the first piece of line to be put under construction will be from Swastika, on the T. & N.O.R., to West Tree. (Sept., 1920, pg. 489.)

Quebec Central Ry.—The location plans for an extension from Scotts, on the main line, to a junction with the Canadian National Rys. at Diamond Jct., authorized by the Quebec Legislature, have been approved by the Board of Railway Commissioners of the Q.C.R. having passed under Dominion jurisdiction by the Railway Act of 1919. This extension will be 19½ miles, and will give the Q.C.R. a direct line to Quebec City, running over the Canadian National Railways and the Quebec Bridge, a distance of approximately 9½ miles from Diamond Jct., to Champlain St. station. The Q.C.R. has asked the Canadian National Rys. to give it running rights and terminal facilities at Champlain St. station, in preference

to the Palais or Parent Square terminals, in another section of Quebec, which are six miles further from the bridge. The Scotts to Diamond Jct. extension generally follows the Chaudiere River valley, passing through the old settled and partially cultivated sections of Dorchester and Levis Counties, giving station accommodation to the three end villages of St. Lambert and Breakeville. There are no bridges or trestles on the lines, all the larger culverts are built of concrete, and some smaller ones of cedar. The maximum grade is 1%, compensated, with maximum curve 5 degrees, and 85 lb. rails are being used. The contractors are J. T. & J. F. Davis, who commenced work last summer and continued throughout the winter. All the clearing and concrete work has been completed, 70% of the grading is finished, and 2½ miles of track laid. The work is proceeding favorably and it is expected the grading will be finished by June 30. In the meantime track laying, ballasting, fencing, building of stations and other construction work is being proceeded with, and it is expected the line will be fully completed and ready for operation not later than the end of August. In all probability this extension, with track and terminal facilities over the Canadian National Rys., will comprise the Q.C.R.'s main line to Quebec, and the through Boston, Portland and New York trains will be operated over it, the present line from Scotts to Levis being operated as a branch. (Mar., pg. 143.)

St. John & Quebec Ry. has applied to the Dominion Parliament to extend to 1923 the time within which it may build the Centreville-Andover section of its line in New Brunswick. The line is in operation between Centerville and the junction with the C.P.R. at Westfield, N.B., over which line access is gained to St. John. (June, 1920, pg. 298.)

The supplementary estimates for the year ending Oct. 31, 1921, passed by the Ontario Legislature recently contain the following items:—

Engineering, surveys and investigations	\$10,836.25
Grading, widening cuts and fills, etc.	10,000.00
Replacing timber bridges and culverts	45,177.94
Additional weight of rail and improved fastenings	22,000.00
Additional track material	83,394.38
Right of way fencing	5,195.00
Snow fences	5,000.00
Road crossings and signs	3,000.00
Buildings	2,533.63
Water stations	17,262.25
Fuel stations	60,000.00
Shops and locomotive houses	78,900.33
Sheds and other buildings and miscellaneous structures	128,724.36
Yard tracks and industrial sidings	81,047.63
Signs and yard tracks	15,964.18
Roadway machines and tools	50,670.18
Shop machinery	57,523.69
Locomotives	265,500.00
Freight cars	319,000.00
Passenger cars	2,706.84
Work equipment	14,338.02
Lamp, New Liskard	6,321.29
Additional telephone circuits between North Bay and New Liskard	742.64
Renewing telegraph and telephone line equipment	3,066.30
Five metallic circuits, Swastika to Champlain	502.34
Telephone line, Cobalt to Porcupin Junction	24,272.91
Replacing iron wire, Cobalt and Englehart	1,000.00
Single strand copper wire	3,311.25
Phantom telephone circuit, Cobalt to Porcupin Jct., and new switchboard, Porcupin Jct.	9,311.25
Miscellaneous	100,000.00
The estimates for the fiscal year ending Oct. 31, 1922, also passed at the recent session, contained the following items:—	
8 miles 90 lb. rails	\$15,000.00
Surveys	25,000.00

The Premier of Ontario was reported to have stated recently that the clearing of right of way for some 25 miles from Cochrane north would be gone on with, to relieve employment, but we are advised that he was probably misquoted. This is apparently borne out by a statement made by him in the Legislature recently to the effect that the Government had not determined when the projected extension to the Kettle Falls of the Atibitibi River would be gone on with. He also referred to a possibility that electric power will be developed at the Kettle Falls by the Hydro Electric Power Commission of Ontario, and used for the electrical operation of the T. & N.O. Ry.

We are advised that the suggested extension northerly from Cochrane is being investigated and that nothing has been settled as to the route or when construction will be started. The Government has authorized a continuation of surveys for the location of an extension of the railway from Cochrane and a survey party, in charge of W. R. Maher, will commence work immediately. The ultimate objective of this extension is Moose Factory at the Mouth of Moose River, but it is not the present intention to make a location through to James Bay. For the present the Commission's attention will be confined to an extension through the clay belt of Northern Ontario, which extends for about 60 miles north from Cochrane. (April, pg. 198.)

Cambie Station, C.P.R.—The C.P.R. has changed the name of Bow station on the main transcontinental line, 36.4 miles west of Revelstoke, B.C., to Cambie, in honor of A. J. Cambie, who had charge of the building of the portion of the C.P.R. from Burrard Inlet into the interior of B.C. for the Dominion Government under the Onderdonk contract, who afterwards entered the C.P.R. Co.'s service and continued in it until about a year ago, when he was placed on pension list, but it is not at 85 years of age is enjoying good health and is frequently called into consultation by the Pacific District management. There was formerly a station named Cambie, on the loop near Glacier, B.C., which was abandoned consequent on the building of the Connaught tunnel.

False Arrest by Ticket Agent.—Duncan McKay, a Prescott, Ont., mechanic, has been given \$100 damages against J. C. Carruthers, G.T.R. ticket agent at Prescott, for false arrest. McKay bought a ticket at Prescott for Detroit, paying for it with a cheque. The ticket agent asked a bank about the cheque, and through an error in the name, was told there was no account, whereupon he had McKay arrested at Kingston. McKay had an account in the bank with sufficient funds to meet the cheque. The judge held that the ticket agent set the criminal law in operation without reasonable cause.

Abattoir Lease.—The C.P.R. is reported to have leased from the Montreal Abattoirs Limited the abattoir on Frontenac St., Montreal, adjoining the company's stockyards, and will, it is said, operate it as a slaughtering and cooling plant.

The Dominion Iron & Steel Co. is reported to have ordered its railway employees who were on strike in 1920 to vacate their homes in Sydney, N.S., which the company has been allowed to occupy during the winter. About 30 families are stated to be affected.

Mainly About Railway People Throughout Canada.

W. G. Annable, who has been appointed Assistant Passenger Traffic Manager, Ocean Traffic, C.P.R., Montreal, was born at Ottawa, Ont., March 3, 1875, and entered C.P.R. service in 1891, since when he has been, to Jan. 1901, junior to chief clerk, City Passenger office, Ottawa, Ont.; Jan. 1901 to Nov. 1905, in General Passenger Department, Montreal, in charge of steamship reservations on the Pacific for through passengers from Europe, and also on the Atlantic for through passengers from the Orient, also Chinese business in detail for the company, and the recording of such passengers through Canada in bond to other countries; Nov. 1905 to Dec. 1908, General Baggage Agent, Montreal; Dec. 1908 to Jan. 1916, General Passenger Agent, Atlantic Steamship Lines, Montreal; Jan. 1916 to March 1921, General Passenger Agent, Canadian Pacific Ocean Services, Montreal; March to Apr. 1921, General Passenger Agent, Ocean Traffic, C.P.R., Montreal.

G. A. Begy, customs appraiser, St. Catharines, Ont., who died there Apr. 18, was formerly a general railway and canal contractor, and carried out work on the C.P.R. and G.T.R., building bridge abutments on the St. Lawrence River, and canal locks at Iroquois and Morrisburg.

Henry Blackwell Beaumont, who has been appointed General Agent, Passenger Department, Ocean Traffic, C.P.R., Toronto, was born there, Aug. 3, 1887, and entered steamship service in June 1904, since when he has been, to June 1909, clerk; June 1909 to July 1911, private secretary; July 11, 1911 to Jan. 1913, chief passenger clerk; Jan. 1913 to July 1917, City Passenger Agent, Allan Line Steamship Co., Montreal; July to Oct., 1917, City Passenger Agent, Canadian Pacific Ocean Services Ltd., Montreal; Oct. 1917 to June 1919, chief passenger clerk, same company, London, Eng.; June 1919 to Jan. 1920, Assistant to Passenger Manager, same company, London, Eng.; Jan. 1920 to March 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Montreal; March to Apr. 1921, General Agent, Passenger Department, Ocean Traffic, C.P.R., Montreal.

A. A. H. Boissevain, who died in Holland recently, and who founded a banking firm in New York, bearing his name, took a prominent part in early C.P.R. financing and was a large shareholder. Boissevain, on the C.P.R. Winnipeg-Napin Branch, 182.7 miles southwest of Winnipeg, was named after him.

Sir George Melville Brown is European General Manager, C.P.R., not General European Traffic Manager, as mentioned in Canadian Railway and Marine World for April.

A. B. Calder, of the C.P.R. executive staff, who arrived in England early in April, was summoned to Buckingham Palace by the Prince of Wales, who is looking forward to returning to Canada, and to visit his ranch at High River, Alta.

E. S. Carter is reported to have been appointed Secretary, New Brunswick Board of Public Utilities Commissioners, at Fredericton, succeeding F. P. Robinson, who is stated to have been removed for cause.

W. C. Casey, whose appointment as General Agent, Passenger Department, Ocean Traffic, C.P.R., Winnipeg, was announced in our last issue, was born at Moncton, N.B., Dec. 12, 1882, and entered transportation service, Aug. 1901, since when he has been, to Apr. 1902, ticket clerk, Intercolonial Ry., Moncton, N.B.; Apr. 1902 to Apr. 1903, ticket clerk, C.P.R., Halifax, N.S.; Apr. 1903 to Apr. 1910, Travelling Passenger Agent, C.P.R., St. John, N.B.; Apr. 1910 to Dec. 1913, chief clerk to General Passenger Agent, Atlantic Steamship Lines, C.P.R., Montreal; Dec. 1913 to Feb. 1919, General Agent, Passenger Department, Atlantic Steamship Lines, C.P.R., Winnipeg; Feb. 1919 to March 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Winnipeg.

L. C. Charlesworth, heretofore Deputy Minister of Public Works for Alberta, at Edmonton, has been appointed Deputy Minister of Railways and Telephones for the province, succeeding N. L. Harvey, who resigned to take a position with Western Coals Ltd., Edmonton. Hugh M. Baker, heretofore Secretary to the Premier, has been appointed to Mr. Charlesworth, and J. D. Robertson, heretofore Engineer of Highways, has been appointed Deputy Minister of Public Works.

C. R. Dalrymple, head of Jas. Dalrymple & Sons, wholesale produce, Montreal, who died there April 25, aged 46, was brother of J. E. Dalrymple, Vice President, Traffic, G.T.R.

J. E. Dalrymple, Vice President, Traffic, G.T.R., received a communication from the British Admiralty recently, stating that the Lords Commissioners had had under review the reports of services rendered by the G.T.R. in sea transport during the war, and desired to record their thanks and appreciation of the railway's work, particularly in connection with the rapid turn-round of ships at Montreal, and the preparation of ships for the various services.

William A. Duff, who has been appointed Engineer of Standards, Canadian National-Grand Trunk Pacific Rys., Toronto, was born at Hamilton, Ont., Apr. 20, 1877, and graduated from the University of Toronto in applied science in 1901. He has been, from 1901 to 1902, draftsman and Assistant Resident Engineer, Vancouver, Victoria & Eastern Ry.; in British Columbia, 1902 to 1903, Assistant Engineer, G.T.R., Hamilton, Ont.; 1903 to 1905, draftsman, Kenwood Bridge Co., Chicago, Ill.; 1905 to 1907, draftsman, Canadian Bridge Co., Walkerville, Ont.; 1907 to 1908, chief draftsman, Bridge Department, National Transcontinental Ry., Ottawa, Ont.; 1908 to 1913, Assistant Bridge Engineer, National Transcontinental Ry., Ottawa, Ont.; 1913 to Oct. 1, 1916, Engineer of Bridge, Canadian Government Railways, Moncton, N.B.; Oct. 1, 1916 to Jan. 1, 1919, Assistant Chief Engineer, Canadian Government Rys., Moncton; Jan. 1, 1919 to Apr. 1, 1921, Assistant Chief Engineer, Eastern Lines, Canadian National Rys., Moncton.

Capt. H. Eastman, Vice President and Managing Director, Quebec & Chibougamau Ry., returned to Quebec from England, Apr. 12.

Robert S. Elworthy, whose appointment as General Agent, Passenger De-

partment, Ocean Traffic, C.P.R., Chicago, Ill., was announced in our last issue, was born in London, Eng., Sept. 10, 1877, and entered transportation service, July 21, 1891, since when he has been, to Apr. 1, 1904, clerk, and Assistant Ticket Agent, C.P.R., Chicago, Ill.; Apr. 1 to Dec. 31, 1904, City Passenger Agent, C.P.R., St. Louis, Mo.; Jan. 1, 1905 to Mar. 31, 1909, chief clerk, Passenger Department, C.P.R., Chicago, Ill.; Apr. 1, 1909 to Nov. 1, 1910, General Travelling Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn.; Nov. 1, 1910 to Apr. 30, 1912, City Ticket Agent, same road, Minneapolis, Minn.; May 1, 1912, to Oct. 31, 1913, City Ticket Agent, C.P.R., Chicago; Nov. 1, 1913 to Dec. 31, 1915, chief clerk, C.P.R. rail and steamship lines, Chicago, Ill.; Jan. 1, 1916 to Feb. 1, 1919, General Agent, Passenger Department, C.P.R., Minneapolis, Minn.; Feb. 1, 1919 to Dec. 31, 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Chicago.

Jacob Lewis Englehart, until recently, Chairman, Timiskaming & Northern Ontario Ry. Commission, Toronto, died there, Apr. 6, after a comparatively short illness, due to hemorrhage in the brain. He was born at Cleveland, Ohio, Nov. 2, 1847, and was educated in the public schools there, where he was also engaged for a time in commercial enterprises. In 1870 he moved to London, Ont., and was one of the pioneers to investigate the oil fields of that section. He organized the firm of J. L. Englehart & Co., which was the first concern to operate an oil refinery in Ontario. He sold his interests there to the London Oil Refining Co., and removed to Petrolia, Ont., and subsequently bought the Carbon Oil Co., which later became a part of the Imperial Oil Co., of which he was elected Vice President in 1881. He was appointed Chairman of the Timiskaming & Northern Ontario Ry. Commission in March, 1905, and remained as such until after the change of the Ontario Government in 1919, when he asked to be relieved. On the death of his wife in 1908, he gave the Town of Petrolia his homestead there, which he had had equipped as a hospital, and in 1909 he gave a complete Roentgen ray apparatus to the St. Michael's Hospital, Toronto, and in 1910 chime of bells to Christ Church, Petrolia. He was associated with several financial and other organizations, including the Bank of Toronto, the Crown Savings & Loan Association of Petrolia, the London & Western Trust Co., etc., and was also a member of the Toronto, York, Toronto Hunt, and London Clubs. The funeral took place at Petrolia, Apr. 9, a special train being run from Toronto. Among those present were, G. W. Lee, Chairman, T. & N.O.R. Commission; W. H. Maund, Secretary-Treasurer; S. B. Clement, Chief Engineer and Superintendent of Maintenance; W. A. Griffith, Superintendent; and W. A. Graham, Purchasing Agent and Storekeeper, T. & N.O. Ry.; F. P. Brady, Assistant to the Executive, Canadian National Rys.; U. E. Gillon, General Manager, Toronto Terminals Ry. Co.; A. L. Smith, Superintendent, Toronto Union Station; G. G. Bowker, General Superintendent, Ontario Lines; P. J. Lynch, Superintendent, Barrie Division, C. Forrester, Superintendent, London Division, G.T.R.; C. O. Stillman, President, and other officials. Im-

perial Oil Ltd., and several other business associates.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal, and R. A. Ross, E.E., consulting engineer, and a member of the Montreal Administrative Commission, will be given the degree of D.Sc., by Toronto University on June 9. Mr. Fairbairn graduated from the University in 1893.

Mrs. Hays, widow of C. M. Hays, formerly President, G.T.R. and G.T.P.R., returned to Montreal recently, with her daughter, Mrs. Thornton Davidson, after spending several weeks at Pasadena, California.

John J. Higgins, chief clerk in office of Vice President in charge of construction, Canadian National Ry., Toronto, was married in the Church of the Immaculate Conception, at Winnipeg, by Monsignor Cherrier, on April 6, to Miss Mary Eva Corrigan, formerly accountant, Engineering Department, C.N.R., Winnipeg. Her fellow employees gave her a complete set of community silver, silver tea service and china dinner set, and St. Ignatius choir, in which she was soprano soloist, gave her an electric coffee urn. They went to New Orleans for their wedding trip.

E. C. Kennedy, chief clerk, Bonaventure station ticket office, G.T.R., Montreal, was presented with a club bag, Apr. 2, by his associates, on leaving for Detroit, where he has been appointed City Passenger Agent, Canadian National-Grand Trunk Ry.

H. G. Kelley, President, G.T.R., left Canada for London, Eng. during April, to consult the directors as to the position of the arbitration proceedings with the Dominion Government regarding the price of certain G.T.R. stock, and as to the company's financial position, etc.

Lt.-Col. R. W. Leonard, St. Catharines, Ont., formerly National Transcontinental Ry. Commissioner, has given \$250,000 in trust, the income from which will establish scholarships at certain institutions.

Howard M. MacCallum, who has been appointed Assistant General Passenger Agent, Ocean Traffic, C.P.R., Montreal, was born at Huntingdon, Que., Dec. 3, 1882, and entered transportation service in Sept. 1899, since when he has been, to May 1904, general freight and passenger work, Allan Line, Montreal, and Portland, Me.; May 1904 to Aug. 1907, chief clerk to General Passenger Agent, Steamship Lines, C.P.R., Montreal; Aug. 1907 to Aug. 1908, Travelling Passenger Agent, Steamship Lines, C.P.R., Winnipeg; Aug. 1908 to Dec. 1909, General Agent, Steamship Lines, C.P.R., Winnipeg; March to Apr. 1921, General Agent, Canadian Pacific Ocean Services Ltd., Chicago, Ill.; Feb. 1919 to March 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Toronto; March to Apr. 1921, General Agent, Passenger Department, Ocean Traffic, C.P.R., Toronto.

M. H. MacCallum, Vice President in charge of Construction, Canadian National Ry., and E. Langham, formerly General Purchasing Agent, C.N.R., returned to Toronto April 6, after a trip on the s.s. Canadian Forester, to Nassau, Bahamas; Kingston, Jamaica; and Belize, British Honduras.

George G. McKay, whose appointment as General Agent, Passenger Department, Ocean Traffic, C.P.R., Detroit, Mich., was announced in our last issue, was born at Hamilton, Ont., June 13,

1878, and entered transportation service in 1893, since when he has been, to June 1905, operator and ticket agent, G.T.R., at various points in Ontario; June 1905 to June 1906, ticket agent, Pere Marquette Rd. and Cincinnati, Hamilton & Dayton Rd., Detroit, Mich.; June 1906 to Oct. 1911, City Passenger and Ticket Agent, C.P.R., Detroit, Mich.; Oct. 1911 to June 1916, City Passenger and Ticket Agent, C.P.R., Chicago, Ill.; June 1916 to June 1920, Travelling Passenger Agent, C.P.R., Detroit, Mich.; June to Nov. 1920, Assistant General Agent, Passenger Department, C.P.R., Chicago, Ill.; Nov. 1920 to March 1921, General Agent, Passenger Department, Canadian Pacific Ocean Services, Detroit, Mich.

Chas. S. Meek, exporter and importer, Vancouver, who died there recently, was a son-in-law of the late Sir William Whyte, formerly Vice President, C.P.R.

Lt.-Col. C. N. Monsarrat, heretofore Consulting Engineer, Railways and Canals Department, Ottawa, has left the service, the position having been abolished, and has entered into partnership with H. Pratley, M. Eng., as Monsarrat & Pratley, consulting engineers, with office at 508 Drummond Building, Montreal. They will specialize in design and supervision of bridge work, of all types, for railway or highway purposes, and will provide similar services in connection with difficult foundations, piers, dams and structural steel work for industrial and other buildings. They will undertake the preparation of reports and estimates, the making of inspections and appraisal and furnishing of professional advisory services. Lt.-Col. Monsarrat was born at Montreal, July 2, 1871, and entered C.P.R. service in Nov. 1889, since when he has been, to June 1896, structural draftsman, Chief Engineer's office, Montreal; June 1896 to Apr. 1897, Inspector of Steel Bridges, in charge of their manufacture and erection; Apr. to Dec. 1897, designing and estimating structural work, and engineer in charge of erection of many important structures in British Columbia and elsewhere; Dec. 1901 to Jan. 1903, Assistant Engineer, Montreal; Jan. 1903 to Apr. 1911, Engineer of Bridges, Montreal; Apr. 1911 to Apr. 1918, Chairman, Quebec Bridge Commission, and from Apr. 1918, Consulting Engineer, Railways and Canals Department, Ottawa.

James Albert Morice, who has been appointed Foreign Freight Agent, C.P.R., Toronto, was born at Stratford, Ont., Sept. 17, 1878, and entered railway service June 2, 1896, since when he has been, to July 7, 1907, in local freight and operating departments, G.T.R., Toronto; July 8, 1907 to March 14, 1919, Contracting Foreign Freight Agent, C.P.R., Toronto; March 15, 1919, to March 31, 1921, agent, Foreign Freight Department, C.P.R., Toronto.

L. Mulken, Division Freight Agent, C.P.R., St. John, N.B., was entertained at dinner at St. John, recently, and presented with a gold watch, by a number of friends, on leaving there, to become Division Freight Agent, C.P.R., North Bay, Ont.

F. H. Phippen, K.C., of Toronto, chief counsel for the G.T.R., in the arbitration proceedings between the Government and the company, who has gone to England with President H. G. Kelley, to consult the directors, was accompanied by Mrs. and Miss Phippen.

Lieut. F. W. Rous, who died at the Sanatorium at Gravenhurst, Ont., recent-

ly, leaving a wife and four children, was born at Belleville, Ont. For some years he was private secretary to Senator M. J. O'Brien, and had a good deal to do with the latter's railway contracts, etc. He went overseas with the 159th Battalion, in Oct. 1916, serving with it until it was broken up in Feb. 1917, when he was transferred to the 8th Reserve Battalion, and in July 1917 he joined the 4th C.M.R., serving with it through Paschendaele. He was wounded in the lung at Amiens, and was awarded the military cross for conspicuous bravery. On returning to Canada, he became President, Automobile Supply Co., Toronto. Tubercular trouble resulted from his wound, and finally he was attacked with double pneumonia, from which he died.

M. S. Throne, General Agent, Freight Department, C.P.R., New York, died there, Apr. 6, from blood poisoning caused by an infected carbuncle. He was born at Watertown, Wis., Aug. 12, 1881, and entered railway service in 1905, since when he was, to 1910, in Wisconsin Central Ry. service at Milwaukee, Wis., and as Freight Claim Agent at Chicago, Ill.; 1910 to 1913, chief clerk to Vice President and Traffic Manager, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn.; 1913 to Mar. 15, 1919, District Freight Agent, C.P.R., and M.S.P. & S.S.M.R., Cleveland, Ohio; and from March 15, 1919, until his death, General Agent, Freight Department, C.P.R., New York.

W. E. Weegar, who has been appointed Trainmaster, Districts 30, 31 and 32, Ottawa Division, G.T.R., Ottawa, entered G.T.R. service Nov. 17, 1887, since when he has been, to Nov. 12, 1899, brakeman; Nov. 12, 1888 to Jan. 20, 1913, conductor; Jan. 20, 1913 to June 22, 1918, Trainmaster, Montreal; June 22, 1918 to April 1921, Trainmaster, District 30, Ottawa Division, Ottawa, Ont.

H. K. Wickstead, B.A.Sc., C.E., has returned to Brazil, after spending several months in South America, where he made a study of the Brazilian railway system. He had a very enjoyable and interesting trip, and a most cordial reception, and received numerous courtesies from the officials of the several railways travelled over, including the Central Rio to Sao Paulo; the Sao Paulo & Paulista, Santos to Barretos; the Sorocabana; the Sao Paulo-Goyas; the Sao Paulo-Grande and the Parana, besides a portion of the Leopoldina system. Aside from the professional interest, he describes the scenery, on some of the mountain sections between the sea and the interior plateau, as magnificent, especially that on the Parana between Paranaqua and Curitiba. He returned to Canada via London, Eng., calling at the northern Brazilian ports of Bahia and Pernambuco, and at Madeira, Lisbon, and Vigo.

Sir Thomas White, who has been representing the Dominion Government as one of the arbitrators to settle the amount to be paid for certain G.T.R. stocks, has resigned his seat in the House of Commons, as member for Leeds, Ont.

Discrimination by Railway Companies. H. H. Stevens, Center Vancouver, B.C., introduced a bill in the House of Commons recently to amend the Railway Act by striking out the words "unreasonable," "undue," "unjust," etc., in the sections dealing with discrimination. He stated his object to be to make the question of discrimination an absolute one, rather than one subject to modifications.

What Information Respecting Canadian National Railways Should be Made Public?

At each session of Parliament since the Canadian Northern Ry. was taken over by the Dominion Government and the operation of the Canadian Government Ry. also placed under the Canadian Northern directors, a large number of questions have been asked in the House of Commons, and some in the Senate in reference to all the lines. The great majority of these questions have not dealt with matters of government policy, as would be the logical expectation, but have been in connection with mere details of operation, and of local importance only. Representative questions of this nature, together with the answers, have been given in Canadian Railway and Marine World from time to time; one concerned the discharge, as the member put it, of one sectionman on the I.R.C., but it afterwards developed that he was attempting to obtain information concerning a reduction of maintenance forces, effected by discharging one laborer on each section, on a certain district. Another member desired details concerning the purchase of ice at a point in Nova Scotia, the names of the tenderers, the amounts of the tenders, the successful tenderer, and so on. Another enquired as to the taking off of a certain local train; and another, concerning the amount of insurance carried on the Fort Garry Hotel in Winnipeg, with all details. One member lodged a very strenuous complaint because lumber was piled on one side of the track at a certain point, and maintained that it should have been piled on the other side. Another evidently took a view to creating agitation to completely revolutionize the system of railway accounting in use in North America, demanded to be informed concerning "the gross receipts, operating costs, and surplus or deficit during 1919 and 1920, 'in' every divisional point on the Government railways." In connection with these questions, considerable inconsistency has been shown by the Minister of Railways, Mr. Meighen. Very often questions dealing with operating details have been dismissed by him with the statement that the properties are under corporate control, and that the information sought was not, and could not reasonably be expected to be in the Government's possession, or with the statement that the giving of such information would not be in the public interest. On the other hand, other questions, likewise concerning operating details, have been answered most fully.

Viewing the matter broadly, the attitude of the opposition, as repeatedly expressed by its leader, W. L. Mackenzie King, and by his lieutenants, has been that Parliament is entitled, under any and all circumstances, to be fully informed concerning the expenditure of every cent of the public funds. Despite repeated explanations by Premier Meighen, and the Minister of Railways, as to the corporate form of management of the National lines, and the determination of the Government to refrain from interference in matters of operation, the opposition has persisted in demanding full information, and in bitterly assailing the Government for its refusal to furnish it. On March 22, on the motion for committee of supply, Mr. King moved an amendment "That, subject to the reservation that in exceptional cases there may be documents of a confidential

character, which in the public interest may properly be withheld from publication, the House declares that it is the undoubted right of Parliament to demand and receive copies of all reports, accounts, correspondence and papers in relation to the management of every department of the public service, including the affairs of the Canadian National Ry., whether operating under the control of a department or under corporate form." After a lengthy debate, the amendment was defeated by 117 to 79. Throughout the discussion, the opposition took the stand that the withholding of information inevitably tended to put the road "into politics," while the Government, supported by the Progressive party under the leadership of Mr. Crerar, took the opposite view.

In the course of the debate, reference was made to Mr. A. K. MacLean, of Halifax, having a resolution on the order paper calling for the formation of a select standing committee on Canadian National Ry. and shipping, and Mr. Crerar expressed his approval of such a move. Mr. MacLean's motion was introduced on April 5, and withdrawn on the same date, after some discussion.

On April 8 the Premier moved "That a select standing committee on National railways and shipping be appointed for the present session, and be instructed to enquire into the following questions:— (1) What information as to operation of Canadian National Ry. and shipping, as conducted by the board of directors and management, should, in the public interest, be brought down in Parliament on questions, motions for production of papers, or otherwise? (2) When, by what method, and under what conditions, if any, should such information be given, regard being had for the necessity of securing to Parliament, and the public, all facts requisite for the determination of policy, including finance, and to the board of directors the best possible conditions and efficiency of management? (3) What system of auditing should be adopted, and what extent of detail should be given in the annual report? (4) Whether, and for what purposes, the committee should be continued, and that for the above purposes and for such other purposes as the committee deem in the public interest there be referred to the committee the board of directors' annual report, and that the committee have power to examine witnesses under oath, to send for papers, persons and records, and to report from time to time."

Mr. Mackenzie King immediately stated that the committee proposed was not so much a committee for the purpose of giving Parliament information, as it was a committee for the purpose of placing restrictions around the giving of information. He claimed that giving a committee the duty of finding out what information should or should not be brought down is simply depriving Parliament of a right which it has to any and all information, and that the restrictions placed on the committee itself were highly undesirable. He moved the following amendment:—"That all the words after the word 'session' in the second line, to the end of the question, be omitted, and the following be inserted in lieu thereof:—"That such committee shall have power to enquire into all matters in any way relating to the railways

owned or controlled by the Government of Canada whether under the direction of the Railways and Canals Department or under any corporation in which the Government are stockholders, whether relating to construction or operation, from the date of the appointment by the Government of the board of directors of the Canadian Northern Ry. Co. down to the present time; and similarly to enquire into all matters in any way connected with the Canadian Government Merchant Marine, either in respect of the construction or operation of the ships, and that such committee shall have power to send for papers, persons and records, to engage counsel and transportation experts, and to make such reports and recommendations from time to time as, in their judgment, will be calculated to promote the public interest." After a protracted debate, this amendment was defeated by 73 to 56, Mr. Crerar and his followers supporting it.

Before the main motion was put, Mr. Crerar urged an enlargement of the committee's powers, and moved in amendment:—"That the motion be amended by adding thereto, as clause 5, the following words: 'What approximation, if any, consistent with the responsibility of Parliament in the matter, can be found to the appointment and the control of directors and management, ordinarily exercised by shareholders in a private corporation.'" Mr. Meighen expressed himself as being in general agreement with this, but desired to change the amendment to read: "What, if any, improvement could be made in the general scheme of management," which Mr. Crerar, in moving his revised amendment, moved also that it be inserted as clause 4, with clause 4 of the original motion made clause 5. The revised motion was then put to a division and carried by 80 to 42, the Progressive party supporting the Government.

The committee provided for by the above motion was appointed on April 11, to consist of the following members:—Messrs. Allan, Bantyne, Bureau, Cahill, Casgrain, Chaplin, Cogg, Crerar, Davidson, Duff, Hocken, Long, MacLean (Halifax), MacLean (York), Manion, MacLean (Royal), Mewburn, Murphy, Nicholson (Algoma), Papineau, Reid (Grenville), Reid (McKenzie), Stevens, Stewart (Lanark), Tweedie, White (Victoria). Major-General Hon. S. C. Mewburn was appointed chairman of the committee, and Mr. Stewart vice chairman.

The committee met for organization on April 14, with D. B. Hanna, President, Canadian National Ry., and A. J. Mitchell, Vice President, Finance and Accounts, in attendance. The next meeting was on April 20, when Messrs. Hanna and Mitchell were again present. At this meeting, Mr. Hanna submitted a plan of the organization of the Canadian National Ry. and auxiliary services of the Canadian Government Merchant Marine Ltd. In reply to a question by one of the committee, he outlined the "make-up" of the system, explaining the relation of the different lines composing it, and then entered into an explanation of the organization, naming the board of directors, and stating that the operation of the railways is carried on under the administration of six vice-presidents and a general counsel, viz.: A. J.

Mitchell, Finance and Accounts; C. A. Hayes, Traffic; M. H. MacLeod, Construction; S. J. Hungerford, Operation and Maintenance; R. C. Vaughan, Purchases and Supplies; and G. D. Perry, Telegraphs. G. G. Ruel is General Counsel. Mr. Hanna then detailed the organization of the various departments as follows:—

The finance and accounting department is sub-divided into the treasury department and the audit and accounting department, the auditing being carried on by an outside firm of auditors. Dealing with subjects under this head which should properly be withheld from publicity through parliament, Mr. Hanna specified, confidential arrangements with company's bankers re proposed issues; details of proposals received in respect of insurance contracts; disclosures of salaries of staff; information giving details of business handled at competitive points; details of competitive prices; details of investigation in regard to dismissal of employees.

In dealing with the traffic department, Mr. Hanna outlined its functions, and the methods employed, and said: "While our tariffs of necessity become public . . . yet it might be unwise at times to be obliged to divulge information of sources from which information has been obtained that has assisted in determining the bases for the published tolls. Particulars should not be asked for as to business done with the railway by any individual shipper or group of shippers. It would be unwise that information should be given as to the traffic earnings on any particular district or for any particular town or city. If occasion should arise for disciplining a representative of the department . . . particulars should not be required, or the employee encouraged to carry a fancied grievance to a source outside of the organization. To do so would impair discipline and weaken the authority of the immediate officer in charge."

In referring to the construction department, Mr. Hanna said:—"It is most essential that certain information which this department has and obtains from time to time should not by any means become public property. This applies particularly to the location of new lines through important centers. The reason, of course, for this is so that the railways will not be held up in prices for right of way. The approximate estimates of cost of doing work, where it is contemplated to do it by contract has been found, by practice, inadvisable to be made known to contractors, who then may use these figures to their advantage in putting in their tenders."

In dealing with the operating and maintenance department, Mr. Hanna pointed out that the work of operation is divided between sub-departments as follows, the first six, generally speaking, being handled divisionally, and the others departmentally:—(1) Transportation; (2) mechanical; (3) maintenance of way and structures; (4) car service; (5) police and special service; (6) medical service; (7) railway telegraph and telephone service (locally); (8) dining and sleeping cars and hotels; (9) express; (10) coast steamships and ferries; (11) electric railways. He pointed out that it would be unwise to divulge information in detail in regard to contemplated improvements or extension of facilities, before the necessary property was secured or agreements with municipal or other interested bodies were concluded; or as to dismissal or other punishment of em-

ployes for violation of rules, or unsatisfactory services; also in regard to the earnings of individual trainmen.

After dealing with the organization of the purchasing and stores department, Mr. Hanna said:—"The disclosing of information to the public in respect to our purchases would be most disastrous to the railway from a buying standpoint. . . . We would be placed in the unfortunate position of our competitors knowing everything about our business, and we knowing nothing about theirs, and being able to obtain our prices, they would in every case endeavor to obtain lower ones."

In regard to the Canadian National Telegraphs, he said:—"We should not be obliged to divulge information in regard to our methods, and results of solicitation for business, nor in respect to the names of persons or firms who are good customers of the company."

He then detailed the work of the legal department, and of the President and executive staff. In dealing with the organization and work of the Canadian Government Merchant Marine, he de-

mented, said:—"A splendid spirit of co-operation and loyalty extends throughout the organization, each officer seeming to feel the greatest confidence in the ultimate success of the railways. There is not the slightest indication among the officers and employees that Government control of the properties means stagnation."

A. J. Mitchell, Vice President, Finance and Accounts, was examined at length by members of the committee, on a variety of subjects relating to C.N.R. organization and work. He filed statistics as follows:—Comparative operating results, Canadian Northern Ry. and Canadian Government Ry.; gross revenue, working expenses and fixed charges for 1920 and 1919 for the same railways; wages, Canadian National Ry.; cost of principal materials; information re Canadian Pacific Ry.; information re United States railways; 2nd annual report, Canadian Government Merchant Marine.

Mr. Mitchell appeared again before the committee April 26 and submitted a number of statements showing the financial and operating positions of the Canadian National Ry. A large part of his testimony concerned the great increases in wages, caused by the McAdoo

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

*Overshipped.

and Chicago awards, and in material prices. He stated that material prices are showing a tendency to decrease, and that it is a logical expectation that wage rates will decrease in proportion. He showed how necessary it was for the C.N.R. to spend large sums for maintenance, terminal improvement, and equipment, to put the property in proper shape, and in a thorough analysis of operating costs showed the great advantage enjoyed by the C.P.R. in freight and passenger traffic density, and length of haul in both passenger and freight service. The inadequacy of rate increases, to properly offset the great increases in operating costs, was also demonstrated.

On April 27, R. T. Riley, of Winnipeg, the only western representative on the Canadian National directorate, stated to the committee that he considered the first big question to be decided by it was whether the primary object of the Cana-

dian National directors should be to furnish service to the people, or cut down deficits at any sacrifice. By cutting down train service to the absolute minimum, and abandoning all work undertaken with a view to the future, the latter course would be pursued, but in his opinion, such a policy would meet with instant public disapproval. He claimed that there could be no real success until the people of Canada realize they are the shareholders in the Canadian National Rys. enterprise, and that the time has come for all to forget about the Intercolonial and the other lines composing the system, and to think and speak of the Canadian National only. He urged the desirability of no parliamentary interference in matters connected with operation, but also said: "I do not see how it is possible, until the millenium comes, for a government to run railways without political influence somewhere."

On the same day, while S. J. Hungerford, Vice President, Operation and Maintenance, was informing the committee concerning operating features of the property, a dispute arose among the committee as to how far it would be proper to enquire into railway wages. After Mr. Hungerford had been excused to catch a train, the differences of opinion still existed, the chairman of the committee, supported by several other members, contending that the subject would be an interminable one, while other members claimed that they were entitled to all information concerning the matter. Finally, it was moved by J. A. Stewart that a statement should be requested from Mr. Hungerford in explanation of particulars cited in statements filed before the committee. The motion was carried, so that it appears that an enquiry into wages will be conducted by the committee.

Canadian National Railways Construction, Betterments Etc.

North Sydney Railway Wharf.—A press report states that the plans for the improvement of the railway wharf at North Sydney, N.S., provide for an extension at the head of the wharf of 150 ft., the same width as the present structure, and an extra 90 ft. on the western side. Improvements to the office section are also contemplated, and it is said that a concrete warehouse will be built on the new addition.

Peticodiac River Bridge.—Tenders were received recently for the construction and completion of the substructure for a single track railway bridge over the Peticodiac River, 1.4 miles from Salisbury, on the branch line between Salisbury and Albert, N.B.

Newcastle to Tracadie.—Residents of Northumberland County, N.B., are asking the Dominion Government to build a line to connect Tracadie with Newcastle. Newcastle is on the west bank of the Miramichi River, and such a line would run along the river bank, skirt Miramichi Bay, and along the coast to Tracadie, which is near the mouth of Portage River. Tracadie is the terminus of the Caraguet & Gulf Shore Ry., which starts from Gloucester Jet, 38.8 miles west of Newcastle, and runs to Tracadie, 82 miles.

St. John Station.—A press report states that owners of properties expropriated for the new station building at St. John, N.B., have received notice of the prices offered. If these are not accepted the prices to be paid will be settled by the Exchequer Court.

Hervey Jct. Station, Portneuf County, Que., on the National Transcontinental Ry., was burned recently.

Canadian Northern Ry. - National Transcontinental Ry. Connection.—The Board of Railway Commissioners has authorized the Canadian Northern Quebec Ry. to open for traffic its connection with the National Transcontinental Ry. near St. Prosper, Que. This connection, we were officially advised in Dec. 1920, is half a mile long and has a ruling gradient of 0.4%. St. Prosper is about 14 miles west of St. Marc, where two miles of line with a 0.4% gradient, have been built to connect the C.N.Q.R. and the N.T.R.

East Burrill Viaduct.—We are officially advised that Angus Sinclair, Toronto, is the contractor for the substructure of the East Burrill viaduct deviation, between Glenalda and St. Boniface, mile

87.6 to 91.6. Canadian Railway and Marine World for July 1920 contained full details of a number of projected revisions on the St. Lawrence Subdivision, of which the Burrill revision is one. This deviation is approximately 4 miles long, extends over two ravines, one of which is to be filled in solid, and the other is to be crossed by a steel trestle 450 ft. long and 80 ft. high. The grading work is unimportant, but there is some rock work. The object of this, as of the other diversions, is to reduce the gradients on the subdivision from 1% to 6/10%, and to flatten out the curvature. In the work now to be done the bridge or trestle will have a total length of 645 ft., instead of the 450 ft. of which we were advised in July 1920.

The bridge to be built is located at mile 89.7 west of Quebec, near St. Boniface, and will cross the Laverne gully, through which flows a small stream, the East Burrill Creek. The new bridge will be a single track girder viaduct with steel towers on concrete pedestals and abutments. The track will be a 2 degree curve throughout the bridge, the super-elevation of 1½ in. being taken up by tilting the spans. There will be a sidewalk on one side of the bridge. The dimensions of the bridge will be: Length 645 ft.; greatest height, 80 ft.; centers of grades, 9 ft.; spans, 2 end spans of 60 ft. each; 4 intermediate spans of 60 ft. each, 1 intermediate span of 85 ft., and 4 lower spans of 40 ft. each; these spans will be supported on 5 braced steel towers and 1 rocker bent tower. The substructure will consist of 22 concrete pedestals averaging 10 ft. high; batwing abutment at east end 26 ft. high, and temporary timber abutment at west end resting on rock fill, to be replaced by permanent concrete abutment when the fill settles. The concrete for the substructure will be 1-2-4 and 1-2½-5. The ground in which the work will be done is sticky clay, boulders and blue clay, and piling may be necessary in spots. Actual construction has not been started, but the site is cleared and the contractor's plant is being assembled. The general contractor for the substructure, Angus Sinclair, has let a sub-contract to Campbell & Lattimore, Toronto. Tenders for the superstructure were received to recently, and it is hoped to have the structure completed by the end of the year.

Chaudiere Jct., Que.—It is reported that it is intended to close the locomotive

house at Cap Rouge, Que., and to concentrate the power and train operation at Chaudiere Jct., where the locomotive house is being extended, and a standard coaling plant and asphalt facilities are being provided.

Ste. Rosalie to Bagot, Que.—J. E. Marcille, M.P. for Bagot, Que., asked in the House of Commons recently: "Has the Government any intention of using the land now unused, but formerly occupied by the Canadian National Rys., between Ste. Rosalie and Bagot Station? If not, is it the Government's intention to hand the land back to the respective former owners?" The Minister of Railways replied: "The matter is under consideration by the C.N.R. management."

Work in Prairie Provinces in 1920.—J. F. Reid, M.P. for Mackenzie, Sask., asked in the House of Commons March 4: "How many miles of grading were completed on Canadian National Rys. branch lines in Manitoba, Saskatchewan and Alberta during 1918, 1919 and 1920?" On what lines and in what respective provinces was the grading done, and how many miles of rails were laid?" The Minister of Railways, in replying, gave details of the miles of grading and track laying for each of the three years, which are summarized as follows:—

	Grading.	Tracklaying.
1918	160.8	29.87
1919	268.96	151.08
1920	88.8	128.1
	458.64	358.8

Western Lines Construction.—A. E. Warren, General Manager, Western Lines, is reported to have stated at Edmonton, Alta., recently that a great deal of work will be done on the lines in the western provinces this year, but until the Dominion Parliament has passed the appropriations it is impossible to state the nature or extent of the work planned. There will be a large amount of ballasting and track repair work on the main and branch lines; elimination of lines where the Canadian Northern Ry. and the Grand Trunk Pacific Ry. parallel each other, and in addition to other general work, erection of coal storage sheds at Prince Rupert is contemplated.

Ontario District Concrete Structures. Tenders are under consideration for a number of concrete structures on Ontario District lines.

Port Arthur, Duluth & Winnipeg Rys. A. E. Warren, General Manager, West-

ern Lines, C.N.R., and several divisional officers have been inspecting this line for the purpose of deciding what repair and reconstruction are necessary. The line was originally built from Fort Arthur to Gundersen Narrows, near the International Boundary, but is only being operated for 58.1 miles as the North Lake subdivision of the Canadian Northern Ry., branching off from Kashabowie Jct.

Regina Right of Way.—A press report states that negotiations are in progress for the purchase by the C.N.R. of a 66 ft. strip of private property off the northern tier of blocks in the Transcona and Rosemount subdivisions, Regina, Sask., for widening the right of way on the Moose Jaw line between the Grand Trunk Pacific Ry. shops and the western limits of the city. Application is reported to have been made to the city council for the closing of the portions of the streets and lanes which will be cut off.

Mayfield Branch.—A delegation from Southern Saskatchewan is reported to have waited on the Dominion Government recently in connection with the extension of the Canadian Northern Ry. Mayfield Branch. In 1919 arrangements were made for the extension of the branch from Bengough, the route favored by the management being one which it is stated will ultimately connect with the main line at Gravelbourg. Settlers are asking for a diversion via the shores of Big Muddy Lake, which would add about 16 miles to the length of the line as projected, but would, it is claimed, serve an additional 11 townships.

Grand Trunk Pacific Ry.—The Canadian National Ry. received tenders to April 7 for the following work on the Grand Trunk Pacific Ry. at Melville, Sask.:—Construction of earth dam and excavation of reservoir for railway water supply, and excavation and laying of cast iron pipe line in connection with same.

A press report states that several important diversions are being planned in Northern Alberta consequent on the co-ordination of the Canadian Northern Ry.

and the Grand Trunk Pacific Ry. under the Canadian National Ry. The diversions proposed will, it is said, eliminate several bridges on the G.T.P.R., including the long trestle over the Battle River, near New Norway; eliminate the G.T.P. R. station at Camrose, and necessitate the construction of a new piece of line from New Norway, on the G.T.P.R., to Battle, on the C.N.R. The building of this piece of line would save a considerable mileage in hauling coal from the Battle River to Edmonton.

Saskatoon-Calgary Line.—A Calgary, Alta., press report says that A. E. Warren, General Manager, Western Lines, when there recently stated that it is not the intention to carry on any important construction work in the west this year. The most important work to be undertaken will be on the Saskatoon-Calgary line, where it is intended to replace the present 60 lb. rails between Kindersley and Hanna with 85 lb. rails, and to put the track into first class condition.

Alberta Branch Line.—The Board of Railway Commissioners has approved route map showing revised general location of projected branch line through Tps. 25-27, Ranges 3-15, west 4th Meridian, mile 27 to 118, Alberta.

Entwistle-Evansburg Bridge.—A press report states that surveys are being made for a cutoff from the Canadian Northern Ry. east of Entwistle, Alta., to link it up with the G.T.P.R. there. It is stated that this would involve the abandonment of the bridge over the Pembina River between Entwistle and Evansburg, and its removal to another place. The bridge is stated to be about 40 ft. long, and 175 ft. above water level.

Brule Lake to Grande Prairie District. A press report states that residents of Grande Prairie district, Alta., have asked the C.N.R. management for the construction of a line from Brule Lake, 30 miles west of Edmonton on the Canadian Northern Ry., and 203 miles west of Edmonton on the Grand Trunk Pacific Ry., through the Grande Prairie district to

Pouce Coupe. This line would traverse the Upper Smoky River valley coal field.

Kamloops Bridge.—The Board of Railway Commissioners has issued an order recently authorizing the operation of trains across the bridge over the Thompson River at Kamloops, B.C. We are officially advised that this bridge is on the branch line starting from the C.N.R. main line at Kamloops Jct. It is about three miles south of the junction and provides access from the north through Kamloops, and to the Kamloops-Kelowna branch, which is under construction. The substructure consists entirely of pile piers, capped, braced and sheathed with dimension timber. The end piers are connected to the shore by approach timber trestles, and the pivot pier for the swing span is protected by the usual type of guide pier. The total length of the bridge proper is 564 lineal ft., of which 181 ft. is taken up in the two arms of the swing span. The remaining 383 ft. is made up of 3 spans approximately 128 ft. between pier centers. The trestle approaches together measure 405 ft. Owing to the difficulty of obtaining steel during the war, the construction of the bridge is of the timber through Howe truss type. The work was started May 7, 1917, and the swing span was tried on March 2, 1918, and found to be wholly satisfactory. The work was carried out in its entirety by the C.N.R. construction forces.

False Creek Reclamation.—Work on the diversion of Main St., Vancouver, B.C., to bring it nearer to the C.N.R. station at False Creek, is reported to be well in hand. Final work is also being gone on with on the sea wall on the reclaimed area, and preparations are being made for returning the reclaimed area in front of the station into a lawn, etc.

Vancouver Island Lines.—The Board of Railway Commissioners has authorized the building of a temporary trestle to carry the C.N.R. over the Squamish & Nanaimo Cowichan Lake Branch at mile 74 Victoria-Alberni Subdivision, Canadian Northern Pacific Ry. (Mar., pg. 128.)

The Dominion Government's Action to Secure Possession of the Grand Trunk Railway.

The circumstances which led up to the suspension early in April of the arbitration between the Dominion Government and the G.T.R. Co., as to the value of certain of the company's stocks, were fully dealt with in the House of Commons on April 19, by the Prime Minister, Mr. Meighen, who in moving the first reading of a bill respecting the G.T.R. arbitration stated that the arbitration proceedings had ceased and the arbitrators' powers had lapsed under the terms of the agreement entered into March 8, 1920, and that although the agreement provided for an extension of time if necessary, the Government did not see fit to grant it until the G.T.R. met its conditions, which are set forth in the bill. He pointed out that there appears to be a feeling among certain shareholders and others in Great Britain that the Canadian Government is dealing harshly with G.T.R. investors, but he considered this was due to a failure to realize the facts, or rather a determination not to grasp the fact that their present position is due to the unsoundness of enterprises which the shareholders deliberately entered into. In tracing the financial relations of the Government and the G.T.R., he showed that the Dominion undertook certain de-

fined responsibilities, while the G.T.R. undertook others, and that the Dominion has not only carried through, faithfully and scrupulously, every responsibility into which it entered, but had done vastly more. After outlining the contract obligations, he pointed out the additional assistance rendered, saying: "In 1909, a loan of \$10,000,000 was made the G.T.R. by the Government, in G.T.R. guarantee. In 1913, \$15,000,000 was loaned the G.T. Pacific on G.T.R. guarantee. In 1914 G.T. Pacific bonds for \$16,000,000 were guaranteed by the Government to complete the system without recourse to the G.T. R. This was distinctly a G.T.R. obligation under contract. Subsequently, in 1916, 1917 and 1918, cash loans were authorized by Parliament and were advanced to the G.T.P. for \$7,081,000, \$5,038,000 and \$4,071,000 respectively.

The G.T. Pacific Ry. had agreed to operate the National Transcontinental Ry. It failed, indeed was utterly unable, to do so, and the Government has been compelled to operate the line at many millions annual loss of operating account alone. Early in 1919, on six days' notice, the G.T. Pacific informed the Government that it would cease to operate the railway. The Government

has been compelled since then to provide for operation of this road under receivership and has had to advance to the receiver some \$26,607,000 for operating and fixed charges. For the G.T.R. itself the Government has since the summer of 1919 advanced various sums to keep the system intact and enable it to continue, the advances aggregating approximately \$47,000,000. The greater part of this has been advanced since the execution of the agreement for the acquisition of the G.T.R. The total amounts advanced to assist the G.T.R., inclusive of interest unpaid, amounts to \$77,297,000, of which all but \$15,000,000 is due, and to the G.T.P. \$62,400,000, which is all due. The Government has also guaranteed G.T.R. obligations for \$25,000,000. It is very difficult to argue in the face of this recital that the Government has at any time dealt harshly with G.T.R. shareholders or G.T.R. enterprises."

Mr. Meighen continued: "By the terms of the agreement of March 8, 1920, there was no binding obligation upon the Government to finance G.T.R. operations. The Government assisted in such financing, and Parliament authorized assistance, in order that the G.T.R. might continue to operate, and render the essen-

tial service that it does render as a transportation system and be held together as a transportation unit. The importance of maintaining the integrity of the G.T.R. system and preventing its disintegration and dissipation, into parts and pieces, appeals to everyone who carefully studies the question, and, indeed, can scarcely be overstated.

Mr. Meighen then called attention to the general warnings issued to the G.T.R. in connection with its delay in the conduct of the arbitration, and pointed out that the company was informed on Feb. 7 as to the Government's desire for possession of the property, as a condition for extension of the arbitration proceedings, but that the G.T.R. directors, instead of attempting to obtain the shareholders' opinions, distinctly refused to do so. The Government then again warned the company on March 19, only to be cabled by the chairman, Sir Alfred Smithers, refusing assent. Therefore, Mr. Meighen, said, it is idle to maintain that the Government requested something from the directors which they were not capable of performing, because they were given abundance of time to secure the shareholders' judgment upon the proposal, if they had set about to do so. In concluding, Mr. Meighen said: "It is the Government's opinion that there is no further need whatever of the G.T.R. Co. remaining in possession of the property, and further that it is wholly unreasonable that it should insist on doing so, while the financing of the property is virtually placed on the shoulders of the country. It has had abundance of time to secure its evidence and no doubt has secured it. If the G.T.R. as a Government property, is to be maintained to advantage, it must be in union and concert with the Canadian National Rys. They should no longer be operated in any degree as distinct systems, but as one. This advantage the Dominion is entitled to now, and in the Government's judgment the G.T.R. authorities are entirely without justification in seeking to withhold it. By the present measure, the Government asks Parliament to support the stand taken by the administration. We believe the shareholders should not be finally denied the reconstitution of the arbitration board, until an opportunity is given to meet the conditions required. By the present measure, Parliament will give them this opportunity, in clear and definite language, and will give sufficient time to enable them to meet and decide. It seems to me clearly a case, not for further negotiations with the company, but for a square and final statement of what must be done, with reasonable opportunity to accept or reject. That is the purport of the bill which I now submit for the judgment of Parliament."

The bill was passed by the House of Commons on April 25. After it had been read a second time in the Senate, the Government leader, Sir James Loughheed, moved several amendments, which were adopted, others, offered by private members, being rejected. It was then read a third time and passed by the Senate, as follows:

Whereas pursuant to The Grand Trunk Railway Acquisition Act, 1919, chap. 17, of the second session, His Majesty the King, hereinafter called "the Government," and the Grand Trunk Railway Co. of Canada, hereinafter called "the company," entered into an agreement bearing date March 8, 1920, for the acquisition by the Government, on the terms

in the said agreement stated, of the entire capital stock of the G.T.R., except the present guaranteed stock as thereby defined, and the said agreement was by and subject to the provisions of chap. 13 of the Statutes of 1920 in all respects ratified and confirmed; and whereas, although the company has not concluded the presentation of its case to the arbitrators and no award has been made, the period of nine months stipulated by the eighth clause of the said agreement for the making of the award of the arbitrators has elapsed and it is expedient to prescribe terms upon which the Governor in council may approve of a further time within which the award may be made: therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. The Governor in council may approve of a further time within which the arbitrators or a majority of them may make their award, but any agreement for this purpose shall stipulate terms and conditions which shall ensure to the satisfaction of the Government,—

(a) that forthwith the directors of the company and of such of the companies comprised in the G.T. system as the Government may designate shall resign or vacate their offices as directors at such time or times and in such manner as may be requested by the Government, and that nominees of the Government shall be duly appointed directors; provided that the substituted board of directors of the company need not comprise more than five members; that until otherwise provided by the board a majority of the directors shall constitute a quorum; and that it shall not be necessary that any of the directors shall reside in England or be qualified by ownership of stock;

(b) that the directors of the company so nominated by the Government and their successors shall hold office as such directors during pleasure of the Governor in council, who shall have power to remove them and to fill vacancies, and the board of directors so constituted may exercise and carry on all the powers and business of the company without reference to or consultation with the shareholders of the company, and not subject in anywise to their vote, direction or control;

(c) that the head office of the company and the meetings of its board of directors for the transaction of any business shall after the substitution of directors as herein provided be in Canada;

(d) that the directors of the company appointed upon nomination by the Government as aforesaid, in addition to their other powers, shall have and may exercise all the powers and functions of the committee of management as provided by the said agreement;

(e) that there shall be a committee which may be constituted by authority of the present directors of the company, or otherwise as may be agreed, and may be known as the G.T. shareholders committee, which, for the purpose of carrying on the arbitration proceedings and presenting the case of the G.T. shareholders and for the exercise of the powers or duties conferred on prescribed by the said agreement of March 8 in that regard, shall have and may exercise the powers and be charged with the duties heretofore belonging to the said directors; and that assessments or deductions, as provided for by clause 21 of the said agreement of March 8 for all costs of

the arbitration not heretofore provided and paid by means of assessments shall be made in such amounts as may be necessary for the purpose, and upon and in accordance with requisitions of the committee, and that upon satisfying such requisitions neither the company nor the Government as guarantor of interest and dividends shall be bound to see to the application of the moneys requisitioned or otherwise responsible for or bear any of the costs of the arbitration; and moreover, after substitution of directors of the company as herein provided for, the company, and the government as guarantor of interest and dividends on the debenture and guaranteed stocks, shall be entitled to deduct and retain from such interest and dividends as may thereafter become payable upon the said stocks any and all costs or expenses connected with the arbitration heretofore or hereafter advanced or paid or incurred by either the company or the government, other than such as under the agreement of March 8, 1920, are payable by the Government;

(f) that for the purpose of the arbitration the books, minutes, reports, documents and other records, and all the railways and properties of the companies comprised in the G.T. system shall at all times be accessible and open to inspection and examination by the committee, or by any person or persons named by the committee, or by counsel representing the shareholders in the arbitration proceedings;

(g) that upon substitution of directors as hereinbefore provided for, the arbitration shall proceed to a conclusion as speedily as may be, the time for making the award to be subject to provision in the agreement satisfactory to the Government.

2. The Government and the company are respectively authorized to agree for reviving and continuing the arbitration proceedings as aforesaid, provided the agreement be made on or before May 16, 1921, and to do, execute and authorize all acts, instruments, matters and things necessary for the purposes aforesaid, and upon the execution of any such agreement on behalf of the Government and on behalf of the company under the authority of its directors the aforesaid agreement of March 8, as thereby modified shall be and continue to be binding and effective for all purposes, and the stipulations thereof affecting the Government and the company respectively shall have the same force and effect as if specially enacted by Parliament.

3. In the event of approval by the Governor in council of a further time for the making of the award under the provisions of this act, or of any agreement concluded in pursuance of the powers hereby conferred, the powers and duties of the arbitrators shall remain and continue, and be deemed to have remained and continued, and the proceedings shall be resumed and concluded in all respects as if the time within which the award is actually made had been the time limited therefor by the said agreement of March 8, 1920.

4. For the purpose of carrying out the substitution of directors of this company herein provided for, any director of the company may vacate his office by resignation in writing submitted to the board at any meeting of the directors, and if one or more of the directors of the company, not exceeding five at any one time, shall in the manner aforesaid vacate his or their offices, the remaining directors

of the company present at the aforesaid meeting or at any subsequent meeting, even although they do not constitute a quorum, may elect a director or directors nominated by the Government to fill the place or places of the director or directors so vacating his or their offices. Moreover the Governor in council may at any time appoint additional directors to the substituted board if considered expedient. The bill as amended was returned to the House of Commons and passed May 2.

The G.T.R. Co. has given notice of a meeting of shareholders to be held in London, Eng., May 12, to consider and, if approved, authorize the execution and completion of a proposed agreement amending the present agreement dated March 8, 1920, between The King, represented by the Minister of Railways and Canals of Canada of the first part, and the company as provided for in the bill passed by the Dominion Parliament, as printed above.

Canadian Pacific Railway Construction, Betterments, Etc.

Appropriations.—The directors' annual report, another page of this issue, details expenditures on capital account for this year amounting to \$4,316,236, of which the following are the principal items:—Replacement of rail in main and branch tracks with heavier rails, \$1,000,000; tie plates, rail anchors, ballasting, ditching, and miscellaneous betterments, \$35,700; additional terminal and side-track accommodation, \$377,292; replacement and enlargement of structures in permanent form, \$509,624; additional stations, locomotive houses, freight sheds and shops and extensions to existing buildings, \$398,158; improvements in connection with telegraphic service, \$55,032; machinery at various shops, \$30,950; lining of Connaught tunnel, \$400,000; extension work on Chateau Frontenac Hotel, \$853,000.

St. John River Bridge.—The Board of Railway Commissioners passed order 30,709, March 5, as follows:—Re application of C.P.R., under sec. 248 of the Railway Act, 1919, for authority to build substructure of bridge 1.8, St. John Subdivision, over the St. John River, as shown on plans on file with the Board. Upon the approval by the Governor in council, by order in council 2622, Nov. 1, 1920, and the report and recommendation of the Board's Chief Engineer, it is ordered that the C.P.R. be authorized to construct the substructure of the said bridge at St. John, as shown on plans no. 58212, dated Oct. 5, 1920; no. 58120-1, dated Sept. 14, 1920; no. 58120-2, dated Sept. 24, 1921, no. B-2-318, dated July 26, 1920; no. B-2-320, dated Sept. 19, 1920; and no. B-2-323, dated Sept. 15, 1920, on file with the Board; detail plans of the superstructure to be filed for the approval of an engineer of the Board.

It was stated at a St. John City Council meeting on April 14 that the Minister of Public Works had invited the council to send a representative to Ottawa on April 19, to discuss the plans of the bridge with all parties interested. The Mayor was authorized to attend the meeting.

St. John Trestle No. 5.—The St. John, N.B., City Engineer, and the C.P.R. District Engineer are reported to have inspected trestle no. 5 recently, to determine what work is necessary prior to the city calling for tenders for this work and for general wharf repairs. A new agreement between the city and the C.P.R. in connection with the trestle is reported to be under consideration.

Ottawa Northern & Western Ry.—The Dominion Parliament has granted an extension of time for two years for the commencement, and five years for the completion of the authorized railway from Waltham, Que., to a junction with the transcontinental line at Chalk River, Ont.

London Division.—Work is reported to

have been started on betterments of lines on the London Division. About 200 extra section men are reported to have been engaged. The work to be done will, it is reported, include the putting in of 150,000 new ties, and the rebalasting of about 20 miles.

Western Lines.—D. C. Coleman, Vice President, said in an interview at Winnipeg recently:—There is no occasion for gloom or despondency about the future of Western Canada, but conditions at the moment certainly demand that business enterprises be conducted with prudence and caution. I have no sympathy with the view expressed by some that at a time like this governments or private companies should undertake large expenditures for works that are not absolutely essential, in order to create a spurious feeling of confidence. If you violate a fundamental economic law and incur obligations at the wrong time you are bound to suffer for it in the end. If the sky clears up a bit later in the year, we shall have a reasonable programme of improvements and extensions but for the time being any action in connection with that programme is deferred.

Suffield Branch.—The shareholders will be asked at the ensuing annual meeting to authorize the extension of the Suffield Southwesterly Branch from Lomond, Sask., for not exceeding 30 miles.

Manitoba & North Western Ry.—The Dominion Parliament has authorized the construction of the following lines:—From Tp. 30, Range 10 or 11, west 2nd Meridian, near Tuffnell, Sask., northwesterly to the West Saskatchewan River, Tp. 49-51, Range 14 or 15, west 2nd Meridian, thence westerly to Prince Albert, Sask.; and from Tp. 28, Range 6-8, west 2nd Meridian, near Theodore, Sask., generally westerly to between Govan and Lanigan on the C.P.R. Pheasant Hills branch.

Agassiz to Harrison's Mills.—Some time ago a crack was discovered in the mountain side above a double tunnel on the main transcontinental line between Agassiz and Harrison's Mills, B.C. After an inspection by the engineering staff, it was decided to avert danger by the removal of the rock. A press report states that 1½ tons of explosives were placed in the crevice and fired recently, about 20,000 tons of rock being blown out, falling mainly into the river, but blocking the outlet of one of the tunnels. The inner track and tunnel, to which the traffic was diverted, were cleared three hours after the blast, after which the removal of the debris closing up the other track was started.

Vancouver Pier.—The fill at the site of the new pier B.C. on the waterfront at Vancouver, in connection with the C.P.R.'s pier and wharf plans, is reported to have been completed. The work was

started in March, 1920, by the Pacific Construction Co., which is stated to have employed 1 hydraulic dredge, 2 clam shell dredges, 1 dipper dredge and 5 tugs. The excavation varied from 35 ft. at the shore end to 135 ft. at the outer end, and the material utilized for the fill work was taken from the First and Second Narrows of Burrard Inlet. The following figures of the material handled are given: Total handled on job, 1,800,000 cu. yd.; excavation for foundation, 700,000 cu. yd.; handled for foundation, 1,100,000 cu. yd.; length of fill, 890 ft. C. Murphy, General Manager, Western Lines, is reported to have stated on a recent visit to Vancouver, that nothing had been settled as to when construction of the pier would be gone on with.

Maintenance of Way Flagging Rules for Impassable Track.—The Board of Railway Commissioners passed general order 334 April 1, as follows:—Re general order 188, April 8, 1917, prescribing Regulations for Uniform Maintenance of Way Flagging Rules for Impassable Track, for the observance of every railway company within the legislative authority of the Parliament of Canada, and requiring that the said rules be printed in railway companies working timetables. Upon the report and recommendation of the Board's Chief Operating Officer, the Board orders that the general order 188 be amended to provide that the Regulations for the Uniform Maintenance of Way Flagging Rules for Impassable Track may, at the option of the railway companies, be printed in the companies' rule books, in lieu of the working timetables, as provided in the said general order.

Manitoba Public Utilities Commission. A Winnipeg press dispatch of April 28 said that the Legislature had, by a vote of 24 to 21, adopted a resolution declaring that the Commission had outlived its usefulness, that it should be dispensed with, and that its duties should be transferred to the Provincial Secretary's Department. The Commissioner is P. A. Macdonald.

Trial for Manslaughter.—R. J. Allan, conductor, and A. E. Pillow, locomotive man, Chapeau, Ont., were committed for trial, April 8, by the Police Magistrate, on a charge of manslaughter arising out of a collision on the C.P.R. on Dec. 23, when a conductor also living at Chapeau was killed.

DEPARTMENT OF THE NAVAL SERVICE.

NOTICE OF SALE.

Sealed tenders addressed to the undersigned and endorsed on the envelope "Tender for Travelling Cranes," will be received up to noon, on Wednesday, the 1st day of June, 1921, for the purchase of two 2½ ton Travelling Cranes, including boilers, jibs and small fittings, and now lying at Halifax Dockyard.

Further particulars and permission to inspect the Cranes may be obtained on application to the undersigned or to the Commander-in-Charge, H.M.C. Dockyard, Halifax, N.S.

G. J. DESBARATS,
Deputy Minister of the Naval Service.

Ottawa, Ont., April 26, 1921.

Unauthorized publication of this advertisement will not be paid for.

Traffic Orders by Board of Railway Commissioners.

Charges for Fixing Doors of Box Cars, etc., for Live Stock.

General order 337. April 8.—Re consideration of question of charges for fixing car doors and loading charges in cases where box cars are supplied by a railway in lieu of stock cars ordered by the shipper. Upon reading the submissions filed on behalf of the United Grain Growers, and the C.P.R., the Board orders as follows:—1. That, when, at any public stock yards, where loading is not done by the shipper, and a charge for loading is made, box cars are supplied to live stock shippers, in lieu of stock cars, the doors of such cars shall be fixed to the satisfaction of the shipper, at the expense of the railway having the line haul, such company being responsible for the supplying of a suitable vehicle. 2. That, where box cars are supplied by a railway to live stock shippers, in lieu of stock cars, at any public stock yards where loading charges are in effect, the loading charge shall not be based on the number of box cars actually furnished or loaded, but on the number of cars which would have been loaded had stock cars been supplied by the railway.

Switching Stone Dust at St. Marys.

30,794. March 16.—Re complaint of Deviney & Campbell, of St. Marys, Ont., that the C.P.R. has increased its rate for switching stone dust from the Thames Quarry Co. to its tile plant at St. Marys, from 1c. per 100 lb., minimum \$5 a car, to 3½c. per 100 lb. Upon hearing the complaint at Ottawa, June 15, 1920, the complainants and the railway company being represented, and upon the report and recommendation of the Board's Chief Traffic Officer, the Board declares that the charge of 3½c. per 100 lb. made by the C.P.R. for switching stone dust from the Thames Quarry Co.'s plant to the complainants' factory at St. Marys was wrongfully made and should have been 2c. per 100 lb.; and the C.P.R. is, therefore, authorized to refund the amount of such overcharge to the complainant.

Hull Electric Co.'s Passenger Traffic.

30,804. March 31.—Re application of Hull Electric Co., under sec. 334 of the Railway Act, 1919, for approval of its Standard Local Passenger Traffic, C.R.C. no. P-16. Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said tariff, providing for a 25c. fare applicable between Ottawa and Hull and the Connought Park Jockey Club, be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Diversion and Reconsignment Rules, Regulations and Charges.

30,831. March 30.—Re application of N. W. Hawkes of the New England Freight Association, on behalf of railways in New England, U.S.A., for permission further to suspend effective date of certain schedules naming Diversion and Reconsignment Rules, Regulations, and Charges until April 30, upon one day notice. Upon its appearing that the Interstate Commerce Commission has under investigation a suspension docket no. 1250, dated March 18, further suspending, until April 30, upon one day notice, schedule issued by U.S. carriers naming Diversion and Reconsignment

Rules and Regulations, the Board orders that N. W. Hawkes, Chairman, New England Freight Association, be granted permission further to suspend effective date of the following schedules, until April 30, upon one day notice, after filing thereof with the Board, viz., Boston & Maine, C.R.C. 2033; Central Vermont C.R.C. 1451; Maine Central, C1893. That all carriers in the United States publishing similar tariffs applying on international traffic be granted similar permission to file with the Board upon one day notice.

Maine Central Railroad Freight Tariff.

30,833. Re application of the Maine Central Rd., under sec. 330 of the Railway Act, 1919, for approval of its Standard Freight Mileage Tariff, C.R.C. no. C-2010. Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said tariff be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Chicago, Indianapolis & Louisville Ry. Stone Tariff.

30,839. Re application of E. P. Vernia, General Freight Agent, Chicago, Indianapolis & Louisville Ry. for permission to reissue his Tariff C.R.C. 288, applying on stone in carloads, effective April 13, upon 10 days notice. Upon its appearing that the Interstate Commerce Commission has, by its special permission 52275, dated March 21, granted a similar application, the Board orders that the Chicago, Indianapolis & Louisville Ry. be authorized to file with the Board, effective April 13, upon 10 days notice, a tariff showing increased rates on stone, in carloads, to points in Ontario, as authorized under I.C.C. ex parte no. 74.

Granite Paving Blocks Freight Rates.

30,841. Re application of Brodies Limited and Jos. Brunet, of Montreal, for a reduction in rates on granite paving blocks from Hebert to Montreal, and from Stavernyville to Montreal, all in the Province of Quebec, to the basis of rates in effect prior to Sept. 13, 1920. Upon hearing the application at Montreal, March 22, the applicants, the Canadian Pacific, and the Grand Trunk Railways, being represented, the Board orders that the application be refused.

Atlantic, Quebec & Western Ry.'s Coal and Wood Pulp Rates.

30,849. April 4.—Re complaint of H. F. Iverson of Montreal, on behalf of the Chicoutimi Pulp Co., against the rate charged by the Atlantic, Quebec & Western Ry. on coal from Gaspe to Chandler, Que., and on wood pulp from Chandler to Gaspe. Upon hearing the complaint at Montreal, March 23, the Chicoutimi Pulp Co. and the Atlantic, Quebec & Western Ry. being represented at the hearing, the Board orders that the complaint be dismissed.

Minimum Weights on Grain, Etc.

30,868. Re application of R. N. Collier, agent, Trunk Line Association, and Eugene Morris, agent, Central Freight Association, on behalf of certain United States carriers, for permission to publish, on 15 days notice, revised minimum weights on grain and grain products and rules and regulations applicable thereto. Upon its appearing that the Interstate Commerce Commission has, by

its special permission 52340, dated March 25, granted similar petitions, the Board orders that carriers in the U.S., and their lawfully appointed agents, be authorized to file, upon 15 days notice to the Board a special supplement to their tariffs to points in Canada, cancelling the minimum weights, and rules and regulations applicable thereto, established by Interstate Commerce Commission special permission 51215, and establishing revised minimum weights on grain and grain products, and rules and regulations applicable thereto, as set forth in the said special permission.

Grand Trunk Pacific Railway Tolls.

30,873. Re application of Canadian Northern Ry. Co., under sec. 323 of the Railway Act, 1919, for approval of a by-law passed March 10, 1921, authorizing H. H. Melanson, Passenger Traffic Manager, Toronto; R. Creelman, Assistant Passenger Traffic Manager, Winnipeg; and R. E. MacLeod, Assistant to Passenger Traffic Manager, Montreal, from time to time to prepare and issue tariffs of tolls to be charged for carriage of passenger traffic upon the railway owned or operated by the Grand Trunk Pacific Ry. Co., or any portion thereof, and upon the steamships owned or operated by the Grand Trunk Pacific Coast Steamship Co., and to specify the persons to whom, the place where, and the manner in which such tolls shall be paid. Upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said bylaw be approved.

C.P.R. Facilities to Elevators at Fort William and Port Arthur.

30,855. April 6.—Re application of Davidson & Smith, Fort William, Ont., for an order directing the Canadian Northern Ry. to allow C.P.R. to switch cars to and from the Canadian Government elevator at Port Arthur, over the Canadian Northern Ry. spur and property from and to the C.P.R., so as to afford the applicants the same privileges as the Canadian Government elevator at Port Arthur, Ont. Whereas, by the Board's order 27,693, Sept. 16, 1918, the C.P.R. was authorized, subject to and upon certain conditions therein specified, to use and operate the Canadian Northern Ry. spur line into the applicants' elevator; and upon reading the submissions filed on behalf of the applicants and the railway company, the Board orders that the C.P.R. furnish, and continue to furnish and maintain, to the applicants' elevator, under the permission granted by order 27,693, the same traffic facilities as the company has been and is furnishing, and will furnish, to the Government elevator at Port Arthur, under the permission granted by order 20,393, Oct. 17, 1913; such service to be put into effect within ten days from the date of this order.

Free Transportation for New Zealand's Premier.

30,901. April 13.—Granting application of Canadian National Rys., under sec. 34 of the Railway Act, 1919, for permission to issue free transportation to the Prime Minister of New Zealand, and his wife, daughter, and secretary.

Chatham, Wallaceburg & Lake Erie Freight Tariff.

30,917. April 20.—Granting application of Chatham, Wallaceburg & Lake Erie Ry., under sec. 330 of the Railway

Act, 1919, for approval of its Standard Freight Mileage Tariff, C.R.C. no. 646.

Michigan Central Cheese Rates.

30,920. April 23.—Re application of Michigan Central Rd. for permission to publish, on one day notice, revised rates

on cheese from stations in Canada to the Atlantic seaboard, for export. Upon it appearing that an error has been made in the publication of commodity rates on cheese, by transposition of the rates for carloads, and less than carloads, and immediate correction being necessary,

in order to give effect to the proper rates, the Board orders that the company be permitted to publish a supplement to its tariff C.R.C. 3003, so as to give effect to the proper rates on cheese; the said supplement to be made effective upon one day notice.

Railway Rolling Stock Orders and Deliveries.

The Timiskaming & Northern Ontario Ry. is in the market for several cabooses.

The estimates for the year ending Oct. 31, 1922, submitted to the Ontario Legislature recently, include \$150,000 for two mikado locomotives.

The four switching locomotives which the Railways and Canals Department has ordered from Montreal Locomotive Works, as mentioned in our last issue, will be used in construction work on Welland Ship Canal.

W. W. Butler, President, Canadian Car & Foundry Co., and W. H. Woodin, a director of that company and President, American Car & Foundry Co., are in England, endeavoring to close a large equipment order with British interests, for the two concerns.

Canadian National Ry.s, between Mar. 5 and Apr. 9, received the following roll-

cars to G.T.R.; from Fort William shops, 357 box cars to C.P.R.; and from Amherst shops, 200 trucks to Reid Newfoundland Co.

The Timiskaming & Northern Ontario Ry. has received 4 mikado (2-8-2) locomotives from Canadian Locomotive Co. One of them is equipped with a booster, a description and illustrations of which were published in Canadian Railway and Marine World for Dec., 1920, and an illustration of the completed locomotive is given on this page. The chief particulars are as follows:—

Weight on drivers	157,000 lb.
Weight, total	258,000 lb.
Wheel base of engine, rigid	16 ft. 6 in.
Wheel base of engine, total	34 ft. 8 in.
Heating surface, firebox	208 sq. ft.
Heating surface, tubes	3,016 sq. ft.
Heating surface, total	3,224 sq. ft.
Driving wheels, diam.	63 in.
Driving wheel centers	Cast steel

building and locomotive works participated in this business, but some of the rolling stock was constructed outside the country for G.T.R. Western Lines. Most of this money, however, was spent in Canada.

"For delivery in 1918 the Government ordered for the Canadian National Ry.s, 185 locomotives, of all types, 21 passenger cars, and 8,715 freight cars, at a total cost of \$36,217,998. For delivery in 1919 to the Canadian National, the Government ordered 50 locomotives, 3,037 freight cars and 260 passenger cars at a total cost of \$18,718,820, and for delivery to the same road in 1920, 75 locomotives, 4,776 freight cars and 50 passenger cars, at a total cost of \$22,058,272.

"The Government ordered for delivery in the same year to the Grand Trunk Pa-

Mikado (2-8-2) Locomotive, with Booster, Timiskaming & Northern Ontario Railway.

ing stock; 140 stock cars, completing an order for 350; 17 sleeping cars, completing an order for 18, and 20 baggage cars, completing an order for that number, from Canadian Car & Foundry Co.

The G.T.R., during February and March, received the following additions to rolling stock: 7 switching locomotives from its Montreal shops; 840 automobile cars, 80,000 lb. capacity, and 50 baggage and express cars, from Canadian Car & Foundry Co.; and 42 automobile cars, 80,000 lb. capacity, from American Car & Foundry Co.

The C.P.R., between Feb. 11 and Apr. 13, received the following additions to rolling stock: 84 automobile cars and 160 refrigerator cars from its Angus shops, Montreal; 790 steel frame box cars from Canadian Car & Foundry Co., Fort William, Ont.; 250 steel frame box cars from the American Steel Car Corporation; and 218 steel frame box cars from Eastern Car Co.

The Canadian Car & Foundry Co., between Mar. 14 and Apr. 12, delivered the following rolling stock: From Montreal, 13 sleeping cars and 18 baggage cars, to Canadian National Ry.s; and 20 baggage express cars and 714 automobile

Driving journals, diam and length.....	Main 10 x 13 in.
Others 9 x 13 in.	
Cylinders, diam and stroke	25 x 30 in.

Brake beam	Traused type

Rolling Stock Ordered for Government Railways, Etc.

The following, evidently officially inspired, press dispatch was sent from Ottawa April 5:—"If Canadian railways have not been able to handle all Canada's freight requirements in 1918, 1919, and 1920, it is not the fault of the Dominion Government. Orders were given by the Government for delivery to the Canadian National Ry.s, in 1918 and 1919, and to the Canadian National-Grand Trunk and Pacific and Grand Trunk Ry.s, in 1920, of 382 locomotives, costing \$21,328,247; 21,463 freight cars, costing \$65,710,094; and 331 passenger cars, costing \$11,314,469; or \$98,352,811 in all. All Canadian car

cific Ry. 37 locomotives and 860 freight cars, valued at \$5,243,925, and to the Grand Trunk Ry. 35 locomotives and 4,075 freight cars, at a total cost of \$16,113,795.

"The locomotives cost from \$37,000 to \$40,500 each, for switching locomotives, to \$72,500 for the Santa Fe type obtained from Montreal Locomotive Works. Freight cars cost from \$2,370 for flat cars, to \$48,500 for a steel rotary snow plough, also obtained from the Montreal company. The passenger cars ranged from \$24,000 for colonist cars to \$49,348 for sleepers."

Particulars of these orders were, of course, given from time to time in Canadian Railway and Marine World, but it was not stated that the orders had been placed by the Government. The Minister of Railways is constantly reiterating that the Government does not interfere in the management of the Canadian National Ry.s, etc., and that the directors have a free hand. If that is the case, why should it be stated that the Government places the rolling stock orders? Does the Minister want to take the credit for popular things and to place the responsibility for others on the directors?

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—W. J. ATKINSON, heretofore Superintendent, Edmundston Division, Quebec District, Edmundston, N.B., has been appointed Superintendent, St. Maurice Division, Quebec District, vice F. Griffin, transferred. Office, Quebec, Que.

T. J. BROWN, heretofore Superintendent, Calgary Division, Western District, C.N.R. and Grand Trunk Pacific Ry., Calgary, Alta., has been appointed Superintendent, Dauphin Division, Prairie District, C.N.R. and G.T.P.R., vice A. E. Macdonald, transferred; with territory—Dauphin to Humboldt, not including Humboldt, 247.3 miles; North Jct. to Hudson Bay Jct., not including Hudson Bay Jct., 199.7 miles; Sifton Jct. to Winnipegosis, 20.7 miles; Thunderhill Jct. to Preeceville, 72.1 miles; Hudson Bay Jct. to Pas, 87.5 miles; Canora to Sturgis Jct., 21.7 miles; Preeceville to Lintlaw (under construction), 27.8 miles; Humboldt to St. Brieux (under construction), 33 miles; Pas to mile 214 (under construction), 214 miles. Office, Dauphin, Man.

P. BOHAN, heretofore Roadmaster, Oba Subdivision, Hornepayne, Ont., has been appointed Roadmaster, Ruel Subdivision, Capreol, Ont., vice P. Vicks, transferred.

E. W. CAMERON, Assistant Superintendent, Saskatoon Division, Prairie District, Humboldt, Sask., has been given jurisdiction over the Battleford and Carlton Subdivisions.

W. J. COUGHLIN, heretofore Bridge and Building Master, Superior Division, Hornepayne, Ont., has been appointed Assistant to Bridge and Building Master (F. McKay), Capreol, Ont.

W. A. DUFF, heretofore Assistant Chief Engineer, Moncton, N.B., has been appointed Engineer of Standards, C.N.R. and G.T.P.R., all lines. He has charge of the preparation of standards, specifications, bridge load charts, and rules and instructions pertaining to engineering and maintenance of way, and will perform such other duties as may be assigned to him from time to time, reporting to C. B. Brown, Engineering Assistant, Operation and Maintenance Department. Office, Toronto.

JAMES GORMAN has been appointed Superintendent, Sleeping, Dining and Parlor Car Department, Western Lines, C.N.R., and Grand Trunk Pacific Ry., vice H. B. Wollen, transferred to the Hotel Department. Office, Winnipeg.

F. GRIFFIN, heretofore Superintendent, St. Maurice Division, Quebec District, Quebec, Que., has been appointed Superintendent, Edmundston Division, Quebec District, vice W. J. Atkinson, transferred. Office, Edmundston, N.B.

E. C. KENNEDY, heretofore chief clerk, Bonaventure station ticket office, G.T.P., Montreal, is reported to have been appointed City Passenger Agent, Canadian National-Grand Trunk Rys., Detroit, Mich.

J. KILPATRICK, heretofore Superintendent, Grand Trunk Pacific Ry., Smithers, B.C., has been appointed acting Superintendent, C.N.R., Melville, Sask., and his former position has been abolished.

J. W. KING has been appointed acting Shore Steward, Steamship Department, C.N.R., and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., vice J. M. McLeod, resigned.

P. VICKS, heretofore Roadmaster, Ruel Subdivision, Capreol, Ont., has been appointed Roadmaster, Oba Subdivision, Hornepayne, Ont., vice P. Bohan, transferred.

J. ROWE and not J. Reid, as mentioned in our last issue, has been appointed Roadmaster, Grand Trunk Pacific Ry., with territory from Jasper to McBride, B.C.; vice W. Willis, deceased.

J. B. WINDROSS has been appointed Manager, Macdonald Hotel, Edmonton, Alta.

Canadian Pacific Ocean Services Ltd. W. T. MARLOW, General Freight Agent, and C. E. BENJAMIN, Passenger Traffic Agent, are continuing in the service, with the same titles as heretofore. The other officials and staffs of the C.P. O.S. freight and passenger departments have been absorbed by the C.P.R., which has been appointed Traffic Agent, C.P. O.S.

Canadian Pacific Ry.—W. G. ANNABLE, heretofore General Passenger Agent, Ocean Traffic, has been appointed Assistant Passenger Traffic Manager, Ocean Traffic. Office, Montreal.

W. BALLANTYNE, heretofore Assistant General Passenger Agent, Ocean Traffic, has been appointed General Passenger Agent, Ocean Traffic, vice W. G. Annable, promoted. Office, Montreal.

H. B. BEAUMONT, heretofore General Agent, Passenger Department, Ocean Traffic, Montreal, has been appointed General Agent, Passenger Department, Ocean Traffic, Toronto, vice H. M. MacCallum, promoted.

D. C. CAMPBELL has been appointed Assistant Superintendent, Woodstock Division, New Brunswick District, vice W. Dixon, transferred. Office, Aroostook, N.B.

J. CAMERON, heretofore Roadmaster, Owen Sound and Walkerton Subdivision, Orangeville, Ont., has been appointed Roadmaster MacTier Subdivision, Bruce Division, Ontario District, vice J. H. Guthrie, transferred. Office, Toronto.

C. T. DELAMERE, heretofore Engineer of Construction, Montreal, is leaving the company's service, the position having been abolished.

J. H. GUTHRIE, heretofore Roadmaster, MacTier Subdivision, Toronto, has been appointed Roadmaster, Owen Sound and Walkerton Subdivisions, Bruce Division, Ontario District, vice J. Cameron, transferred. Office, Orangeville, Ont.

W. E. KINGSTON, heretofore Trainmaster, Wilkie, Sask., has been appointed Trainmaster, Moose Jaw, Sask., vice G. S. Lytle, transferred to Wilkie.

G. S. LYTLE, heretofore acting Trainmaster, Moose Jaw Division, Saskatchewan District, Moose Jaw, Sask., has been appointed Trainmaster, Wilkie, Hardisty, Macklin, Reford, Cutknife and Kelfield Subdivisions, Saskatoon Division, Saskatchewan District, vice W. E. Kingston, transferred. Office, Wilkie, Sask.

M. MACALLUM, heretofore General Agent, Passenger Department, Ocean Traffic, Toronto, has been appointed Assistant General Passenger Agent, Ocean Traffic, vice W. Ballantyne, promoted. Office, Montreal.

F. W. NICHOLLS, heretofore Road-

master, London, Ont., has been appointed Roadmaster, Kingston Subdivision, Kingston, Ont., vice T. J. Lackey, transferred.

J. E. PARKER, heretofore City Passenger Agent, Ocean Traffic, Montreal, has been appointed General Agent, Passenger Department, Ocean Traffic, Montreal, vice H. B. Beaumont, transferred.

I. VERSCHELDEN, heretofore Bridge and Building Master, Montreal Division, Montreal, has been appointed Bridge and Building Master, Farnham Division, Quebec District, vice H. M. Farmer, transferred. Office, Farnham, Que.

Grand Trunk Ry.—E. S. COOPER, Trainmaster, District 4, Montreal, has had his jurisdiction extended over District 5, G. COOPER, Trainmaster, District 5, having been transferred to Island Pond, Vt.

H. BATTLE, heretofore Locomotive Foreman, Palmerston, Ont., has been appointed Locomotive Foreman, Stratford, Ont., vice R. A. Innes, assigned to other duties.

G. COOPER, heretofore Trainmaster, District 5, Montreal Division, Brockville, Ont., has been appointed Trainmaster, District 1, and a part of District 2, to east yard limit board, Richmond, Vt., vice E. W. Williams, assigned to other duties. Office, Island Pond, Vt.

W. CULROSS, Road Foreman of Locomotives, Toronto, has been given jurisdiction over the Barrie Division.

E. P. EAST, Road Foreman of Locomotives, Toronto, has been given jurisdiction over Districts 15, 20, 21, 22 and 23.

F. FOSTER has been appointed General Foreman, Allandale, Ont., vice G. McBride, assigned to other duties.

W. KIRKWOOD, Travelling Engineer, Toronto, has been given jurisdiction over District 17, including Petrolia Branch, and Districts 18 and 24.

C. J. MCKEOUGH, Trainmaster, Stratford, Ont., has had his jurisdiction extended to cover Districts 20 and 21, H. McLennan having been assigned to other duties.

D. C. MESSEFROLL, heretofore Master Car Builder, Eastern Lines, Montreal, has been appointed Master Car Builder, London shops, Ont., vice W. A. Pitt, assigned to other duties.

A. B. MITCHELL, heretofore acting Master Car Builder, London shops, Ont., has been appointed Master Car Builder, Eastern Lines, vice D. C. Messeroll, transferred to London. Office, Montreal.

J. ROBERTS, heretofore acting Superintendent, Motive Power Shops, Stratford, Ont., has been appointed Superintendent, Motive Power Shops there, and his former position has been abolished.

A. F. SHARPE, Trainmaster, Allandale, Ont., is reported to have been appointed Chief Dispatcher, London, Ont., vice W. L. Doherty.

W. SHARP, Road Foreman of Locomotives, Toronto, has been given jurisdiction over Toronto Terminals and Districts 16 and 19.

W. F. WEEGAR, Trainmaster, District 30, Ottawa, Ont., has had his jurisdiction extended over Districts 31 and 32, Ottawa Division, J. S. McAdam having been assigned to other duties.

J. A. WALTON has been appointed Locomotive Foreman, Palmerston, Ont., vice H. Battle, transferred.

Freight and Passenger Traffic Notes.

The Canadian National Ry. will have summer tourist camps in the Rockies at Mount Robson Park from July 1 to Aug. 31, and at Jasper Park from June 15 to Sept. 15.

The C.P.R. has been ordered by the Board of Railway Commissioners to stop train 14 at Exshaw, Alta., beginning May 22, to allow passengers from the west to detrain.

The New York Central Rd. is reported to have inaugurated a fast freight service between New York and Montreal, via Malone, N.Y., for carload or less than carload freight.

The Ituna, Sask., Board of Trade's complaint, against reduction of Grand Trunk Pacific Ry. train service from daily to six trains a week, has been dismissed by the Board of Railway Commissioners.

The Canadian National Ry. will, it is reported, put on a through service from Montreal to Murray Bay for the summer, the train to run from Bonaventure station, Montreal, on the south shore line to the Quebec Bridge, thence into Quebec, and over the Quebec & Saguenay Ry. to Murray Bay. The old route was from Montreal to River Ouelle and thence by steamboat to Murray Bay.

The Canadian National Ry. have put in operation a new merchandise freight service between Montreal and Winnipeg, via Ottawa. Less than carload shipments for the west from point east and south of Montreal are collected at Bonaventure station, and are carried thence in through cars to Winnipeg, where they are distributed to various centers. Goods consigned by this service are due in Winnipeg six days after leaving Montreal.

The Alberta & Great Waterways Ry. is reported to have transported 122 cars, containing 2,285 tons of freight, from Edmonton to the end of track at the Clearwater River, Alta., between Nov. 1 and Mar. 31. Of this 23 cars contained machinery for oil drilling in the Fort Norman district; 6 contained boats and 5 contained machinery for boats. The other freight was merchandise and miscellaneous supply, mainly for Fort Norman.

A Vancouver press dispatch of April 12 stated that freight rates on lumber and shingles, from British Columbia to eastern Canada, would be reduced on April 21, as a result of the Canadian Railway Association's decision to assist Canadian lumbermen to compete against those of the southern United States, and that the new rates would make a reduction of about \$4.30 a thousand feet on lumber from Vancouver to Toronto.

The British Columbia Berry Growers Association is reported as having announced that 500 freight cars will be required to move the 1921 B.C. crop. This means a production of approximately 2,500 tons of small fruits. Production is expected to be more than 50% over last year, when the crop brought in \$1,000,000, there being about 2,800 acres under this cultivation. The Association will endeavor to enlarge the market for British Columbia berries.

The C.P.R. has announced that during June, July, August and September special fare tickets will be on sale to the Atlantic and Pacific coasts and return good to Oct. 31. Special fare tickets will also be sold to Rocky Mountain resorts, where the C.P.R. has hotels at

Banff, Lake Louise and Glacier, and the summer camp at Lake Windermere. All tickets will be good for stopovers at any point en route, and may be used from Winnipeg, on the direct line to Banff, etc., or via Saskatoon, Edmonton and Calgary.

The Pacific Great Eastern Ry., owned and operated by the British Columbia Government, has increased the rates for commutation tickets on the line from North Vancouver to Whistler. The old and new costs of a book of 25 tickets from North Vancouver to the several points on the line are as follows:

	Old rate	New rate
Cypress Park	\$5.90	\$4.50
Caulfield	4.20	4.80
Eagle Harbor	4.75	4.80
Whistler	6.00	7.50

The C.P.R. has for a considerable time been running a train each way between Montreal and North Toronto, daily except Sundays, with connections to and from Ottawa. On May 1, the run of this train will be extended from Yonge St. station, Toronto, to Hamilton, the extended route being via Islington and the Islington-Mimico cut off to the G.T. R. Toronto-Hamilton line and thence to the Toronto, Hamilton & Buffalo Ry. station in Hamilton. The westbound train will leave Montreal at 9.30 p.m. daily except Sundays, and the eastbound train will leave Hamilton at 8 p.m. daily except Saturdays. Through sleeping cars will be operated in each direction.

The Roberval-Saguenay Ry.'s application for permission to operate three times a week service on its Latierriere Branch, instead of a daily service, on the ground that the traffic offering does not warrant the daily service, has been dismissed by the Quebec Public Service Commission. After hearing representations by the Mayor of Latierriere and the Saguenay Chamber of Commerce, considering a letter from the Dominion Minister of Railways, and reading the contract entered into by the Ha Ha Bay Ry. Co. with the Quebec Government, April 3, 1912, which contract was taken over by the Roberval-Saguenay Ry. Co. acquired the Ha Ha Bay Ry., the Commission decided that there was no reason for relieving the company of any of its contract responsibilities. Had there been any abnormal conditions, such as the C.P.R. Commissioners would have had to give them consideration, but under present circumstances they felt compelled to refuse the application.

The Canadian National Ry. made several changes, in the Montreal-Winnipeg and Toronto-Winnipeg passenger service, both ways, starting April 30. Train 1, the Continental Limited, leaves Bonaventure Station, Montreal, 9 p.m. daily, via G.T.R. to Ottawa; Canadian Northern Ry. to North Bay; Timiskaming & Northern Ontario Ry. to Cochrane; National Transcontinental Ry. to Winnipeg, which is reached at 7.30 p.m. daily. This train ran heretofore over the C.N.R., via Capreol and Port Arthur. Train 2, the Continental Limited, leaves Winnipeg at 10.30 a.m. daily via National Transcontinental Ry. to Cochrane; Timiskaming & Northern Ontario Ry. to North Bay; Canadian Northern Ry. to Ottawa; Grand Trunk Ry. to Montreal, arriving at Bonaventure station 10.15 a.m. daily. These trains ran formerly over Canadian Northern Ry. via Capreol and Port Arthur. Train 3, The National, leaves Toronto

union station 10.30 p.m. daily, by Canadian Northern Ry. via Capreol and Port Arthur, reaching Winnipeg 9.10 p.m. daily. Train 4, the National, leaves Winnipeg 5.00 p.m. daily, by Canadian Northern Ry., via Port Arthur and Capreol, arriving at Toronto, 5.30 p.m. daily. This train ran formerly via G.T.R. to North Bay, T. & N.O. to Cochrane and National Transcontinental Ry. to Winnipeg.

Coal Consumption by Locomotives.—The immense amount of coal used by railway locomotives is shown by the following figures:—In the year ended June 30, 1916, locomotives in Canada used 8,677,354 tons; in 1917, 9,788,424 tons; in 1918, 9,839,906 tons, and in 1919, 9,141,023 tons. The consumption for the entire country for the years 1916, 1917, 1918 and 1919 was 28,868,856 tons, 33,123,735 tons, 34,771,832 tons, and 28,863,017 tons respectively. Of this, 60,872 was imported. Averaging the four years, locomotives used 29.6% of all coal used in Canada.

The Great Winnipeg Water District Commissioners passed the following resolution recently:—That where capital expenditure is contemplated along the district railway line in work which would be dependent upon the railway, the parties be notified that it is not the settled policy of the district to continue the operation of the railway, and that there is a possibility of it being discontinued at the end of 1921 or any time thereafter.

Switch Displacement Charged.—Leonard Robertson, Canadian National Ry. station agent at Denmark, N.S., was committed for trial recently on a charge of being responsible for the displacement of a switch at Urquhart's siding, where by a train was wrecked and the locomotive man was killed.

Calgary Wants a Union Station.—The Calgary, Alta., Board of Trade passed a resolution recently favoring a union station in the city for all passenger traffic, and, it is reported, expressed the opinion that the C.P.R. station should be used for the purpose.

Liquor Selling Punished.—Julius Bornstein, a news agent on the C.P.R., Montreal-Toronto line, was fined \$350 and sentenced to 90 days in jail, by the Cornwall, Ont., police magistrate, recently, for selling intoxicating liquor on the train.

The Pennsylvania Rd. has reduced its quarterly dividend from 1½ to 1%, after having paid dividends of 6% a year for 22 years, except in 1906, when it paid 6½%, and in 1907, when it paid 7%.

C.P.R. Aid to Golf Club.—The C.P.R. is reported to have promised to give \$5,000 a year for five years for the development of the United Service Golf Club at Victoria, B.C.

Motor Bus Service.—The St. Catharines, Ont., Chamber of Commerce is reported to have arranged for the operation of a motor bus between St. Catharines and Beamsville.

Two Princes of the old Russian Nobility are said to be working as section laborers on the Canadian National Ry., between Hearst and Armstrong, Ont.

Franklin Railway Supply Co. has removed its general offices to National City Building, 17 East 42nd St., New York, N.Y.

Railway Deficits in Canada and the United States.

While the people of Canada have been brought to a realization of the drain upon the national resources occasioned by the deficits incurred in the operation of the Canadian National Rys., it would be well if they were thoroughly informed of the financial results attending the operations of railways on the American continent in their entirety, as it is a fact that only the roads in an exceptional position have been able to show capitalization, favorable operating conditions, and abundance of traffic, or combinations of these conditions, are earning a favorable return. The C.P.R. is such a favorably situated road, but even its annual report for the calendar year 1920 shows that operating expenses were \$40,000,000 greater than in 1919, while gross revenue increased by a less amount, although rates were increased to partly compensate for wage increases and there was a 25 per cent freight business handled. The operating ratio for 1920 was 84.70 against 81.39 in 1919 and 78.20 in 1918.

Statistics compiled by the Bureau of Railway Economics show that the net operating income of United States lines was \$1,052,776,628 in 1916, \$974,778,937 in 1917, \$693,111,170 in 1918, \$516,290,090 in 1919, and only \$62,264,421 in 1920. The operating ratio was 65.55% in 1916, 70.57% in 1917, 81.54% in 1918, 85.25% in 1919, and 93.59% in 1920.

The Transportation Act was designed to allow U.S. railways to earn 5½ or 6% on their investment. The earnings for Nov. 1920 were \$41,544,063 short of the amount needed to return the 5½%. In September, October and November U.S. railways handled more business than ever before, but their net was only 4% on the investment. In September, they earned at the rate of 4½%, in October at the rate of 4½%, in November at the rate of 3.3%, and in December when the slump in business was becoming pronounced, at the rate of 1.4%. For December, 88 roads, operating 79,151 miles of line, had deficits amounting to \$20,000,000. The total earnings for the month were \$10,000,000, and the total operating kept above zero by the fact that 14 roads having net operating income amounting to \$37,210,000. In 1920, 95 roads had deficits for the year, and the only thing that kept them out of bankruptcy was the government guarantee that extended to September.

As above noted, the net operating income for all U.S. roads for 1920 was something over \$62,000,000; in other words, if it had not been for the government guarantee, the investors in U.S. railway securities would have received an average return of only 1/3 of 1% on their investments.

In January, 1920, 166 class 1 roads in the U.S. operating 200,000 miles of line, had a deficit of \$1,289,291. In Jan. 1920 these roads had an operating income of \$52,971,220. Conditions cannot be said to be improving, in view of such showings as these.

The following table of net operating income or loss for some of the principal roads serves to show the state of affairs in the U.S.

Lehigh Valley	1,437	-491,307	-6.0%	.686
Louisville & Nashville	5,043	-40,210		1,324,567
Maine Central	1,215	-1,008,927		2,165,950
New York Central	5,675	254,633		6,111,625
N.Y., New Haven & Hartford	1,985	-1,542,837		4,006,319
Northern Pacific	6,655	-632,179		3,545,640
Pennsylvania	10,604	-525,759		845,674

-The minus sign indicates an operating loss.

Of course, the present slump in business in the U.S. and consequent lessening of traffic offered, are largely responsible for these operating losses by lines which are commonly looked on as the best and strongest railway properties of the U.S., and the securities of which are held by thousands of individuals in every part of the life of the country. This is greatly evidenced by the figures for car loading. In the busiest part of 1920, approximately 1,000,000 cars a week were loaded with revenue freight. For the week ended Jan. 1, 1921, the number was 598,905; for the week ended Jan. 8, 706,413; Jan. 15, 709,888; Jan. 22, 703,115; Jan. 29, 699,936. For the week ended Feb. 5, the number was 688,000, and since then has averaged about 700,000.

The railways have tried to meet the situation as best they could, by laying off men whose services could be dispensed with and by otherwise cutting down expenses wherever possible. The railway business, however, is one in which the shareholders expect an exceptionally large part of all expense, and for this reason the reduction in expenses could not be made to coincide with the reductions in revenue. But leaving aside all considerations of reduced business and revenue, the record of performance in the year ending 1920, which is shown in its maximum, is not particularly encouraging from a earning point of view.

In view of the foregoing facts it must be evident to the people of Canada that while the Canadian National lines are at an added disadvantage, because of the sparsely settled condition of a large part of the territory served, and for other reasons, their operating results are to a large extent but the natural consequence of a state of affairs which has affected the majority of U.S. railways so adversely.

A Concise Accident Report.—Among the passengers on a transcontinental train were several Chinamen, and a citizen who was somewhat queer in his actions. This latter individual refused to remain seated, and persisted in roaming from one end of the train to the other. Finally he was enticed into a game of fan-tan with some of the Chinamen. After the game had been in progress a short time, a row broke out, and, in the struggle, the train was stopped. The Chinamen and the queer individual fell off the train. On arrival at the terminal, the conductor handed in a report to the Superintendent as follows:—"Two washers and a nut lost from train no. 1."

Railway Lands Patented.—Letters patent were issued during March for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:—

Canadian Northern Ry.	160.00
Canadian Pacific Ry.	85.85
Kettle Valley Ry.	87.76
Manitoba, Southwestern Colonization Ry.	5.87
Nicola, Kamloops & Similkameen Ry.	9.81
[Total]	349.30

Canadian Pacific Railway Co.'s Annual Report.

The C.P.R. Co.'s report for the calendar year 1920 exemplifies the increased cost of railway operation and cost of transportation service to the public. A comparison of some of the figures, with corresponding figures for former years, illustrated the changes which have taken place.

The operating ratios in 1917, 1918, 1919 and 1920 were 69.46, 78.10, 81.39 and 84.70% respectively. In itself, such a condition, in which the operating ratio is steadily increasing, cannot be considered satisfactory. The ratio of 84.70 in 1920 meant but a nominal surplus for the company. However, as pointed out elsewhere in this issue, only railways in an exceptionally strong position can keep their operating ratio down to even that figure under present conditions. Considering that the operating ratio of U.S. railways for 1920 averaged 93.59, C.P.R. shareholders have cause to be pleased with the results of the year.

In comparing the traffic and traffic density for 1920 and 1919, it is seen that the ton miles of freight handled in 1920 was 13,994,508,975, against 12,121,322,012 in 1919. Freight train earnings per mile of road increased from \$8.434 to \$11.072, and freight earnings per train mile increased from \$5 to \$5.50. The tons of revenue freight carried one mile per mile of road increased from 840,928 to 1,066,401. Although the number of revenue passengers carried increased from 15,671,752 to 16,759,555, the number of passengers carried one mile decreased from 1,763,604,596 to 1,718,084,609, involving a decrease in the length of the average trip of from 112.53 to 102.45 miles. Passenger traffic density decrease is shown by the figures for passengers carried one mile per mile of road, which were 135,727 in 1919 and 132,223 in 1920. Passenger train earnings per train mile increased from \$2.59 in 1919 to \$2.81 in 1920, and passenger train earnings per mile of road increased from \$4463.87 to \$4844.78.

The increases in rates which took effect Sept. 13, 1920, had some effect in increasing the company's revenue per unit of transportation sold. The amount received per passenger mile increased from 2.59c. in 1919 to 2.82c. in 1920, and the amount received per ton mile of revenue freight increased from 1.003 to 1.038c. The effect of the increased passenger rate, despite the decrease in passenger rate, was noted in total passenger revenue to increase from \$46,000,000 to \$49,000,000, and the effect of the increased freight rate, coupled with the increase in tonnage handled, was to increase freight earnings from \$111,000,000 to \$145,000,000.

Large as was the increase in gross revenue, from \$176,929,060.00 to \$216,641,349.30, the fact of the operating ratio having increased indicates that operating expenses increased in even greater proportion. Passenger train mileage having changed only slightly, a certain part of the increased operating expense can be attributed to the increased freight business; but it is axiomatic that an increase in traffic will be handled at a much less proportionate cost than that previously existing, and so the explanation for the rapid increase in operating expense will be found elsewhere, viz., in increased coal and material prices, and in the effect of the Chicago Wage Award, retroactive to May 1. In view of the fact

that compensatory rate increases did not take effect till September, the C.P.R.'s showing is remarkable. If, however, freight traffic had fallen off 25% in 1920, instead of increasing to that extent, results would have been materially different.

Car loading, as shown by an increase in the number of tons of revenue freight per loaded car mile, of from 22.08 to 23.44, improved, although excelled in 1918, when it was 23.90. Train loading also improved, the number of tons of revenue freight per train mile being 529.25 in 1920, and 498.07 in 1919, but was likewise excelled in 1918, when it was 530.44.

No small part of the showing made by the C.P.R., which must be regarded as highly gratifying, under the conditions surrounding railway operation at present, is due to the exceedingly high morale among its employees of every rank. A good esprit de corps, a maximum degree of co-operation, and a realization of the fact that reward and promotion will be received as deserved, altogether independently of outside influences, are all necessary for the success of any enterprise. To the existence of these factors throughout the C.P.R. organization, a large part of its success is doubtless due.

Canadian National Rys. Superintendent at Hornepayne.

J. O. Brouillard, Drummond and Arthabasca, Que., asked in the House of Commons recently:—"Who has been appointed Superintendent of Hornepayne Division, Canadian National Rys.; what is his age, and how many years of service as a railway man has he had; who recommended him; why was he promoted to that position?" The Minister of Railways replied:—"J. J. Napier; 39 years of age; has been in service of Canadian northern Ry. since 1905; was recommended by General Superintendent; Mr. Napier was formerly a locomotive man."

The Association of Professional Engineers of Manitoba has decided to offer to Manitoba University the establishment of an engineering scholarship, and assistance in lectures on special engineering subjects, on lines similar to those adopted in the province by the medical profession. The association's officers for this year are M. A. Lyons, Chief Engineer, Good Roads Board; Vice President, J. G. Legrand, Bridge Engineer, Western Lines, Canadian National Rys.; Secretary and Registrar, G. I. Guy, Chief Engineer, Public Utility Commission; council, W. M. Scott, Commissioner, Greater Winnipeg Water District; D. A. Ross, consulting engineer; H. A. Dixon, Chief Engineer, Western Lines, Canadian National Rys.; P. B. Gaffney, Bridge Engineer, Good Roads Board.

United States Minister Harding, in his inaugural address, on Mar. 4, urged the cessation of government ownership in business, and also the cessation of government ownership experiments.

The Canadian Ticket Agents Association will hold its annual meeting and outing at Ottawa, on Sept. 20, and succeeding days, making its headquarters at the Russell House.

The Canadian National Railways "No Politics Order."

The circumstances surrounding the issuing of the so called "no politics" order by President Hanna, of the Canadian National Rys., have been fully reviewed in previous issues of Canadian Railway and Marine World as well as development following its issue. Since the announcement of the board of conciliation's decision and the reinstatement of the three employees affected, we have secured considerable information concerning the status of railway employees in other countries, in relation to political activities, and aspirations to parliamentary honors, which clearly shows that Mr. Hanna was fully justified by the practice elsewhere, outside of all other considerations in the stand he has taken.

In Australia and New Zealand, civil servants and employees of the government railways and steamship organizations are ineligible for political office in so far as the federal or state governments are concerned. In South Africa, railway employees are ineligible to hold seats in parliament. Employees of the French state railways are not permitted to hold seats in the Senate or Chamber of Deputies unless they resign their railway positions. In England, railway employees elected to parliament have to resign their positions on the railway or give up their seats in parliament.

The above shows that in the countries mentioned a man cannot be a railroader and a parliamentarian at the same time, and if he wants to be a parliamentarian it is necessary for him to stop being a railroader. The experience has evidently been that the two spheres of activity do not blend to the advantage of either the individual or the state, and it is evident that, by custom and precedent, Mr. Hanna has ample justification.

Rules for wire construction along, or across, railways, or across or near other lines, wires, conductors, structures or appliances. The Board of Railway Commissioners issued the following circular recently:—"Referring to circular 186, Jan. 5, 1920, applying general order 231, of May 6, 1918, and the conditions and specifications thereby approved, to construction along, as well as across, the railway. Since sec. 372, sub-sec. 1 (b) applies to construction across, or near other lines, wires, conductors, structures, or appliances within the Dominion Parliament's legislative authority, where, therefore, the construction, whether along or across the railway, or across or near other lines, wires, conductors, structures, or appliances, is by consent and in accordance with the Standard Conditions and Specifications set out in the schedule to general order 231, and approved by that order, no further leave of the Board is necessary."

The Nakusp & Slokan Ry. Co. has given notice of application to the Board of Railway Commissioners to recommend the sanctioning of an agreement for the lease of its line and undertaking to the C.P.R. Co. for 99 years from July 1, 1920.

The C.P.R.'s summer train schedule will go into effect May 22, when the last Trans-Canada train will be put in operation for the season, trains leaving Montreal.

The Timiskaming & Northern Ontario Ry. is reported to have put in force a regulation that all passengers must buy tickets before boarding trains.

Regulation of Railway Wages in the United States.

The Transportation Act, passed by the U.S. Congress in 1920, contained a division (secs. 300-316) providing for the settlement of disputes between carriers and their employees and subordinate officials. These labor provisions, as well as the other portions of the act, which has to do with the highly important subject of railway regulation in its entirety, were framed only after a great deal of discussion, both in and outside of Congress. At one stage of the development of the bill, clauses making strikes unlawful were incorporated in it, but were struck.

The main feature of the law as it now stands is the necessity of attempting to settle all disputes in conference, and failing this, of submitting them to a public tribunal endowed with powers of hearing disputes and making decisions concerning them.

Sec. 300 of the act contains definitions of "carrier," "Board," etc., as used therein, "Board" meaning the Labor Board provided for in sec. 304. Sec. 301 provides that in settling disputes all carriers and employees to exert every available means to avoid any interruption to operation, growing out of any dispute between carriers and their employees, and initiate a conference to settle such dispute. If the dispute cannot be so settled it shall be referred to the authorized board. Sec. 302 provided that "Railroad boards of labor adjustment may be established by agreement, between any carrier, group of carriers, or the carriers as a whole, and any employees or subordinate officials of carriers, or organization or group of organizations thereof." Sec. 303 defines the function of these labor boards of adjustment, which may be local, regional, or national, so far as the law is concerned, and which is to settle any dispute not settled by ordinary conference between the parties concerned. Sec. 304 provides for the establishment of the "Railroad Labor Board," consisting of three members representing the railway management, three representing railway labor and three representing the public, all appointed by the President of the U.S. with the advice of the Senate, directly in the case of the public representatives, and from not less than six nominees in the case of the labor and management representatives. Any vacancy is to be filled in the same manner as originally. Sec. 305 provides for appointments in case either labor or management fails to provide nominees. Sec. 306 deals with qualifications for membership on the Board, terms, salaries, etc. The salary of members is \$10,000 a year each. Sec. 307 provides that, in case a board of adjustment as provided by sec. 302, cannot decide a dispute, or if a board of adjustment is not organized, the Labor Board, either upon its own motion, or upon proper application, shall hear and decide any dispute involving grievances, rules or working conditions. The Labor Board will also decide disputes concerning wages. If the Board is convinced within 10 days that any increases it may have granted will necessitate a readjustment of the rates of any carrier affected, it may suspend its decision, and rehear the case, with a view to either affirming or modifying such decision. This section also states that the concurrence of five of the nine members is necessary to a decision, and in a decision concerning wages, at least one of the representatives of the

public must concur. It also provides that "All the decisions of the Labor Board, shall establish rates of wages and salaries and standards of working conditions which in the Board's opinion are just and reasonable." The section further provides that in determining the justness and reasonableness of wages, the Board shall take into consideration, "among other relevant circumstances," the following: (1) The scale of wages paid for similar kinds of work in other industries. (2) The relation between wages and the cost of living. (3) The hazards of employment. (4) The training and skill required. (5) The degree of responsibility. (6) Character and regularity of employment. (7) Inequalities of increases in wages or of treatment, the result of previous wage orders or adjustments. Sec. 308 deals with investigations and published reports of the Board, and provides for the election of a chairman, and the maintenance of offices in Chicago. Sec. 309 provides that "Any party to any dispute to be considered by an adjustment board, or by the Labor Board, shall be entitled to a hearing, either in person or by counsel." Sec. 310 gives the Board power to summon witnesses and the right to examine all records and entitles the Board to call on any district court to enforce these rights on its behalf. Sec. 311 states that any person disobeying the Board, in respect of the terms of the preceding section, is liable to a penalty of \$500 for each offence, each day during the continuation of such disobedience constituting a separate offence. The section also provides that any U.S. civil servant or employee shall furnish the Board any information contained in the records of his office. Sec. 312 provides that no carrier shall pay a lower rate than that in effect on March 1, 1920, when the roads were returned to their owners, until Sept. 1, 1920. Sec. 313 gives the Labor Board power to enquire into and determine any suspected violation by carriers or employees, of any of its rulings. Secs. 314, 315 and 316 provide for the appointment and duties of the Board's Secretary, the making of appropriations for the Board's expenses, and the cancellation of the Board of Mediation and Conciliation established by the act of July 15, 1913, respectively.

The Board, as constituted in 1920, includes the following members:—Group representing the public: R. M. Barton, former member of the U. S. Tennessee Court of Appeals; G. W. Hanger, former Assistant Commissioner, U.S. Board of Mediation and Conciliation; Henry Hunt, former Mayor of Cincinnati. In the group representing railway management are Horace Baker, formerly General Manager of the Cincinnati, New Orleans & Texas Pacific; W. L. Park, former Vice President of the Illinois Central, and J. H. Elliott, formerly General Manager of the Texas & Pacific. In the group representing railway labor are Albert Phillips, Vice President of the Brotherhood of Locomotive Firemen and Enginemen; A. O. Wharton, President A.F. of L., Railroad Department; and J. J. Forrester, President, Brotherhood of Railway and Steamship Clerks, Freight Handlers and Express and Station Employees. Messrs. Barton, Phillips and Baker are appointed for three years; Messrs. Hanger, Wharton and Elliott for two years, and

Messrs. Hunt, Forrester and Park for one year.

The Board was constituted about April 13, 1920, and started hearings on wage demands, in Washington. Its first official order dismissed the petition for hearing on the part of the "outlaw" strikers, on the ground that they had not obeyed the letter and spirit of the law requiring that transportation suffer no interruption owing to disputes. On May 17, the Board moved to its permanent headquarters in Washington. In July it issued the order granting increases in pay to railway employees, known as the "Chicago Wage Award." Shortly after, it issued an order granting increases amounting to \$30,000,000 yearly to American Railroad Express Co. employees. Another interpretation of interest concerned an application for hearing in disputes between the Spokane & Eastern Ry. & Power Co., and the Forest Dodge, Des Moines & Southern (electric road), and their employees. The Board denied its jurisdiction, on account of sec. 300 stating "The term 'carrier' includes any express company, sleeping car company, and any carrier by railroad subject to the Interstate Commerce Commission except a street, interurban, or suburban electric railway not operating as a part of a general steam railroad system of transportation." Another interpretation of interest concerned the Erie Rd., which reduced the pay of its skilled labor without the conference required by law, and was ordered by the Board to restore the rate as set forth in its July award.

The policy of having railway revenues controlled by the Interstate Commerce Commission, and railway wages, representing two thirds of railway operating expenses, controlled by the Railway Labor Board, contains possibility of conflict in regulation in its entirety. As noted above, sec. 307 specifically states that the Board, in determining the justness of wages, shall take into consideration, "among other relevant circumstances" the conditions as set forth. Just how far the earnings of the railways, and the scales of rates as prescribed by the Interstate Commerce Commission, will be considered by the Labor Board as a "relevant circumstance" in its deliberations, it is difficult to say. The Board itself has been rather non-committal to date, stating that while no doubt railway earnings are relevant, it is the Interstate Commerce Commission's function to regulate rates, and entirely beyond the Labor Board's concern as to what the rates are. To any one enquiring into the railway situation as it exists, it is evident that the arrangement of affairs, involving as it does a distinct division of responsibility in matters which are so closely and inseparably connected as railway wages and rates, can largely influence the degree of success attending the regulation of U.S. railways under the Transportation Act of 1920 and future developments will be interesting and worth watching.

E. J. Wearang, General Agent, Grand Trook Railway, Liverpool, Eng., in receiving his subscription writes—"I read Canadian Railway and Marine World regularly and look forward to getting it, as it is always a source of interest and contains very useful information."

Reduction in Number of C.N.R. Shop Employees.

A. B. Copp, Westmoreland, N.B., said in the House of Commons April 11:—"I desire to refer to a matter which has been dealt with in the public press for the last two or three days, and I should be glad to have an expression of opinion regarding it from the Minister of Railways. I refer to the reduction in the number of working men in the Canadian National Rys. shops in Moncton. There is a rumor to the effect that from 600 men are to be turned out from the shops. Is that report correct, and, if so, is the order only a matter of temporary expediency or is it to be permanent? This is of great importance to the people in that city as well as to the public generally."

The Minister of Railways said:—"The member informed me at six o'clock of his intention to bring this matter up on the orders of the day. I called up President Hanna at Toronto, and asked him the real situation. Mr. Hanna informs me that, owing to a decline in the business of the railways, they could not find work for all the employees in the shops. They therefore offered to keep on all hands and reduce work to half time. All employees in the shops west of Port Arthur accepted. Those on the Government Railways, as a body refused, and the management could therefore do nothing but lay off temporarily all surplus employees. Just as soon as there is work the men will again be taken on."

Steel Rail Orders for Canadian Railways.

The Algoma Steel Corporation, Sault Ste. Marie, Ont., had to close down, on Dec. 25, 1920, for six weeks, owing to want of orders, but it then received a Canadian National Rys. order for 40,000 tons, 85 lb., C.P.R. standard section steel rails, which were rolled and shipped to western points by the middle of March. It also received an order from the Michigan Central Rd., for 15,000 tons, 105 lb., Dudley section, which were also shipped, after which the mill closed down again. Recently another order has been received from Canadian National Rys. for 50,000 tons 85 lb. C.P.R. standard section rails, principally for western points, which will be sufficient to keep the mill in operation for a couple of months. It also has an order from the Timiskaming & Northern Ontario Ry., for 2,900 tons of 90 lb. A.R.A. type, A rails. Negotiations are said to be in progress with the Dominion Iron & Steel Co. for 20,000 tons for the Canadian National Rys.

J. C. Douglass, South Cape Breton, and Richmond, N.S., said in the House of Commons on April 11:—"I desire to draw the Minister of Railways' attention to a Sydney, N.S., press dispatch of April 9, as follows:—"In a statement to the Canadian Press today, R. M. Wolvin, President, Dominion Steel Co., stated that the company had offered to roll rails for the Canadian National Rys. at actual cost, but he gave positive denial to a statement appearing in an Ottawa dispatch, which reported the offering of a large rail order to the company by the Railways Department." In view of the importance of this matter, and the large amount of unemployment that prevails at Sydney and Glace Bay in consequence of the small amount of business being

done in connection with coal and steel operations, I desire to ask the Minister if he has any statement to make on the subject."

The Minister of Railways said:—"I notice the article in question and I wish to make the following statement with respect to it:—The Canadian National Rys. have rails for renewals and repairs for 1921. Notwithstanding this fact they have offered to take a large quantity of rails for new work. They have offered the Algoma Steel Co. the same price as paid it for rails during 1920, \$55 a ton, and have offered the Dominion Iron & Steel Co. the same price. This price both companies have refused and are asking higher prices. As the mills have reduced the wages of employees, and rails in the U.S. are offered at \$47 a ton, it is not considered reasonable that the Government should be called upon to pay an increased price for rails for 1921."

Storage Battery Car Test on Canadian National Railways.

The Canadian National Rys. is arranging to make a 30 day test of a storage battery car between Belleville and Trenton, Ont., on its Rideau Subdivision, Ottawa Division. The distance between the two points is 11.4 miles, and the intention is to place the car in hourly service between them, leaving Trenton at 8:55 a.m. on the first trip of the day and leaving Belleville at 10 p.m. on the last trip. Two stops are contemplated between Belleville and Trenton, and if it is found that the car can make the time it is likely that one or two more stops will be scheduled. At present there are three passenger trains each way daily between the two points, and the hourly schedule will be necessarily interfered with at certain times by reason of having to clear these regular trains.

In the event of the tests proving successful, it is possible that several of these cars will be introduced into branch line service, an example of such service being on the line from Trenton to Picton, Ont., 30.6 miles. The expectation is that the cars will be suitable on such runs, where the traffic does not compensate for the expense of frequent steam operation and is not sufficient to warrant the large capital expenditures incidental to electrification.

The car to be used in the test is 55 ft. long with the interior arrangement practically the same as that of an ordinary first class passenger car. The car does not generate power, but is equipped with storage batteries, the capacity being such that the car will cover about 140 miles in one charging of the battery-representative of the present day batteries, on divisions where the grades are age. The maximum speed which can be attained is 40 m.p.h. on level track. The car has been built in the United States, special ball bearing trucks being a feature of its construction. The charging of the batteries for the test runs will be done at Trenton, where the railway has the necessary facilities.

The Canadian National Rys. have been ordered by the Board of Railway Commissioners to restore train service between Middleton and Port Wade, N.S.

The New Brunswick Government, during the year ended Oct. 31, 1920, collected \$2,573.34 in taxes from electric railways.

Grand Trunk Railway Tourist Traffic to Georgian Bay.

The G.T.R. has made arrangements with the Midland, Ont., Town Council under which tourist traffic to Georgian Bay will be handled from Midland, instead of from Penetanguishene as heretofore. The G.T.R. will run an express train from Toronto to Midland. The service will probably be started June 25, continuing to about Sept. 6. The north-bound train will leave Toronto about 10 a.m. reaching Midland about 2 p.m., and the south-bound train will leave Midland about 12.45 p.m. reaching Toronto about 4.20 p.m. The traffic on Georgian Bay will be handled by the Georgian Bay Tourist Co., and the Honey Harbor Navigation Co.

The agreement with the G.T.R. provides that the Town of Midland shall provide this year a plank platform 10 ft. wide paralleling track 11, from 60 ft. west of the westerly limit of King St. easterly to the intersection of track 11 and the Esplanade track, for the transfer of passengers between trains and steamboats; to increase the width of the present planked portion of the dock from 24 ft. to 40 ft. for the whole length of the dock, and to erect a canopy roof thereon 14 ft. wide by 158 ft. long, together with fences; to arrange for the free use by the G.T.R. of the warehouse at the foot of King St. until a permanent baggage room is built by the town, to undertake the transportation of passengers and baggage between the trains and the steamboats, and to provide for a steamboat service between Midland and Copperhead. The town also agrees to complete in 1922 the construction of the dock from King St. westerly to a point in line with the present planked portion of the dock, and to extend the railway siding from the easterly limit of King St. to the westerly end of the dock, the work to be of sufficient strength to carry passenger trains; to rebuild and maintain the trestle from the eastern limit of King St. to the easterly limit of the trestle; and to repair the siding thereon and the track approaching it, to erect a frame building 42 x 14 ft., containing a waiting room 14 x 21 ft., lavatory accommodation and a baggage room adjoining the station, for the accommodation of the traffic. The G.T.R. agrees to continue to run tourist traffic via Midland as long as the steamboat service and all other facilities are satisfactorily maintained.

Ticket Collectors on Canadian National Rys. Trains.—Hon. R. Lemieux, Maisonneuve and Gaspé, Que., asked in the House of Commons recently: "How many train agents are there on the Canadian National Rys. System?" The Minister of Railways replied: "Assuming that by 'train agents' ticket collectors is meant, the management states there are 25." In answer to other questions, the Minister stated their salaries are from \$150 to \$175 a month. They are not appointed to assist conductors. They have been appointed since June 1910. There is no record of the conductors having applied for the assistance of ticket collectors.

Exchange on Freight Charges Between Canada and the United States.—The surcharges collected during April, under Board of Railway Commissioners general order 326, of Jan. 14, were 8%.

The Maritime Provinces' Demand for Special Railway Rates.

A Fredericton, N.B., press dispatch of April 12 stated that a member of the Nova Scotia Government had been in consultation there with the New Brunswick Government, and that the two provinces would join in a demand for the restoration of the old commodity rates and differentials on the Intercolonial Ry., and in opposing the application of rates put into effect by the Board of Railway Commissioners for the I.R.C. since 1916, adding that the I.R.C. was not built as a commercial proposition, but to make Confederation possible. In support of this contention it is alleged that all governments and all managements of the Intercolonial since Confederation up and until 1916 had established rates that would permit the products of industries in the Maritime Provinces to have a freight rate that would take them into the centers of Quebec and Ontario for competitive business.

The situation, we are advised, is that, prior to the increases in railway rates which were sanctioned by the Board of Railway Commissioners, as concerned the railways under its jurisdiction, the industrial interests of the Maritime Provinces were favored with a scale of rates applying on their products destined for Ontario and the west, which compensated in large measure for their geographical disadvantage, involving longer hauls, and which enabled them to compete successfully with producers in the Montreal territory and the areas to which their goods were destined. Although the Board of Railway Commissioners has no jurisdiction over the Intercolonial Ry., the increases in rates as applying to lines under its jurisdiction were also applied to certain I.R.C. rates, with the result that the existing differentials were destroyed, and the spread, as between Maritime Province points and points in the Montreal territory were materially increased. The spread as between Sydney, N.S., and Montreal, in favor of the latter, on freight to Fort William, Ont., was, as of Sept. 1, 1914, on first class traffic, 30c. On April 1, 1916, it was 34c.; on April 1, 1918, it was 39½c.; on Aug. 15, 1918, it was 49½c., and after the application of the 40% increase was 69c. The spread on 5th class traffic was 15, 17, 19½, 24½ and 34½c. for the respective dates as above, and on other classes in proportion. Rates from Halifax, as compared with those from Montreal to Toronto, showed a difference in favor of Montreal on first class, on April 20, 1913, of 22c.; on Dec. 1, 1916, of 25c.; on March 15, 1918, of 30c.; on Aug. 12, 1918, of 38½c., and, after the 40% increase, of 52½c. On the rates to Windsor, Ont., these spreads on first class ran 20, 26, 30, 37½ and 52½c. on the respective dates. Many further examples could be cited, but the foregoing are sufficient to demonstrate the grounds on which the Maritime Provinces largely base their complaint, viz., reduced ability to compete in common markets by reason of increasingly unfavorable differentials.

In connection with that part of the press dispatch which refers to rates put into effect by Board of Railway Commissioners of Canada for the Intercolonial Ry. it must be borne in mind that section 5 of the Railway Act of 1919 excludes government railways from the Board of Railway Commissioners' jurisdiction, as did the previous act, so that,

as a matter of fact, while decisions of the Board, in matters of joint rates, must inevitably affect the I.R.C., the I.R.C. rates themselves are not subject to review by the Board. The Board's position in the matter is clearly shown by a recent decision of Assistant Chief Commissioner McLean, in connection with the Sydney and North Sydney Boards of Trade application re export rates, in which he stated: "The fundamental question is the question of our powers . . . there is the further point that, while provision is made in Canadian National legislation, that, on the issuance of orders in council, railways in which the government has ownership or interest can be brought under our jurisdiction, no such order in council has been issued yet, in regard to Canadian Government Rys. As our powers must be derived from acts passed by parliament, we have to say frankly that we have been given no power to control rates over the Canadian Government Rys., or to compel them to initiate rates. Under the present circumstances, having no jurisdiction . . . the Board has no power to issue the order asked for."

Mr. McLean referred to legislation which would put all the Canadian National Rys. lines under the Board's jurisdiction, which will be applied at some future date, but at present the country is presented with a situation wherein some portions of the Canadian National system are subject to the Board's jurisdiction, while others are not. The Intercolonial, Prince Edward Island, and National Transcontinental Rys., as being purely governmental undertakings, are not; the Canadian Northern Ry., being a government undertaking only so far as concerns stock ownership, is under the Board's jurisdiction. The Grand Trunk Pacific Ry., built by a company and operated by the Canadian National Rys. directors for the receiver, in this case the Minister of Railways, is under the Board, as will be the G.T.R. when the Government acquires the stock. The Quebec & Saguenay, and other small eastern roads purchased outright by the Government and incorporated into the Canadian Government Rys., are not under the Board's jurisdiction.

To speak of rates put into effect by the Board of Railway Commissioners of Canada, for the Intercolonial Ry. since 1916, is not strictly accurate, the situation being that the increases applying to lines under the Board's jurisdiction were automatically applied to the rates covering traffic over the I.R.C. section of the Canadian National Rys., to the end that existing differentials were greatly changed, as above noted.

That people in the I.R.C. territory have always maintained that they should receive lower rates than the standard scale has been commonly known, and in the past they have received considerable concessions in this direction. When delegates representing the then Province of Canada, comprising Quebec and Ontario, met with delegates from the Provinces of New Brunswick and Nova Scotia, in conference, at Quebec, in Oct. 1864, to arrange for their confederation as the Dominion of Canada, the Grand Trunk Ry. was in operation from Sarnia, Ont., to Riviere-du-Loup, Que., about 120 miles east of Quebec City, a total distance of about 780 miles; and the Nova

Scotia Ry. was in operation from Halifax to Truro, about 64 miles, leaving a gap between Truro and Riviere-du-Loup of about 500 miles. The European & North America Ry. was also in operation from St. John to Shediac, N.B., about 108 miles. One of the resolutions passed by the conference provided that the general government to be established for the Dominion should secure, without delay, the completion of a railway from Riviere-du-Loup to Truro and this was embodied in the British North America Act, passed by the British Parliament, and assented to in March 1867, which declared that the Dominion Government should, within six months after the union, provide for the commencement of a railway, to connect the river St. Lawrence with Halifax, for its construction without intermission and for its completion with all practicable speed. But so far as we can ascertain there was no provision that special rates were to be given. Similarly, before British Columbia came into Confederation in 1871, the building of the C.P.R. through to the Pacific Coast was provided for, but, so far as we are aware, British Columbia has never contended that the line should not be run as a commercial enterprise.

The extent to which the interests of the Maritime Provinces have been favored by special rates, the extent to which the basis existing before the increases took effect was determined by considerations of a political nature, and the extent to which they were based on purely economic consideration, would take more space to discuss than can be given at this time. We are informed that the general enquiry concerning the entire rate structure of the country which is being conducted by the Board of Railway Commissioners will include these features of I.R.C. territory rates.

Reduction of Dominion Atlantic Railway Passenger Service.

The Board of Railway Commissioners passed order 30,809, March 21, as follows:—Re Dominion Atlantic Ry.'s application for reduction of train service between Truro and Annapolis, N.S. Upon hearing the application at Moncton, N. B., March 7, the applicant company, the Berwick, Middleton, Lawrenceton and Annapolis Royal Roads of Trade, and the Nova Scotia Shippers' Association being represented, the Board orders that the company be authorized to provide the following train service between Truro and Windsor, viz.: Train 1, to leave Truro, daily, except Sunday, at 6.35 a.m. and arrive at Windsor at 8.50 a.m., as at present; train No. 4 to leave Windsor at 11.30 a.m. and arrive at Truro at 1.50 p.m., daily, except Sunday. That the operation of trains 96 and 97 from Kentville to Annapolis be cancelled.

Petroleum & Transport Ltd. has been incorporated under the Dominion Companies Act, with a \$3,000,000 authorized capital and office at Montreal, to acquire and develop oil properties; to own and operate all or any means of transport, wharves, docks, pipe lines, etc. The incorporators are:—Hon. A. J. Shaugnessy, K.C., R. C. Holden, J. D. Wright, C. Arnold and B. Forbes, Montreal.

Locomotive Boosters for Timiskaming & Northern Ontario Railway.

A Kingston, Ont., press dispatch of April 8 says—"The first locomotive booster ever used in Canada was yesterday tested on the mikado freight locomotive built by the Canadian Locomotive Co. for the T. & N.O. Ry. and proved a decided success in every way, so much so that it will be applied to four remaining locomotives being built for the T. & N.O. Ry. The booster consists of a simple two cylinder steam engine, upon a cast steel bed plate. It is applied to the two trailing wheels of the locomotive, hitherto simply used to carry the weight of the locomotive. It is used for heavy loads at speed, and increases the steam making capacity of locomotive boilers."

The foregoing is no more correct than the ordinary daily newspaper report. As far as Canadian Railway and Marine World can ascertain, there was no test of the booster, in the ordinary sense of the term, on April 7. In response to our enquiry the Canadian Locomotive Co. wrote us on April 8 as follows: "The locomotive was tried yesterday, and performed very satisfactorily. We are, however, unable to furnish you with any data, as no record was kept, and no load was applied. We believe the T. & N.O. R. will conduct some tests after the locomotive has been broken in, in service. We may add that, in a run of 14 miles yesterday, the booster was cut in and out several times, and operated very smoothly."

The so called "test" on April 7 had nothing to do with the decision to equip four Pacific type locomotives with boosters, which was arrived at last autumn, when the locomotives were ordered, as was stated in Canadian Railway and Marine World for Dec. 1920. It was also decided at the same time to have a booster put on one of the four mikado locomotives which were ordered in May 1920, as stated in Canadian Railway and Marine World for June 1920, and it was this locomotive which was given a trial run on April 7.

The statement in the press dispatch that the booster "is used for heavy loads at speed, and increases the steam making capacity of locomotive boilers," is altogether erroneous and misleading. In the first place, the booster is designed to operate only at slow speeds. Its true function is to aid in starting a train, and assist in hauling it over heavy grades, where the speed is necessarily slow. The theory is that, when the speed is low, the capacity of the boiler is in excess of the demands for steam, and that the surplus steam which may be generated may as well be used in furnishing additional tractive effort. This theory is put into practice by utilizing the trailing wheels as driving wheels for the time being, through the medium of the booster. How the writer of the press dispatch reasons that the booster increases the steam making capacity of the boiler is a mystery.

One would imagine that the additional strain on the boiler, when the booster is cut in, would necessarily tend to reduce steam pressure considerably, and it seems that where the booster is to be used successfully, on grades of any length, the capacity of the boiler must be high, in relation to the cylinder demands made on it. Beyond the possibility of steam leaks, due to lack of maintenance, this would seem to be the

only consideration of consequence that could act to make the booster otherwise than highly successful.

As was stated in Canadian Railway and Marine World a few months ago, the ruling grades on the T. & N.O.R. are approximately 1½%. There are several of them, and all quite short. On account of being short, and so much steeper than the average, the management believes the booster to be well adapted to furnish the additional tractive effort required to surmount them. The occurrence of a number of station stops, on grades as high as 1½%, also makes the booster exceptionally adaptable.

The press report also states that the trailing wheels were hitherto used simply to carry the weight of the engine. The next press report will likely have it that the driving wheels, not being favored with a little weight to carry, are used simply to balance the pistons.

Railway Wages Debated in Toronto.

A debate on railway rates and wages took place before the Canadian Club in Toronto on April 11, between D'Arcy Scott, barrister, etc., Ottawa, a former member of the Board of Railway Commissioners, and Jas. Murdock, Vice President of the Brotherhood of Railway Trainmen. Mr. Scott, who spoke first, said he was not going to rely on the \$70,000,000 deficit on the Canadian National Rys. as a reason for the reduction of railway wages, and proceeded to trace the growth of the wage bills, by the application in Canada of the McAdoo award and the Chicago wage award. He pointed out the overtime provisions of the railway wage agreements, with examples to show how they operated, citing the case of a conductor earning over \$5,000 yearly, and other examples of \$300, \$350 and \$400 monthly wage receipts. He pointed out that the 8-hour basic day was a large factor in the increase of overtime payments, made at the time and one half rate, and that high railway wages keep up prices in other industries, and retard a return to normal conditions.

Mr. Murdock said that the course of events indicated to him a desire, on the part of the public, to sacrifice the wages of Canadian railway employees on the railway altar, for the purpose of enhancing the welfare and prosperity of the entire population of the country. The whole proposition resolved itself into a question of whether prosperity in this country must be purchased at the expense of railway employees. He emphasized the risks and hazards incidental to railway work, claimed that the work tends to wear a man out quickly, and stated that the people, regarding the statements of exceptionally high earnings on the part of individual employees, fail to realize that these employees earn far above the average by reason of working long overtime hours.

A large audience listened to the debate; but, as each speaker had only 25 minutes in which to present his views, there was a feeling on the part of all that only the fringe of the subject had been touched, and that much more time would be necessary for a thorough dis-

cussion and analysis of this important matter.

Since the debate, Mr. Murdock has written Mr. Scott a letter, which was given to the press. In it he claimed that Mr. Scott was in error in having referred to all train and locomotive men being paid time and one half for overtime, and stated that on nearly one half of the railway mileage of Canada, neither freight locomotives nor trainmen are so paid. He further stated that no conductor earns \$5,000 yearly, although it is possible for a man to earn at this rate for a month or so at a time by working double time. In concluding, Mr. Murdock stated that the hardest job a labor leader has is that of convincing his men that those in high places are not deliberately stating untruths in regard to labor; that he did not consider that Mr. Scott would intentionally convey inaccurate information to the public, but that statements made by Mr. Scott in the debate had the same result so far as the mind of the average individual laboring man was concerned.

In reply, Mr. Scott wrote an open letter to Mr. Murdock, in which he said that Mr. Murdock might better have made his statements at the debate, as he had had much time to do so, after Mr. Scott had finished speaking, instead of attempting to continue the debate in the newspapers. Mr. Scott points out that the whole burden of his argument was a condemnation of the application of the McAdoo award to Canada. In connection with his statement about the earnings of a conductor on Ottawa-Brockville run, he states that he got his information from a man who had been in the union. Mr. Murdock's organization as long as, or longer than, Mr. Murdock has. His information was to the effect that the conductor earned \$420 a month, which, multiplied by 12, is \$5,040 a year, and although he conceded that it was improbable that a conductor would keep up his work at this rate for a whole year, the fact remained that he could earn that much in a year, under the rules, by doing so. He contends that there are many such cases in Canada, where a crew runs into a terminal, spends several hours at home at that terminal, and takes the train back again the same day, with the consequence that the crew is paid for the 12 or 14 hours used in making the round trip, although they are resting perhaps six hours out of that time. He states further that although the cost of living has come down, and wages in other industries have been reduced, Canadian railways are still paying the rates of wages fixed by the two U.S. American awards, and that although he wants to see railway freight and passenger rates reduced, he cannot see how it can be done so long as these railway labor awards, to which Canada was not a party, remain in effect.

United States Railroad Administration. President Harding has named J. C. Davis, of Ohio, who has served as General Counsel to the Railroad Administration, to be Director General, succeeding J. B. Payne, who resigned a short time ago. Mr. Davis' duties will be principally the winding up of the Administration's affairs.

Italian Railway Electrification. — A Rome cablegram says that Italy has decided to electrify about 5,000 miles of its railways, and will send a mission to the United States shortly to study railway electrification there.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 332. March 14.—Ordering that live stock valuations in classification of household goods and settlers' effects, as set out on page 106 of Canadian Freight Classification 16, be amended to agree with provisions of sec. 1 of Livestock Bill of Lading, schedule A. approved by General order 329, dated 1/29/20.

General order 333. March 26.—Prescribing form, size and style of tariffs of telephone companies; of telephone tolls to be charged; also system of publication and posting of rates and tariffs.

General order 334. April 1.—Amending general order 188 to provide that Regulations for the Uniform Maintenance of Way Flagging Rules for Impassable Track may, at option of railway companies, be printed in their rule books, in lieu of working timetables.

General order 335. April 1.—Amending general order 236, re protection to railway employees, and adding the following: "The driver shall be the leading engine giving up the train short of the destination of the train, a test of the brakes must be made, and that the engine is operative from the engineer's valve of the engine remaining with the train."

General order 336. April 2.—Amending Uniform Code for Freight. This order is given in full under "Amendment to Uniform Code, rule 99" elsewhere in this issue.

General order 337. April 8.—Re charges for fixing car doors and landing charges in cases where box cars are supplied by a railway company in lieu of stock cars ordered by the shipper. This order is given in full under "Traffic Orders by Board of Railway Commissioners" elsewhere in this issue.

General order 338. April 13.—Authorizing Bell Telephone Co. for further increase certain tolls.

30,773. March 15.—Ordering Canadian National Ry. to restore train service between Middleton and Port Wade, N.S., and rescinding order 30,772.

30,774. March 15.—Authorizing C.P.R. to build spurs for R.C. Spruce Mills Co., Wattsburg, B.C. General order 339. April 4.—Ordering that the time within which Vancouver Harbor Commissioners may enter into agreement with C.P.R. for occupation of lands and building of tracks in Vancouver, B.C., be extended until June 30.

30,776. March 16.—Ordering C.P.R. to erect shelter at Stuckey, N.B.

30,777. March 16.—Ordering Canadian National Ry. to build grain loading platform on n.w. 1/4, Sec. 27, Tp. 47, Range 18, west 3rd meridian, at mile 26, Sturgeon River Subdivision, Sask.

30,778. March 15.—Dismissing Canadian National Ry. application to remove station agent at Ocas, Ont.

30,779. March 14.—Approving agreement between Bell Telephone Co. and Thamesville Telephone Co., Kent County, and rescinding orders 6,992 and 23,256.

30,780. March 16.—Recommending to Governor in council for sanction agreement between Vancouver, B.C., and C.P.R. re lease of former to latter for 99 years.

30,781. March 16.—Ordering Michigan Central R.R. to lower level of bridge over power canal, with wigwag signals, at crossing just east of Charins Cross station, Ont.

30,782. March 16.—Approving revised plans of proposed Michigan Central R.R. bridge over power canal, at Montrose, Ont.

30,783. 30,784. March 16, 17.—Approving Bell Telephone Co. agreements with Bell Telephone Co. of Wellington, Grey and Dufferin Counties, Ont., and rescinding orders 6,993 and 24,539; and LaSalle Rural Telephone Co., Algoma District, Ont.

30,785. March 16.—Authorizing C.P.R. to build spur across line in Block C.D.L. 196, between Vancouver and Cordova Sta., Vancouver, B.C.

30,786. March 17.—Approving agreement between Bell Telephone Co. and Rockwood & Oustic Telephone Co., Huron County, Ont., and rescinding order 24,766.

30,787. March 17.—Authorizing Canadian National Ry. to cross a number of highways on its station Southwesterly Branch, mile 0 to 311.8, Sask.

30,788. March 16.—Authorizing Canadian National Ry. to cross 2nd meridian, between Secs. 11 and 12, Tp. 23, Range 17, west 3rd meridian, Sask.

30,789. March 18.—Ordering Grand Trunk Pacific Ry. to erect station between Dominion and Quebec Sts., Prince George, B.C.

30,790. March 17.—Approving Canadian National Ry. revised location on east half of n.w.

1/4 Sec. 15, Tp. 17, Range 11, west 6th meridian, R.C.

30,791. March 17.—Authorizing C.P.R. to cross, divert and close diverted portion of highway at mile 37.92, Rosetown Southerly Branch, Sask.

30,792. March 17.—Ordering G.T.R. to remove and bridge at Macdonald, near Birch, Ont., so as to make it cross track at right angles.

30,793. March 15.—Rescinding order 28,414, June 4, 1910, ordering G.T.R. to divert road allowance between Cams, 4 and 5, Raleigh Tp., Ont., so as to make it cross track at right angles.

30,794. March 16.—Declaring that charge of 3 1/4 c. per 100 lb. made by C.P.R. for switching stone from Thames River Co.'s plant to factory at St. Marys, Ont., was wrongfully made and should have been 2 c. per 100 lb., and authorizing C.P.R. to refund the overcharge to DeVinney & Campbell, St. Marys, Ont.

30,795 to 30,803. March 17.—Dismissing applications of Quebec, Montreal & Southern Ry. to remove station agents at Contrecoeur; authorizing removal of station agents at Varennes and St. Jules; dismissing applications to remove agents at St. Francis; dismissing applications to remove agents at St. Jean; dismissing applications to remove agents at Bequets, all in Quebec.

30,804. March 17.—Approving Hall Electric Co.'s Standard Local Passenger Tariff C.R.C. no. P-16 providing for a 25c. fare between Ottawa and Carleton Place, and for Park Joey Club, Ont.

30,805. March 17.—Ordering C.P.R. to enlarge station at Bindlos, Alta., by June 15.

30,806. March 18.—Approving agreement between Bell Telephone Co. and Leith & Annan Telephone Co., Grey County, Ont.

30,807. March 18.—Ordering C.P.R. to appoint station agent at Barnwell, Alta.

30,808. March 18.—Approving British Columbia Electric Ry. to build spur for Granite Island Quarries, South Vancouver, B.C.

30,809. March 21.—Ordering Dominion Atlantic Ry. to provide train service between Truro and Windsor, N.S., and cancelling operation of trains 96 and 97 from Kentville to Annapolis, N.S.

30,810. March 18.—Authorizing G.T.R. to connect with and operate over spur built by Hydro Electric Power Commission of Ontario, in Brant Tp., Ont.

30,811. March 22.—Approving supplement 16 to Canadian Freight Classification 16, including ratings on lumps.

30,812. March 21.—Declaring that for the present, C.P.R. crossing near Tramping Lake station, Sask., is protected to Board's satisfaction.

30,813. March 21.—Ordering Canadian National Ry. to appoint caretaker at Woodlands, Ont.

30,814. March 18.—Authorizing New York Central R.R. to make highway crossing at Melocheville, Que.

30,815. March 21.—Authorizing Calgary & Edmonton Ry. (C.P.R.) to make highway crossing at Victoria Ave., Red Deer, Alta.

30,816. March 21.—Approving Grand River Ry. to take certain land in Preston, Ont., for efficient operation of its line.

30,817. March 21.—Amending order 30,715 re removal of Dunlop St. east of Cookville station, Ont.

30,818. March 21.—Approving agreement between Bell Telephone Co. and Percy Tp., Ont., and rescinding order 24,624.

30,819. March 21.—Declaring that for the present Canadian National Ry. crossing at Government's mill 71.3 west of Beauséjour, Que., is protected to Board's satisfaction.

30,820. March 22.—Approving Canadian National Ry. revised location through Simcoe, 29, Tp. 18, Range 14, west 6th meridian, B.C.

30,821. March 21.—Extending to May 15 time within which Canadian Northern Ry. may build spur for J. C. Case Threshing Co., Ont.

30,822. March 21.—Dismissing application of Town of Simcoe, Ont., for order directing railway company to give revised rates on Simcoe as favorable rates on freight going in and out of Simcoe as they accord to other places.

30,823. March 21.—Approving application to build umbrella roof over platform at Val Morin station, Que., and dismissing application of residents of order directing it to enlarge station and change its location.

30,824. March 24.—Approving Canadian Northern Ry. location mile 0 to 2,666, Tps. 49 to 52, Range 22, west 2nd meridian, Sask., and authorizing crossing of a number of road allowances.

30,825. March 26.—Authorizing Canadian Northern Pacific Ry. to cross highway in s.e. 1/4 Sec. 8, Tp. 19, Range 18, Kamloops Division of Yale District, B.C.

30,826. March 24.—Declaring that for the

present C.P.R. crossing near Stalwart, Sask., is protected to Board's satisfaction.

30,827. March 21.—Rescinding order 21,941, June 16, 1917, authorizing Grand Trunk Pacific Ry. to build spur for Alsip Brick & Supply Co., North Alberta District, Alta.

30,828. March 26.—Declaring that C.P.R. crossing near Rosetown, Sask., is protected to Board's satisfaction.

30,829. March 29.—Ordering Canadian National Ry. to build subway on Water St., Winnipeg, within six months.

30,831. March 30.—Authorizing N. W. Hawkes, New England Railway, Freight Association, on behalf of New England railways, to further suspend effective date of certain schedules naming derivation and reassignment rules, regulations and charges until April 30, upon one day notice; also granting similar permission to all carriers in the U.S. publishing similar tariffs.

30,832. March 30.—Approving agreement between Bell Telephone Co. and Zion & Wolsley Telephone Co., Grey County, Ont.

30,833. March 30.—Approving Main Central R.R. Standard Freight Mileage Tariff C.R.C. no. C-2010.

30,834. to 30,837. March 29.—Approving Canadian National Ry. revised tariff between stations 35 and 36, Tps. 17-14, mile 33.65 to 35.75; fractional s.e. 1/4 Sec. 13, s.e. 1/4 Sec. 28 and n.w. 1/4 Sec. 27, Tp. 19, Range 15, west 17 and 18, Tps. 19, Range 15, mile 24.65, and s.e. 1/4 Sec. 2, east half of Sec. 3 and east half of Sec. 10, Tp. 18, Range 14, mile 81.6 to 33.65, west 6th meridian, B.C.

30,838. March 26.—Authorizing Canadian National Ry. to rebuild bridge over South Saskatchewan River, at mile 159.8 Duck Lake Subdivision, Saskatoon, Sask.

30,839. March 30.—Authorizing Chicago, Indianapolis & Louisville Ry. to file with Board, effective April 1, 1921, revised tariffs, showing increased rates on stone, in carloads, to points in Ontario, as authorized under I.C.C. ex parte no. 74.

30,840. March 30.—Authorizing Canadian Northern Ry. to open for traffic its Lucky Lake Branch from Lucky Lake to Scapa, mile 19.7 to 24.7, Sask.

30,841. March 26.—Dismissing application of Brodies Ltd. and Jos. Brunet, Montreal, for reduction in rates on granite paving blocks from Hebert & Co., Montreal, to St. Marysville, Montreal, to the basis of rates in effect prior to Sept. 13, 1920.

30,842. March 30.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in n.w. 1/4 Sec. 30, Tp. 10, Range 26, west 4th meridian.

30,843. April 1.—Authorizing G.T.R. to build spur for Ontario Public Highways Department, crossing Governor's Road, on Lot 2, Con. 1, Oxford East Tp.

30,844. March 24.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to remove station agent at Hedley, B.C.; caretaker to be appointed.

30,845. March 30.—Approving details and location of G.T.R. station at New Hamburg, Ont.

30,846. March 30.—Approving details and location of G.T.R. station at Hosmer, B.C.; caretaker to be appointed.

30,847. April 4.—Authorizing Dominion Atlantic Ry. to remove station agent at Ohio, N.S.; caretaker to be appointed.

30,848. April 4.—Authorizing Quebec, Montreal & Southern Ry. to remove agent from Bequets station, Que., on establishment of joint rate at Portville, Que.

30,849. Dismissing complaint of F. H. Iverson, Montreal, on behalf of Chicoutimi Pulp Co., against rate charged by Atlantic Quebec & Western Ry. on coal from Gaspe to Chandler, and on woodloads to Chandler, Gaspe, Que.

30,850. April 4.—Authorizing C.P.R. to move station at Macaca, Que., to a point more convenient to the town.

30,851. April 4.—Authorizing Crow's Nest Southern Ry. to remove its station agent at Waltham, B.C.; caretaker to be appointed.

30,852. April 6.—Authorizing C.P.R. to build siding at mile 134.19, St. Agathe Subdivision, Brunet, Que.

30,853. April 4.—Ordering G.T.R. to install gates at farm crossing on J. Poliquin's property, near Princeville, Que.

30,854. April 4.—Authorizing C.P.R. to remove station agent at Westerham, Sask.; caretaker to be appointed.

30,855. April 4.—Ordering C.P.R. to furnish and continue to furnish and maintain for Davidson & Smith Elevator Co., Fort William, Ont., same traffic facilities as have been furnished to Dominion Government elevator.

30,856. April 4.—Approving agreement between Bell Telephone Co. and Port Hope Telephone Co., Durham County, Ont.

30,857. April 4.—Authorizing G.T.R. to build three spurs for Canadian Libbey Owens Sheet Glass Co., Hamilton, Ont., crossing Canadian National Rys. spur.

30,858. April 4.—Ordering Canadian National Rys. to appoint station agent at Hay Lake, Alta., by Sept. 1, caretaker to be appointed in meantime.

30,859. April 5.—Dismissing application of Watts Trenching Co., for station agent at Hay Lake, B.C., and ordering Canadian National Rys. to appoint caretaker there, and to stop trains 9 and 10 regularly on Tuesdays and Fridays.

30,860. April 6.—Approving Canadian Northern Western Rys. plan showing change in railway location for station purposes at May Chapin, Canadian Northern Rys. plan showing changes in railway for station ground purposes at Cleveus, Sprague Lake and St. Walsbury, Sask.

30,864. April 6.—Approving Campbellford, Lake Ontario & Western Rys. (C.P.R.) revised location of busi-ness spur at Trenton, Ont.; authorizing crossing of Canadian Northern Ontario Rys. to operate its trains over proposed interchange track; remitting order 26,152 re C.N.O. crossing, and approving protection by half interlocker.

30,865. Ordering C.P.R. to stop train 14 at Exshaw, Alta., to allow passengers from west to detain, effective May 22.

30,866. April 7.—Ordering G.T.R. within 60 days to install combined bell and wigwag signals at intersection of tracks at crossing of 5th Ave., St. Pierre, Que.

30,867. April 7.—Dismissing application of United Farmers of Alberta to stop train at Wrentham, and ordering C.P.R. to appoint caretaker there.

30,868. April 8.—Authorizing carriers in U.S. within 15 days notice to Board, to file special supplement to tariffs to points in Canada, cancelling minimum weights and rules and regulations applicable thereto, and to file with Board Special Permission 51,215, and establishing revised minimum weights on grain and grain products and rules and regulations applicable thereto, to set forth therein.

30,869. April 7.—Authorizing G.T.R. to dispense with operation of gates at crossing of 10th Ave., St. Victoriaville, Que., provided all train movements are flagged across.

30,870. Authorizing Grand Trunk Pacific Rys. to build spur for G. G. Sawmills, Ltd. 3115a, Cariboo District, B.C.

30,871. April 7.—Authorizing Alberta Public Works Department to make highway over C.P.R. in s.e. ¼ Sec. 3, Tp. 11, Range 23, west 4th meridian.

30,872. April 3.—Dismissing Canadian National Rys. application for leave to appeal to Supreme Court of Canada re spur for Newcastle Junior Mining Co., Drumheller, Alta.

30,873. April 7.—Approving Canadian Northern Rys. bylaw authorizing H. H. Melanson, R. Creelman and R. F. MacLeod to prepare and issue tariffs of 1921.

30,874. April 8.—Authorizing Canadian Northern Rys. to build spur for Eastern Lands Department at mile 3.1 Oba Subdivision.

30,875. April 7.—Authorizing Canadian National Rys. to alter and extend Great West Land Co. spur through s.e. ¼ Sec. 7, Tp. 53, Range 23, west 4th meridian.

30,876. April 7.—Dismissing complaint of Board of Trade, Yuma, Sask., against reduction of train service on Grand Trunk Pacific Rys. from daily to six trains a week.

30,877. April 7.—Amending order 10,451 by providing that gates installed at G.T.R. crossing of Bourgeois St., Hyacinthe, Que., be operated for 24 hours every day.

30,878. April 8.—Authorizing Alberta Public Works Department to make highway over C.P.R. in s.e. ¼ Sec. 10, Tp. 8, Range 5, west 5th meridian.

30,879. April 7.—Approving Quebec Central Rys. location from near Scott station, Que., to connect with Canadian National Rys. at Diamond Jet, Que.

30,880. April 7.—Approving Canadian National Rys. route map of revised general location through Tps. 25-27, Ranges 3-15, west 4th meridian, mile 27 to 115, Alta.

30,881. April 11.—Authorizing C.P.R. to enter on E. Agnew's land for removing trees obstructing view of crossing between Ranges 3 and 6, Con. 2, Nassagawaga Tp., mile .042 Hamilton Branch, south of Guelph Jet, Ont.

30,882. April 11.—Amending order 30,785 re C.P.R. spur across lane between Powell and Cordova Sts., Vancouver, B.C.

30,883. April 11.—Approving relocation of C.P.R. station at Lydiat, Man.

30,884, 30,885. April 8.—Authorizing Quebec Central Rys. to cross Levis-Jackman highway, St. Helene de Breakeville Parish, Que.

30,886. April 11.—Authorizing C.P.R. to build

spur for Merchants Grain Co., Port William, Ont.

30,887. April 11.—Authorizing C.P.R. to divert road allowance in n.e. ¼ Sec. 32, Range 15, west 3rd meridian, at mile 57 Rosestown Branch, to cross and close such diversion, and rescinding order 30,235.

30,888. April 11.—Ordering Canadian National Rys. to build standard timber cante pass on Mrs. M. L. Lomel's property in s.e. ¼ Sec. 22, Tp. 8, Range 21, west 4th meridian, Alta., by Apr. 30.

30,889. April 11.—Authorizing Canadian Northern Rys. to build temporary trestle over Guelph and Nainaimo Rys., Cowichan Lake Branch, at mile 74.0 Canadian Northern Pacific Rys. Victoria-Alberta Subdivision, Vancouver Island, B.C.

30,890. April 11.—Authorizing Canadian Northern Rys. to build highway crossing in s.e. ¼ Sec. 5, Tp. 52, Range 21, west 3rd meridian, at Cleveus, Sask.

30,891. April 11.—Declaring that for the present Michican Central Rd. second road crossing west of Tillsonburg station, Ont., is protected to Board's satisfaction.

30,892. April 11.—Approving plan showing proposed changes in overhead crossing and high-way approaches on Halifax & Southwestern Rys. at mile 6.2 Lunenburg Subdivision, N.S.

30,893. April 11.—Authorizing C.P.R. to build crossing for gunnery track, at miles 0.53 and 0.75 Galt, Ont.

30,894. April 13.—Authorizing Canadian National Rys. to build new track, crossing tracks and connect with Timiskaming & Northern Ontario Rys. at mile 61.4 North Bay, Ont.

30,896. April 14.—Authorizing G.T.R. to dispense with watchmen at crossing of Lindsay St., Lindsay, Ont., between 9:45 and 5:45 a.m., during January, February, March and April, each year.

30,897. April 14.—Authorizing G.T.R. to build spur for Warren Bituminous Paving Co. of Ontario, Port Hope, Ont.

30,898. April 14.—Extending to July 31 time within which C.P.R. may install electric bills for crossing of Dundas St., near Cooksville station, Ont.

30,899. April 14.—Authorizing C.P.R. to build extension to spur for Imperial Oil Ltd., Calgary, Alta.

30,900. April 14.—Authorizing Quebec Central Rys. to build across Beaulieu Road, St. Jean Chrysostome.

30,901. April 13.—Authorizing C.P.R. to move station at Macaza, Que., and amending order 30,454.

30,903. April 15.—Authorizing C.P.R. to build spur for M. & L. Samuel Benjamin & Co., Toronto.

30,904. April 15.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in south half of Sec. 10, Tp. 13, Range 14, west 4th meridian.

30,905. April 15.—Authorizing C.P.R. to build standard 4 station at Handel, Sask.: to be completed by Sept. 1, 1921.

30,906. April 15.—Authorizing C.P.R. to make highway crossings at Hudson Ave., Cote St. Luc, Que., and when Westminster Ave. is opened, crossing bridge authorized to be closed to road.

30,907. April 15.—Authorizing C.P.R. to arrange to have its agent at Brant, Alta., meet trains on Monday, Wednesday and Friday, each week.

Regulation for Protection of Railway Employees.

The Board of Railway Commissioners passed general order 335 April 1, as follows:—Re general order 236, May 20, 1918, prescribing certain regulations for the protection of railway employees, paragraph 2 of which reads as follows:—"2. When more than one engine is attached to a train, the engineer of the leading engine shall operate the brakes." Upon reading the submissions filed on behalf of the railway companies, and representatives of railway employees; and upon the report and recommendation of Board's Chief Operating Officer, the Board orders that general order 236 be amended by adding to paragraph 2 the following, viz.: "In case of the leading engine giving up the train short of the destination of the train, a test of the brakes must be made to see that the same are operative from the engineer's valve of the engine remaining with the train."

Canadian National Railways Earnings.

Following are gross earnings for the system, monthly, for 1921, compared with 1920:—

	1921	1920
January	\$8,781,839	\$7,267,620
February	8,150,341	6,516,059
March	9,497,710	7,741,328
	\$26,429,740	\$21,544,947

Approximate earnings for two weeks ended Apr. 14, \$3,978,250, against \$3,633,002 for same period 1920.

Canadian Pacific Railway Earnings, Expenses, Etc.

Following are gross earnings, operating expenses and net earnings, monthly, for 1921, compared with 1920:—

	Gross Earnings	Net Increases
Jan.	\$14,465,430	\$61,425
Feb.	12,758,987	118,659
	\$14,392	\$13,392

Incr. \$27,234,417 \$26,779,600 \$1,464,817 \$15,002
Deer. \$237,256 \$392,258

Approximate earnings for March, \$14,466,000, and for two weeks ended Apr. 14, \$6,262,000, against \$15,189,000 and \$7,252,000 for same periods 1920.

Grand Trunk Railway Earnings.

Following are gross earnings, operating expenses and net earnings, monthly, for 1921, compared with 1920:—

	Gross Earnings	Net Increases
Jan.	\$6,587,587	\$54,610
Feb.	5,733,447	490,820
	\$12,321,034	\$12,321,034

Incr. 2,420,193 1,276,400 1,158,753
Deer. 2,420,193 1,276,400 1,158,753

Approximate earnings for March, \$6,222,885, against \$6,756,871 for March, 1920.

CANADIAN NATIONAL RAILWAYS.

Eastern Lines—Quebec District.

Sealed tenders addressed to the undersigned and endorsed, "Tender for Concrete Structures, Quebec District" will be received at this office until 12 o'clock noon, Monday, May 16th, for the construction of four structures on the Quebec District.

Drawings, Specifications and Form of Contract may be seen and form of tender obtained at the following offices:—Office of Division Engineer, Tunnel Terminal Station, Montreal; Office of District Engineer, Champlain Market Bldg., Quebec; Office of Division Engineer, G. N. W. Building, Ottawa.

Tenders will not be considered unless made on the form supplied by the Railway Company and accompanied by an accepted cheque on a chartered bank for the sum of Seven Thousand Dollars (\$7,000), payable to the order of the Treasurer of the Canadian National Railways.

Note.—Blue print copies of drawings can be obtained at above offices in Quebec, Montreal and Ottawa, and at the office of the Engineer, Maintenance of Way, Room 409 Old Union Station, Toronto, by depositing the sum of ten dollars (\$10.00) payable to the Treasurer, Canadian National Railways, the said cheque to be returned if the intending tendered submits a regular tender.

The lowest or any tender not necessarily accepted.

W. A. KINGSLAND,

General Manager,

Canadian National Railways,

Bank of Toronto Bldg., Montreal, Que.

Railway Wage Developments in the United States and Canada.

Canadian Railway and Marine World for April dealt with the discussion which had been going on concerning railway wages, and gave a summary of events in that connection up to that time. Since then the discussion has continued in railway and business circles.

In the United States, hearings before the Railway Labor Board in Chicago, concerning the national agreements have continued, a feature of them being examinations of several railway executives by labor representatives, the executives being summoned to appear by the Board, on request of the organizations' representatives. An extended rebuttal to the arguments for the railways was made by B. M. Jewell, of the American Federation of Labor's railroad department, and in addition, a statement was prepared and presented on behalf of the employees by W. J. Laidlaw, the consulting economist. Press reports state that, a few days after the conclusion of Mr. Jewell's rebuttal testimony, the Board rendered its decision in the whole matter, abrogating the national agreements, but recognizing certain principles contained therein as fair and just, and directing individual roads and their employees, in coming to future agreements, to take these principles into consideration.

The conferences between individual roads and their employees concerning wage matters, as required by Transportation Act, dealt with elsewhere in this issue, have continued, until at the present time practically every road of any size in the U.S. has filed requests for hearings before the Labor Board, due to inability of the roads and their employees to come to any agreement in connection with proposed wage reductions in practically every case. In some of the requests, the matter concerns only the wages of unskilled labor, but in the others, the roads demand reductions in the rate of pay of all classes of employees. Our latest advice is to the effect that the Labor Board has grouped a great many of the cases for individual roads into matter for one hearing, and laid down the rule that in that hearing, and similar ones following, eight hours will be given each side in the dispute, to present its oral testimony, in addition to which written testimony may be presented. Important developments in regard to wage rates are expected shortly.

Interesting features of the matter in the U.S. were, first, a meeting between a committee representing the American Association of Railroad Security Owners, and several labor organization leaders. The results attending this direct coming together of capital and labor, with management excluded altogether, were not definitely stated. The statement made concerning the meeting was to the effect that all recognized the seriousness of the existing situation, and expressed a desire to be helpful in solving the problems brought about by it. A second feature was a brief discussion of the railway situation by President Harding, in an address to Congress delivered recently, in which he said:—"Railway rates and the cost of operation must be reduced . . . the remaining obstacles, which are the inheritance of capitalistic exploitations, must be removed, and labor must join management in understanding that the public which pays is the public to be served, and simple justice is the right, and will continue to be the right of all

the people." The address, however, in so far as the betterment of the general railway situation was concerned, contained no practical suggestions, although it is stated that the President is considering the problem seriously and has been in frequent consultation with railway executives and labor leaders.

A case which had been before the Labor Board for many months concerned disputes between short line carriers and their employees has been dismissed, the Board giving as a reason that it was found impracticable to try to decide on reasonable wages, for the varying work done under greatly varying conditions, by some 4,000 different employees of short line railways in widely separated parts of the country.

Another development worthy of note is that the Chairman of the Association of Railway Executives has held conferences with the leaders of the train and locomotive service brotherhoods, relative to the question of the advisability of establishing regional boards of adjustment. It was decided to submit the question to conferences of the individual roads in each region.

In Canadian circles, the most outstanding development in this connection has been the debate which took place recently before the Canadian Club in Toronto, in which D'Arcy Scott, a former member of the Board of Railway Commissioners, attacked the present wage scales, and James Murdock, Vice President of the Brotherhood of Railway Trainmen, defended them. This debate is dealt with elsewhere in this issue. According to press reports, Chief Railway Commissioner Carvell, while in Vancouver recently, again attacked the McAdoo award, both in principle and in regard to the influences causing its adoption in Canada, and drew forth a spirited reply from L. L. Peltier, Ottawa representative of the Order of Railway Conductors, defending the provisions of the award and denying Mr. Carvell's statements of it having been adopted in Canada at the instance of U.S. leaders of international labor organizations. The present scale of railway wages was also defended in a speech in the Senate on April 13, by the Minister of Labor, in which he claimed that the wage award was granted voluntarily by the Railway War Board, and that no outside pressure was brought to bear in the matter.

Railway Mechanical Convention Matters.

As stated in Canadian Railway and Marine World for April, the Railway Supply Manufacturers Association decided not to hold an exhibit of railway appliances, etc., at Atlantic City in June, as usual.

The American Railway Association's Purchases and Stores Division has decided not to hold its annual convention at Atlantic City, in June, but will hold a business meeting at the Blackstone Hotel, Chicago, on June 9, 10 and 11. The general committee and standing committees will be in attendance. Members are requested to have such representatives of their supply departments attend as can conveniently do so. The meeting will consider reports of committees which have completed their investigations of the subjects referred to

them and are ready to present their recommendations, and will formulate a constructive plan for future activities. The endeavor of the meeting will be to handle such subjects as will produce economy in the operations of the supply departments of the railways. In this connection, arrangements will be made to exhibit a series of motion pictures, illustrative of the reclamation work on railways. This will be an important feature and will be in addition to the committee reports, all in the interest of economical and more efficient service.

The American Railway Association's Mechanical Division has also decided not to hold its annual meetings at Atlantic City from June 15 to 22, but instead to have a business session, on June 15 and 16, at the Drake Hotel, Chicago, at which reports will be presented by committees on the following subjects: Prices for labor and material; car construction; loading rules; brake shoe and brake equipment; train brake and signal equipment; specifications and test for materials; tank cars and standard methods of packing journal boxes.

Employment and Pay of Counsel in G.T.R. Arbitration.

J. O. Brouillard, Drummond and Arthabaska, Que., asked the following questions in the House of Commons recently, which were answered by the Minister of Justice.

Q. "Upon whose recommendation was W. N. Tilley, K.C., appointed counsel for the Government on the arbitration proceedings between the Dominion, and the G.T.R. Co., and what is his remuneration in such services?" A. "Mr. Tilley was retained upon the responsibility of the Government. Retainer, \$10,000; \$400 a day for days engaged out of Toronto; \$100 a day for days in Toronto."

Q. "Is E. F. Newcomb, barrister, Ottawa, employed by the Government with the arbitration proceedings between the Dominion and the Grand Trunk Ry. Co.?" A. "Yes."

Q. "If so, what is his position, and upon whose recommendation was he appointed?" A. "He was retained by W. N. Tilley, K.C., leading counsel for the Dominion, who, when he was retained, stipulated the right to select junior counsel."

Q. "What is his remuneration?" A. "\$30 a day for each day upon which he is exclusively engaged upon the work of the arbitration."

Q. "Is he son of the Deputy Minister of Justice?" A. "Yes."

Q. "Is the Government aware that he was only admitted to practice law within the past two years?" A. "No. He was admitted in 1916."

Q. "What are the special qualifications for this work?" A. "The Government is advised that his qualifications are excellent."

Q. "Has he received any other work from the Department of Justice? If so, upon whose recommendation, and what was the kind of work given, and how much has he earned to date for services other than connected with the G.T.R. arbitration?" A. "Yes. Upon the Department's responsibility; litigated matters; earnings, according to departmental record, \$570."

Standard specifications for galvanized telegraph and telephone wire have been issued in booklet form, by Canadian Engineering Standards Association.

Amendment to Uniform Code, Rule 99.

The Board of Railway Commissioners passed General order 336, April 2, as follows:—Re general order 42, July 12, 1909, approving a Uniform Code for Canadian railways; and re rule 99, paragraphs 6 and 9 thereof, which read as follows:—

"If recalled before another train arrives he (the flagman) must, at night, or when weather conditions obscure day signals, or when snow ploughs or flangers may be running, in addition to the two torpedoes leave a fusee, burning red, at the point he returns from and at such other points on his return as may be necessary to ensure full protection.

"Flagmen must each be equipped for day time with a red flag and 4 torpedoes, and for night time, and when weather or other conditions obscure day signals, with a red light, a white light, and 4 torpedoes, 3 red fusees, and a supply of matches."

Upon hearing the matter at Ottawa, Sept. 27, 1920, the Canadian Pacific, Grand Trunk and Canadian National Railways, the Michigan Central Railroad, the Brotherhood of Locomotive Firemen and Enginemen, the Brotherhood of Locomotive Engineers, and the Brotherhood of Railroad Trainmen being represented at the hearing, and upon the report and recommendation of the Board's Chief Operating Officer, the Board orders that paragraphs 6 and 9 of rule 99 be struck out and the following substituted therefor, viz:—

"If recalled before another train arrives, he must, in addition to the two torpedoes, leave a fusee, burning red, at the point he returns from, and, while returning to his train, when snow ploughs or flangers may be running, curvature, weather, or other conditions governing, a fusee burning red must be placed at such points, or times, as the flagman may find necessary to ensure full protection. To maintain the proper interval between trains, a fusee burning red must be left by the protected train, at the point from which it moves.

"Flagmen must each be equipped for day time with a red flag, 22 x 28 in., on a staff, at least 6 torpedoes and 5 red fusees; and for night time, and when weather or other conditions obscure day signals, a red light, a white light, with a supply of matches, at least 6 torpedoes, and 5 red fusees."

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, during March, and for 7 months ended March 31, 1921 and March 31, 1920.

	Mar. 1921	1921	1920
Canadian Northern Ry.	7,770	55,369	39,237
Canadian Pacific Ry.	4,742	89,659	58,523
Grand Trunk Pacific Ry.	1,586	18,973	17,064
Great Northern Ry.	1	162	491
(Duluth)			
Total	11,049	164,803	115,895

J. F. McTaggart, heretofore Travelling Auditor, has been appointed Treasurer, Canadian National Telegraphs, Toronto, vice D. E. Henry, resigned on account of ill health.

Telegraph, Telephone and Cable Matters.

J. Stevens, heretofore chief operator, Grand Trunk Pacific Telegraphs, Regina, Sask., has been appointed chief operator, Canadian National Telegraphs there.

At a meeting of the Great North Western Telegraph Co.'s directors at Toronto, April 7, D. B. Hanna, President, Canadian National Ry.s., was elected President, vice Z. A. Lash, K.C., deceased, and G. D. Perry, General Manager, Canadian National Telegraphs, was elected Vice President, G.N.W.T. Co.

D. E. Henry, who has resigned as Treasurer, Canadian National Telegraphs, Toronto, on account of ill health, entered Great North Western Telegraph Co.'s service in 1899, under the late H. P. Dwight, then President and General Manager. He was appointed Treasurer in March 1911.

D. B. Hanna, President, Canadian National Ry.s., has been elected President, Great North Western Telegraph Co., succeeding Z. A. Lash, deceased. G. D. Perry, heretofore General Manager, has been elected a Vice President, Adam Brown, of Hamilton, continuing as the other Vice President.

The exclusively Canadian wireless news service which was inaugurated by the Canadian Pacific Ocean Services to its liners in mid-ocean, has now supplanted, on all Canadian liners, the United States news service, which has been discontinued. The present bulletin consists of Canadian news, combined with English news received from the Welsh station.

Telephone conversation was carried on between the President of the U.S., at Washington, D.C., and the President of Cuba, at Havana, Apr. 11, and between the President of Canada and the President of Cuba, Apr. 14, by land lines to Key West, Fla., and thence by submarine cable to Cuba. It is reported that in connection with this formal opening of the line, telephone messages were received from the Catalina Islands in the Pacific, by wireless, cable and land lines. The report gives the distance between the Catalina Islands and Cuba as "5,700 miles, or farther than from London to Pekin." The distance, as the crow flies, from Catalina Islands to Cuba, is approximately 2,500 miles, and from London to Pekin on the same basis, approximately 6,000 miles.

Practically all telegraph and telephone lines south and west of Winnipeg were seriously interfered with during one of the worst blizzards experienced in Western Canada, which commenced Apr. 6 and continued for three days. On the fourth day, although the storm had ceased, a high wind developed, which played havoc with the lines, heavily laden with ice and snow. Regular communication between Winnipeg and the east was maintained and also with Regina and points west, by way of Chicago, Seattle and Vancouver until Apr. 11, when all important circuits were recovered and replaced in service. A severe sleet and wind storm occurred in southeastern Ontario Apr. 16 and 17, and telegraph and telephone companies suffered to a considerable extent. Canadian National Telegraphs lost about 100 poles, but their main routes were practically intact on Apr. 18. The storm was particularly severe in the vicinity of Stratford.

In connection with the Western Union Telegraph Co.'s desire to land its Bar-

badoes cable at Miami, Florida, in order to connect with its land lines, and the U.S. Government's refusal to consent to the connection being made, the U.S. Circuit Court of Appeals has confirmed the lower court's decision refusing the Government's application for a preliminary injunction to prevent the landing of the cable, and the sending of messages originating in, or addressed to, Brazil, over the cable from Colimar, Cuba, to Key West. The judgment stated that, under its power to regulate commerce, to prohibit the landing of cables between foreign countries and the U.S. coast, no practice had been established sufficient to sustain the contention that the President had such power as chief executive, and it declared that the company had the right to land its cable on the Florida coast, under the Post Road Act.

Among the Express Companies.

Canadian National Ex. Co. has opened an office at Colinton, Alta.

The Canadian National Ex. Co. has discontinued its agent at Libau, Man., which is now operated as a prepay point.

The Canadian National Ex. Co. put its service into effect on the Murray Bay Division, from St. Joachim to Murray Bay, Que., Apr. 4.

J. A. Walford, heretofore agent, Edmonton, Alta., has been appointed agent, Dominion Ex. Co., Penticton, B.C., during the absence, on three months leave, of W. E. Davis.

The Alberta Government received taxes from express companies operating in the province in 1920 as follows:—Canadian National Express Co., \$995; Canadian Express Co., \$725; Dominion Express Co., \$2,440. The companies are taxed on the number of offices in the province and not on the income derived.

The Gold Seal Liquor Co., Calgary, Alta., has given notice of appeal to the Supreme Court of Canada, against the decision of the Supreme Court of Alberta's Appellate Division in favor of the Dominion Ex. Co., to the effect that an express company is not bound to accept shipments of intoxicating liquor, either into, or out of, the province.

The C.P.R. Passenger Department has made arrangements with the Dominion Express Co., whereby foreign and domestic money orders, and letters of credit, or travellers' cheques, are placed with the railway representatives and agents. These will now be procurable at all C.P.R. hotels, Great Lakes steamships, British Columbia Coast and Lake and River Services, Atlantic and Pacific steamships, and all C.P.R. passenger offices in Canada and United States.

The City of Toronto has appealed to the Dominion Government against the increases in express rates authorized by the Board of Railway Commissioners' general order 327, Feb. 2, and published fully in Canadian Railway and Marine World for February, page 125. The appeal complains that the method of arriving at the sum due to the railways for their share in transporting goods for express companies by multiplying the freight rate $1\frac{1}{2}$ times, was arbitrary and unsound, and that the companies' overseas business should be considered in arriving at what must be considered as fair remuneration. The Government decided that if the matter was to be argued further, the companies would be given an opportunity to be heard.

Electric Railway Department

Winnipeg Electric Railway's Increased Fares Confirmed by Court of Appeal.

The Manitoba Court of Appeal on April 4 dismissed the City of Winnipeg's appeal against the Manitoba Public Utilities Commissioner's order of Aug. 20, 1920, fixing the fares to be charged by the Winnipeg Electric Ry. in the city. In the autumn of 1918 the company was faced with a serious financial situation, on account of increased operating costs, and applied to the city council for leave to increase fares over those stipulated in the franchise under which the company was operating. The city council referred the company to the Public Utilities Commission and two interim orders were issued by the Commissioner, who had exhaustive valuations of the company's property made. This investigation extended over two years and included a complete valuation of the company's physical assets, and the company's financial history also came under review. At the end of the investigation the Commissioner made a final order raising the fares as follows:—Cash fares 7c.; 4 tickets for 25c.; school children, 7 tickets for 25c. The city appealed against this order to the Court of Appeal. By the terms of the order allowing the appeal to be taken the point submitted to the Court of Appeal was limited to the following question, viz.: Had the Public Utilities Commissioner power or authority to make the order raising the fares, in so far as it effects the City of Winnipeg; provided that on the said appeal no question shall be raised or argued as to the constitutional validity of the Public Utilities Act, or as to the validity of the appointment of the Commissioner. The controversy between the city and the company as to the Public Utilities Act involved two questions, viz., as to whether it was within the powers of the province to enact such legislation, and whether upon the construction of the act, assuming it to be within the powers of the province to pass it, the Commissioner had power to change the fares fixed under the franchise agreement between the city and the company. The question before the Court of Appeal was limited to the second of these two questions, the question as to the constitutionality of the act being eliminated.

The case was heard at considerable length and judgment was delivered by Chief Justice Perdue, who said in part: The leave to appeal was confined to the question "Had the Public Utilities Commissioner power or authority to make the said order as it affects the City of Winnipeg?" The city contended that the Commissioner had no power or authority to make the order complained of, on the ground that it was made in contravention of the express terms and conditions of city bylaw 545 and of the Manitoba Statutes, 1892, chap. 56, and of an agreement dated June 4, 1892, made in pursuance of the bylaw and special act. Having reviewed the legislation affecting the case, the Chief Justice dealt with the arguments by the city's counsel in support of its contention.

On the first ground, that the Commissioner had not power, under a general act, to alter rates fixed by a previous special act, it was held, after a review

of the facts, and the consideration of cases, that bylaw 543 is not an agreement; the agreement and the contract were made subsequently and ratified by the Manitoba Statutes of 1895, chap. 54, sec. 2. It is this contract that binds the company, and it cannot be contended that the contract is a statute; it is only a contract, made in pursuance of the agreement, and validated as a contract three years afterwards. And even if it were found that the bylaw was incorporated in the act so as to be an integral part of the act, it was, the Chief Justice thought, the Legislature's intention that the Public Utilities Act's provisions would in case of conflict with those of the special act prevail over the latter. After reviewing the sections of the acts affecting this point, and cited case, the judgment proceeds: "City bylaw 543, after

cations were made to the Commissioner, who issued orders as to additional tracks, the removal of tracks, and many other matters requiring the expenditure of large sums by the company. There has been a great increase in the wages, and the cost of material, and from various causes there has been a great depreciation in the utility's revenue. The Commissioner's finding on the facts is very important. The Commissioner said: "No dividends have been earned for the last five years, and the company's finances are so depleted that efficient service cannot be furnished without additional revenue. Therefore it must be evident that unless further revenues are provided the service must deteriorate and the riding public suffer. The petition of the company alleges that unless it is afforded some relief, and is permitted to increase its revenues derived from transportation, it will be forced into bankruptcy." The Commissioner had shown that increased revenue was necessary. The utility is of extreme importance to the citizens of Winnipeg and the surrounding territory. Its bankruptcy, or a serious impairment of its efficiency, would be a public disaster. Persons in the community reside, as a general rule, a considerable distance from their places of employment. They rely upon the street railway for transportation. A stoppage of its operation for a single day would cause great inconvenience and loss. To argue that the Commission could not save the situation by such simple means as a reasonable increase in fares is to put a very narrow construction upon the provisions of the act.

The company's motion to quash the appeal was refused and the appeal was dismissed with costs to be paid by the city, such costs to be the full taxable costs and not subject to the limitation contained in the Court of Appeal Act, sec. 23. Justices Dennistoun and Fullerton delivered concurring judgments.

Almost immediately after the judgment had been rendered the city council discussed the situation and passed a resolution favoring entering into immediate negotiations with the company but at the same time authorized the city solicitor to appeal against the judgment to the British Privy Council. Four months past A. W. McLimont, Vice President of the company, has been endeavoring to negotiate with the city council to permanently settle the transportation problem in Winnipeg. The following alternative suggestions were proposed by the company to the council, and these are forming the basis of negotiations: (1) The city taking the railway. (2) Agreeing upon terms the company shall operate under for the remaining period of the franchise. (3) Making an entirely new agreement, based upon service at cost or some similar arrangement in which the company's profits shall be limited, and the fares go up or down as the cost of operation increases or decreases. The control of this form of operation might be by a commission, composed of representatives of the city and the company, with an independent chairman.

A special meeting of the city council

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.

Treasurer, A. Gaboury, Superintendent, Montreal Trams Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; J. H. Cousins, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Manager, Director, Three Rivers Traction Co.; A. W. McLimont, Vice President, Winnipeg Electric Ry.; R. E. Marne-Roads, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.

Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co.; Hull, Que.
Official Organ, Canadian Railway and Marine World, Toronto.

the legislation confirming it, still remained a bylaw, and the contract executed in pursuance of it by the city and the company remained a contract after its confirmation by the act of 1895. This contract might with the consent of the parties, be varied by a subsequent contract."

The company was brought under the jurisdiction of the Public Utilities Act by order in council on May 28, 1912, passed on a petition from the city council. When the company was brought under the act the Commission acquired exclusive jurisdiction over fares. The company and the city were no longer free to bargain with each other over the question of fares, or other matters concerning the utility. Such questions could only be dealt with by the Commission or subject to its approval. It was the Commission's duty to make orders as to extensions, equipment and service to be furnished by the company. It was also the Commission's duty to protect the public utility by permitting it to charge increased fares, to meet additional burdens imposed upon it. Frequent appli-

was held April 15, to consider the following resolution:—"That the negotiations with the W.E.R. Co. authorized by the council at a meeting on April 4 be left with and be conducted by the public safety committee of the council; that the committee be empowered to retain the services of and to consult with and obtain the advice of such expert or experts as in its judgment may be necessary or expedient for and in connection with such negotiations or to thoroughly safeguard and further the interests of the city in connection with the several matters involved therein; and that the committee be authorized to go fully into the several matters in dispute between the city and the company, including the following: (1) Joint use of poles. (2) Reduction of economic waste due to unnecessary duplication of poles and wires in areas where amount of business does not justify same. (3) Agree to abandon poles in residential districts, poles in streets, and instead thereof, both systems to occupy the poles in lanes. (4) Payment of joint pole accounts. (5) Grounding of secondaries. (6) Placing wires underground, as ordered by Public Utilities Commission. (7) Removal of wood span wire poles from streets. (8) Attachment of span wire to buildings wherever possible. (8) Carry out recommendations of Prof. Fetherstonhaugh to adopt a system whereby the voltage of current taken to ground should be reduced from 500 to 250. (9) Electrolysis. (10) Several phases. (10) Payment charges. (11) Increase in fares. (12) Outstanding taxes. And after the completion of such negotiations, that the committee report back to council the result thereof."

The resolution was adopted with clauses providing empowering the committee to obtain the assistance of experts and control to negotiate for extension of service, and that all questions to be dealt with and matters between the company and the city to be, by agreement, placed outside the jurisdiction, power, authority and control of the Public Utilities Commission, and that all matters in dispute, or arising between the city and the company, be fully gone into by the committee, and that it report, from time to time, the results of its negotiations for ratification.

Permission has been granted the Winnipeg City Council to appear before the Privy Council on an appeal against the Manitoba Court of Appeal's judgment, given above.

Hamilton St. Ry. Franchise, Etc. — Although the Hamilton St. Ry. franchise does not expire until 1928, the question of its being acquired by the city prior to that time is being discussed. The chairman of the city council's street railway committee is stated to have expressed his opposition to buying out the company and to have added: "The city is doing very well as it is. We get \$400 for every mile of track, the company's line; we also get 8% of the gross receipts, and we have the lowest fares in Canada. The company says that it is losing money, and even now does not even care to make necessary repairs. I think, under the circumstances, the city would be very foolish to try and operate. I don't know of a municipality in Ontario that did it successfully." The Ontario Railway and Municipal Board is losing money on the London St. Ry. every day, and its experience does not show any inducement for Hamilton to go into business in that

Increases in Electric Railway Freight and Passenger Rates.

Edmonton Radial Ry.—The Edmonton, Alta., City Commissioners have submitted to the Utilities Committee a plan for readjustment of the finances of the various public utilities. A press report states that the publicly owned utilities other than the Edmonton Radial Ry. show a surplus of \$546,034, and that the railway shows an accumulated deficit of \$622,969, of which \$200,191 was incurred in 1920. The commissioners propose that the public utility be operated as a whole, and in order to turn the present deficit and in order to increase the charges on all the other utilities to the extent of 12 1/2%, the street railway being dealt with separately. The suggestion as to the street railway is that the present fares shall remain in force, but that workmen's tickets shall be discontinued; that children's tickets shall be issued only to children up to 12 years instead of 15, and that tickets be available during school hours, the number of tickets sold for 25c. to be reduced from 10 to 8, the tickets for high school pupils to remain as at present.

A later press report says that the City Commissioners put in operation the following schedule of fares on April 15:—Cash fare, 7c., four tickets for 25c.; tickets for children under 12 years of age, 3c.; school children over 12 may use these on presentation of a school certificate between 7.30 a.m. and 5.30 p.m., except on Saturdays, Sundays and holidays. After midnight, cash fare 15c. Workmen's tickets are discontinued.

For the William Municipal By-Law Port Arthur Civic By-Law—The Ontario Legislature has passed an act authorizing the cities of Port William and Port Arthur to pass bylaws to increase the fares on their electric railways over and above the 5c. rate provided for in the original act, such bylaws to be subject to the approval of the board of railway commissioners and the ratepayers' approval. The act as passed contains the section of the bill as originally introduced, together with the additional provisions, private bills committee, both of which were given in Canadian Railway and Marine World for April, page 212.

The Fort William City Council's utilities committee and the Port Arthur Public Utilities Commission are reported to have met jointly recently and discussed the finances of the two electric railways. It is stated that a vote would be taken at an early date in both cities on the question: "Are you in favor of a 7c. cash fare, with 4 tickets for 25c. and 18 tickets for \$1?"

Guelph Radial Ry.—The Ontario Legislature has passed an act authorizing the Guelph Radial Ry., which is owned and operated by the city, to increase its capital stock by \$250,000, and to increase its cash fare from 5c. to 7c., its tickets from 6 for 25c. to 4 tickets for 25c.; and to charge double the day cash fare from 11 p.m. to 5 a.m.

Hull Electric Co.—The Board of Railway Commissioners passed order 30,804, March 21, approving this company's Standard Local Passenger Tariff C.R.C. no. P-16, providing for a 25c. single fare between Ottawa and Hull and the Connaught Park Jockey Club, instead of a 20c. one as heretofore.

Nipissing Central Ry.—We are officially advised that the Timiskaming & Nor-

thern Ontario Railway Commission, operating this electric railway for the Ontario Government, has applied to the Board of Railway Commissioners for authority to increase fares. Following is a comparison of the present fares and those asked for:—

Those asked 1877	Proposed	Present
Between Cobalt and Haileybury	15c. or 8 tickets for \$1	10c.
North Cobalt and Haileybury	10c. or 12 tickets for \$1	10c.
Within Haileybury	7c. or 4 tickets for 25c.	5c.
Cobalt and Kerr Lake and intermediate points	45c. or 8 tickets for \$1	10c.
New Liskeard and Haileybury	15c. or 8 tickets for \$1	10c.
Points within New Liskeard	7c. or 4 tickets for 25c.	5c.
New Liskeard and Cobalt	30c. or 4 tickets for \$1	20c.

School children's tickets to be 10 for 30c., instead of 10 for 25c., good only on school days, and purchasable only by scholars under 18 on presentation of certificate from the principal.

Workmen's tickets, good between 5 and 7.30 a.m., and 4.45 and 7 p.m., daily except Sundays, to be sold 21 for \$1.25 from Cobalt to Kerr Lake and intermediate points; from Cobalt to Haileybury and intermediate points; from New Liskeard to Haileybury and intermediate points, instead of 21 for \$1, and 21 for \$2.50 from New Liskeard to Cobalt and intermediate points instead of \$1.25 as at present.

New Liskeard and Haileybury municipalities and Burke Tp. have protested against the proposed increases.

The Nova Scotia Tramways & Power Co. The Nova Scotia Legislature passed an act in 1920 authorizing the company to charge increased fares on its lines and limiting their collection to two years from the passing of the act. It was provided that by the year the Government should appoint a Commissioner under the Public Inquiries Act to consist of three members, one appointed by the Chief Justice of the N.S. Supreme Court, one by Halifax City Council, and one by the company, to make an investigation and to report to the Government and to the Halifax City Council, and on or about 1, 1922, as to whether the increased fares granted by the act should be continued further. The Commission, which consists of Messrs. Campbell (Chairman), Rogers and McCall, has been sitting in Halifax and taking evidence. It adjourned on April 19, to May 2, and prior to adjournment asked the Halifax City Council to present its case in writing by April 29.

Port Arthur Civic Ry.—See Fort William Municipal Ry.

Winnipeg Electric Ry. — See under "Winnipeg Electric Ry.'s increased fares confirmed by Court of Appeal" on another page of this issue.

The Fort William, Ont., City Council has appointed a special committee to investigate charges that street railway tickets have been stolen in considerable quantities by employees and disposed of to outside parties. The discovery by the auditing department of considerable differences between the amount of cash received for the sale of tickets, and the number of tickets turned in by the conductors, is stated to have brought about the investigation.

Negotiations for Purchase of Niagara, St. Catharines and Toronto Railway.

Representatives of 17 municipalities in the Niagara district which are served by the Niagara, St. Catharines & Toronto Ry. (electric) had an interview in Ottawa April 4 with the Minister of Railways, Dr. Reid, in connection with a desire, on the part of the municipalities, to buy the road in their own responsibility while retaining the Province of Ontario guarantee the bonds. The representatives stated that the municipalities desire to operate the road themselves, and if and when hydro electric radial railways are built, to have it made part of that system. Among the deputation were Mayor Lovelace and W. B. Burgoyne, of St. Catharines, and T. J. Hannigan, Secretary of the Hydro Electric Railway Association of Ontario.

The Minister, with whom was D. B. Hanna, President, Canadian National Rys., met the deputation, and in the discussion it was pointed out that in the original offer made by the Minister to dispose of the three government owned electric roads, the Niagara, St. Catharines & Toronto, the Toronto Suburban, and the Toronto Eastern (the latter in liquidation), a chief condition was that the Ontario Government should guarantee the bonds issued in payment for the properties. The delegation expressed a desire to dispense with a provincial guarantee. Dr. Reid is reported as saying that his understanding, which the delegation agreed was correct, was that Sir Adam Beck had postponed the purchase of the three electric roads for the Hydro Electric Commission of Ontario, and that the Hydro Electric Commission was to accept the municipalities' bonds as collateral security, while, by the proposition made by this delegation, the municipal bonds would not be negotiable in the same way as would Hydro Electric Power Commission bonds, guaranteed by the Province of Ontario, and that the Dominion Government would only accept the bonds with the idea that, if financial conditions warranted, they might be sold. The Minister also reported to have informed the deputation that, while the Dominion Government had approved his offer of sale of the three roads to the Ontario Hydro Electric Power Commission, it was manifestly out of the question to take up the sale of the Niagara, St. Catharines & Toronto Ry. singly.

The Dominion Bureau of Statistics report shows the Niagara, St. Catharines & Toronto Ry. has 61.70 miles of main track, and in the year ended June 30, 1919, had gross earnings of \$8,722,232; operating expenses of \$743,000, and a net income of \$51,254. It carried in that year 6,460,695 passengers, and 356,400 tons of freight. The construction costs of the road are not available at present, but after acquisition by the Canadian Northern interests it was bonded for \$20,000 a mile, and, as is shown by the above net income statement, its operating expenses permit of a surplus after operating expenses and taxes, and after the deduction of fixed charges corresponding to this amount of bonded indebtedness. However, the price mentioned in the Minister of Railways' original offer, which involves acquisition of the three roads mentioned, or none, was \$3,554,374.90 for the N.S.C.&T.Ry., and it does not require a great deal of calculation to see that, taking into consideration fixed charges on this sum, operation

of the property in 1919 would have incurred a deficit for the municipalities. An examination into the physical location of the property and its relation to the steam railways serving the district, shows that if the municipalities were to buy the line, on the understanding that they must turn over all interchange traffic to the Canadian National Rys., the stipulation was contained in the Minister's original offer, they would be in the position of accepting a short haul on interchange business where it would be possible for them to get a long haul on the same business by turning it over to another road. Under present conditions, of course, it is almost immaterial in the long run as to the length of haul the Niagara, St. Catharines & Toronto gets on interchange business before handing it over to the Canadian National lines, and it is a fact that if the electric line just pays its way, or even incurs some deficits on its own operations, the benefit derived by the Canadian National system by reason of the long haul business obtained from the electric road makes the operation a very profitable one so far as the C.N.R. lines as a whole are concerned.

On the present bonded indebtedness of \$1,098,000, the fixed charges on a 6% basis would be \$65,880, on the price the municipalities are offered the property at the fixed charges would be \$212,662, a difference of \$146,782, which means that the 1919 operations would have given them a deficit of \$95,528. It is stated on the best of authority that the value of the property on a basis of reproduction cost, less depreciation, would indicate a value of about \$6,000,000, so that while the municipalities would be making a "bargain" on this basis, on the basis of annual returns, based on the operating results of 1919, they would be liable to large losses.

Electric Railway Freight Traffic in Montreal.

The Montreal Administrative Commission is reported to have decided on April 15, in conjunction with the Montreal Tramways Commission and the Montreal Tramways Co. that the carrying of freight by the company must cease forthwith. The controversy on this matter has been going on for some time, and there have been negotiations between the two commissions and the company for several months. The matter was discussed by the Montreal Builders' Exchange April 16, when it was stated that the company had been carrying freight for 17 years, mainly building materials, principally at night. The Administrative Commission is reported to have ordered this haulage to cease. In the course of the negotiations following this order, it was reported that the company had expressed its willingness to continue the haulage, but was unwilling to apply to the Tramways Commission for power to do so, as a freight station would then have to be provided, and other conditions would be laid down. The Builders' Exchange passed a resolution favoring the haulage of freight by the company under such conditions as might be mutually arranged. The carrying of public freight by the company ceased in accordance with the notice on April 18.

It was reported April 19 that negotiations had been restarted with a view of effecting a settlement. The only freight being carried by the company is its own and a limited quantity for the city council.

Guelph Radial Railway to be Transferred.

The Premier of Ontario stated in the Legislature April 26 that the Government would immediately introduce a bill to validate the bylaw passed by Guelph ratepayers at the last municipal elections confirming an agreement with the Hydro Electric Power Commission of Ontario respecting the Guelph Radial Ry., and the bill was introduced later in the day.

At the municipal elections in Jan. 1920 the ratepayers, following a report by Hydro Electric Power Commission of Ontario's engineers, passed a bylaw to raise \$150,000 to repair the line in repair and to buy additional rolling stock, the line to be operated as part of the H.E.P.C.O. projected electric railway system. Preparations were made to carry out this agreement, but owing to the raising of questions as to whether bylaws covering the construction of the Hamilton-Guelph-Elmira electric line, authorized the inclusion of the Guelph Radial Ry., and the Government position on the whole of the projected hydro radial lines, culminating in the appointment of a commission of enquiry, the bylaw was not approved by the Government. In Nov. 1920, the city council terminated the agreement voted on in Jan. 1920, and on Dec. 12 approved, for submission to the ratepayers, a new agreement under which the city undertook to sell to the H.E.P.C.O. the whole of the Guelph Radial Ry. Co.'s property and assets for \$150,000, payable in 20 instalments of \$11,700 each. The city council agreed to bear the cost of acquiring, equipping, maintaining and operating the line as established by the Commission, and to provide the funds therefor, and agreed to issue \$300,000 of 5% debentures to be deposited with the Commission either on completion of the agreement or as required. This agreement was confirmed by the ratepayers on Jan. 1, 1921, and it is this bylaw an agreement which the Government now proposes to validate. The Premier is reported to have said in his statement to the Legislature that the Government had neither promised nor obligated itself financially in the undertaking. Having reviewed the situation and the correspondence which had passed, the Premier added: "I do not approve of the bylaw as submitted, but if Guelph is pleased with the agreement the Government will make no objection."

Levis County Ry.'s Position.—Lauson, St. Romuald and Biensville Municipal Councils have refused to vote anything to aid the Levis County Ry. to acquire new rolling stock, and to build new car shops, to replace those burned on Feb. 25. It is the opinion of the City of Levis to decide what it will do, and if it should come to the company's aid, one or two of the other municipalities will probably change their attitude. The company is operating a very reduced service with the cars which were not burned. It has not taken any steps to replace the destroyed building and cars, everything depending on the municipalities attitude.

Montreal Tramways Co. has declared the regular quarterly dividend at the rate of 10% per annum.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Brantford, Ont., City Council is reported to have passed a bylaw providing for the issue of \$80,000 of debentures to cover the cost of extensions and improvements on the Brantford Municipal Ry., some details of which were given in our last issue. (April, pg. 213.)

British Columbia Electric Ry.—The relaying of tracks on Government St., Victoria, B.C., was started at the beginning of April, and it is expected to have it completed early in May. (Mar., pg. 158.)

Chatham, Wallaceburg & Lake Erie Ry.—The Ontario Legislature's private bills committee has thrown out a bill, promoted by the Chatham City Council, to provide for a survey of the Chatham, Wallaceburg & Lake Erie Ry., with a view to its being taken over by the Hydro Electric Power Commission of Ontario. A deputation of citizens was to have gone to Toronto on March 30 to interview the Government on the matter, but following advices from Toronto that an order in council providing for the survey would be passed by the Government, the deputation did not go. On April 4 the Government passed an order authorizing the Hydro Electric Power Commission to make a report on the railway. The municipalities affected are Chatham City, Wallaceburg Town, Erie Beach Village and Dover, Chatham, Raleigh and Harwich townships. (Sept., 1920, pg. 503.)

Dartmouth-Imperial, N.S.—A proposal to build an electric railway between Dartmouth and Imperial, N.S., is reported to be under discussion.

Fort William Municipal Ry.—A press report states that when the plebiscite on the fare question is held the Fort William, Ont., ratepayers will be asked to vote on the question of extending the line to Mission Park. The cost of this work is estimated at \$20,000. (June, 1920, pg. 316.)

Hamilton St. Ry.—The condition of Wentworth St. South was before the Hamilton, Ont., City Council's work committee recently. This is one of the streets upon which the Hamilton St. Ry. was to relay its tracks. When the company wanted to do so, the city asked that the work be delayed until a sewer was put in; this has now been done, and it is reported that the company is not in a position to get rails for track relaying. The board of control is reported to have asked the works committee to call upon the company to lay new tracks. (April, pg. 213.)

Hydro Electric Ry.—Essex Division.—A press report states that Windsor, Ont., city officials state that paving on Ottawa and other streets cannot be started until the Hydro Electric Power Commission of Ontario is ready to lay the new tracks for the electric railway. The new track work outlined by the Commission includes lines on Ottawa St., Parent Ave., Erie St., Windsor, and on Monmouth Road, Walkerville. (April, pg. 213.)

London & Port Stanley Ry.—The question of building a bridge at Port Stanley, Ont., inner harbor, come before the Elgin County Council, April 12. It is said that the L. & P.S. Ry. officials and the Board of Railway Commissioners have reached an agreement as to the type of bridge to be erected. The county council in 1919 voted \$20,000 for the erection

of a swing or lift bridge, but the L. & P.S. Ry. officials favored a fixed bridge at a higher level. (April, pg. 213.)

London St. Ry.—We are officially advised that the company is in the market for few railway diamonds. C. B. King is Manager, London, Ont.

Montreal Tramways Co.—Some reconstruction work was put under way, between Guy and Mountain Streets, on the St. Catherine St. West line, at the beginning of April.

The construction of a line along St. Denis St. to St. Catherine St. and thence eastward along St. Catherine St., is reported to be under consideration.

Other work for the season is being arranged and it was reported that repairs and construction work would be in full swing by the end of April. (April, pg. 213.)

New Brunswick Power Co.—The St. John, N.B., City Council considered recently a report from Commissioner Frick on the street car tracks, recommending that the company be asked to carry out its obligations as provided for in the following section:—"The said company is hereby empowered to lay and maintain a track and operate its railway upon the route through Queen Square, Carleton, until July 1, 1912, at which time it shall be the duty of the City of St. John, and it is hereby empowered to remove the track, poles, and wires of said company from said square, in case the company shall then refuse or neglect to do so, and shall put the square in as good condition as it was before the track was laid." (Nov., 1920, pg. 616.)

Nipissing Central Ry.—The estimates for the year ending Oct. 31, 1921, submitted to the Ontario Legislature recently, contain the following items for this railway:—

Paving Armstrong St., New Liskeard, \$1,089.33.
Roads, Local Superintendent, North Cobalt, \$1,802.30.
Car barns and shops (revote \$1,000), \$4,040.
Distribution system, \$1,250.
Passenger cars, \$15,903.14.
Service equipment, \$2,500.

Nova Scotia Tramways & Power Co.—Residents of the Richmond Heights district of Halifax have asked the company to extend its tracks to Duffus St. At present they terminate at the corner of Kaye and Gottingen Sts. It is said that the route proposed for the projected extension is along North Creighton St., which parallels Gottingen St. (Oct., 1920, pg. 561.)

Winnipeg Electric Ry. is reported to have opened for service its new substation on Sherbrooke St. This is the last of the three-wire substations to be built in the city in connection with the agreement between the company and the city for the prevention of electrolysis. (Mar., pg. 159.)

Quebec Public Service Commission Act. The Quebec Legislature has amended Article 736 of the Revised Statutes of 1909, concerning the salary to be paid the Commission's President by increasing it from \$7,000 to \$8,000. Article 768 is amended by the addition of a paragraph providing that if the President be not re-appointed at the end of any term of 10 years, he shall be entitled to a pension of two-thirds of the salary he was receiving at the time he ceased to hold office, except that such failure to be re-appointed shall not be due to his refusal to continue in office.

The British Columbia Electric Railway and the Rule of the Road.

The British Columbia Legislature passed an act in 1920 changing the rule of the road, from the British practice to that in most general use elsewhere in Canada. This act became effective July 15, in the principal areas of the province, but was not to be put in force until Dec. 31, 1921, in the area on the mainland and on Vancouver island within which the B.C. Electric Ry. operates its railways. The purpose of fixing this extension of time was to enable the Government and the company to consider the question of the payment of the cost of changing the company's lines and rolling stock to suit the new rule. The estimated cost to the company of the alterations is put in a recent press report at \$1,000,000, of which \$750,000 is estimated for Vancouver and vicinity, and \$250,000 for Victoria and vicinity.

The B.C. Legislature passed an act at its recent session authorizing the borrowing of \$3,550,000, the proceeds to be appropriated among other purpose to the payment of such sums, not exceeding in the aggregate \$400,000, as the Lieutenant Governor in council may direct to be paid to the B.C. Electric Ry. towards the cost of making alterations in its track, rolling stock and equipment necessitated by the change in the rule of the road. In the course of the debate on the bill the Minister of Public Works explained that it was originally estimated that the cost to the company of the changes necessitated by the alteration of the rule of the road would be \$1,000,000, but later investigations led the government to believe that the cost could be made for \$800,000. The Government considered that it would be acting fairly by the company by bearing half the cost, the total expenditure of the Government not to exceed \$400,000. The company had delayed buying new equipment, and had delayed plans for the improvement of its lines in view of the coming into force of the changes, but with the passing of the act would be prepared to go ahead.

Since the above was put in type we have received the following from a Vancouver correspondent:—The B.C.E.R. Co.'s estimate of the cost of changing its equipment to conform to the change in the rule of the road from left to right was more than twice the \$400,000 which the Government has provided. A report is being submitted to the Government by an independent engineer, as to whether the company's scheme can be modified and its estimate reduced. It has been announced that the change in the lower portion of B.C. will take place on Dec. 1 next, but is difficult to see how the B.C.E.R.'s equipment can be changed by that time, and whether that is the proper season, in view of the disruption of business which will occur.

Detroit United Ry. Affairs.—Detroit, Mich., ratepayers decided April 4, by a vote of 92,015 to 52,961 not to approve of the Detroit United Ry. service at cost offer, and by a vote of 96,539 to 50,704, approved of an ordinance to buy the company's lines as the franchises fall in.

The equipment of the Regina, Sask., Municipal Ry. cars for operation by one man is reported to be proceeding satisfactorily. It was expected to have the White Line equipped during April.

Bill to Change Regulation of Ontario Electric Railway Fares.

A bill to amend the Ontario Railway Act was introduced in the Ontario Legislature by C. McCrea, Sudbury, March 23, and read a first time as follows:—

"1. Sec. 210 of The Ontario Railway Act is repealed and the following substituted therefor:—

"Notwithstanding anything to the contrary contained in any agreement with a municipal or other corporation or person or in any special act, the fare to be taken by a company on a railway operated by electricity shall first be approved by the Ontario Railway and Municipal Board, and no fare shall be charged upon such railway which has not been so approved."

"2. Sec. 231 of The Ontario Railway Act is amended by striking out the words 'within the maximum hereinbefore mentioned' in clause i thereof and substituting therefor 'subject to the provisions of sec. 219,' and by adding to said section the following subsection:—

"(2) Notwithstanding anything to the contrary contained in any agreement with a municipal or other corporation or person or in any general or special act, the company and the council of any municipality in which a railway is constructed may by agreement with the approval of the board vary the terms under which the said railway is operated without a vote of the electors, provided, however, that no such variation shall have the effect of extending the term of the franchise beyond the limit previously agreed upon."

"3. Subsec. 1 of sec. 247 of The Ontario Railway Act is amended by inserting after the word 'runs' in the second line thereof the words 'or the company,' and by inserting after the word 'right' in the second line thereof the words 'to give notice.'"

"4. Subsec. 4 of sec. 260 of The Ontario Railway Act is amended by adding thereto the following:—

"Provided always that unless within 60 days from the said taking of possession by the board the company and the council of the municipality make such agreement as in the opinion of the board will provide an ample and efficient service and enable the company to obtain sufficient revenue to keep the railway in a reasonably safe condition and to meet the working expenditure and such return on the capital actually invested as the said board shall deem fair and reasonable, the board shall, upon application by either the company or the council of the municipality make such order as it deems just and reasonable and such order shall be binding upon the company and the municipality subject to the right of either party to apply for a revision thereof at the expiration of any fifth year thereafter upon giving one years previous notice to the other party."

"5. This Act shall come into force and take effect on the day upon which it receives the Royal assent."

The bill was read a second time April 1 and referred to the Legislature's railway committee, where it was most vigorously opposed by the City of Toronto and some other municipalities, also by Sir Adam Beck. J. W. Lyon, of Guelph, President of the Ontario Hydro Electric Railway Association, was one of its most vigorous opponents, outside of the Legislature. Mr. McCrea vigorously condemned him for his opposition, and accused him of inconsistency, in view of

the fact that the City of Guelph had at the same time a bill before the House to allow fares to be raised on Guelph Radial Railway, which is owned and operated by the city, and which it is proposed to turn over to the Hydro Electric Power Commission of Ontario to operate.

The Railway Committee in considering the bill, defeated it after considerable discussion.

The Canadian Electric Railway Association's Activities.

The C.E.R.A.'s executive committee, which met in Ottawa, April 14, with President, C. Gordon Gale, in the chair, disposed of a considerable amount of routine business.

It was decided to take up the question of uniform coinage with the Finance Department.

The compensation paid by the Post Office Department for carrying mails was considered, and the matter of securing higher rates was left to the President to deal with.

The following were admitted to associate membership—Canadian Street Car Advertising Co., and Eugene F. Phillips Electric Works, Montreal; Dominion Wheel & Foundries, Toronto; Elliot, Thompson Electric Co., Cleveland.

Replies from member companies, to a questionnaire on joint councils, having been considered, the committee expressed its opinion that joint councils between officials and employees of each individual company are desirable, but that extension of these relations beyond that point is not warranted at present.

E. P. Coleman, Dominion Power & Transmission Co.; W. S. Hart, Three Rivers Traction Co.; and Lt. Col. J. E. Hutcheson, Montreal Tramways Co., were appointed a committee to consider and report on the Hydro Electric Power Commission of Ontario's proposed rules for installation and maintenance of electrical supply and signal lines.

The committee was appointed to deal with traffic regulations and accident prevention, the members being A. Gaboury, Montreal Tramways Co., chairman, assisted by Chief of Police Gaudet, Montreal; Major F. D. Burpee, Ottawa Electric Ry., assisted by Chief of Police Ross, Ottawa; R. B. Morley, General Manager, Ontario Safety League, assisted by Chief of Police Dickson, Toronto; and R. Myrre-Ross, Quebec Ry., Light & Power Co., assisted by Chief of Police Trudel, Quebec.

The following officials of member companies were appointed to watch legislation of interest to electric railways, to advise the Association's office in reference to the same, and to act as conveners of committees composed of member companies' officials in the Dominion or provinces, respectively, when joint or concerted action is considered desirable. A. W. McLimont, Winnipeg Electric Ry.; New Brunswick, J. A. Olive, New Brunswick Power Co.; Nova Scotia, W. I. Weston, Nova Scotia Tramways & Power Co.; Ontario, C. L. Wilson, Toronto & York Radial Ry.; Quebec, W. J. Lynch, Quebec Ry., Light & Power Co.

The London & Port Stanley Ry. will, it is reported, be in the market shortly for an electric locomotive, and a steam shovel.

Electric Railway, Finance, Meetings, Etc.

Montreal Tramways Co. has declared a dividend of \$2.50 a share for the quarter ended March 31, payable May 2, to shareholders of record of April 15.

Regina Municipal Ry.—A press report gives the following statistics for March and for the three months ended March 31, compared with the same periods of 1920:—

	1921	1920.
March.		
Revenue receipts	\$72,819.90	\$72,918.25
Passengers carried	311,975	348,579
Three months		
Revenue receipts	\$94,296.30	\$102,470.80
Passengers carried	1,086,964	1,170,799

	1921	1920
Toronto Civic Ry.—		
Revenue Passengers		
Jan.	\$50,352	\$40,700
Feb.	46,800	27,906
March	53,021	31,978
	\$150,013	\$99,584
	\$126,754	\$107,991

Toronto Ry. Co.—The annual and special meetings of shareholders, which had previously been adjourned several times, were further put off on April 21, to May 27. The reason is that the agreement for the purchase of certain of the company's assets by the Hydro Electric Power Commission of Ontario and the City of Toronto is not ready for presentation to the shareholders.

A press report states that the company owes the City of Toronto \$1,052,540.46 for overdue percentages, exclusive of 6% interest.

Winnipeg Electric Ry. and allied companies:—

	Feb. 12, 1921	Feb. 12, 1920	Feb. 12, 1920
Gross	\$63,125	\$114,873	\$966,354
Expenses	\$63,667	\$28,395	\$63,667
Net	96,458	116,668	241,728
			\$20,471

The surplus for Feb. 1921 after fixed charges was \$44,914, against \$57,085 for Feb. 1920.

Toronto Street Railway's Gauges Not To Be Changed.

The Toronto Transportation Commission, which will operate the Toronto Ry. after it is taken over by the city in September, and also the Toronto Civic Ry. lines, made the following announcement April 27:—"The question of gauge change has been occupying the attention of the Commission for a considerable time and various plans have been prepared by the staff for changing the gauge, the estimated cost of which has been figured at \$1,500,000. The Commission felt that an advantage of gauge showed no immediate advantage, and would be liable to increase the operating difficulties until the work is completed. The financial requirements of the Commission to provide funds for urgent rehabilitation will be heavy, and they felt the necessity in view of existing financial conditions, of keeping their expenditure at the lowest possible figure. The advantage of gauge change, viewed in the near distant future, was not sufficiently tangible to warrant the Commission in assuming the extra expenditure at the present time."

The Commission's chairman, P. W. Ellis, supplemented the foregoing statement, as follows:—"We looked at it from every angle, and came to the conclusion that the advantages of retaining the present gauge outweighed those of changing it. We took into consideration the confusion and interruption of service which would follow the proposed

change, with traffic under full headway. Take just one problem involved in making such a change, that of intersections. These would have to provide for both standard and wide gauge cars while the work was in progress. If we changed one part of a route we would have to change it all, or else transfer the passengers. It was going to inconvenience car users for a long period of time, and we decided against it."

The gauge of the Toronto Ry. and Toronto Civic Ry. lines is 4 ft. 10½ in. The Toronto & York Radial Ry. lines, which are proposed to be taken over by the Hydro Electric Power Commission of Ontario, except the portions of them within the city limits, which will be taken over by the city, have two gauges. The Mimico Division, from Toronto west to Port Credit, 9.74 miles, and the Scarborough Division, from Toronto east to West Hill, 10.18 miles, are 4 ft. 10½ in. gauge; the Metropolitan Division, from Toronto north to Sutton, 52.13 miles, is 4 ft. 8½ in. gauge.

The Toronto Suburban Ry., which is owned by the Dominion Government, and operated by the Canadian National Ry., has lines in the western portion of Toronto, with interurban lines from Toronto to Woodbridge, 12.02 miles; and from Lambton Jct. to Guelph, 46.3 miles; its total mileage being 64.02. All its lines are now 4 ft. 8½ in. Its original lines in Toronto were 4 ft. 10½ in. The Woodbridge extension was built as 4 ft. 8½ in., but afterwards widened to 4 ft. 10½ in. Towards the end of 1916 the gauge on all lines was narrowed to 4 ft. 8½ in., except the Lambton-Guelph extension, which was built to that gauge.

Proposed Purchase of the Ottawa Electric Railway.

The Ottawa City Council passed a resolution, April 5, asking the Hydro Electric Power Commission of Ontario to make a valuation of the Ottawa Electric Ry. and to advise as to the city's policy regarding the future operation of the railway; the cost of improving the condition of the line and providing a service that would be satisfactory to the city. A similar resolution was passed by the council on a previous occasion, but the company refused to allow such an investigation, arguing that the agreement between the company and the city calls for the appointment of arbitrators to fix the value of the property. The council is reported to have been advised that the company's concurrence in an investigation by the Hydro Electric Power Commission of Ontario is unnecessary, although it would facilitate the enquiry.

A series of three addresses by authorities on electric railway matters to the members of the Ottawa Board of Trade was arranged for recently. The first of these was delivered April 6, by D. F. Wilcox, of New York, who was appointed by the United States Government during the Wilson administration, to report on the condition of radial railways throughout that country. He spoke on municipal ownership. The other addresses are to be by E. I. Lewis, Chairman of the Indiana Public Service Commission, on private ownership; and W. E. Cann, Toledo, on service at cost.

Niagara, St. Catharines & Toronto Ry. started May 1 to operate its electric cars on daylight saving time.

Mainly About Electric Railway People.

A. Beaudry, the newly appointed President of the Quebec Public Service Commission, took his seat at the Commission's sitting in Quebec March 29, when he read the official notice of his appointment.

T. Blundell Brown, one of the directors of the British Columbia Electric Ry. in London, Eng., is on a visit to the company's properties, and will spend several weeks at the Pacific coast, before returning to England.

R. Colwell, heretofore in the Winnipeg Electric Ry.'s service, has been appointed Superintendent, Edmonton Radial Ry., Edmonton, Alta., at a salary of \$3,600 a year. W. Brunless, who has been acting as Superintendent since the resignation of Superintendent Moir, has reverted to his own position of track foreman.

John Whitsell,
Manager, Winnipeg Electric Railway.

Geo. Kidd, General Manager, British Columbia Electric Ry., addressed the company's head office social club recently on the British Empire.

Geo. McGregor, Superintendent, London & Port Stanley Ry., is reported to have been relieved of his duties on April 15, following an investigation into a collision on the line Mar. 28.

E. W. Oliver, General Superintendent, Niagara, St. Catharines & Toronto Ry., Toronto, spent about a month in Bernuda recently.

S. F. St. Cyr, Chairman, Montreal Tramways Commission, addressed the old pupils of the Montreal Polytechnical School on the Montreal tramway system recently.

John Whitsell, whose appointment as Manager, Winnipeg Electric Ry., Winnipeg, was announced in a recent issue, and whose portrait appears in this issue, was born in Iowa, Nov. 30, 1868, and entered transportation service in 1881,

since when he has been, to 1897, shop foreman, Sioux City Traction Co., Sioux City, Mich.; 1897 to 1900, shop foreman, Suburban Railroad Co., Chicago, Ill.; 1900 to 1913, General Superintendent, same company, Chicago; 1913 to 1917, Superintendent of Equipment, and General Superintendent of Transportation, County Traction Co., Chicago; 1917 to 1920, General Superintendent, Chicago & West Towns Ry., Chicago; 1920 to March 1921, General Superintendent, Chicago & Interurban Traction Co., Chicago.

Transportation for the Blind on Montreal Tramways.

Lt. Col. J. E. Hutcheson, General Manager, in response to an enquiry, advises Canadian Railway and Marine World that a blind person when travelling on the company's cars, accompanied by a guide, is carried for one fare, including the guide. The following notice has been issued by the Superintendent:—

"Conductors will note the attached sample pass of certificate of the blind. Presentation of this pass will authorize conductors to accept one adult fare in payment of passage of two passengers, viz., a blind person and his guide. You will note that this certificate is valid only after it has been countersigned by the principal of a blind institute. You will, therefore, examine both sides of these certificates every time one is presented."

The pass, which is printed in both English and French is about 4 x 2½ in., the English wording being as follows:—

Front.
TRAMWAYS
Certificate of the Blind.

To Conductor.—
Accept from
One adult fare only for bearer and guide.
A. GABOURY, Supt.

Back.
Not valid unless countersigned by Principal of
Institute of the Blind.

Electric Railway Employes' Wages, Working Conditions, Etc.

London St. Ry.—The Ontario Railway and Municipal Board is endeavoring to bring about the return of the London St. Ry. to the company's officers for operation. The question round which controversy centers is that of wages. The men are reported to have asked for an agreement with a rate of wages reaching 52c. an hour, to which request the company replied that it was not prepared to renew the existing contract which gives 48c. an hour, with whatever further grant the Ontario Railway and Municipal Board, which is operating the road, can pay out of surplus earnings. The company's position is that unless it is granted an increase of fares, it cannot do anything in the way of increasing wages. The London City Council will, it is reported, not take any action towards granting an increase, and the men, it is stated, will, unless some arrangement is made, go on strike.

Ottawa Electric Ry. — The wages agreements between the company and its car employes expired April 30. The employes union asked for alterations in working conditions which would shorten the hours without reducing the day's wage. The management pointed

out that present conditions do not allow of any changes in the hours of labor, although it was admitted that working conditions could be improved. The company's position in its relationship to the city is uncertain, and should be considered. The union is reported, after considering the management's statement,

to have decided to continue at the present wages for a year unless an arrangement is arrived at between the city and the company on the franchise question. A new agreement on this basis is, a press report states, being settled, some minor details as to working conditions being in course of arrangement.

Toronto Transportation Commission Places Large Car Order.

The Toronto Transportation Commission has ordered from Canadian Car & Foundry Co., Montreal, 100 motor cars and 60 trailers, for use on the Toronto Ry., which will be taken over by the city in September, and on the Toronto Civic Ry., which will also come under the Commission's jurisdiction. The amount of the contract is about \$1,270,000, which covers only the car bodies and trucks, and not the electrical equipment, air brake material, etc., the final details of which are not yet decided upon. It is expected that the prices to be paid for this equipment, when added to the price of the cars themselves, will enable the commission to obtain the cars complete, delivered in Toronto, at an average unit cost of between \$17,000 and \$18,000.

The cars are to be of all steel construction; the motor cars will be 51 ft. 8 in. long over all, and 8½ ft. wide, and the trailers will be the same width, but approximately 49 ft. long. The new cars will therefore be larger than the double truck cars now being operated by the Toronto Ry., which are approximately 45 ft. long.

The interior arrangement of both cars and trailers, and the means by which passengers will enter and leave, will differ substantially from the Toronto Ry.'s cars, and the design of the new motor cars and trailers themselves will differ largely also, in so far as the entry and exit of passengers is concerned, although the interior arrangement of both will be similar.

The motor car interior will be divided into two sections. The front section will be equipped with longitudinal seats, along each side of the car. The entrance for passengers, instead of being at the rear of the car as with the present equipment, will be at the front, the entrance doors being of the folding type, operated by air pressure, with the width of opening such that two passengers may enter at the same time. These doors will be interlocked with the controlling mechanism in such a way that power to move the car will not be available until the door are closed. The fares will not be paid on entry, but the conductor and fare box will be located at the center of the car so that, if the passenger remains in the front section of the car during the journey, the fare will be paid while he is leaving the car by the side door exit, or if he rights in the rear portion of the car, the fare will be deposited as he is passing from the front to the rear section. In the rear section, the longitudinal seats will be replaced by the standard arrangement of double transverse seats on each side, in addition to which there will be a bench seat at the back conforming to the shape of the rear of the car body. Exit from the rear section will be by a side door on the right side of the car looking forward, this door also being air operated and electro-pneumatically interlocked with the controlling apparatus so that the car cannot

be moved until the passenger is off and the door closed. The normal seating capacity of the car will be 57 persons.

The trailing cars will also be divided into two sections, with the seating arrangement similar to that of the motor cars, but entry will be by means of a side door opening into the forward section. The fare box in the trailer will be located so that the fare may be paid while passing from the front to rear section of the car, or while leaving the front section by the side door exit, the same as in the motor car. The entry and exit side doors of the trailer will be on the same side of the car and close to each other. Although the trailer will be shorter than the motor car, its seating capacity will be greater, accommodating 61 persons, which is explained by the fact of the controlling apparatus and space for the motorman taking up a certain amount of the space of the motor car.

The Toronto Ry.'s trailers are of the short single truck type, and for that reason less comfortable than the ordinary cars, but the new trailers will be substantially of the same type of construction as the motor cars, and fully as desirable from the travellers' point of view. The new cars will be ventilated by forced draught, and electrically driven fans, and equipped with modern electric heating equipment. The familiar hand crank will be replaced by a low hanging bar extending the length of the car. The cars and trailers will be connected by automatic couplers.

The Toronto Ry. cars are not equipped with air compressors, compressed air being supplied from compressors located at various points throughout the city, the cars stopping opposite the street connection to the reservoir supplied by the stationary compressor, when the reservoirs on the cars are connected up and air is turned into them and the cars equalizes. This supply of air must then suffice to operate the brakes, and, on the cars so equipped, the pneumatically-operating doors, until the next stationary supply of compressed air is reached. The new cars will be equipped with electrically driven air compressors, and storage reservoirs, thus obviating the stops to charge the car reservoir from the stationary supply. The trailer will also be equipped with air brakes, the brakes on both cars operating simultaneously, in accordance with the position of the motor's brake valve. Taking into consideration this feature, and the automatic coupling feature, the combined equipment will be more in the nature of a two-car train, rather than a simple car and trailer as known heretofore in Toronto.

Many special features will be included in the new equipment. All interior lights will be shaded, and in front, in addition to the headlight, will be a signal light, which will light up automatically as soon as the doors close and the car is ready to proceed. The information thus given will be of value to traffic of-

ficers at street intersections. At the rear will be two signal lights, designed to be of assistance to motorists; one will be red and show when the car is stopped, or when the power is shut off to make a stop, and the other light, green, will show when the car is moving or about to start, both lights being cut in and out automatically. The gearing through which the drive from the motors to the axles will be transmitted will be of the spiral type, obviating a great deal of noise incidental to the old style mesh; the electrical equipment will provide for quick starting and rapid acceleration.

Prior to the placing of the contract, there had been a great deal of agitation among various bodies in Toronto to have the new equipment built in the city. However, in the absence of any modern plant equipped for the work and able to do it at a cost comparing at all favorably with the cost of building a new factory, this was impossible. The proposition for the Transportation Commission to build its own cars, which would involve all the overhead and direct costs of a complete plant, distributed over an output restricted to the Commission's requirements, was out of the question. The specifications for the electrical equipment and air brake and other devices are now nearing completion, and the expectation is that the contract for these will be let in the near future. The color of the cars is still undecided on, and it is probable that the design as projected at present will be subject to minor changes before construction begins.

Toronto transportation problems have for long been recognized as a difficult one, the congestion in the main thoroughfares being very severe during the rush hours. The new cars are designed to afford the greatest rapidity in loading and unloading, together with greater capacity, should help the situation materially. Delivery is expected to begin about Sept. 1.

Electric Railway Notes.

Sudbury-Copper Cliff Suburban Electric Ry. is reported to have introduced p.a.y.e. cars.

The Dominion Parliament has authorized the directors of the Oshawa Ry. to fix the date upon which the annual meeting of the shareholders is to be held. The Oshawa Ry. is owned by the G.T.R.

The Grandview, B.C., Chamber of Commerce has, through the Vancouver Police Committee, protested against the skip-top plan adopted recently on some of the British Columbia Electric Ry.'s lines.

At a meeting of the London, Ont., City Council, April 18, an alderman gave notice of motion to ask the Hydro Electric Power Commission of Ontario to negotiate for the purchase of the London St. Ry. Co. property.

The London & Port Stanley Ry. will, it is reported, operate its electric car service between London and Port Stanley during the summer in connection with the Cleveland & Buffalo Transit Co.'s steamers, which will call at Port Stanley.

A press report states that A. W. MacAlister, K.C., heretofore English clerk in the Attorney General's Department at Quebec, is reported to have been appointed as successor to Sir George Garneau, as a member of the Quebec Public Service Commission, Sir George having resigned.

Marine Department

The Minister of Marine's Statement on Canadian Government Merchant Marine.

The following is the first official and correct report to be published of Hon. C. C. Ballantyne's speech in the House of Commons on March 29, in moving the House into committee of supply, the report in the House of Commons Debates, unrevised edition, having contained some inaccuracies:—I desire to place before the members particulars concerning the operations of the Canadian Government merchant ships during the year ended Dec. 31, 1920. I thought it well to do so at this time in order that members may be in possession of the facts and they will be in a better position, after a perusal of the official report of my remarks, to ask whatever questions they may deem proper when the House is again in committee of supply. It is agreeable to members, I suggest at the outset that they be good enough to allow me to finish without interruption whatever I have to say. When we are in committee of supply I will, to the very best of my ability, and with the greatest pleasure, give the fullest information regarding the operations of the Canadian Government Merchant Marine.

Reasons for Building.—When, on April 4, 1918, I had the honor of announcing to Parliament the Government's shipbuilding programme, I gave the reasons which impelled us to enter upon such an undertaking. Although it may be a repetition of what I then said, I shall now briefly restate the reasons which caused the Government to create a Canadian Government merchant marine. During the spring of 1918, the war was at its most critical period, and losses in shipping tonnage throughout the world were very grave. Indeed, so serious was the situation at that time that it amounted to a race between the enemy submarines and the shipbuilding yards of the British Empire, in the one case to destroy allied tonnage as rapidly as possible, and in the other to make good, as far as possible, that loss of tonnage. In the first place, therefore, this Government thought it wise to enter upon shipbuilding as a war measure. Before that decision was reached, the British Government was utilizing our steel shipbuilding yards throughout the Dominion for its own purposes, which ships were under British registry, the Canadian Government providing the necessary funds. However, as these ships were being built for the mother land, and under British registry, the moment they were ready to be put into commission they would necessarily pass into the possession of the British Government to be utilized by it in the way it might deem best. The Dominion Government, therefore, came to the conclusion, and its decision received the unanimous approval of the House at that time, that it would be better for Canada, in the national interests, seeing that she was financing the construction of these ships that were being built for the British Government, we should build ships under Canadian registry and for the benefit of the Canadian people. Accordingly our first reason for entering upon the shipbuilding programme at that time was the imperative need of providing shipping to make up the immense

losses that were occurring almost hourly during the most critical period of the war. The second reason for embarking upon this policy was that the Government owned a large system of railways, amounting to about 18,000 miles, and which will be increased to something like 23,000 miles if the acquisition of the Grand Trunk goes into effect. Having this vast system of national railways, the Government deemed it necessary to complete the chain of transportation by providing ships to carry the cargoes that would be transported over this immense railway system to our seaports for exportation. The third, but by no means the least important, reason for the construction of these ships was to enable

signed the Canadian Government should not have given any more contracts for ships. I explained to the House last year, and I repeat the statement, that the Government's reason for continuing the shipbuilding programme was the serious labor conditions that existed throughout Canada at the time of the signing of the armistice, and which conditions prevailed through the year 1919. Thousands of skilled and unskilled workmen were out of employment; and as, at that time, hundreds of thousands of our brave men were returning from the front, the Government felt that it was its plain duty to carry on shipbuilding, and to give employment not only to the men then needed in the industry, but to others who were likely to require work, and especially the returned soldiers, that from the point of view of making provision for unemployment it would be a wise policy for the Government to continue its shipbuilding programme. I hope the House will pardon me if, from this point, I adhere somewhat more closely to my notes in order to afford members that detailed statistical information which is so imperatively necessary in connection with this important matter.

Falling Freight Rates.—The year 1920, as was generally anticipated, proved unsatisfactory to shipping interests the world over, more especially from the point of view of net earnings. The loss of tonnage that had been sustained during the war was more than overtaken, with the result that there has been throughout the year a surplus of available tonnage. The world tonnage at the commencement of the war was about 49,000,000 tons. The available world tonnage at present is about 65,000,000 tons. The costs of operation that had reached abnormally high proportions during the war and to which reference will be made later, continued throughout the year. That, taken in conjunction with the substantial decline in freight rates from those of the previous year, added very materially to the difficulties with which shipowners had to cope. During the year there was a very severe decline in freight rates from United Kingdom ports over well defined routes, such as those to India and South America. While the decline in trans-Atlantic rates to U.K. ports was not so acute, it was nevertheless very substantial, and had a marked effect on the earnings of vessels. For instance there has been a decline of 65% in the rate on flour; on grain 61%; on deals 55%; on cereals 48%; and on apples 41%. On cargoes from Canadian ports to South American ports decreases have averaged from 17 to 50%. On cargoes to India there has been a decline of 20% in the comparatively short time since the route was established. From British Columbia ports to Australia there has been a steady decline averaging between 15 and 35%. On the one article of lumber the decline over the rate for 1919 was, during 1920, at least 25%.

Over all the principal trade routes, both trans-Atlantic and trans-Pacific, there has been a corresponding decline in freight rates, and while shipping companies during that time had to contend with the highest operating costs ever

Canada to expand her export trade; and as I proceed with my remarks members will see that the Canadian Government Merchant Marine has performed a very great national work in opening up new trade routes and in helping to develop and expand the export trade of the Dominion. No new contracts for ships have been let since 1919. I have noticed from time to time that the Canadian press, and occasionally some gentlemen engaged in banking, the presidents of our large financial institutions, have called upon the Government not to build any more ships, assuming the opinion that the time had arrived when shipbuilding by the Government in this country ought to cease. I find no fault with these financial gentlemen except to say that when they made such appeals they seemingly were not aware that the Government had not placed any new contracts for the construction of ships since 1919, but was simply carrying to completion its original shipbuilding programme. Some of those who made this demand were of the opinion that when the armistice was

known, they were also faced with the problem of smaller cargo offerings than had been the case for many years. As an indication of the enormous extent to which operating costs have increased in recent years, I may point out that the percentage of increase in the prices paid for the principal requirements as between the years 1914 and 1920 has been approximately as follows:—Coal 133%; provisions 100%; oils, etc., 100%; paints 125%; rope 100%; general deck and engine stores 100%; wages 300%. So acute is the depression in shipping that for some considerable time there have been lying idle in different ports of the world a very large number of British ships, and at the present time there are lying idle 536 steel steamships of United States registry, in addition to nearly 300 wooden ships of the same registry. Under all these unusual conditions the Canadian Merchant Marine may well be considered to have had a very satisfactory year, the results of which I shall place in more detail before the House.

Number of Ships.—The next matter of interest I wish to bring before the House is the number of ships that the Government owns. When I made my statement in connection with the shipbuilding programme to the House last session there were 24 ships completed and in commission as follows:—7 of 8,300 tons each; 4 of 5,100 tons each; 4 of 4,500 tons each; 8 of 3,500 to 3,900 tons each; 1 of 2,800 tons. The approximate tonnage of these ships is 129,000 tons. Since that time 23 additional ships have been completed and put in commission as follows:—9 of 8,300 tons each; 4 of 5,100 tons each; 4 of 4,500 tons each; 4 of 3,500 to 3,900 tons each; 2 of 2,800 tons. These have an approximate deadweight tonnage of 131,000 tons. There are therefore now in commission 47 ships of the following types:—16 of 8,300 tons each; 8 of 5,100 tons each; 8 of 4,500 tons each; 12 of 3,500 to 3,900 tons each; 3 of 2,800 tons each; of an approximate deadweight tonnage of 259,783 tons. There remain to be completed 16 ships of the following types:—2 of 10,500 tons each; 9 of 8,300 tons each; 5 of 3,500 to 3,900 tons each. These will have a deadweight tonnage approximately 114,470 tons. The entire programme which completed will comprise 63 ships of the following types:—2 of 10,500 tons each; 25 of 8,300 tons each; 8 of 5,100 tons each; 8 of 4,500 tons each; 17 of 3,500 to 3,900 tons each; 3 of 2,800 tons each. The approximate deadweight tonnage of all of these ships when completed will be 374,254 tons. Seven of these ships are being equipped with oil fuel installation and 13 of them will be provided with refrigeration spaces.

It will be recalled that for the purpose of the shipbuilding programme \$20,000,000 was voted for the present fiscal year. Of that amount there has been expended \$14,684,513.99. It is estimated that before the end of the fiscal year a further sum of \$650,000 will be expended, making a total expenditure for the year of \$15,334,513.99. It therefore follows that, of the amount of \$8,000,000 which will be required to complete the programme, \$1,665,496.01 is a reserve.

Cost of Ships.—The average cost of construction of all ships under the Government shipbuilding programme figures out at \$191.95 a d.w. ton. The average cost of the ships built by the United States Shipbuilding Board has been stated in a recent official communication to be about \$215.00 a d.w. ton. So that,

on a much smaller programme, our cost compares very favorably indeed with the cost of construction of similar steel ships by our friends to the south, being nearly \$24 a ton less than theirs.

With regard to the costs of operation, a comparison of Canadian Government wage costs with like costs, of operating similar ships by Great Britain, the United States, Japan, Norway and France, is as follows:—The monthly wage cost of a Canadian Government merchant marine ship of 8,100 tons d.w. which carries a crew of 41, including 2 boys, is \$3,705. Published figures from an authentic source (bulletin issued by Dow, Jones & Co., New York) show the monthly wage cost of foreign ships of similar tonnage as being, for British ships \$3,924; United States, \$5,315; Norwegian, \$3,378; and Japanese, \$2,869.

I would like to give the House particulars of the number of officers and men employed on our Government ships at the end of 1920. All told the number was 1,674, comprising:—Masters 48; officers 138; engineers 183; ordinary seamen, firemen, stewards, etc., 1,305; total, 1,674. Total number Canadian by birth or adoption:—Masters 30; officers 57; engineers 129; ordinary seamen, firemen, stewards, etc. 652; total, 868. Total number British: Masters 18; officers 81; engineers 54; ordinary seamen, firemen, stewards, etc. 653; total, 806. Grand total, 1,674.

Routes and Sailings.—I think it will interest the House also to be given some information in regard to the routes upon which these ships are plying. They are as follows:—Fortnightly sailings, Canada to Liverpool, Canada to London, Canada to Barbados, Trinidad and Demerara. Three-weekly sailings, Canada to Glasgow, Canada to Nassau, Kingston, and Belize, Canada to St. John's, Newfoundland, via Charlottetown, P.E.I. Monthly sailings, Canada to Cardiff and Swansea, Canada to Pernambuco, Santos, Rio de Janeiro, Montevideo, and Buenos Aires, Canada to Havana, Cuba, Canada to Liverpool, via Sydney, N.S., Canada to Mediterranean, Straits Settlements, Java and India, Canada to Australia and New Zealand, Vancouver to Straits Settlements, Java and India, Vancouver to Australia (direct), Vancouver to New Zealand (direct).

During 1920 new routes have been opened up and allocations of steamers made as follows: (1) Montreal-Glasgow service; established Jan. 23, 1920; sailings every three weeks; allotted three 4,300 ton ships. (2) Vancouver-Australia and New Zealand service; established Feb. 23, 1920; monthly sailings; allotted five 8,100 ton ships. These ships call, east and west bound, at Wellington, Auckland, Sydney and Melbourne. (3) Montreal-Cardiff and Swansea service; established July 3, 1920; monthly sailings; allotted three 4,300 ton ships. (4) Montreal-India and the Orient service; established Sept. 11, 1920; sailings every two months; allotted two 8,100 ton ships. (5) Halifax and St. John-Nassau, Kingston and Belize service; established Dec. 8, 1920; three-weekly sailings; allotted two 5,100 ton ships.

In accordance with the trade agreement concluded during the year with the British West Indies it was decided to equip two of the 5,100 ton ships then under construction with passenger accommodation, in consequence of which a regular service every three weeks has been established between Canada and

the Bahamas, Jamaica and British Honduras. The delegates at the very important conference held in Ottawa in June, 1920, to negotiate a preferential trade agreement between Canada and the West Indies, particularly the delegates from the Bahamas, Jamaica and British Honduras, claimed that they were very short indeed of passenger services. I informed them, as your Minister of Marine, that the Government did not own or intend to build any passenger ships, but the delegates were very much interested in the matter and continued their pressure upon me and the other representatives of the Government, requesting us to equip, if possible, some of our freight ships with a limited passenger accommodation. I pointed out to them that I did not think it would pay to equip freight ships with a limited passenger accommodation and to operate them on such a long route as that of Halifax to the Bahamas, Jamaica and British Honduras and back over the same route in the winter, and from Montreal in the summer. Some representatives from the West Indies then said that if it did not pay, the countries they represented would each contribute a certain amount. I am sorry I have not before me the amount that each of the Islands stipulated in the agreement that it would be willing to pay, but if my memory serves me correctly the amount in all would be about \$13,000. We cannot tell at present whether or not this new route will pay, but judging from one or two other cases the ships have made, it looks as if it might break even. I would not, however, be prepared to make that as a positive statement; we shall have to wait until the end of the fiscal year. While the accommodation provided is for but 26 cabin passengers to each ship, it is of such an excellent character that it attracts a full passenger list for each sailing. Fuel cargoes also have been carried, and it is confidently expected that the regularity and character of the service generally will build up a profitable business in the interchange of the products of these British possessions and Canada. The first ship on this route sailed from Halifax on Jun. 25 last, with a full complement of passengers, and a general cargo of flour, potatoes, oats, cement and general merchandise.

Trade Development.—The House and the country generally, and the exporters of Canada in particular, will be interested to know what these ships are capable of doing in the way of expanding Canada's export trade. In this connection, I regret to have to express my disappointment with the efforts so far made by the Canadian manufacturer and exporter. These ships have been equipped with one or two extra passenger cabins in order that Canadian business men might either go themselves to these British possessions and foreign countries, or send their commercial agents. While the showing of exports is not a bad one so far, I would like again to make an urgent appeal to Canadian manufacturers and business men to reach out more aggressively for export trade. I said last year, and I say it again, that if Canada is to wipe out her immense war debt with a reasonable tone, Canadians must not only look after the home trade but reach out aggressively for foreign markets. We have provided this magnificent fleet of freight ships and these new routes have been opened up. No old established steamship company would take the chance that the Government

ships have taken in opening up one new route after another; the old companies would naturally hesitate and first try to ascertain whether or not it would be profitable to put ships on the various new routes to which I have referred. But these ships are Canadian ships, built in the national interest. The Government has never attempted and, I hope never will attempt, to interfere in the management of the ships; all I have said to the management, as the responsible minister, was, that they should make all the money they could, at the same time keeping the national interest in mind and assisting the Canadian people in every way to export the products of fishery, forest, farm, mine, and factory. Canadians, therefore, have reason to be proud that they possess this immense fleet of new ships going to all corners of the world, and making a very creditable showing, to which I shall refer in a moment. But the great feature of a Canadian merchant marine is the fact that this country can say: We want this ship, or so many ships, run on whichever route we think there is a possibility of Canada obtaining trade, and thus expanding her export business.

Exports.—The principal exports of Canadian products by the Canadian Government Merchant Marine ships have been:—From Atlantic ports to Malta, Barcelona, India, Ceylon and Java. From Atlantic ports to Liverpool, London, Glasgow, Cardiff and Swansea. From Atlantic ports to the British West Indies, Cuba and South America. To Australia from Vancouver. To Newfoundland from Montreal and Halifax. The exports to Malta, Barcelona, India, Ceylon and Java consisted of iron and steel products, glass, furniture, agricultural implements, rubber goods, automobiles, grain, flour, etc. To United Kingdom ports the exports have been grain, flour, cereals, canned goods, bacon, cheese, apples, pulp, paper, lumber, iron and steel, machinery, cement, etc. To the British West Indies the products exported have been cement, flour, trunks, iron and steel products, paper, machinery, furniture, etc. To South America the exports have been pulp and paper, malt, agricultural implements, dried fish, steel products, lumber, etc. To Cuba exports have consisted mainly of pulp and paper, malt, flour, hay, lumber, fish, potatoes, whiskey, oats and cement. To Australia there have been exported from British Columbia ports, lumber, paper, cement, fish, machinery, rubber goods, etc. From Montreal and Halifax to Newfoundland, there have been exported flour, hay, oats, paper, cheese, cement, etc. The importance of the merchant marine to Canadian trade cannot be too strongly emphasized. Canadian goods to the value of over \$50,000,000 have been transported during the year in Canadian-built ships, each named ship with the prefix "Canadian" being the best advertisement for Canada in the principal markets of the world.

Operating Results.—I have now arrived at what, I presume, will be the most interesting part of my statement this afternoon, and that is: What results have been obtained from the operation of these ships during the past calendar year? I will, therefore, proceed at once to give this information to the House. It is as follows:—

Operating Account for 1920.	
Gross revenue closed voyages.....	\$10,027,442.77
Operating expenses.....	8,735,917.22
Operating profit closed voyages.....	\$1,293,525.55

Deduct—	
Depreciation.....	\$667,665.46
Outstanding liabilities.....	22,000.00
Incorporation expenses.....	5,400.00
	695,065.46
Net earnings closed voyages.....	\$598,460.09
Net earnings on voyages closed since January applicable to 1920.....	183,000.00
Total net earnings.....	\$781,460.09

These net earnings are before providing for interest, and the above amount of net earnings, \$781,460.09 is equal to 2.35% interest on notes given to the Government for the full cost of the ships.

F. S. Cahill, Pontiac, Que., asked:—
 When does the Government pay for the money Mr. Ballantyne continued.—
 The rate of interest varies, depending on the time at which loans are made. When these Government ships are ready to be put into commission, they are turned over to the operating company and charged to that operating company at cost price, which I gave a few moments ago as \$191.95 a d.w. ton. The operating company gives the Dominion Government its promissory notes for the ships. The following is a statement of the assets and liabilities:—

Canadian Government Merchant Marine Ltd. and subsidiary companies consolidated balance sheet as at Dec. 31, 1920.

ASSETS.	
Fixed assets—	
Ships at cost.....	\$50,005,892.71
Less depreciation reserve.....	815,841.32
	\$49,190,051.39
Plant and equipment at cost.....	\$ 27,243.25
Office furniture at cost.....	29,128.66
	\$56,371.91
Less depreciation reserve.....	2,818.60
	53,553.31
Total.....	\$49,243,604.70
Current assets—	
Cash in banks and on hand.....	\$ 426,816.02
Accounts receivable.....	1,750,161.36
Advances to captains, crews and agents.....	54,605.09
Adjusted losses due by underwriters	67,866.82
Unsettled claims, estimated amount recoverable.....	686,805.91
Interest receivable accrued.....	4,583.33
Inventories of stores and supplies.....	41,521.84
Dominion of Canada Victory Loan 1934.....	500,000.00
Total.....	\$3,535,853.97

LIABILITIES.	
Capital stock—	
Authorized 10,000 shares of \$100 each, \$1,000,000; issued, 4,709 shares of \$100 each.....	\$ 470,900.00
Notes payable.....	
Due Dominion Government secured by mortgages on ships.....	49,535,892.71
Current liabilities—	
Accounts payable.....	1,712,803.63
Open voyages.....	
Balances of uncompleted voyages.....	963,920.65
Surplus.....	1,064,233.01
Contingent liabilities (non ascertained).....	
	\$53,687,649.40

As regards current assets, members will, I am sure, note with pleasure the strong liquid position of the operating company. No bank loans are shown, and the company is in an easy position financially.

T. Vien, Lotbinière, Que., having asked: Are the ships insured? Mr. Ballantyne replied: Yes. Insurance premiums alone for 1920 amounted to over \$1,000,000, and they are included in operating expenses. The ships are insured up to 80% of their original cost.

Mr. Vien asked: How is the depreciation calculated? Mr. Ballantyne replied: I have the information here; but it is somewhat technical, and if the member will ask me that question again when

we get into committee on the estimates, I shall be glad to give him the details. Mr. Vien then asked: When we come to that in the estimates, will the Minister be prepared to tell us the current value of the same type of ships in the markets of the world?

Mr. Ballantyne continued: I am quite sure that the figures I am giving are absolutely correct. Not only have they been certified to by the company's auditor, but I asked a well known firm of chartered accountants, outside altogether of the operating company, to give me the usual statement that appears when an annual balance sheet is issued. The certificate of these auditors, the well known firm of Marwick, Mitchell & Co., reads as follows:—

"We have audited the accounts of the Canadian Government Merchant Marine, and its subsidiary companies for the year ended Dec. 31, 1920, and have obtained all the information and explanation which we have required. We certify that the above consolidated balance sheet and relative operating and subsidiary accounts, in our opinion properly drawn up so as to exhibit a true and correct view of the state of the company's affairs as at Dec. 31, 1920, and of its operations for the year ended at that date, according to the best of our information and the explanations given to us, and as shown by the vouchers and other documents subject to the explanation that no provision has been made in respect of accrued interest on notes payable due to the Dominion Government for 1920, as the amount of same may be subject to adjustment."

The Outlook.—I want to say a word or two in regard to the present outlook. While there is a business reaction throughout the world, I am under the impression that this is only of a transitory character, and that we are looking for a considerable improvement in trade in the very near future. While freight rates may be expected to still further decline, this will be offset by much lower operating costs, and with the acquisition of the Grand Trunk Railway system, this additional mileage added to the lines which the Government now own and operate, will make in all 23,000 miles, and, in fact, I believe, as a constant feeder to the Government's ships.

Shipbuilding conditions throughout the world are quite similar, owing to the lack of demand for tonnage. Canadian shipbuilders, therefore, are experiencing the same depreciation that is being experienced in other countries. Canadians have demonstrated that they can build ships equally as good, and, during the past few years, at as low a cost as the old and experienced yards in the United Kingdom. Freight ships totaling 8,400 d.w. tons, corresponding to the Government's type would cost in the United Kingdom about \$29.10s. a ton, equal to \$130 at the present rate of exchange. I have had no need to ask Canadian shipbuilders recently for a price to build steel ships, but I have every reason to believe that the Canadian price would not be any more than \$10 or \$15 a ton higher than the United Kingdom price which I have just quoted. The Government still has under consideration the question of a subsidy as an aid to stimulate steel shipbuilding in Canada, and it may be that an announcement in that connection will be made by the Finance Minister when he brings down his budget.

Conclusion.—As I have already stated, by July 1, 1921, the Government's ships will have been completed and placed in commission, and Canada will have reason to be proud of her merchant marine modern freight ships.

I first had the privilege of announcing the Government's shipbuilding programme in the House of Commons on April 4, 1918. The Government's ship-

building policy at that time received the unanimous approval of Parliament, and I was particularly pleased on that occasion to receive such warm words of commendation from that distinguished statesman whose word carries such great weight in this House and throughout the country, the member for Shelburne and Queen's (Mr. Fielding). My thanks are also due for the words of commendation uttered on that occasion by the member for Maisonneuve (Mr. Lemieux) and the late member for Prince County, P.E.I., Captain Read.

The creation of a Canadian Government merchant marine has been warmly endorsed by people from one end of this country to the other, and even if these ships in the future are not able to continue to make the good showing that they have done so far, I am satisfied that I am expressing the majority opinion, not only of this House, but of the whole country, when I say that the policy of Canada owning and operating her own merchant marine is fully justified.

I have endeavored to place before the House as briefly and concisely as possible the main features of the Government's programme, both from the construction and operating point of view. Before the end of the present calendar year all construction will be completed, after which the connection of the Marine Department with the programme will cease. The House will not need to be reminded that the programme of ship construction was much more extensive than anything hitherto undertaken by this country. It was not to be expected that the work could be carried to completion without experiencing some difficulties and disappointments. I am able to report, however, that no serious difficulty was experienced. The aim of the Government throughout was to develop shipbuilding as a self-contained industry. It has been successful to the extent that the boilers, engines, pumps, winches and all the other accessories are nearly all of Canadian manufacture. The House will, I am sure, be glad to know that all these necessities manufactured in Canada by Canadian workmen, have measured up to the highest standards of excellence and are giving results equally as satisfactory as could be obtained from similar accessories manufactured elsewhere by long established concerns. It is no less satisfactory to know that while the price paid for the construction of ships may be regarded, in the light of the present day conditions, as high, they have been substantially lower than those paid for similar work in the U.S., where conditions more nearly resemble those in Canada.

There is a further consideration from which as the Minister primarily responsible for the programme I derive some comfort, and that is, that every contract made, every voucher paid, every letter and telegram exchanged between the Department and contractors is open for the fullest inspection of any member of the House who desires any further information.

It would be difficult, indeed it would be impossible, to measure in any adequate way the national importance of Canada's merchant marine. I am firmly convinced that what these vessels have already accomplished in the way of marketing Canadian products in remote parts of the world is but an indication of the greater successes along these lines in the years immediately ahead of us. Canada is no longer a stranger in foreign ports. The maple leaf, struck on the house flag

and on the funnels of ships is becoming a familiar sight in the principal world ports.

In the design and construction of the ships, British types have been adopted. Those in commission have splendidly met every requirement and have been commended by men competent to form opinions. The quality of the ships themselves, as well as, in a general way, the types of men serving as officers and crews, are helping in a very special manner to establish for Canada and for Canadian business a favorable position abroad.

It would not be proper for me to conclude this statement without expressing my deep appreciation of the technical officers of the Marine Department who shared with me the great responsibility of constructing this \$75,000,000 merchant fleet for Canada. As I stated a moment ago, we had many difficulties to contend with. The war was at its height, material was high, and unskilled as well as skilled labor was hard to obtain. But we managed to build these ships in Canada, and the achievement is a great tribute to the Canadian workman and the Canadian shipbuilder; it is creditable to them that these ships have been constructed so well. The design, of course, was British; but, as I have mentioned, all accessories were made in Canada by Canadian manufacturers, and no serious complaints have reached the Marine Department either in regard to design, construction, or equipment of these ships, down to the minutest detail. In the circumstances, this House and the country generally may feel confident that, given equal opportunities, we can build ships in competition with the world and build them as well. I desire particularly to tender my thanks to the naval architect, C. Duguid, to my very able Deputy, Alex. Johnston, and to all those who assisted me during these years in carrying to a successful conclusion, if I may be permitted to say so, the creation of Canada's large and splendid mercantile fleet.

Ocean, Coast, Lake and River Steamship Officers for 1921.

The following appointments, made by Canadian navigation companies for their various steamships and tugs, have been reported to the Canadian Railway and Marine World, in addition to those given in our last issue. The first column contains the names of the ships, the second, those of the captains, and the third, those of the chief engineers:—

The Owen Sound Transportation Co. Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Owen Sound, Ont., to carry on the general transportation of passengers and merchandise, and a general towing business, and to own and operate steam and other ships of every description. The provisional directors are: W. G. Hay, J. Garvie and J. M. Hay, Owen Sound. The company has taken over the s.s. Michipicoten, owned formerly by the North American Bunt Chair Co. Ltd., Owen Sound. The s.s. Michipicoten was built at Detroit, Mich., in 1883, when she was named City of Windsor. She has an oak hull of the following dimensions,—length b.p. 117 ft., breadth 24 ft. 8 in., depth 11 ft.; tonnage, 511 gross, 216 net, and she is equipped with engine of 33 h.p. driving a screw.

General Shipbuilding Matters Throughout Canada.

A. Berquist, Victoria, B.C., is stated to be arranging to build three sailing ships, 125, 90 and 75 ft. long respectively. He took over a considerable quantity of shipbuilding material and plant from the Foundation Co., when it ceased its shipbuilding business in British Columbia.

B.C. Marine Engineers and Shipbuilders Ltd., Vancouver, The Hudson's Bay Co. is reported to have ordered from this company four small schooners for use on the Mackenzie River delta and for short Arctic cruises. It is stated that they will go north in June on board the auxiliary powered schooner Lady Kindersley, now being built at the same yards for the H.B. Co. The order for the building of the auxiliary powered schooner Lady Kindersley was given in the early part of 1920 and she was intended for delivery by Oct. 1920, but considerable delay was caused, owing to non delivery of the engines, which were ordered in England. She was launched March 27, the christening being performed by Mrs. T. P. O'Kelly, wife of the Assistant Commissioner, Hudson's Bay Co., Winnipeg. The Lady Kindersley is rigged as a three masted baldheaded schooner, with a jib headed mizzen and top sail for running purposes, and carries a large square sail forward, also being fitted with a triangular shaped top sail. The total area of fore and aft sails is about 10,960 sq. ft. and the approximate total area of all sails 15,610 sq. ft. She is equipped with a 350 b.h.p. semi-Diesel engine for a speed of about 7 knots an hour. Her dimensions are: length overall 200 ft., length l.w.l. 188½ ft., beam 36 ft., moulded depth 15 ft., draft loaded 12 ft., capacity for freight 700 tons. She will cost approximately \$300,000, and is intended for the Hudson's Bay western Arctic service, and will sail from Vancouver through the Behring Sea and Strait, and round Cape Barrow into the Arctic to the Mackenzie River.

Canadian Vickers Ltd., Montreal, launched the s.s. Ideford, Apr. 9, the christening being performed by Mrs. M. Swenson, wife of the President of the Norwegian America Line Agency, New York. This was the first launch from this company's yard this year, and is stated to be the earliest launch in any year on the St. Lawrence River. The Ideford is one of two ships being built for the Norwegian America Line, Christiania, Norway, and was designed and built under the personal supervision of A. MacFarlane, Naval Architect, New York, assisted by F. H. Bodin, Captain Halvorsen and M. Ygersteth of the Norwegian America Line. She is classed under Norwegian Bureau Veritas register and is a high class cargo steamship, with many special features tending to economical operation. Her dimensions are:—length 365 ft., breadth 49½ ft., depth 23 ft. When loaded she will carry 6,400 tons of cargo on a 23% ft. draft. The propelling machinery consists of triple expansion engines, with cylinders 27, 43 and 70 in. diam. by 48 in. stroke, supplied with steam by three Scotch boilers, each 14½ x 11½ ft., fitted with forced draft, and adapted to burn either coal or oil as fuel, and equipped with superheaters for increased economy of consumption. The engines are fitted with the Michell thrust bearing of which Canadian Vickers Ltd. is the licensee for

Canada. The engines will develop sufficient power for a speed of 11½ knots under full load. The hull is reinforced in the bow, for navigation in ice, and is equipped with windlass and winches made by the builders, and with direct acting type steering gear operated by telemotor. In addition to the usual equipment of derricks, The foremast has a powerful derrick, capable of lifting 30 tons. Life saving equipment is according to the requirements of the Norwegian Sea Control, the boat davits being of a patent type. The ship will be ready for operation about the end of May, and she will be followed about May 7 by a sister ship for the same owners, to be named Topdalsfjord.

At a reception, following the launching, P. L. Miller, General Manager, Canadian Vickers Ltd., said that, in the existing conditions of world trade and freight rates, no one could expect shipping companies or private owners to place orders at the present cost of tonnage. Canadian Vickers Ltd. has no

K.C., Secretary; S. H. Cochrane, C. E. Cochrane and G. D. Brynmor.

Halifax Shipyards Ltd., Halifax, N.S. During April, repairs were in progress on the Dominion Steel Corporation's s.s. Turret Court, the Imperial Oil Co.'s s.s. Imperoyal and the Dominion Coal Co.'s s.s. Hochelaga.

W. R. Huntly & Son, Parrsboro, N.S., launched the ocean going steam tug Otis Wack for Gypsum Packet Co., Windsor, N.S., for towing plaster barges to New York. After launching she was towed to Hantsport, where she took on lumber and fittings for her cabins, and then to Yarmouth, to have her machinery installed. Her dimensions are,—length 107 ft., breadth 25 ft., depth 13 ft.

Joseph McGill Shipbuilding & Transportation Co., Shelburne, N.S., launched the schooner Canada, Apr. 5. She has been built to compete in the coasting schooner races, from which the selection will be made of the representative schooner in the international race, which is expected to be an annual affair.

Steel Cargo Steamship Glenclava, built for Great Lakes Transportation Co., by Midland Shipbuilding Co.

contracts for shipbuilding to follow the launching of its ship 82, the Topdalsfjord, for the Norwegian America line, which will take place about May 7. Present conditions in shipbuilding will probably last for some years, and it is up to labor to put shipbuilding companies in a position to compete for such business as is offering, by reducing their demands, and accepting lower wages. Failure to do this will undoubtedly put Canadian shipbuilding companies out of business. Canadian Vickers Ltd. operations will be very materially reduced by the end of June, and only such organization will be retained as may be necessary to handle ship repairing work in the drydock.

Collingwood Shipbuilding Co., Collingwood, Ont.—The annual meeting was held at Collingwood, Apr. 4. The directors, who were re-elected, are as follows:—H. B. Smith, President; J. W. Norcross and R. M. Wolvin, Vice Presidents; J. S. Leitch, Managing Director; H. W. Cowan, F. S. Isard, S. Dymet.

J. Coughlan & Sons Ltd., Vancouver, B.C., held its annual shareholders meeting Apr. 20. The directors for this year are: J. Coughlan, President; J. J. Coughlan, Vice President; D. A. McDonald,

W. C. McKay & Son, Shelburne, N.S., launched the schooner Jennie Elizabeth at the end of March, for fishing service for A. Ritcey and others, of Riverport, N.S. Her dimensions are,—length overall 125 ft., beam 26½ ft., depth of hold 11 ft.

Midland Shipbuilding Co., Midland, Ont.—The s.s. Glenclava, built by this company, which was launched Nov. 27, 1920, and delivered to the Great Lakes Transportation Co., Midland, Ont., Dec. 21, 1920, has gone into service. She is built to the highest classification of the British Corporation, and fitted for lake and ocean service, with the usual pumps and auxiliaries, electric light, refrigerator, and all up to date appliances for trade in the south. She is built on the arch system, having three holds, without any obstruction in either, and with a water-bottom extending the full length of the ship, the last section being arranged for fuel oil, if required. Her dimensions are,—length overall 254 ft., breadth 42 ft., depth 16 ft. She is equipped with triple expansion engines, with cylinders 20, 32 and 52 in. diam., by 42 in. stroke, 1,000 i.h.p., at 85 r.p.m., built at Detroit, Mich., in 1889 and formerly in the Great Lakes Transportation Co.'s s.s. Major. Steam is supplied by two new

boilers each 11 x 13 ft., at 180 lb., built by John Inglis Co., Toronto, and fitted with forced draft and a combination fuel system, so that either coal or oil may be used. Her d.w. tonnage for salt water service is 2,875 long tons.

Queensboro Shipyards, New Westminster, B.C., is reported to be negotiating for the lease of two water front lots at North Vancouver, B.C., with the option of purchase, for the establishment of a shipbuilding yard there. Joseph Crane is Manager.

Star Shipyards Ltd., New Westminster, B.C., is building a coal barge for the City of North Vancouver, costing approximately \$8,000. E. Mercer is Manager.

Sydney Foundry & Machine Works Co., Sydney, N.S., announced early in April that construction would be started on the new marine railway during the month, and that it was expected to have it completed and ready for the accommodation of ships during July. The water frontage has been surveyed, and soundings completed, and driving of piles started about the middle of April.

Yarrows Ltd., Victoria, B.C., completely overhauled the light cruiser *Aurora*, and the destroyers *Patrician* and *Patriot*, at its Esquimalt plant, during the Canadian Navy's visit to the Pacific coast recently. The greater part of the work was done in the engine rooms, but the two destroyers were also docked, and put in a thoroughly seaworthy condition, before starting on their return journey via the Panama Canal, to Halifax, N.S. The three ships are all fitted with Yarrow water tube boilers. The H.M.C.S. *Aurora* could easily have been docked at Esquimalt, but it was decided not to dock her until her return to the Atlantic.

The Imperial Oil s.s. *Talaralite* has been overhauled recently at this yard and a number of engine room repairs undertaken. Other repair work carried out by the company recently covers deck repairs to C.G.S. *Malaspina*; cleaning, painting and fitting new tail shaft to the Pacific Salvage Co.'s s.s. *Algerine*; cleaning, painting and minor repairs to the steam tug *Mystery*; general overhauling of the

Consolidated Whaling Co.'s steamships *Orion*, *White*, *Grant* and *St. Lawrence*; and repairs to the C.P.R. s.s. *Princess Beatrice*, consisting of damages to the bow due to stranding on Steep Island. The refitting and reconditioning of the *Grand Trunk Pacific Coast Steamship Co.'s* s.s. *Prince Rupert* is nearing completion. It was a very extensive job, consisting chiefly of joinder work. The hull has undergone repairs to bottom damage, boilers, propellers, tail shafts, oil fuel tanks, and steering gear, while the engines have been overhauled generally. New masts and funnels have been installed and all staterooms have been built in. It is anticipated that the work will be completed well within the contract time.

Georgian Bay Steamship Services.

The Northern Navigation Co., which withdrew its s.s. *Waubic* from the Georgian Bay service last year, has decided that it will not renew it this year, and has sold the ship. To deal with the tourist traffic in the Georgian Bay, the Georgian Bay Tourist Co. and the Honey Harbor Navigation Co. are in course of organization. It is stated that the Georgian Bay Tourist Co. will provide a steamboat capable of carrying 400 passengers, to leave Midland daily, on the arrival of a new G.T.R. train, run to San Souci, and return to Midland the next day, again connecting with the train. In addition to this she will make special trips on Friday evenings, in connection with the evening train at Midland, returning to Midland on Sunday evening so that passengers will be able to catch the Monday morning train there.

A second steamboat will convey passengers among Honey Harbor islands.

The Honey Harbor Navigation Co. Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Midland, Ont., to own and operate steam and other ships for the conveyance of passengers and merchandise, to act as common carrier and to own and operate wharves,

docks, tourist hotels, etc., and also conduct a tourist business on Georgian Bay. The provisional directors— are: N. K. Wagg, H. R. Wagg, and R. R. Wilson, Midland, Ont. We are advised that the company has acquired the s.s. *City of Dover*, owned formerly by W. F. Colbe, Port Dover, Ont., and operated out of that port. She was built at Port Dover in 1916, and is screw driven by engine of 15 h.p. Her dimensions are, length 74.8 ft., breadth 20.4 ft., depth 7 ft.; tonnage, 81 gross, 55 net.

The Town of Midland has concluded negotiations with the G.T.R. for an improved train service during the summer. An additional train will be put on between Toronto and Midland, calling only at Allandale, and the Town of Midland has agreed to at once extend and increase the platform accommodation for the easy transfer of passengers between the trains and the ships, and to increase the wharfage capacity at the docks, erect shelter and baggage room there, and to operate a steamboat daily throughout the season between Midland and Copperhead. The town also agrees to complete during 1922 the construction of the dock at Midland, to extend the G.T.R. siding, to rebuild and maintain the trestle and track approach thereto, and to erect a frame building 42 x 14 ft. for waiting and baggage room.

A Quebec Shipping Project.

The Quebec Telegraph says that an experiment, which, if successful, will put Quebec on the map as a wheat exporting port and as a distributing center for pulp, is to be shortly tried by a Canadian shipping company. The plan is to ship wheat from Georgian Bay ports to Quebec in ships which can use the canal between Port Colborne and Quebec and reship to the Atlantic ships at Quebec. Arrangements are being made for return cargoes of pulp. In this way there will be a double revenue from the boats, whereas if they ran to Montreal it would be practically impossible to get a paying return cargo.

Ships Registered in Canada During January, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Delivery of Ship.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following has been delivered to Canadian Government Merchant Marine for operation:—

April 9, s.s. Canadian Traveller, Marine Department contract 30, builder's yard no. 2, approximately 8,390 d.w. tons, built by Harbor Marine Co., Victoria, B. S. She was expected to leave Vancouver April 27, for Egypt, with a full cargo of railway ties.

Names of Steamships.—The name for one of the steel cargo steamships, of approximately 8,390 d.w. tons each, for Canadian Government Merchant Marine, the contract for which was given to Prince Rupert Drydock & Shipbuilding Co., and which is being completed by Wallace Shipbuilding & Drydock Co. at Prince Rupert, owing to the former company's bankruptcy, viz., Marine Department contract 42, builder's yard no. 1, has been changed from Canadian Reaper to Canadian Scottish.

Officers of Steamships.—The following masters of steamships have been appointed, or transferred, in addition to those mentioned in previous issues:—Canadian Beaver, Capt. F. J. Smeltzer, heretofore master s.s. Sheba, vice Capt. P. St. A. Robertson, transferred; Canadian Coaster, B. S. Potts, new appointment; Canadian Commander, Capt. J. D. McKenzie, new appointment; Canadian Leader, Capt. M. Robertson, heretofore master Canadian Pioneer; Canadian Miner, Capt. A. E. Sprosen, vice Capt. W. G. Tudor, transferred; Canadian Observer, Capt. W. G. Tudor, heretofore master Canadian Miner, vice Capt. A. Purvis, transferred; Canadian Pioneer, Capt. P. St. A. Robertson, heretofore master Canadian Beaver, vice Capt. M. Robertson, transferred; Canadian Ranger, Capt. A. Purvis, heretofore master Canadian Observer, vice Capt. J. D. McKenzie, transferred; Canadian Runner, Capt. D. O. Davies, heretofore master Canadian Signaller, vice Capt. W. Wallace, Canadian Signaller, Capt. F. W. Bolton, vice Capt. D. O. Davies, transferred; Canadian Victor, Capt. J. M. Reith, vice Capt. T. R. Coffin, transferred; Sheba, Capt. D. Blupett, vice Capt. F. J. Smeltzer, transferred.

Costs, Earnings, Etc., of Steamships. J. Archambault, Chambly, P. Q., Que.; A. W. Chisholm, Inverness, N.S.; W. Duff, Lunenburg, N.S.; L. T. Pacaud, Megantic, Que.; and J. H. Sinclair, Antigonish and Guysborough, N.S.; asked seven series, of seven questions each, in the House of Commons, March 31, which had all evidently been prepared by the same person, or in collaboration, as they were identically worded except as to the names of the ships, which were distributed among the five questioners. Consolidated the questions were as follows: 1. What were the initial costs of the steamships, Canadian Commander, Canadian Conqueror, Canadian Farmer, Canadian Gunner, Canadian Leader, Canadian Miller, Canadian Navigator, Canadian Otter, Canadian Pioneer, Canadian Planter, Canadian Ranger, Canadian Signaller, Canadian Scottish, Canadian Spinner, Canadian Squatter, Canadian Victor, Canadian Voyageur? When was each ship put into commission? 2. How much was spent in repairs to each ship since built, up to Dec. 31, 1920? 3. What was the gross amount earned by each

ship for calendar year 1920? 4. What was the gross amount of expenditure of every description in connection with the operation of each ship for calendar year 1920? 5. What were the net earnings of each ship from the date when first put into commission up to Dec. 31, 1920, after deducting all expenditure of every description? 6. What were the net earnings of each ship for calendar year 1920 after deducting all expenditure of every description? 7. How many tons of coal did each ship consume during calendar year 1920, and what was the average price paid therefor?

The Minister of Marine gave the following information in answer to question 1, viz., name of ship, initial contract cost and when commissioned:—

Canadian Commander	(1)	(1)
Canadian Conqueror	\$1,428,190.00	Sept. 30, 1920
Canadian Farmer	\$18,530.00	April 28, 1920
Canadian Gunner	\$15,541.25	Nov. 6, 1919
Canadian Leader	(1)	(1)
Canadian Miller	\$1,777,320.00	Sept. 24, 1919
Canadian Navigator	\$84,915.00	Nov. 22, 1919
Canadian Otter	(2)	(2)
Canadian Pioneer	\$1,519,440.00	May 9, 1920
Canadian Planter	\$1,579,075.00	May 7, 1920
Canadian Ranger	\$1,575,816.00	May 23, 1919
Canadian Signaller	\$14,926.25	Aug. 30, 1919
Canadian Seignior	\$1,575,506.00	Aug. 14, 1919
Canadian Spinner	\$1,577,884.00	Dec. 6, 1919
Canadian Squatter	(2)	(2)
Canadian Victor	\$1,433,610.00	Aug. 1, 1920
Canadian Voyageur	\$47,025.00	Feb. 22, 1919
(1) Not finished.	(2) Cost not finally ascertained.	

The Minister, in answer to questions 2 to 7 both inclusive, said:—"The information asked for is as to operating details under the Canadian National Ry. board, and is not in the Government's possession. The question as to the desirability in the public interest of securing such and like information, and making same available, on motion, or on question in Parliament, is to be considered by a special committee of Parliament."

Steamship Recruit.—J. H. Sinclair, Antigonish and Guysborough, asked in the House of Commons March 31:—1. Was the s.s. Recruit of the Canadian Government Merchant Marine, which went aground at Vache Point, St. Lawrence River, rescued and refitted for sea? 2. If so, how much expended in repairs? 3. Where were the repairs made and were public tenders asked for by advertisement? 4. Was the insurance collected from the underwriters? 5. If so, how much was insured and how much was collected? 6. How much was earned by this ship in the year 1920 after deducting all expenditure of every kind? 7. Where is she now? The Minister replied to the first question:—"Yes," and in reply to the others, said:—"The information asked for is as to operating details under the Canadian National Ry. board, and is not in the Government's possession. The question as to the desirability in the public interest of securing such and like information and making same available on motion, or on question, in Parliament is to be considered by a special committee of Parliament."

Quebec's Alleged Unfavorable Treatment.—C. E. Power, Quebec, asked in the House of Commons on March 29, whether the Minister of Marine had received any complaints from Quebec merchants, or any persons on their behalf, with regard to discriminatory action against the port of Quebec by Canadian Government Merchant Marine, and if so, whether he intended to take the complaints into consideration. The Min-

ister replied that, so far as his knowledge went, no communications of any kind had reached the Department, charging any such discrimination, but that he would look into the matter, and, if it transpired that any correspondence had reached the Department, he would inform Mr. Power.

Ships for Great Lakes.—The following questions were asked in the House of Commons recently by J. E. Armstrong, East Lambton, M.P., and answered by the Minister of Marine:—

Q. How many ships now in service or under construction by the Dominion Government are capable of passing through the canals and doing business on our inland waters? A. "Seventeen." Q. "Does the Government intend placing any or all of the ships built and owned by it, and capable of being operated on our inland waters, during the present season? If not, will the Government give the reasons for not using the said boats?" A. "The question of determining the routes upon which the ships shall ply and the business that they shall engage in, is in the hands of the Canadian Government Merchant Marine."

Canadian Railway and Marine World was informed April 21 that the Canadian Government Merchant Marine management had not come to any decision as to whether any of the ships operated by it would be sent to the Great Lakes.

Montreal Sailings.—The following dates have been announced:—

Atlantic Service.
Liverpool service, from Montreal:—Canadian Ranger, May 4; Canadian Navigator, May 18; Canadian Conqueror, June 1; Canadian Trapper, June 29; Canadian Farmer, June 15; Canadian Victor, July 13; Canadian Conqueror, cold storage, July 27.

London service, from Montreal:—Canadian Trapper, May 11; Canadian Squatter, May 25; Canadian Rancher, June 8; Canadian Rider, June 22.

Glasgow service, from Montreal:—Canadian Otter, May 21; Canadian Aviator, June 11; Canadian Navigator, July 2.

Avonmouth service, from Montreal:—Canadian Commander, cold storage, May 4.

Cardiff and Swansea service, from Montreal:—Canadian Trooper, May 14; Canadian Hunter, June 25.

India and Far East service, from Montreal:—Canadian Leader, May 11; B.S.N. steamship, June 11; Canadian Pioneer, July 11; B.S.N. steamship, Aug. 11.

Australia and New Zealand service, from Montreal:—Canadian Spinner, May 28; Canadian Commander, cold storage, June 25; Canadian Ranger, July 23.

De Janeiro, Santos, Brazil and Buenos Aires service, from Montreal:—Canadian Seignior, May 28; Canadian Explorer, June 23; Canadian Miller, July 20; Canadian Planter, Aug. 17.

Barbados, Trinidad & Demerara service, from Montreal:—Canadian Trapper, May 11; Canadian Commander, May 21; Canadian Observer, June 7; Canadian Gunner, June 21; Canadian Harvester, July 5.

Nanaimo, Kingston and Belize service, from Montreal:—Canadian Fisher, May 3; Canadian Forester, May 24; Canadian Fisher, June 14; Canadian Forester, July 14.

Havana, Cuba, service:—Canadian Miner, May 19; Canadian Sealer, June 3; Canadian Aviator, June 17; Canadian Miller, July 14; Canadian Charlottetown, Prince Edward Island and St. John's, Newfoundland, service, from Montreal, via Charlottetown:—Canadian Supper, leave Montreal May 6, leave Charlottetown May 11; leave Montreal May 27, leave Charlottetown June 1; leave Montreal June 17, leave Charlottetown June 22; leave Montreal July 8, leave Charlottetown July 14.

Pacific Coast Service.—Canadian Government Merchant Marine is inaugurating immediately a service between Vancouver and Vancouver Island, points in British Columbia and Seattle, Wash., San Francisco, and Wilmington, California. The service will be performed

by the steamships Canadian Rover, Canadian Farmer and Canadian Beaver, 3,890, 3,954 and 3,972½ d.w. tons each respectively. Sailings will be every 10 days.

New Zealand Service.—W. A. Beddoe, Canadian Trade Commissioner, Auckland, N.Z., has written the Trade and Commerce Department as follows:—

"The establishment of a line of steamships between Canada and New Zealand from Canada's west coast has been a great boon and impetus to trade, but the competition in Australia has been so unsettled that the ships, upon arriving there, have been tied up, seriously interfering with the mail and trade service. Recently the Canadian Government Merchant Marine has started a service between Vancouver and New Zealand which has been welcomed in the latter country, and when conditions become normal this service will be an important factor in the developing of Canada's western trade. The fact that the Canadian Government Merchant Marine will run ships from Eastern Canada direct to New Zealand has also been warmly welcomed. There is a line from there to New Zealand, which is supposed to run every month, but the service has not been regular for some time, and the Canadian Government Merchant Marine, having entered the above route, may be expected to give a regular dependable service. The result then will be that goods from Eastern Canada can be shipped direct to New Zealand, thus obviating long railway haulage. New Zealand is particularly patriotic, and it is generally recognized in this Dominion that trading within the Empire conduces to a better understanding of the overseas Dominions, the one with the other, and draws them closer together, also that the reciprocal preferential trade between the two Dominions tends to solidify and enrich the British Empire."

Collingwood Shipbuilding Co., Kingston, Ont.—The launching of the steel cargo steamship Canadian Coaster, Marine Department contract 58, builder's yard no. 16, approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, on March 24, was mentioned in our last issue, the christening being performed by Miss Nettie Ray, niece of H. C. Welch, Manager, the ceremony taking place on the 25th anniversary of his marriage. We have since been advised that when launch, the ship was well advanced in construction, the boilers and engines having been installed, and the cabin and other interior work being practically completed. She is of the 'tween deck type, with the following dimensions,—length b.p. 251 ft., breadth moulded 43½ ft., depth moulded 26 ft. The propelling machinery consists of triple expansion inverted condensing type engines, with cylinders 18, 30 and 50 in. diam. by 36 in. stroke, supplied with steam by 2 Scotch boilers, each 14 ft. diam. by 10½ ft. long, at 180 lb., and fitted with forced draft, all supplied by Collingwood Shipbuilding Co., Collingwood, Ont. She has been specially built and fitted for the West Indian service, and is expected to be delivered during May.

Halifax Shipyards Ltd., Halifax, N.S. which is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Cruiser and Canadian Constructor, Marine Department contracts 38 and 39, builder's yard nos. 3 and 4, each approximately 16,500 d.w. tons, advises us that it expects to launch

the Canadian Cruiser early in June, and the Canadian Constructor during July.

Harbor Marine Co., Victoria, B.C., delivered the steel cargo steamship Canadian Traveller, Marine Department contract 30, builder's yard no. 2, approximately 8,390 d.w. tons, to the Marine Department, and she was transferred to Canadian Government Merchant Marine for operation April 9.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—It is expected that the steel cargo steamship Canadian Reaper, Marine Department contract 42, builder's yard no. 1, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, will be launched May 12, by Mrs. C. W. Peck, wife of Lt. Col. C. W. Peck, V.C., M.P. The name of the ship has been changed to Canadian Scottish, at Lt. Col. Peck's request, to commemorate the Scottish regiment which he led during the war. The keel for this ship was laid Sept. 27, 1919, and she was nearly ready for launching some time ago, but the bankruptcy of the builder prevented this. Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., has the contract for completing the Canadian Scottish and the sister ship, Canadian Thrasher, the name of which, it is said, may also be changed. It is expected that the latter ship will be ready for launching about the middle of August. The work on both ships is being supervised by Henry A. Butt, overseer for Marine Department.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—See Prince Rupert Drydock & Engineering Co.

New York and Quebec Steamship Service.

Furness Withy & Co. has arranged to operate its s.s. Fort St. George, a sister ship of its s.s. Fort Victoria, now on the Bermuda service, on a special service between New York, the Saguenay and Quebec, in connection with its New York and Bermuda service, making at least four voyages during the season. The first sailing of this service will be made from New York, July 2, returning from Quebec, July 8, the minimum rate being \$100 each way, plus tax. The general itinerary of the cruises will be as follows:—Leave New York Saturday, spend Sunday at sea, arrive at Halifax, N.S., Monday morning, where a stopover of about 8 hours will be made, allowing passengers ample time for a trip to Grand Pre, the center of the Evangeline country; leave Halifax Monday, pass through the Gut of Canso and Northumberland

Straits Tuesday, pass Perce Rock Wednesday morning and along the south shore of the St. Lawrence Wednesday, arrive at the mouth of the Saguenay River Thursday morning, and proceed up the river about 12 miles to Eternity Cove, return to the St. Lawrence and arrive at Quebec in the evening of the same day; leave Quebec Friday afternoon, proceed up the Saguenay River as far as Cape Trinity, near Eternity Cove, arriving there Saturday morning, return to the St. Lawrence, pass along the Gaspe coast, Perce Rock, and through Northumberland Straits and the Gut of Canso, arrive at Halifax, N.S., Tuesday morning, leave there Tuesday afternoon, spend Wednesday at sea and arrive at New York Thursday morning. The s.s. Fort George was built in 1913 and is 14,000 tons gross, and was formerly named Wandillie and operated in the Australian trade by the Adelaide Steamship Co. She is being refitted for her new service.

Welland Ship Canal Contracts.

Tenders were received by the Railways and Canals Department, Ottawa, up to April 5, for work on section 5, Welland Ship Canal, the bulk of which will consist of dredging, as advertised in Canadian Railway and Marine World for February. The contract for this section was let originally to Canadian Dredging Co., Midland, Ont., which carried on the work until May 2, 1917, when it was suspended on account of the war. In Dec. 1918, another contract was given the company, to proceed with the work on a cost plus basis. Up to the time of writing (April 20), no tender had been accepted.

We are advised that it is the intention to call for tenders for the completion of sections 1, 2 and 3, the work on which is being done at present on a cost plus basis, by Dominion Dredging Co., Baldry, Yernburgh & Hutchinson, and Doheny, Quinlan & Robertson, respectively. Section 4 is not under contract.

The Gulf Transportation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital and office at Quebec, Que., to own and operate ships for the transportation of freight and passengers, and to act as common carrier.

Lighthouse Keepers' Bonus.—The Minister of Marine stated in the House of Commons recently, in answer to a question by J. F. Fafard, L'Islet, Que., that the question of granting a bonus to lighthouse keepers for 1920 was under consideration.

Ships Added to and Deducted From the Canadian Register During January, 1921.

Dominion Marine Association's Activities.

The Naval Service Department advises that the Association's recommendation, to the effect that existing Canadian legislation on the subject of radiotelegraphy on the Great Lakes is satisfactory and sufficient, will be accepted by the Department, and that no further action will be taken at present towards enacting regulations on the lines of the Imperial Act in Great Britain, which is of considerably wider application.

The Association has asked the Dominion Government for a modest grant, in support of a school of engineering at Queen's University, Kingston, Ont., simulating the School of Navigation, which already receives a small grant. The new school is in operation, and attended by a large number of students, who receive regular training, and, in addition to that given by ordinary schools, have the advantage of lectures from the University's engineering staff.

The Association is continuing its opposition to the compulsory payment of pilotage dues below Montreal, and now has the Shipping Federation of Canada's support in this matter. It is also maintaining its attitude against the imposition of such mariners dues in Quebec Province, which entails payment of the heavy tonnage tax in U.S. ports on ships arriving there from Quebec, and it has again protested against the reimposition of inspection fees, of which the ships were relieved in 1903.

J. E. Armstrong, East Lambton, Ont., has once more introduced in the House of Commons a bill to place steamships under the Board of Railway Commissioners' jurisdiction. It is practically the same as in 1920, except that it is now proposed to be confined to ships operating between Canadian ports on inland waters only. This is the seventh appearance of the bill in one form or another, and opposition is being expressed from all quarters of the country. The Association is still emphatically opposed to the measure, as subversive of the first principle which should govern shipping in the way of freedom and free competition, and its General Counsel, Francis King, has issued a memorandum voicing the Association's objections.

The Association's executive committee has asked the Minister of Marine that the definitions of the eastern boundaries of Canadian inland waters, in the Canada Shipping Act, parts 2 and 4, be assimilated, and that a line further east be adopted, running from Cape Gaspe to the east end of Anticosti Island, and thence to the north shore of the St. Lawrence. The definition in the Act relating to Masters and Mates, part 2, sec. 72 (r), is "Inland waters of Canada" means all inland waters of Canada, other than Lakes Ontario, Erie, Huron (including Georgian Bay), and Lakes Superior and Winnipeg, and includes all bays, inlets and harbors of or on the said lakes and bays." In part 4, relating to seamen, the definition in sec. 326 (c) is "Inland waters of Canada" includes all the rivers, lakes and other navigable waters in Canada, except salt water bays, arms of the sea, and gulfs on the sea coast, and includes the River St. Lawrence as far seaward as a line drawn from Cape Chatte on the south shore to Point des Monts on the north shore." The development of pulpwood trade in the lower river is gradually ex-

tending the activities of suitable inland shipping farther down the river, and it is very desirable that, so far as consistent with safety, the boundaries which were fixed some time ago, with reference to quite different conditions, should be extended to conform to the trade conditions of today and in the near future. There seems to be no sufficient reason for the distinction made in the two definitions quoted above, and the adoption of the more easterly boundary for both parts of the act would be a material advantage, but, in the Association's opinion, the continual extension of the trade farther east, and particularly along the north shore, renders it very desirable that the boundary should be moved as far east as possible, and it is believed that the extension mentioned in the first sentence of this paragraph, to include Anticosti, would not be at all inconsistent with the requirements of safety, or with any of the other considerations necessarily involved in fixing the definition of inland waters for the purposes in question. The Association has therefore asked for the introduction of a bill to amend the act accordingly. The Marine Department is not, apparently at the moment, inclined to extend the boundaries farther east, as the subject requires consideration from all points of view. It is probably admitted, however, that there is no good reason for the distinction in the present boundaries and it is quite probable that assimilation and extension eastward will take place.

The Association's executive committee has expressed to the Marine Department its opinion of the Trade and Labor Congress' legislative programme before the Dominion Parliament, one section of which recommends amendments to the Canada Shipping Act. The committee considers that the establishment of a regular pilotage district between Montreal and Kingston is absolutely unnecessary, and would serve no good purpose. No difficulty has arisen, owing to the non establishment of the district, and its establishment would be disadvantageous rather than advantageous. The regular lines in these waters, Canada Steamship Lines, Keystone Transportation Co., etc., only engage as masters of their ships, plying in these districts, men who are competent pilots for the waters, and as the masters are trained, the engagement of special pilots is not necessary. The Congress' proposal for additional "safeguards" in the "manning" of ships of over 500 tons is not understood by the committee, which considers that the Association's members man their ships as efficiently as possible. The Association favors the fullest and most complete opportunity for certificated men to protect their rights in the Wreck Commissioner's courts, and does not object to their request for the right to appeal to another tribunal. It is, however, pointed out that an appeal lies to the Minister, for a re-hearing "by the court by which the case was heard in the first instance," but it is considered that this provision may not be proof sufficient to satisfy all the requirements in every case. The proposal for revision of the procedure does not explain itself sufficiently to enable the Association to express its views. The committee believes that the assessors in these wreck investigations should be appointed or nominated by the Shipping Federation of

Canada, or by the Dominion Marine Association, according to the enrollment of the ship in question. The right to leave of absence to attend conventions of workers organizations is not a matter for legislation, but rather for individual owners and employees. The Association is definitely opposed to legislation requiring the named qualifications of knowledge and experience for sailors and deckhands, and believes that such legislation would greatly embarrass shipping and serve no good purpose. The Association sees no argument in support of the proposal for legislation defining a month as 28 days, for the purpose of payment of wages.—The committee has asked that further opportunity be afforded to the Association to examine the particulars of the proposals made, and to hear the arguments, if any, in support of the proposals, before any legislation on matters of such importance to ship owners is considered seriously.

Direction Finding Stations for Atlantic and Pacific Coasts.

The attention of masters of all ships fitted with radiotelegraph apparatus is called to the fact that the Naval Service Department has established a radiotelegraph direction finding station near Red Head, on the east side of the entrance to St. John, N.B., harbor, about four miles from the center of the city, the exact location being 1.93 miles 67 deg. 25 min. (n. 88 deg. 55 min. e. mag.) from Partridge Island lighthouse, and named St. John, N.B., Direction Finding Station. The call sign of the station is V A R and the wave length used in transmitting and receiving is 1,600 meters. It is completely equipped with sending and receiving apparatus, and co-operates with the other direction finding stations along the coast, in giving ships their positions, and independently, it affords direct bearings to ships in the Bay of Fundy.

This station is the fourth link in the chain of direction finding stations extending from Cape Race to the Bay of Fundy, has been in service since March 1, and, from reports received, has proved of great assistance to ships navigating the Bay of Fundy.

The Naval Service Department's estimates for the year ending March 31, 1922, submitted to the House of Commons recently, provide for the erection of a radiotelegraph direction finding station, similar to those already in operation on the Atlantic coast, at some point in the vicinity of San Juan Bay, or Estevan, B.C. The exact position for the erection of the station is still under consideration, as some difficulty has been experienced in finding a suitable site.

Atlantic, Gulf & Mediterranean Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$250,000 capital stock and office at Montreal, to own and operate steam and other ships, wharves, drydocks, railway and ship terminals, etc., and to carry on the business of common carriers of passengers and goods. The company is to be deemed a private one, under the Dominion Companies Act and its amendments. The incorporators are J. E. Grivell, E. M. Jackson, B. M. Rogers, P. Schramm and H. G. McKeil, Montreal.

Additions to Canadian Pacific Railway Steamship Fleet.

The directors' report, for the calendar year 1920, contains the following:—Four steamships for Atlantic and Pacific Service, contracted for previously, are being built for the company, viz. *Empress of Canada*, *Montrose*, *Montcalm*, and *Montclare*. The *Koenig Friedrich August* has been bought. An additional ship for British Columbia Coast Service, required because of the loss of the *Princess Sophia* and *Princess Irene*, and the sale of the *Princess May* and *Princess Margaret*, is under construction. The estimated cost of the six ships is \$31,175,000, of which \$18,733,138 was paid up to Dec. 31, 1920. The estimated capital requirements on this account for the year, and including the amount required for the completion of the payments on the *Koenig Friedrich August*, bought, amount to approximately \$12,200,000. Your approval will be asked to the issuance and sale of a sufficient amount of consolidated debenture stock to meet the expenditure for these ships. During the year, the s.s. *Sardinian*, built in 1875,

The s.s. *Empress of Canada* is for the Pacific, and the steamships *Montcalm*, *Montrose* and *Montclare* for the Atlantic service.

Wage Reductions by British Shipbuilders.

London, Eng., press cablegram, April 20.—Another big industrial crisis has been averted by the acceptance of wage reductions in the British shipping industry. At a conference, which closed at Carlisle April 19, the workmen's representatives agreed to recommend wage cuts of 15% for piece workers and 6s. a week for time workers, these being the amounts embodied in wage advances last year. A previous meeting between employers and union leaders had ended in a deadlock. The Labor Minister, on being appealed to, suggested a further conference, and on this occasion a frank production of shipbuilding accounts elicited the impressive fact that the single alternative to the employers' proposals was the closing down of shipyards in many important centers. At present 30% of the workmen engaged in the industry are unemployed or working alternate weeks. This abnormal depression, however, is partly due to the coal shortage consequent on the miners' stoppage.—Copyright, Toronto Star.

The Glen Transportation Co. Ltd.

This company, the incorporation of which was announced in a recent issue, will operate steamships on the Great Lakes and elsewhere. James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, Ont., is President, and A. E. Mathews, President and General Manager, Mathews Steamship Co., Toronto, is General Manager. For the present, three steamships will be operated, *Glenafon*, *Glenacadam* and *Glenclouva*.

The s.s. *Glenafon* is being built by Port Arthur Shipbuilding Co., Port Arthur, Ont., and is approximately 3,000 d.w. tons, and is a steel, bulk, canal sized ship of the single deck, poop, bridge and fore-castle type, with the following dimensions,—length overall 259 ft., breadth moulded 42½ ft., depth moulded 21 ft. She is equipped with triple expansion

engines with cylinders 20, 30 and 56 in. diam. by 42 in. stroke, supplied with steam by two Scotch marine boilers, fitted with oil burning apparatus, 14½ ft. diam. by 11 ft. long, at 150 lb. She is classified under British Corporation regulations, and will have a speed of 10½ knots an hour. The keel was laid Oct. 20, 1920, and she was launched March 30.

The s.s. *Glenacadam*, which was bought by Great Lakes Transportation Co. from George Hall Coal Co. last year, was formerly the F. P. Jones, and was built at Wyandotte, Mich., in 1913. She is of steel, built on the channel system, with steel tank top where no wooden ceilings are fitted, 3 watertight and 2 non watertight bulkheads, steel boiler house, steam pump wells and electric light. Her dimensions are,—length b.p. 244 ft., breadth moulded 43 ft., depth moulded 21 ft.; tonnage, 1,706 gross, 1,059 net. She is equipped with triple expansion engines, with cylinders 18, 24 and 48 in. diam. by 40 in. stroke, 900 i.h.p. at 85 r.p.m., and supplied with steam by two Scotch boilers, each 12 ft. diam. by 11½ ft. long at 170 lb.

The s.s. *Glenclouva* was built recently by Midland Shipbuilding Co., Midland, Ont., for the Great Lakes Transportation Co., and is described and illustrated under "General Shipbuilding Matters Throughout Canada," on another page of this issue.

Immigration via C.P.R. Steamships to St. John, N.B.

Despite the strengthening of restrictions against immigration into this country, and the continuation of the ruling that all new settlers must show \$250 in cash and their railway fare to their destination before being admitted, new settlers continue to arrive in large and increasing numbers. During January, February and March 9,187 new colonists entered St. John via the C.P.R. ships. These numbers would have been considerably larger, shipping men aver, if the \$250 requirement had been dropped to the former \$50 rate, as it was thought recently would be done. In fact, steamship officials state that many hundred intending immigrants cancelled their bookings upon learning that the high rate was to be maintained.

The C.P.R. records for the three months are as follows:—During January, five of the company's steamships arrived at St. John, with 3,856 passengers, of whom 1,450 were new colonists for Canada and 1,407 for the United States. In February, six steamships arrived with 5,022 passengers, of whom 2,045 were new colonists for Canada and 1,430 for the U. S. In March nine steamships arrived with 9,851 passengers; 5,962 being new colonists for Canada and 509 for the U.S.

Lower St. Lawrence Steamship Service.

As a part of the rehabilitation of local steamship services, which were seriously interfered with, and in some cases, entirely suspended, by the war, it is announced that arrangements have been completed for a service between Montreal and Quebec, and other ports on the north shore of the St. Lawrence as far as Harrington Harbor, Saguenay County, and to the Gaspé Peninsula, and on to Paspébiac on Chaleur Bay.

The Clarke Steamship Co. Ltd. has been incorporated under the Dominion

Companies Act, with \$1,000,000 authorized capital, and office at Ottawa, to carry on the business of transportation of passengers, mail and merchandise; towing, wrecking and salvaging, in any navigable waters within or bordering upon Canada; and to build, own and operate ships, docks, drydocks, wharves, warehouses, marine and railway terminals, passenger facilities and accommodation. It is announced that the company has acquired two steamships of approximately 1,000 gross tons, one of which will make Montreal its terminus, calling at Quebec, and at ports on the south shore as far as Paspébiac, while the other will run out of Quebec, calling at ports on the north shore as far as Harrington. The first named service will be fortnightly and the second every 10 days. The company, which has a contract to carry mail on both routes, is under the operating management of Bouchard Bros., who are stated to be in Great Britain arranging for the purchase of a steamship for the Gaspé route.

The company is reported to have bought the s.s. *Shearwater*, which was offered for sale by tender, in Nov. 1920, by the Naval Service Department, and is also reported to have bought a recently built steamship in England, named *Nova Zembla*. The s.s. *Shearwater* was built in England in 1899, with steel hull, wood sheathed, and is fitted with a single screw, two bladed propeller, triple expansion, convertible, surface condensing, reciprocating engines of 1,400 i.h.p., and 4 water tube Belleville boilers, with a working pressure of 260 lb. Her dimensions are,—length 300 ft., beam 33 ft., draft 12½ ft., displacement 980 tons. She was expected to be on the coast by the end of April.

Dominion Government Steamship Laurentian.—The Minister of Marine gave the following information in the House of Commons recently, in answer to questions by A. B. Copp, Westmoreland, N.B.: The s.s. *Laurentian* is owned by the Government, having been bought in April 1917 from Canada Steamship Lines, for \$50,000. She was out of repair and tied up at St. John for four months, and during that time 22 of the crew remained aboard, their wages per day being \$47.99. The ship was repaired between May 29 and Oct. 30, 1920, by New Burrell Johnson Iron Co., and others, the cost being \$48,639.43. Prior to the purchase, the ship was under charter to the Customs Department, the sums paid being: 1911-12, \$7,043.24; 1912-13, \$8,000; 1913-14, \$7,300. The *Laurentian* was offered for sale to the Marine and Fisheries Department in 1913 by Galt, T. Davis & Son, no price being named.

Gaston, Williams & Wigmore exporters and importers, New York, N.Y., have been placed under receivers by the Federal District Court. The liabilities are given as approximately \$6,000,000. The assets consist of stock in 25 subsidiary companies, located at different points throughout the world, the largest of these being, it is said, Gaston, Williams & Wigmore, Ltd. of Canada, steamship owners. The cause of the company's failure is reported to be a fall in the value of its stock holdings, and heavy losses are said to have been sustained when the present Russian Government repudiated claims the firm had for supplies furnished to the Imperial Russian Government and its successor, the Kerensky Government.

Operation of Canadian Canal Boats in New York State.

An Ottawa press dispatch stated recently that the New York State Attorney General had given an opinion that its revised statutes forbade the use of the state canals to Canadian built boats, and that the Ottawa Transportation Co. would be the principal one to be affected by the ruling. Canadian Railway and Marine World communicated with the Attorney General of New York State, Hon. C. D. Newton, and ascertained that a committee, representing owners of U. S. boats operating on the New York State barge canal had, through their secretary, Wm. Guindon, complained to the Superintendent of Public Works at Albany, who referred the matter to the Attorney General. The latter's Deputy, E. J. Mone, replied on March 28 as follows:—

"I am not aware of any statutory provision authorizing any state officer to prevent the navigation on the barge canal or other navigable waters of this state of a canal boat or tug boat, for the reason that it was built in Canada, or for the reason that it is owned and operated by Canadians or other than citizens of the United States. And I entertain grave doubts that any valid state legislation could be enacted to accomplish this result. I am inclined to believe that such legislation would contravene the provisions of the commerce clause of the Federal constitution. However, this might depend upon the form of the legislation, and, inasmuch as I am presented with no specific proposition, I prefer not to express any definite opinion on the question at this time. If any such legislation is seriously contemplated, I will be pleased to give the matter further and more careful consideration.

"I find, however, in the provisions of title 50 of the U. S. Revised Statutes, entitled 'Regulation of vessels in domestic waters,' certain provisions which, it seems to me, cover the situation and operate to forbid the operation on the canals and canalized rivers of the state (which, as I regard it, constitute navigable waters of the U. S.) of foreign owned canal boats and steam tug boats. The general purport of this legislation is to forbid vessels which are not enrolled or licensed, as therein provided, navigating on the navigable waters of the U. S. And no vessel can be enrolled unless it be owned by a citizen, or citizens, of the U. S., or a corporate association under the laws of any of the states.

"A seeming exception to this provision thereof (Sec. 8,058 U. S. Comp. Stat.) is incorporated in Sec. 8,062, which authorizes the enrollment of 'any steam boat, employed, or intended to be employed, only in a river or bay of the U. S., owned wholly or in part by an alien resident within the U. S. . . . as if the same belonged to a citizen of the U. S. . . . on giving a bond and conditions, which shall not be employed in other waters than the rivers and bays of the U. S.' (Secs. 8,062-3.)

"It appears that the provisions of title 50 do not operate to require the enrollment of canal boats which are employed on the internal waters or canals of the state (and not 'employed in trade with the Canadas') and are not propelled by sail or by internal motive power of their own (Sec. 8,145).

"Sec. 8,146 provides that: 'The provisions of title 50 of the Revised Statutes of the U. S. shall not be so construed as

to require the payment of any fee or charge for the enrolling or licensing of vessels, built in the U. S. and owned by citizens thereof, not propelled by sail or by internal motive power of their own, and not in any case carrying passengers, whether navigating the internal waters of a state or the navigable waters of the United States, and not engaged in trade with contiguous foreign territory, nor shall this or any existing law be construed to require the enrolling, registering or licensing of any flat boat, barge or like craft for the carriage of freight, not propelled by sail or by internal motive power of its own, on the rivers or lakes of the U. S.' But this provision is held to relate solely to vessels 'built within the U. S. and owned by citizens thereof' and not to extend to foreign craft, even when owned by an American citizen. (Opinions of Attorney General, U. S., Vol. 16, pg. 563).

"I am persuaded that these provisions do not operate to authorize the navigation upon the navigable waters of the U. S. of canal boats which are not owned by citizens of the U. S. The clear policy and purport of the Federal legislation, as I read it, is to the contrary, viz., that no freight carrying vessels may be navigated upon the navigable waters of the U. S. except as they are authorized so to do by the provisions of title 50. I find no such provision relating to canal or tug boats owned by Canadians or built in Canada.

"As a result of a rather hasty examination of this congressional legislation I am inclined to the belief that canal boats built in Canada, or owned by Canadians, may not be lawfully navigated upon the canals or canalized rivers of the State of New York. If my understanding of the law is correct it is incumbent upon the Secretary of Commerce, who is charged with the duty of enforcing the provisions of these Federal regulations, to take steps to prevent the continued operation of this character of craft on the canals of this state. I would suggest that the committee representing the owners of boats operating on the barge canal, which has communicated with you, communicate to the Secretary of Commerce a full and precise statement of the facts, including the names of the boats, the operation of which is complained of, and the owners thereof, and request that he take steps to prevent their continued operation. I will be pleased to render to it any assistance within my power, but I think that orderly practice requires that the matter be first taken up with the Federal authorities. I am sending a copy of this communication to Wm. Guindon, secretary of, and representing, the complaining boat owners."

The Attorney General's Deputy wrote again on March 25 as follows:—I learn that my letter of March 28 with respect to Canadian canal boats navigating the barge canal has been construed to mean that Canadian built canal boats or tugs could, under no circumstances, navigate the canals or internal waters of this state, and specifically that they could not lawfully carry cargo from a point in the State of New York over the canal and connecting waters to Montreal or other Canadian ports. I did not intend to be so understood. It was my understanding that the practice complained of was the employment of canal boats, or

tugs, built in Canada, or owned by Canadians, to carry cargo from one point or place to another on the barge canal; and I intended to express the opinion that this was forbidden by the Federal statutes to which I referred. I am not aware of any congressional legislation forbidding the employment of such boats on the canals or internal waters of this state in carrying cargo from a New York to a Canadian port or vice versa, provided they do not undertake to carry cargo from one point or place to another within this state, and accordingly am of the opinion that such use on the canals or interior waters of the state of Canadian built, or owned, canal boats, would be lawful. I regret that the unguarded general language employed in my former communication has led to this misunderstanding."

The opinions given above really raised no new point. It is simply the old question of the so-called U. S. coasting law, under which goods or passengers cannot be carried from one U. S. port to another in a ship foreign to the U. S. Similarly foreign ships cannot carry goods or passengers from one Canadian port to another. A Canadian ship, however, may carry between two ports on different sides of the International Boundary. No Canadian ship owners claim the right to carry, for instance, from Buffalo to New York along the Erie Canal, and while, theoretically, a Canadian ship would have the right to carry say, from Fort William, Ont., to New York via the Great Lakes and the Erie Canal, a ship which could do this profitably and safely, having regard to the size of competing lake carriers, the dangers of lake navigation, the canal draft, and the height of the bridges, has not yet been devised. The Dominion Marine Association has always taken the view that the New York State canals should be open to Canadian boats, but as far as the Erie Canal is concerned, the question is purely academic and of no practical moment. The U. S. senator who led the forces against the St. Lawrence improvement scheme at the International Commission's first Buffalo hearing, about a year ago, claimed that the canal was free and open to any Canadian boat. Francis King, General Counsel, Dominion Marine Association, asked him whether he thought a boat which could weather the storms of Lake Superior with a grain cargo could negotiate the low bridges, and the high sills, of the canal, and get through to New York. The Senator stated, in reply, that he knew of plenty of boats whose smoke stacks would operate on hinges, and when pressed further he had the colossal nerve, or infantile ignorance, to suggest collapsible deck houses. This caused a lot of ironical laughter, and Mr King made his point, which was that through carriage is impossible from the head of the lakes to New York, except in specially designed boats, with lightening, Buffalo, and that carriage from Buffalo to New York only, would probably contravene the coasting law.

Algernon Rock Pier.—The Minister of Marine stated in the House of Commons recently, in answer to J. F. Pafard, L'Islet, Que., that it is not the intention to put an aze gas apparatus on the pier at Algernon Rock pier at present.

Atlantic and Pacific Ocean.

Canada Steamship Lines s.s. Manola, which arrived at Montreal, Apr. 19, from St. John's, Nfld., was the first ship to enter the port from the sea this season.

The s.s. Vandolite, an oil tank steamship, built at New York and launched at the end of March for the Standard Oil Co. of New Jersey, will, it is reported, be operated this year by Imperial Oil Ltd., Toronto.

Canadian Pacific Ocean Services is reported to have closed two offices in London, and one in Liverpool, Eng., due to the arrangements made by which the C. P.R. has been appointed as its Traffic Agent, as mentioned in our last issue.

Canadian Pacific Ocean Services' s.s. Empress of Asia arrived at Victoria, B. C., Apr. 19, having crossed the Pacific Ocean from Yokohama in 8 days 21 hr. 28 min., which is stated to be a record, the usual time taken being over 9 days.

The C.P.R. s.s. Empress of France, which arrived at St. John's, N.B., Apr. 15, is said to have established a record between Liverpool and St. John, completing the trip of 2,903 miles in 6 days 8 hr. and 42 min., an average of 19.01 knots an hour.

The Edgewood Shipping Co.'s schooner Edgewood was burnt at Port Antonio, Jamaica, Apr. 18, while bound from St. Thomas, Danish West Indies, for Mobile, Ala. She was owned and registered in Montreal, and was built at Quebec, Que., in 1918, her dimensions being length 191.1 ft., breadth 36.8 ft., depth 15.5 ft., tonnage 699 registered. She was insured for \$120,000.

Canadian Robert Dollar Steamship Co.'s s.s. M. S. Dollar, which arrived at Vancouver, Apr. 12, from New York, completing her first round-the-world trip under the Canadian flag, is stated to be the first Canadian registered ship sailing out of Vancouver to have made such a voyage. She sailed from Vancouver Oct. 27, 1920, for the Orient, and then proceeded via the Suez Canal to New York.

The Houston Line, which is operating a steamship service between Montreal, South America, India and the Far East, and for which McLean Kennedy Ltd. is Canadian agent, has bought the new steamships Itajah, Parthia and Patria, each with 7,000 dwt. capacity. It is stated that they are to be renamed Hesione, Hesperides and Hesperus respectively. The Hesperus is scheduled to sail from Montreal about May 15.

The Williams Line, of New York, is reported to be considering the inauguration of a steamship line between Montreal and Vancouver via the Panama Canal. The company owns the steamships Willcasino, Willdomino and Willkeno, three of the steel cargo steamships of the "War" series built in Canada for the British Government under orders from the Imperial Munitions Board. It also operates a steamship service out of New York to U.S. Pacific ports.

A New York press report stated recently that wage reductions were being put into effect on British steamships calling there and that certain members of crews of some steamships which sailed from New York recently had already had their wages reduced from \$50 to \$30 a month, and that they were prepared to strike on reaching England, provided others would join them. The Cunard Line, which was said to be the one af-

fect, is reported to have stated that nothing was known at its New York office of such a reduction.

The Canada Line, which operated a direct steamship service from Montreal to Continental ports, will, it is announced, resume the service this year, and it was expected that the first sailing on the renewed service would be from Rotterdam, Apr. 26. The services will be from Antwerp and Rotterdam to Quebec and Montreal, and from Montreal to Cherbourg, Antwerp and Rotterdam, alternating with Montreal, Quebec, Hamburg, Danzig and Libau. The steamships to be used are named Samland and Maasdam, each about 9,000 tons gross, with accommodation for third class passengers only.

A Montreal press dispatch says that at a meeting in New York, April 21, of steaming companies operating to French Atlantic ports, Belgium, Rotterdam and Hamburg, which was attended by the French Line, it was decided to lower the rates that were tentatively adopted 10 days previously. The French Line is said to have balked at the tentative rates, contending that shippers were entitled to the lowest rates that the carriers could afford and that it would not agree to conform to the rates that had been in force for the past two weeks. The result was that the rates were reduced 30% on an average.

The s.s. Minnekahda, owned by the American Line, called at Halifax, N.S., Apr. 2, on her first voyage eastward from New York as a passenger steamship in immigrant service. She was built in Great Britain in 1917, and was immediately taken into war service as a freight steamship. On the conclusion of the war she was transferred to the U.S. flag and port of call to be the largest British built ship ever transferred to the U.S. flag. She has been fitted up with accommodation for 2,500 third class passengers, no other class being carried. Her gross tonnage is 17,200, and it is said that her cost approximated \$7,000,000.

The Cunard Lines' s.s. Royal George will, it is announced, be used at Cherbourg, France, by the Cunard Line and the White Star Line jointly, for handling emigrant traffic, prior to shipment out of that port. The s.s. Royal George is well known on the St. Lawrence route, being one of the two large passenger steamships acquired by Canadian Northern Steamships Ltd., to form the nucleus of its Atlantic fleet, which was sold subsequently to the Cunard Co. She was originally named Heliopolis, and was built for the Mediterranean tourist trade. While in service on the St. Lawrence route she held the record for the trans-Atlantic run and has seen considerable war service. Her sister ship Royal Edward was torpedoed in the Dardanelles during the war.

Canada Steamship Lines has, according to a Montreal press dispatch made an arrangement with a Norwegian steamship company, under which a joint line of 12 steamships will be operated between Montreal and Liverpool, and Montreal, Havre and London, under the name of Intercontinental Transport Ltd. The steamships have, it is said, all been arranged for, and it is stated that they will be renamed after various counties in Ontario. Sailings will be provided out of Montreal weekly, the destination alternating between Liverpool and Havre-London. The first sailing is

scheduled for May 14, by the s.s. Porsanger, which was built by Canadian Vickers Ltd., Montreal, in 1918, for Norwegian owners. Her dimensions are—length overall 394½ ft., depth moulded 30 ft., d.w.t. tonnage 7,000, gross tonnage 4,670, load draft 24 ft.

Maritime Provinces and Newfoundland.

The Reid Newfoundland Co.'s s.s. Kyle, from Port aux Basques, Nfld., was the first steamship to arrive at North Sydney this year, viz., on March 28.

The Canadian National Ry. car ferry steamship Prince Edward Island will go to Halifax, N.S., about May 10, for overhaul and repairs, and will be off her route for about a month, during which time her place will be taken by the car ferry steamship Scotia No. 1.

St. John, N.B., harbor revenue for 1920 was \$178,847, against \$147,405 for 1919. During 1920, 254 steamships and 44 sailing ships entered and cleared the port, compared with 264 steamships, 60 sailing ships in 1919. At the city wharves 172,312 tons of general cargo, 318,208 tons of grain, and 49,270,000 ft. of lumber were handled.

The s.s. Impoco, owned by Imperial Oil Ltd., Toronto, stranded on Blonde Rock, near Yarmouth, N.S., during heavy weather, Apr. 6, and it is believed will be a total loss. She was built at Grange-mouth Eng., in 1913 and was screw driven by engine of 157 h.p. Her dimensions were:—Length 249.5 ft., breadth 43.1 ft., depth 19.7 ft., tonnage 2,257 gross, 1,383 net.

The British s.s. City of Colombo, which ran aground at Digby Neck, in the Bay of Fundy during heavy weather, and which was regarded as a total loss, may possibly be salvaged. During the early part of April she was reported to be resting on an even keel, with holds 1, 2 and 3 forward full of water and the engine room dry, and with the greater part of the cargo safe, at any rate temporarily. She is reported to have two large holes in the hull forward.

The s.s. Stadium, which stranded near Cap Blanc, Miquelon, about March 18, broke up subsequently and sank, becoming a total loss. The crew returned to St. John's, Nfld., later in the month. The Stadium was owned by F. H. Ellis & Co., St. John, N.B., and was bought recently from C. T. White & Son, East Apple River, N.S. She was built at Shelburne, N.S., in 1912, and was screw driven by engine of 28 h.p. Her dimensions were, length 78.6 ft., breadth 20.6 ft., depth 9 ft.; tonnage, 118 gross, 49 net.

The Newfoundland Supreme Court has awarded the Danish s.s. Storborg \$50,000 for salvaging the s.s. Delco, in the open sea near Main Head, about 1,000 miles from St. John's, Nfld., in January. The service began Dec. 31, 1920, and continued for 14 days, when the two ships reached St. John's. No help was rendered by the Delco's engines, and the weather at times was very rough, accompanied by snow or fog, and involved considerable risk to both ships during the towing. The Delco had lost all the blades of her propeller, before being picked up by the Storborg, and had drifted considerably to the northward of her course. The value of the Delco's cargo was \$575,000. The amount awarded is to be apportioned according to the law of the country of the Storborg's domi-

cile, but the court considered that a liberal share of the award should be assigned to the masters, officers and crew of the Storborg, whose skill and care were so well bestowed and whose risks and labors were so largely increased during the tow.

Province of Quebec.

The Public Works Department received tenders to Apr. 27 for dredging at Rimouski.

The ferry s.s. *Francois C.*, operated between Berthier and Sorel, has been overhauled and repaired at the Dominion Government shipyard, at Sorel, and was replaced in service Apr. 2. Her capacity has been considerably increased and a deck has been provided with accommodation for 12 automobiles.

The House of Commons passed an act to extend the time for the payment of debentures issued by Montreal Harbor Commissioners, due July 1, 1921, for \$2,000,000, to July 1, 1946, and for the payment of another issue of \$2,000,000 due July 1, 1926, to July 1, 1951.

The s.s. *Duchess of York*, owned by the King Edward Park Co., and operated between Montreal and St. Helens Island, was overhauled during the winter at Sorel and fitted with new paddle wheels, dining room, and 22 sleeping berths. She is expected to be in operation on the route about May 5, and during the summer will be used for excursions to St. Anne de Beaupre, Oka, Ile Malécine, etc.

Canada Steamship Lines has announced the placing in service of its s.s. *Manoa*, sailing from Montreal, June 11 and each 17 days thereafter, along the south coast of the St. Lawrence, past the Gaspe coast and Percé Rock, calling at Charlottetown, P.E.I., and thence to St. John's, N.S. The s.s. *Manoa*, which is about 5,000 tons, has undergone a thorough overhauling and refitting during the winter. She was entered formerly in transatlantic service between Montreal, Plymouth, Havre and Bordeaux.

Judgment was delivered in the Exchequer Court at Montreal, Apr. 14, dismissing an appeal on behalf of the s.s. *Samuel Marshall*, from a judgment of the Admiralty Court, dismissing an application to be allowed to give security on an appeal from a judgment rendered Feb. 17, dismissing a motion on behalf of the ship to quash a warrant of arrest and to annul the sale of the ship, on the ground that the officer who made the arrest and conducted the sale, a Superior Court bailiff, was not an Admiralty Court marshal and had not right to act as such. The court held that the reasons for the judgment of the lower court were sound in law, and must be confirmed. The s.s. *Samuel Marshall* was owned formerly by Central Coal Co., Brockville, and sold to joint owners at Montreal and Three Rivers, Que., a few years ago.

Ontario and the Great Lakes.

Welland Canal was officially opened to navigation Apr. 15, the first ship to pass through being the Mathews Steamship Co.'s s.s. *Easton*.

Mathews Steamship Co. was fined \$750 in Toronto police court recently, for not supplying to the city assessment department a record of shareholders, and of dividends paid, within the time required by law.

The Public Works Department received tenders to Apr. 27 for rental to the Department of completed floating plant and equipment, for cleaning up the waterway in front of the town of Sault Ste. Marie, Ont.

Canada Steamship Lines' s.s. *Macassa* arrived at Toronto, early on Apr. 4, from Hamilton, being the first ship to enter the harbor from an outside point for the year. The captain, G. J. Corson, received the harbor master's hat.

The Toronto Ferry Co.'s s.s. *Clark Bros.* was damaged by fire at Toronto Apr. 21, while tied to a wharf. She was built at Toronto in 1890, originally rebuilt in 1901, and is screw driven by engine of 11 h.p. Her dimensions are,—length 80 ft., breadth 16.2 ft., depth 5.5 ft., tonnage 92 gross, 38 net.

Lock tenders on the Welland Canal were somewhat agitated recently over a new Government regulation providing a retiring age of 65 for civil servants, but the Minister of Railways and Canals is reported to have stated that they may continue in the service as long as they are capable of performing their duties.

The Rockport Navigation Co., Kingston, Ont., will operate a ferry service between Kingston, Ont., and Cape Vincent, N.Y., between May 15 and Nov. 15, twice daily, and during early spring and late autumn once daily, except Sundays, with its steamships *Missisquoi* and *Waubie*. Capt. J. A. Carnegie is President, Capt. R. H. Carnegie, Manager, and Mrs. Jas. Gillie, Secretary-Treasurer.

The s.s. *Bon Ami*, owned by T. C. and C. D. L. Sims, Little Current, and for several years operated in mail service to Manitoulin Island, has been sold to W. B. and W. W. Clinic, Sault Ste. Marie, Ont. She was built at Manitowoc, Wis., in 1902, when she was named *Mariposa*. She is screw driven by engine of 24 h.p., and has the following dimensions,—length 105, breadth 24.5 ft., depth 8 ft.; tonnage, 245 gross, 142 net.

The Detroit & Windsor Ferry Co. is stated to be planning improvements at an approximate cost of \$1,000,000, including a new ferry steamboat, the extension of the dock about 40 ft. into the river, and the building of a new pier at the foot of Ferry Ave., Windsor. The fares question is still being discussed between the company and the city, but it is expected that the present rate of 7 tickets for 25c. will remain in force until the end of 1921, and that after that, the rate will be 6 tickets for 25c. under a 10-year franchise.

An application for an injunction against the Detroit & Cleveland Navigation Co., to prevent it discontinuing its steamship service on Lake Huron, has been filed in the U.S. Federal Court at Detroit, Mich. The company announced recently that the provisions of the seamen's law made the operation of the line unprofitable and that the service would be discontinued. The application for the injunction states that the company is a common carrier and that arbitrary discontinuance of the service would be contrary to law.

Canada Steamship Lines commenced its steamship services on its Northwest Division, covering Montreal, Toronto, Hamilton and Lake Superior, Apr. 26.

The ships utilized on these services for the present are, *Beaverton*, Canadian, Edmonton, Glenellah, Kenora, Mapleboro, Maplebranch, Maplebrook, The Glenellah is expected to be the first ship to load grain at Port William for Montreal. The

company's sailings from Montreal to Quebec commenced Apr. 25, and from Quebec to Saguenay Apr. 30. The Montreal and Three Rivers service started Apr. 8 and the company's first service of the season was the sailing of the s.s. *Macassa* from Toronto to Hamilton, Apr. 2.

J. F. Sowards, Kingston, Ont., has bought the s.s. *Maplegrove* from Canada Steamship Lines, and has had her name changed to *Jed*. The s.s. *Maplegrove* was built at Maize City, Mich., in 1889, and was named *Cherokee*. She has an oak hull, and is of the well deck type, with diagonal strapping on frames, steel arches, with bow sheathed for ice. She underwent considerable repairs in 1913. Her dimensions are,—length b.p. 208 ft., breadth moulded 35½ ft., depth moulded 14 ft.; tonnage, 1,177 gross, 636 net. She is equipped with a fore and aft compound engine, having cylinders 25 and 50 in. diam. by 40 in. stroke, 575 i.h.p., at 86 r.p.m., supplied with steam by a firebox boiler 11 ft. 4 in. diam. by 16 ft. long, at 124 lb.

The Rockport Navigation Co., Kingston, Ont., has bought the s.s. *Waubie* from the Northern Navigation Co., as reported in our April issue. She will be operated on a regular route between Kingston, Ont., and Cape Vincent, N.Y. She was built at Collingwood in 1909, and has a steel hull with 4 watertight and 2 non watertight bulkheads, and steam pump wells. Her dimensions are, length b.p. 135 ft., breadth moulded 25 ft., depth moulded 9 ft.; tonnage, 504 gross, 244 net. She has a classed 100 on the Great Lakes Register, for Georgian Bay and adjacent waters. She is equipped with triple expansion engines, having six cylinders, two 10 in. and two 16½ in., and two 27 in. diam. by 15 in. stroke, 650 i.h.p., at 15½ r.p.m., supplied with steam by a single Scotch boiler 12½ ft. diam. by 10½ ft. long, at 180 lb.

The Kingston Navigation Co., which has bought the steamships *Brockville* and *St. Lawrence*, will operate the former between Kingston and Belleville, calling at Amherst Island, Picton and other way ports, and also between Belleville and Presque Isle Point. The s.s. *St. Lawrence* will be run between Kingston and Ogdensburg, Kingston and Picton, and Kingston and Alexandria Bay, calling at way ports. Both ships were owned formerly by Canada Steamship Lines. The s.s. *Brockville* was built at Toronto in 1898, and has a wooden hull of the following dimensions,—length b.p. 105 ft., breadth moulded 21 ft. 5 ins., depth moulded 5 ft. 7 in.; tonnage, 191 gross, 88 net. She is equipped with fore and aft compound engine, with cylinders 9 and 18 in. diam. by 14 in. stroke, 140 i.h.p., at 165 r.p.m., supplied with steam by a firebox boiler 14½ ft. diam. by 8 ft. long, at 165 lb. The s.s. *St. Lawrence* was built at Clayton, N.Y., in 1884, and has a composite hull, with dimensions,—length b.p. 154 ft., breadth moulded 21 ft., depth moulded 7 ft.; tonnage, 312 gross, 188 net. She is equipped with beam condensing engine, with cylinder 32 in. diam. by 72 in. stroke, 350 i.h.p., at 38 r.p.m., supplied with steam by a firebox boiler 8 ft. diam. by 16 ft. 2 in. long, at 87 lb.

Glen Transportation Co. Ltd. has been granted supplementary Dominion letters patent, increasing its capital stock from \$500,000 to \$1,000,000, by the creation of 5,000 shares of \$100 each.

Manitoba, Saskatchewan and Alberta.

An Edmonton, Alta., press dispatch states that R. Cunningham, Assistant Engineer, Dominion Public Works Department, has suggested that the Saskatchewan River be utilized for the transportation of coal eastward. He is reported to have stated that the river is navigable for such transport to northern Saskatchewan points, and even to Lake Winnipeg, and contrary to general impressions, is navigable all the way, giving a channel with an average depth of water throughout. With the use of light draft barges, dredging would not be necessary, and in the present condition, the river is in the same class as the Athabasca and Peace Rivers, so far as navigability is concerned. He considers that there is sufficient traffic in the 410 miles to Prince Albert to pay the first cost of a tug and several barges out of the first year's operations, based on \$1 a ton for freight, and with that rate nearly doubled, he claims that it would be possible to deliver coal to Prince Albert at a lower cost than if hauled by rail.

British Columbia and Pacific Coast.

The name of the steamship Bowena, owned formerly by Terminal Steam Navigation Co., and now by Union Steamship Co. of British Columbia, Vancouver, has been changed to Chem.

The Pacific Steamship Co.'s s.s. Governor collided with the U.S. Shipping Board's s.s. West Hartland, off Point Wilson, near Port Townsend, March 31, after having made a call at Victoria, B.C.

The North Vancouver municipal ferries committee's chairman is reported to have stated that a contract must be let for the construction of a new ferry by August. Ferry no. 2 has been practically condemned, though its life may be prolonged somewhat by reducing the load unit allowed.

An Ottawa press dispatch of April 13 states that W. S. McMichael, Chief General Inspector of Customs, who is at present in Europe, is studying the question of free port zones, as in operation at Copenhagen, Hamburg, etc., and that on his return to Canada, he will report to the Minister of Customs, who will later proceed to Vancouver to hear representations as to the creation of a free port zone there.

Arrangements are reported in progress in Vancouver, B.C., for the running of a special passenger excursion steamship from Vancouver this summer, to several European ports, via the Panama Canal, and returning to some Atlantic port, where passengers would entrain for Vancouver. The single fare is quoted at \$303, and \$550 for the round trip. It is stated that this will be the first time that a passenger steamship has sailed from Vancouver to a European port.

Upper Traverse Light.—The Minister of Marine stated, in the House of Commons, recently, in answer to J. F. Fafard, L'Islet, Que., that Alfred Fournier, light-keeper at Upper Crossing, St. Roch, officially known as Upper Traverse, resigned April 30, 1920, and that Gustave Fournier had been appointed to succeed him.

Mainly About Marine People.

Capt. John Alward, a former Great Lakes ship master, and for the last 25 years, in Toronto Ferry Co.'s service, died at Toronto, Apr. 2, aged 78.

G. M. Rosworth, Chairman, Canadian Pacific Ocean Services, returned to Canada, Apr. 19, on the s.s. Empress of Asia, after a business trip to the Orient.

Michael Henry, who was Assistant Superintendent, Welland Canal, for about 15 years, and was superannuated in 1911, died at Port Dalhousie, Apr. 17, aged 72, from pneumonia.

Capt. Sir James Charles, C.B., who arrived at the New York recently, in command of the Cunard Line s.s. Aquitania, is commodore of the company's fleet, and is completing 41 years of service at sea, 26 of which have been with the Cunard Co. He has served on several of the Cunard ships, many of which are now gone, and, during the war, was in charge, at different times of the Saxonia, Ausonia, Mauretania and Carmania, and after the signing of the armistice, took command of the Aquitania, when she was utilized for returning Canadian and other troops. He was made a Companion of the Order of the Bath in 1911, for services in connection with the British mercantile marine; Companion of the Order of the British Empire in 1919, and a Knight of the same order shortly afterwards. He has the R.N.R. decoration, and is senior captain on the active list of the Royal Naval Reserve.

William B. Elsworth, whose appointment as Manager of Marine Department, Imperial Oil Ltd., Toronto, was announced our last issue, was born at Bayonne, N.J., March 3, 1869, and entered transportation service in 1900, prior to which he was from 1897 to 1898 in Standard Oil Co.'s service, Bayonne, N.J.; and from 1899 to 1900, in Imperial Oil Co.'s service, Sarnia, Ont. From 1900 to 1906, he was in charge of operation of oil tanks on the Great Lakes, Imperial Oil Ltd., Sarnia, Ont.; 1906 to 1916, Superintendent of Refinery, same company, Sarnia, Ont.; 1916 to 1918, Superintendent of Refinery, same company, Halifax, N.S.; 1918 to 1919, General Superintendent of Refineries, same company, Toronto; 1919 to 1921, Superintendent of Operations, Marine Department, Standard Oil Co., New York, N.Y.

Capt. R. O. Jones, who is retiring in May from White Star-Dominion Line's service, after having been with the company for 37 years, has been on the St. Lawrence route for about 31 years, and was for about 12 years, master of the company's s.s. Canada. He has served on the steamships Dominion, Kensington, Canada, Megantic, Laurentic, Belgic, Adriatic and Celtic. During the war, he carried large numbers of British, Canadian and U.S. troops, and commanded the s.s. Northland, one of the first steamships to sail from Great Britain with troops for Gallipoli. He also commanded a steamship which took troops from Great Britain to South Africa, during the Boer war, in 1899.

J. E. Lunan, heretofore Steamship Inspector (Boilers and Machinery), has been appointed Steamship Inspector (General), Marine and Fisheries Department, Montreal.

Sir Frederick Orr-Lewis, President, Canadian Vickers Ltd., Montreal, was expected to sail from England for Canada on April 26, by the s.s. Empress of Britain.

James B. Stewart, Steamship Inspector (Boilers and Machinery), has been appointed Steamship Inspector (General), Marine and Fisheries Department, Toronto.

A. D. Swan, M.Inst.C.E., Montreal, who is consulting engineer for the Vancouver Harbor Works, is in England, and is expected to return to Montreal in June.

Major W. G. Swan, D.S.O., Chief Engineer, Vancouver Harbor Commission, has been elected President of the Association of Professional Engineers of British Columbia, succeeding D. O. Lewis, who resigned on removing to Toronto, where he is now Assistant Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry.

M. W. Tingley, Comptroller, International Mercantile Marine Co., retired April 1, after 48 years service. He entered steamship service with the American Line at Philadelphia, Pa., in 1873, and was Auditor of that line when it was taken over in 1903 by the I.M.M. Co., of which he was appointed Comptroller.

French Steamships to be Sold.

The French High Commission, New York, is offering for sale five 1,000 tons full powered coal, wooden barges now lying in Louise Basin, Quebec, and named Bouxwiller, Bouzonville, Brumath, Cattonen and Cernay respectively. They were built by National Shipbuilding Corporation, Three Rivers Shipyards Division, Three Rivers, Que., and have the following dimensions, and lengths overall 204 ft., length b.p. 195 ft., beam moulded 39 ft. 8 in., beam extreme 40 1/2 ft., depth of hold 15 ft., draft loaded 16 ft., d.w. cargo capacity 1,400 tons, coal bunker capacity 130 tons, coal consumption 13 tons, speed 9 1/2 knots. They are each equipped with two vertical, inverted, direct acting, compound engines, developing 275 i.h.p. at 175 r.p.m., and supplied with steam by two Scotch marine boilers, each with two furnaces, working pressure 180 lb. The ships are equipped with electric light and radio-telegraph apparatus. The auxiliary equipment includes steam steering engines, steam windlass, 6 cargo winches, single drum, double 7 x 12 in. cylinders, 2 feed water tanks, 1,600 gall. each, 2 drinking water tanks with combined capacity of 1,000 gall. and the usual independent pumps, etc. The ships are described as newly completed, and tenders were invited for their purchase in their present condition, and also completed and ready for sea, with first class classification of Bureau Veritas. These ships were ordered by the French Government, March 12, 1919, from the National Shipbuilding Corporation, Wilmington, Del., and the contract was transferred to Three Rivers Shipyards, Three Rivers, Que., a subsidiary. Both of these companies went into liquidation before the ships were completed, and there was considerable litigation before they were handed over to the French Government.

Lake Superior Chart.—A new and more complete edition of the chart from Caribou Island to Michipicoten Island, no. 110 of Canadian Hydrographic Survey, corrected to Apr. 1921, has been issued. It may be obtained from the Hydrographic Survey, Naval Service Department, Ottawa, for 15c.

New Atlantic Ocean Passenger Depot at St. John, N.B.

With the completion of the construction of the new immigration building at West St. John, N.B., the C.P.R.'s ocean passenger landing accommodation at that port is said to be second to none on the Atlantic seaboard, for convenience of handling and comfort of passengers. The problems of handling heavy ocean passenger business in severe winter weather, in confined space and amid old fashioned buildings, have been successfully overcome, in a manner which is unique as to arrangement and yet entirely suitable for the purpose.

Before the war, westbound ocean passenger steamships called at Halifax, where immigration and customs officers were picked up and examinations of cabin passengers and their baggage were carried out on board ship, during the remainder of the run to St. John. Facilities for examination of steerage passengers only were provided at St. John, and consisted of an immigration examination hall, built as a second story over one of the wharf sheds, and a small immigration building and baggage room

in alphabetically arranged sections, steerage and cabin baggage separately. Offices are provided on the same floor for railway baggage staff, customs officers and steamship staff, also a large lockup room for held-over baggage. After examination, the baggage is loaded on cars on one side of the shed, and passengers are entrained from the opposite side. Sliding doors are provided at intervals. The building is electrically lighted, and steam heated to a comfortable temperature even when a number of doors are open. City baggage is taken out for team delivery from the end of the shed close to the street, and the baggage is taken into the shed in the first instance from the opposite end on electric trucks. The trucks take the baggage from the bottom of the ship's gangway, in the wharf shed across the intervening tracks, over removable bridges.

Passengers are landed from the ship's gangway on to the floor of wharf shed 3. Previously they were allowed to mingle with their friends and onlookers at the foot of the gangway, and find their

night tide, the baggage is taken ashore and placed in the baggage shed before passengers are landed the following morning, and then baggage can be claimed, examined and checked as soon as ticketing is completed. But when a ship docks in the day time, some time elapses before all baggage is placed in the shed, and the first passengers through the immigration inspection have to wait until the baggage shed is ready. Last autumn the need for a modern waiting room was met by the construction of a large waiting room over one end of the baggage shed, which can be reached from the covered passageway across the tracks. This room is 113 x 52 ft., provided with seats around the walls, in the form of three sides of a square in each structural bay, with seating capacity for 300 persons. Lavatory accommodation of modern sanitary type is provided and also a nursery, fitted with cots and chairs. The nursery is operated by the Red Cross Society and children's food can be prepared on an electric stove. Children's clothes can be washed, and a drying rack is available

New Atlantic Passenger Depot, St. John, N.B.

close by. With the returning tide of passenger business since the war, and the greatly increased European immigration movement, were coupled a change of routing of C.P.O.S. steamships, which made St. John the first port of call, and also a very greatly increased stringency in both Canadian and U.S. customs and immigration regulations. The result was that the facilities at St. John were found to be entirely inadequate; custom examination of baggage was obliged to be carried out on the floor of the open wharf shed, with great hardship to passengers and officials. In the early winter of 1919-20, a steam heated baggage shed was erected, parallel to and in the rear of the wharf shed, upon a site which had previously been occupied by cattle pens and tracks. Work was started on Nov. 15, 1919, and the new building was ready for use in two months, on Jan. 15, 1920. This building is 500 x 60 ft., with covered platforms on both sides. Three lines of tracks are located immediately in the rear of the wharf sheds, the tracks bending on a 15° curve at their westerly end. This baggage shed was built to conform to these tracks, and also to the curvature required for new passenger entraining tracks on the opposite side. The building, therefore, varies in width from about 37 ft. at the ends to 60 ft. for the middle portion. Ample accommodation is provided for all baggage from the largest class of steamships to be spread on the floor of the shed at the one time,

way through this shed, across an open space and up a flight of steep stairs into the immigration examination hall on the second floor of adjacent shed 4. After their examination they had to find their way back again to their baggage in shed 3 alongside of the ship. With the coming into effect of more stringent regulations by the immigration department, temporary portable wooden fences were set up parallel to the side of wharf shed 3 next to the dock, and passengers are made to proceed along the passageway thus formed, to the end of the shed, and thence up an inclined covered passageway across the open space and into the end of the immigration hall. This passageway has an incline of 1 in 5, is provided with handrails and the floor is covered with rubber matting. In the immigration hall separate examination rooms are provided for both Canadian and U.S. services. After successfully passing this examination the passengers emerge into a railway ticketing hall, where tickets can be obtained for both the Canadian Pacific and Canadian National Railways, and telegrams sent. Refreshments can also be bought for the train journey by those who do not wish to make use of dining cars. After this, the passengers enter another covered passageway which leads them across the tracks at high level and then down an inclined rampway into the middle of the baggage shed.

In cases where a ship docks on the

in the women's lavatory. Hot water is provided to all lavatory basins and all rooms are steam heated and electrically lighted from pleasing fixtures. The waiting rooms are sheathed with Douglas fir natural finish and are well lighted with large windows. Emergency exit is provided by an inclined rampway to the ground outside.

The tide of European immigration this winter very soon showed that immigration accommodation was required on a large scale. On Dec. 21 1920, work was started on the construction of immigration quarters over the balance of the baggage shed, 360 x 60 ft., and was completed Feb. 15, 1921, a period of forty-eight working days. These new quarters are reached from the second examination room in the upper floor of shed 4, by means of an open bridge across the intervening tracks at high level. The entrance from this bridge is into a large recreation room. A separate passageway leads off to the women's quarters. In the men's quarters a large dormitory 80 x 30 ft., and a small dormitory 55 x 20 ft., are provided for foreign men with lavatories adjacent and a small dormitory, 47 x 11 ft., for British men with separate lavatory room. A disinfecting and bath room is also provided. A dining room 55 x 30 ft., and a kitchen 28 x 50 ft. are provided on the same floor. A central corridor 4 ft. wide leads to an emergency exit, with a rampway to the ground from the end of the building. The

women's quarters have a dormitory 67 x 30 ft. for foreign women, and one 24 x 30 ft. for British women, and separate lavatories are provided for each. The main part of the building is 10 x 10 ft. storerooms and an emergency exit to waiting room outside ramp, complete these quarters. All interior walls of the building are covered with Pedlar metal, painted grey, floors are hardwood except in lavatories, where they are tile. Men's lavatories are equipped with automatic syphon ejection range closets, and the women's with automatic flushometer seats and bowls. Self closing bibs are provided to all basins for hot and cold water. Hot water is supplied from a tank equipped with steam coil and heat regulating valve. Fire lines and hose are located in the corridors throughout. The building has accommodation for 500 persons.

The rapidity and ease with which passengers can now be handled, and the continuous onward movement through the different processes incidental to landing at a national border port, will result in the elimination of a great deal of the distress and vexatious delays and confusion which so often make hard the lot of the returning citizen, tourist or immigrant, and will make the landing in Canada at the port of St. John in winter an experience no longer to be dreaded, and avoided, if possible. Everything is done that is possible for the comfort and convenience of travellers.

The work was carried out by the C.P.R. under direction of its New Brunswick District Staff. J. A. Grant & Co., St. John, were the contractors. The cost of the work will be borne by the C.P.R. and the Dominion Immigration Department.

The s.s. Theodore F. Reynolds, which has been placed in the molasses trade between the West Indies and U.S. and Canadian ports recently, is owned by Theodore F. Reynolds Corporation, and operated by Sugar Products Co., a subsidiary of the Pure Cane Molasses Co., New York, of which last named company the Pure Cane Molasses Co. of Canada is also a subsidiary. She was built at Duluth, Minn., in 1920, and is of the steel tank type with propelling machinery amidships. She is classed 100 A1 at Lloyd's and has the following dimensions,—length overall 261 ft., length b.p. 251 ft., beam moulded 43½ ft., depth moulded 22 ft. 2½ in., draft design 21 ft.; tonnage, 2,359 gross, 1,423 net. The propelling machinery consists of triple expansion engines, with cylinders 19, 22 and 54 in. in diameter, by 40 in. stroke, 1,250 i.h.p., at 85 r.p.m., supplied with steam by two Scotch boilers, each 13 ft. diameter, by 11 ft. long, each equipped with two corrugated furnaces, with a grate area of 50 sq. ft., heating surface of 50 sq. ft., working pressure 190 lb. The propeller has 4 blades and is right hand, 14 ft. dia., 12 ft. 5 in. pitch. The ship's capacity is cargo tanks, 3,071 tons, based on 25 cu. ft. per ton of molasses; fuel tanks, 501 tons of oil, ballast tanks, 263 tons.

Canadian Northern Ry. Ships.—The Minister of Marine gave the following information in the House of Commons recently, in answer to questions by L. J. Papineau, Beauharnois, Que.:—On Oct. 1, 1917, the Canadian Northern Ry. owned and operated four steamships and two barges. The Canadian Northern Ry. now owns and operates 6 steamships and 2 barges, viz., Germania, 105.90 gross tons; Sebastian, 102.8 gross tons; Ca-

nora, 3,382.66 gross tons; Dalhousie City, 1,255 gross tons; Garden City, 637 gross tons; Numberbarger, 1,255.46 gross tons; barges—C.N.P. No. 1, 676.67 gross tons; C.N.P. No. 2, 676.67 gross tons; C.N.P. No. 3, 676.67 gross tons.

The Royal Mail Steam Packet Co., in conjunction with the Holland-America Line, is operating a joint service of steamships from Vancouver and other North Pacific coast ports to London, Liverpool, Hull, Rotterdam, Amsterdam, Antwerp, Hamburg, and Havre, the service being given by the steamships Eemdiver, Kinderdijk and Moerdijk, with monthly sailings. Additional ships are under construction. As soon as all the ships are available, a fortnightly service will probably be given. It is intended to equip the fleet with refrigerator and cool chambers for such commodities as apples, fish, butter, cheese, etc.

Lake Freight for Grain.—Cleveland, Ohio, press dispatch, April 19.—Grain tonnage is in fair demand at 2c. from head of the lakes and Lake Michigan ports to Buffalo and cargoes are taken as fast as they are offered. A big steamship was named today to load at Fort William, and another with a ship of medium size were placed in Lake Michigan trade. All the cargoes will be loaded this month. Canadian boats are reporting for cargoes pretty fast at Fort William. Stocks at the latter port are heavy, but according to reports sales are small and much of the grain is still in the farmers' hands.

St. John, N.B., Harbor Expenditure.—The Minister of Public Works gave the following information in the House of Commons recently, in answer to questions by J. F. Fafard, Lislet, Que.: The expenditure by the Public Works Department at St. John harbor, from 1900 to 1920, was \$14,283,857.94. The exact amount to be spent this year cannot be stated at present. In 1920-21, the expenditure was \$1,233,941.23. The item placed in the estimates for 1921-22 is \$1,250,000.

Freight Rates on Great Lakes.—W. E. Erke, Director of Transportation, Canadian Steamship Lines, is reported to have stated recently that rates on all classes of freight on the Great Lakes, on that company's ships, are lower this season than those quoted during last autumn. This change in favor of the shipper is due to the decrease in operating costs which the company has effected, and it is looking forward to increased business, and the saving that can be made by the movement of freight by water.

Shipping Prices in Great Britain.—At an auction of steamships in London, Eng., recently, on behalf of the Allies Reparation Commission, none of the oil tank steamships offered were sold, and it is reported that only one steamship put up was actually disposed of, the auctioneer describing it as a gift and not a sale. The price offered for oil tank steamships was about \$1 a ton, whereas for 250 for coasting ships, and \$3.25 for inland ships. The increases asked would

make the fees \$5, \$4 and \$3.50 respectively. A similar application was refused last year.

Immigrants' Landing Tax.—The Quebec Harbor Commissioners propose to charge steamship companies 50c. a head on each immigrant landed by them at Quebec. The steamship companies are opposing the proposal, on the ground that any such tax is a matter for the Dominion Government, and in their opinion would, apart from the principle involved, divert many immigrants to U.S. ports, whence they could enter Canada free of the tax.

Transportation Conventions in 1921.

The names of persons given below are those of the secretaries, unless otherwise mentioned:

May 11.—Railway Accounting Officers' Association, Atlantic City, N.J.; E. R. Woodson, 1116 Woodward Bldg., Washington, D.C.

May 12 to 26.—Master Boiler Makers' Association, St. Louis, Mo.; H. D. Vought, 95 Liberty St., New York.

May.—International Railway Fuel Association, Chicago, Ill.; J. G. Crawford, 702 East 51st St., Chicago, Ill.

June.—Railway Accounting Officers' Association, Atlantic City, N.J.; E. R. Woodson, 1116 Woodward Building, Washington, D.C.

June 16.—American Association of Engineers, Mechanical, Chicago, Ill.; V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

June 20.—American Association of Freight Agents; R. O. Wells, Illinois Central Bldg., Chicago, Ill.

June 20.—American Train Dispatchers' Association, Kansas City, Mo.; C. L. Darling, Northern Pacific Ry., Spokane, Wash.

Aug. 24 to 26.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothschild, Union Station, Kansas City, Mo.

Sept. 20 to 22.—Bureau of Maintenance of Way Association, Chicago, Ill.; P. J. McAndrews, Chicago & North Western Ry., Sterling, Ill.

Oct. 4 to 6.—Maintenance of Way Master Painters' Association, Buffalo, N.Y.; E. E. Martin, Union Pacific Rd., Kansas City, Mo.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities. M. P. Fenwick, Jr., 575 Commercial St., Montreal.

Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—L. E. Moreland, Hull Electric Co., Hull, Que.

Canadian Freight Association (Eastern Lines)—G. C. Ransom, 909 Shawchessky Bldg., Montreal.

Canadian Freight Association (Western Lines)—W. E. Campbell, 805 Bay Block, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Campbell, 263 St. James St., Montreal.

Canadian Railway Club—W. A. Booth, 313 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except, June, July and August.

Canadian Traffic League—A. H. Thorpe, 25 Balsam Ave., Toronto.

Dominion Railway Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Houle, Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hill Hill, Montreal.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hill Square, Montreal.

Engineers' Club of Toronto—R. B. Woley, 94 King Street West, Toronto.

Engineers' Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

200-Ton Railway Track Scale, Canadian Pacific Railway.

By H. S. Bare, Building Engineer, Angus Shops, C.P.R., Montreal.

A railway track scale, completed recently at Angus shops, Montreal, for the C.P.R., introduces a number of interesting features that are new, particularly the tapered floor deck shown in the accompanying fig. 1, which is an innovation and a radical departure from the old style flat floor. The scale is a 4 section Fairbanks type S-20, 100 tons per section, with a beam capacity of 200 tons. The pit is 56 ft. long and 10½ ft. wide, of the usual type, with concrete walls and floor, as shown in fig. 2. The deck over the scale is a patented weather proof cover, designed to protect the scale from rust, and to prevent the freezing up of the scale during the winter. This is obtained by elevating the dead and live rails clear of the floor, and sloping the deck to shed the water from the center to either side like a roof.

As is well known, the ordinary track scale floor is flat as shown in fig. 3, and it is impossible to keep water from entering the pit, with the result that trouble is caused by freezing, and the useful life of the scale is destroyed by rust, long before its mechanical life has been reached. Investigation has shown that a fair average accurate life of a track scale with the ordinary flat floor deck (fig. 3), is from 2 to 2½ years. During this time the destruction of the pivots and bearings, by wear, in the presence of rust, is considerable, and after the second year the destruction of the vital parts, by rust and wear, is so constant that many errors develop, and adjustments have to be made to correct the errors that result. With frequent inspections and adjustments the ordinary scale could be kept in service for about 4 or 5 years, and some have been carried as long as 7 or 8 years, depending on the class of scale, local conditions and the amount of weighing done at the point, but, after this service, when taken up for repairs, they generally required all new steel pivots and bearings.

It was conceded that, if rust could be eliminated, the wear of the contact surfaces would be only a small percentage in comparison to the wear by rust, and that the useful life of the scale would be greatly prolonged, as, unquestionably, a scale that is only affected by wear can be kept in service and show close weights at least twice as long as under the other conditions, and to obtain this result the C.P.R. tried in 1918 an entirely new design known as the tapered floor deck,

with results so satisfactory that it has been made standard and all installations since have been equipped with this type of deck as shown in fig. 4. The normal condition of the scale pit, with the tapered floor, has always been found on examination to be free from any sign of condensation, which shows that it is not affected by weather conditions, due to the fact that every stand (both live and dead) is a ventilator (fig. 4). It does not necessarily follow that the temperature at all times is the same both inside and outside of the pit. In winter the temperature in the pit is above that of the outside air, while in summer it is below, but the difference has little or no effect as regards condensation, if the air is in

stands project. The upper edges of the flashings are protected by the overhanging umbrella tops of the stand. Ample space is allowed around the flashing, so that the stand will move without contact, but, even if this should occur, the metal is not stiff enough to affect the accuracy of the scale. The hand can be inserted under the hood of the stand and the freedom of the movement ascertained at any time (fig. 4).

The taper floor has a fall to each side of the pit, of ½ in. per foot, was built up of two thicknesses of 1½ in. & g. lumber, separated by felt and pitch waterproofing; the stand flashings were spiked to the upper layer of the floor, after which tarred paper, burlap and asphalt,

were applied to the surface under the finishing flooring of mastic, which was ¾ in. thick. The base of rail of both tracks 7 in. clear of the floor, a space amply sufficient to carry off the water, and to ensure that no obstruction is preventing accurate weighing. Both live and dead tracks are carried on special approach stands at the ends next to the gap, a method assuring secure anchorage. To take care of expansion point and wing rails were installed.

The scale foundation is the usual type, except that large concrete pedestals were cast at each end of the pit, to carry the last 10 ft. of track, a feature introduced to prevent heaving of track by frost, with the consequent troubles incidental thereto. About 270 cu. yd. of 1-3-5 concrete, with super-cement, were used in the foundation, and, to assure absolute waterproof conditions, all the forms were in place before any concrete was poured. The vertical members of the inside forms were made up of lumber, and, so that no patching would be required in the floor, the lower section of these members were made of scrap angle iron, so that they could be cut off and left in the floor. All concrete was poured into the walls first, raked out of the bottom of the forms and spread over the floor, two mixers being used for the purpose. The mix was spouted into the forms, and the pouring was completed in one operation, taking 18 hours to perform, and super-cement was used to obtain waterproof walls and pit floor.

A shelter for the scale beam and the weighman was built in conjunction with the pit, as shown in fig. 2. The floor of the shelter is 2 ft. above the rail level. By raising the floor of the weighhouse

circulation. In the flat floor pit, where there is practically no circulation of air, condensation takes place on the cold metal parts, with the result that hour frost and ice forms, and dampness is constant, which means rust and destruction of the vital parts of the scale, doubtful weights, and the possibility of scales being frozen up, and out of service during severe winter weather. With the tapered floor the scales were found to weigh as accurately in mid-winter as in summer, and in no case were any of the scales with the tapered cover frozen up, or out of service for any reason.

The new scale at Angus is an all steel proposition, with cast iron stands carried on structural steel, supported by the scale irons for the live track, and similar stands, resting on steel beams carried on the wall of the pit, for the dead track. Dead and live rail stands are of course staggered and 12 in. track centers were adopted. The steel eye beams supporting the dead rail stands also carry the tapered floor joints, and incidentally the floor of the scale; the live rail stands have to be free of the floor to allow for movement when weighing, and the openings are in the floor through which the

in this fashion, it enables windows to be placed in the rear to light the basement, in addition it provides for ventilation of the pit, and, in the case of repairs, the parts can be taken out through the basement windows, instead of disturbing the track.

Similar tapered floors of an earlier design have been in service for more than three years, and the results so far indicate that the scales will last two to three times longer with the new floor than with the old flat floor, no sign of rust or deterioration having been noted in any of

This scale was built as part of a large new installation.

programme in connection with Angus Shop extensions under the direction of the Chief Engineer, J. M. R. Fairbairn, C.P.R., and was supervised by J. W. Orrock, Principal Assistant Engineer. The scale was supplied by Canadian Fairbanks-Morse Co. and was installed by J. D. O'Neill, Scale Inspector, C.P.R., and the work was carried out by the general contractors under the writer's charge.

Fig. 2, illustrating this article, appears on pg. 291.

The C.P.R. and the Boston & Maine
Rd.—The President of the National As-

Association of Cotton Manufacturers is reported to have said at the annual convention at Boston, Mass., recently, that the Boston & Maine Rd. should be taken over by the C.P.R.; the Fitchburg division of the Delaware & Hudson Rd., and the New Haven Rd. by the Pennsylvania Rty., and the Central New England Rd. by the Erie Rd., so that Boston should be made the terminal of trunk lines.

Railway Apprentices from China.—G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, while in Peking, China, recently, arranged with the Minister in charge of Chinese Government Rvs. to

send six of their young men to Canada to be apprenticed to the C.P.R. They will be divided between the operating, traffic and stores departments, and it is the intention that they remain for about three years. They are college graduates and speak English quite fluently. They sailed from Shanghai on the s.s. Empress of Russia, April 28, for Vancouver.

Punishment for Removing Signal Light.—A 14 year old boy was sentenced to two years in St. Patrick's Home by the Sydney, N.S., Police Magistrate, recently, for taking a light from a Canadian National Rys. switch stand.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jet, Me., born at Waterloo, Que., June 26, 1869.

F. P. Brady, Assistant to Executive, Canadian National Tys., Toronto, born at Haverhill, N.H., June 22, 1853.

Capt. C. P. Disney, Engineer of Bridges, Eastern Lines, Canadian National Rys., Toronto, born at Montreal, June 11, 1887.

A. E. Doucet, Director of Public Works, Montreal, born there, June 9, 1860.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

Jas. Ferguson, Trainmaster, Canadian National Rys., Prince Albert, Sask., born at Woodbridge, Ont., June 17, 1878.

W. E. Foster, Solicitor for Ontario,

L. Lavoie, General Purchasing Agent, Canadian National Rys., Toronto, born at Rimouski, Que., June 22, 1879.

J. D. McAuley, Soliciting Freight Agent, Canadian National-Grand Trunk Rys., Montreal, born at Plantagenet, Ont., June 11, 1884.

R. S. McCormick, Chief Engineer and General Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

J. R. C. Macredie, Engineer, Saskatchewan District, C.P.R., Moose Jaw, born at St. John, N.B., June 13, 1880.

James Manson, Assistant to the Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

W. E. Massie, Master Mechanic, Niagara, St. Catharines & Toronto Ry., St. Catharines, Ont., born at Elora, Ont., June 5, 1880.

J. D. Morton, General Auditor, Canadian National Rys., Toronto, born at London, Ont., June 15, 1857.

L. Mulken, Division Freight Agent, C.P.R., North Bay, Ont., born at London, Ont., June 18, 1871.

R. P. Ormsby, Secretary, Canadian National Rys., Toronto, born at Arklow, Ireland, June 26, 1869.

J. E. Pinaut, General Superintendent Canada & Gulf Terminal Ry., Matane, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Foreign Freight Agent, Canadian National-Grand Trunk Rys., Toronto, born at Stratford, Ont., June 13, 1875.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, ex-General Superintendent, Ontario District, C.P.R., Toronto, born at Batavia, Java, June 29, 1878.

L. J. Keycraft, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

J. R. Shaw, Passenger Agent, Canadian Pacific Ocean Services, Ltd., Manila, Philippine Islands, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian National Rys., Toronto, born at Quebec, Que., June 14, 1872.

N. Van Wyck, Freight Claim Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, ex-Manager, Foreign Department, and Superintendent, Atlantic Division, Dominion Express Co., now Vice President, The Holden Co., Ltd., Montreal, born at Toronto, June 1, 1866.

W. Walkden, Assistant Bridge Engineer, Western Lines, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Alderley Edge, Cheshire, Eng., June 1, 1885.

A. E. Warren, General Manager, Western Lines, Canadian National Rys. and Grand Trunk Pacific Ry., Winnipeg, born at Taunton, Eng., June 9, 1874.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

Fig. 2. 200-Ton Track Scale, C.P.R. General View of Pit, showing Scale. See pp. 289 and 290.

H. W. Brodie, General Passenger Agent, lines west of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

J. M. Davidson, Division Engineer, Canadian National Rys., Winnipeg, born at Glasgow, Scotland, June 4, 1877.

G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

W. C. Guthrie, Superintendent, Schreiber Division, Ontario District, C.P.R., Schreiber, Ont., born at Annprior, Ont., June 15, 1870.

L. R. Hart, General Agent, Passenger Department, C.P.R., Boston, Mass., born at Fairport, N.Y., June 3, 1877.

J. A. Heenan, Assistant Chief Engineer, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Memphis, Tenn., June 3, 1874.

R. B. Jennings, Division Engineer, Canadian National Rys., Ottawa, Ont., born at Paris, Ont., June 29, 1888.

M. W. Kirkwood, General Manager, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born at Cheltenham, Ont., June 8, 1877.

Steam Railway Traffic Statistics for Year Ended June 30, 1919.

This is the third of a series of tables containing statistics for the year ended June 30, 1919. The others were published in Canadian Railway and Marine World for March, pgs. 145 and 146, and April, pg. 182.

In addition to the revenue train mileage given in columns 5, 6 and 7, there was a total special revenue train mileage of 97,418, distributed over 20 railways.

Railway Mechanical Methods and Devices.

Welding a Locomotive Cylinder and Valve Chest. Grinding in Triple Valve Emergency Check Valves.

An oxy-acetylene welding job, performed in the Canadian National Ry. Leaside shops, is worthy of mention.

A method of grinding in the emergency valves of triple valves as used in the car department, air brake room, West

compound, the case is held over the valve, so as to bring valve and seat together, and the air is turned on. The air, acting on the piston of the bell ringer, imparts to the check valve a rotative motion, back and forth, through about 60

Locomotive Cylinder and Valve Chest, before welding.

This job, done some little time ago, involved very expert work, and the excellent results obtained were very gratifying. The weld was on a cylinder and valve chest on locomotive 3310. The cylinder and valve chest were so broken that the various pieces were too small for straight welding work, so two plates were made, one for the cylinder and one for the valve chest, to fit the same after the edges of the breaks had been trimmed off evenly. These patches were V'd out at an angle of 45 deg. 1 in. back, for both cylinder and valve chest, and were bolted temporarily in place. The entire cylinder and valve chest were heated to a cherry red color, and the weld was then made. After welding, the work was completely covered in dry sand, and given ample time to cool. The machine regularly used was then employed to bore out the valve chest and cylinder.

When the locomotive was ready for the test, the valve chest and cylinder were filled with steam at working pressure, and no leaks or defects were discovered. This locomotive has been in continuous road service since leaving the shops, and the welded portion has given no trouble, nor shown any sign of weakness. The accompanying illustrations, showing the work before and after welding, furnish an idea of the nature of the job. A complete cylinder and valve chest casting, which would have been necessary had it not been possible to perform this welding operation, would have cost about \$3,500, and the total cost of the repair was less than one eighth of this. The welding was done by M. Karluk, leading welder, under the supervision of H. Daley, Erecting Shop Foreman, and Otis Grant, Superintendent of Leaside shops, and is representative of the type of work which is being successfully performed there.

Toronto shops, C.P.R., is unique. This work was done formerly by hand, and was necessarily slow. Now use is made of an old automatic air-operated bell ringer, which was fixed up, mounted on the air brake bench, secured to a bracket, as shown in the illustration, and connected by piping to the air supply. The

Grinding in triple valve emergency check valves: valve in position for grinding.

Locomotive Cylinder and Valve Chest, after welding.

accompanying illustration shows a check valve in position to be ground in.

In the grinding-in operation, the seat of the valve, inside the check valve case, is smeared with carborundum grinding

degrees; the case is pressed fairly heavily so as to give the valve a good pressure on its seat, and the case is given a quarter turn by the operator every few seconds till the work is done.

Where this job took formerly from five to 10 minutes, it is done in this way in about a minute, and so thoroughly and well that not one in a hundred has to be done over. For this information we are indebted to Louis Bourque, Assistant Car Foreman, West Toronto shops, C.P.R.

operated by compressed air, and one blow is sufficient to take a bend out of a bolt up to an inch in diameter. The bolts are then cut to length, according to orders from the stores department, as shown in fig. 2. Fig. 3 shows the threading machine, which will thread three bolts

Portable Work Bench for Railway Repair Shop.

The accompanying illustration shows a work bench, several of which are in use throughout the Toronto repair shops,

Reclaiming scrap bolts. Fig. 1. Straightening bolt.

Reclaiming Scrap Bolts.

Among the carloads of scrap which are taken to the scrap handling dock at West Toronto shops, C.P.R. (the scrap plant being in charge of J. E. McEwan, scrap and material reclaiming foreman), are a great many bolts, which, instead of being sold as scrap, are reclaimed. The bolts, twisted, bent and with threads

at once, and takes material up to 1 1/4 in. in diameter. This machine is operated electrically, being driven by a 30 h.p. motor.

The saving effected by this reclaiming operation is shown by the following figures, representative of operations for one month.

Bolts reclaimed	18,568 lb.
Value of reclaimed bolts	\$1,415
Scrap value of these	\$283

badly stripped, are sorted out of the car of scrap material, and placed in a section of the dock reserved for bolts. They are then taken to the reclaiming plant and first subjected to the straightening operation, as shown in the accompanying illustration, fig. 1. The hammer is

Cost of reclaiming	150	433
Saving effected		\$92

Railway material exported from Great Britain during January was valued at \$13,285,720, against \$7,087,312 for Jan. 1920.

Italy, Apr. 18 to May 1, 1922. Reports and papers are being prepared covering almost every phase of railway construction, maintenance and operation, and among those to be presented will be thirteen by representatives of various railways in North America

Canadian Pacific Railway Company's Annual Meeting.

The C.P.R. Co.'s shareholders' 40th annual meeting was held at Montreal May 4, Lord Shaughnessy, Chairman of the company, presiding. E. W. Beatty, K.C., President, in moving the adoption of the report for the calendar year 1920, as published in Canadian Railway and Marine World for May, said:—The company's operations during the year, the annual report for which is now submitted for your approval, have been conducted under conditions which were so exceptional as to costs as to make it unique in the company's history, as well as in the transportation annals of Canada. The shareholders are aware of the general conditions which so strongly influenced the results for the year, but I doubt if a full appreciation of them is possible save with a very intimate knowledge of the details, the aggregate of which is so vividly reflected upon the company's revenues. The cost of labor, materials, and fuel, reached their peak during the year, and extraordinary added costs, such as high exchange and taxes, added their quota to the expenses. The back pay which accrued before the increased freight and passenger rates became effective amounted to a little less than \$7,000,000, and the additional amount required to pay exchange on coal and other purchases to \$4,000,000. The total, including provision for income taxes, involved additional costs of approximately \$13,500,000, which was charged to the expenses of the year. All these extraordinary and abnormal expenses the company was able to absorb and pay its fixed charges and usual dividends. This result was only possible because of the excellent character of the company's facilities, provided by us in previous years at large capital expense, and the possession by it of equipment used with the greatest possible efficiency, which enabled the heavy fall movement of traffic to be effected with dispatch which has rarely, I think, been equalled. I cannot speak too highly of the loyal and effective work done by the company's officers and men, without whose efforts such favorable results could not have been secured.

While the condition of the company's property has never been permitted to deteriorate, due to the provision made for its upkeep to a high standard in the few years, there were expenditures which had to be incurred in 1920 which, except for the intensive use of equipment and the shortage of labor and material during the war, would either not have been included in the expenses for that year in their entirety, or would not have had to be incurred at all. The company's equipment was put to a great strain from 1914 to the end of 1919, and both freight and passenger business, including troop and coolie movements, was so extensive that the usual shopping programme had to be reduced, because every unit was required in actual service. When these movements ceased, repairs to equipment and renewals, of course, became extensive, and while I should have preferred that the work could have been postponed until price conditions were more favorable, it was necessary, unless the company were to suffer in prestige, that the work should be gone on with as soon as possible.

About the middle of Dec. 1920, a pronounced contraction in business took place, resulting in diminished traffic of

all descriptions. This depression still continues, but, by rigid economies, the net results for the first three months of this year are somewhat in excess of those of the corresponding period of last year notwithstanding the greatly increased costs of labor prevailing in 1921.

Wages and Rates:—As you are aware, the parity of conditions which has existed in the United States and Canada resulted in the forced adoption in Canada of what is known as the McAdoo Award and amendments, and of the award of the United States Labor Board made in Aug. 1920. Increases in wages may have been justified at that time by the abnormal increase in the cost of living, but they were accompanied by alterations in working conditions of such a character as to impose heavy and, in the view of the companies, unnecessary burdens on the transportation agencies of North America. The combined effect of them has been to greatly increase the cost of the operations of all companies. The conditions which render them necessary being rapidly ameliorated, it is apparent that readjustments will be essential. The effort to secure reductions in wages and alterations in working conditions has already been commenced in the U.S., and is proceeding in a sane, orderly and legal manner. What is accomplished there will undoubtedly reflect on the rates of pay and working conditions in Canada. These increases in wage scales, while not the only element which entered into the increase in freight and passenger rates, were still a very outstanding and potent factor, and when the readjustment of wages takes place it is only right that the rate situation should be again reconsidered, with a view to revision downward. The rates are high, but I am not one of those who believe that the existing scale of wages and the consequent high freight is responsible for the present business depression; the causes of that go much deeper than the mere standard of wages paid to any given class and are world wide. While reduction in wages does carry with it a reduced purchasing power in the individual, such reduced purchasing power is not represented by the difference in the scales of wages, because of the general decrease in prices of the commodities in Canada. Nevertheless, a reduction in both wages and freight rates would have a pronounced and beneficial effect on the general sentiment in the country, through the encouragement it would give and the confidence that normal conditions had been more nearly reached.

Steamships.—The general trade depression has, of course, reflected itself on the results during the present year's operations of the company's steamships, but the passenger business is well maintained and the prospects of immigration on a large scale are very promising. The construction of the new steamships for the Atlantic and Pacific, to which reference is made in the annual report, has been very seriously delayed by the joiners' strike in Great Britain, which will apparently have no effect on the ships which will defer the delivery of these ships until at least the end of this year. These ships are of a class that would render great service during the summer and autumn of this year, and the fact that they will not be available is to be regretted. As both the direct and in-

direct benefits of a continuance of an adequate service are very great it may be desirable to purchase other ships, if these can be obtained at moderate prices. **Finances.**—As indicated in the annual report, your finances are in excellent shape. While the balance in bank is not, of course, as large as it was at the end of last fiscal year, the amount is nevertheless a very substantial one, and there is still unissued or undisposed of over \$67,000,000 of consolidated debenture stock, the issuance of which has been heretofore authorized, or that you will be asked to sanction at this meeting. Even in the trying times during and immediately succeeding the war, the company's progression has been steady and sure, and the assets statement shows an increase since 1914 of an amount in excess of \$170,000,000. Your directors have recently accepted a proposal for the acquisition by London, Eng., interests of a substantial amount of consolidated debenture stock at a price which was very favorable. This is the first application for the acquisition of debenture stock from England since the outbreak of hostilities in 1914, and, in your directors' opinion, is an incident of the utmost significance, as indicating the resumption of interest in your principal capital security in Great Britain. It may conceivably be the first step towards the re-establishment of a market in England for the company's ranking securities which cannot but have an important influence on its future financing.

As explained in the annual report, you will be asked at the special general meeting, to be held immediately after this meeting, to approve the issuance of bonds, debentures or other securities collateral to consolidated debenture stock which the company is or may hereafter be empowered to issue, and on the same amount, such securities to be payable in such currency and at such times and places and bearing such interest as your directors may think proper. While it is not easy to designate in advance the exact purposes for which money may be from time to time required, it is thought by your directors that your approval should be asked to the creation and issue of such securities as will enable the company, in such circumstances, to provide money for extensions and new steamships and also restore the company's cash reserves, substantial amounts of which have, during the last few years, been expended on capital account. The company's enterprise is now so extensive that in providing for normal and proper expansion large sums of money are quickly absorbed. You will, I feel sure, recognize the desirability of having your financial arrangements in such shape that your directors can, without avoidable delay, secure funds for your purposes at intervals as circumstances may justify or require, and to that end will invest them with the proposed powers.

Business Outlook.—While the period of rigid economy and retrenchment has not yet passed, your directors do not look forward to any indefinite continuance of the present commercial depression. Certain basic elements in cost have yet to be reduced, but the stimulus of restored confidence and commercial activity is not, I think, in the distant future. When it is reached and traffic approaching normal is resumed, the full effect will be felt on the company's operations. Over

expansion, and consequent financial embarrassment, have caused, in many localities, a pessimism which is not warranted by the fundamental soundness of Canadian conditions, and the country's almost unlimited natural wealth.

I have the most implicit faith in the company's ability to satisfy all the public demands which may be made upon it, and to meet with credit to itself and advantage to your interests the steadily advancing commercial and transportation requirements of Canada.

The report was adopted unanimously. Resolved—That the report on the affairs of the company for the year ended December 31, 1920, now submitted, be and the same is hereby adopted.

Suffield Southwesterly Branch.—It was resolved that the directors be authorized to proceed with the construction of an extension of the Suffield Southwesterly Branch northwesterly from Lomond, for not over 30 miles when in their opinion conditions warrant, and that to aid in the construction of the equipment and extension the directors be authorized to issue and dispose of consolidated debenture stock to such an amount as they may deem expedient, but not exceeding in the aggregate an amount equal to \$30,000 a mile of the extension.

Payment for Steamships.—It was resolved that whereas the company has statutory power to issue consolidated debenture stock to aid in the acquisition of steamships to the extent of the cost, upon being authorized so to do by the votes of at least two thirds of the shareholders present or represented at an annual meeting or at a special meeting of shareholders called for the purpose; and whereas there are now being built for the company under contract the following steamships for the Atlantic and Pacific services, viz., *Empress of Canada*, 625 ft. long, with beam of 77 ft., moulded depth of 53 ft., and having a gross tonnage of about 22,000 tons, and the *Montrose and Montclare*, each 545 ft. long, with beam of 70 ft., moulded depth of 51 ft., and having a gross tonnage of about 15,600 tons, the aggregate cost of which steamships, including rigging, appurtenances and auxiliaries, is estimated at \$22,500,000; therefore it is resolved, that for the purpose of paying the cost of the steamships above described, the directors are authorized to issue and dispose of consolidated debenture stock, bearing interest at 4% a year, to such an amount as they shall deem expedient, not exceeding in the aggregate the cost of the said ships.

Directors.—The four retiring directors, viz., E. W. Beatty, Hon. F. L. Belque, K.C., C. R. Holmes, and Hon. W. J. Shaughnessy, K.C., were re-elected for four years.

Special General Meeting.—The meeting was thereupon made special for the consideration of the special business mentioned in the notice convening it, and the directors were authorized, from time to time, to issue bonds, debentures or other securities, payable in such currency, at such times and places and with such interest as they may think proper, collateral to any consolidated debenture stock which they are or may hereafter be, authorized to issue, and to such amount as they may deem expedient, not exceeding the amount of such consolidated debenture stock. Such bonds, debentures or other securities may be secured by pledge of such consolidated debenture stock.

Officers.—At a meeting of the

board held immediately after the shareholders' meeting, Lord Shaughnessy was elected chairman of the company. E. W. Beatty, President, and Grant Hall, Vice President, and the following were appointed the executive committee:—R. B. Angus, E. W. Beatty, Grant Hall, Sir Herbert S. Holt, Sir Edmund B. Osler, Lord Shaughnessy.

Timiskaming & Northern Ontario Railway Operating Results.

The Timiskaming & Northern Ontario Railway Commission's 19th annual report, submitted to the Ontario Legislature recently, covers operations for the year ended Oct. 31, 1920. The total mileage owned, or operated over, was 466.36 miles, of which 2.10 miles, the Nipissing Jet spur, was leased from the G.T.R. 13.22 miles was leased to the Nipissing Central Ry., and 120.84 miles consisted of yard track and sidings. The main line from North Bay to Cochrane is 252.29 miles, there being 1.70 miles of second tracks, and there are three branch lines:—Charlton, 7.60 miles; Porcupine, 40.11 miles, and Elk Lake, 28.50 miles.

Proposal to Electrify Part of Pacific Great Eastern Railway.

The Premier of British Columbia proposed recently that a 14 mile section between Vancouver and Whittlecliffe, of the Pacific Great Eastern Ry., which is owned and operated by the province, should be electrified. The section is an isolated one, serving a suburban population with heavy traffic to summer resorts. Hitherto it has been operated with gasoline and gasoline-electric cars, but, owing to high operating costs and increasing demands for service, electrification is deemed necessary. The power supply would be obtained from the British Columbia Electric Ry., and two automatic substations, at Altamont and Whittlecliffe, would have to be built. This electrification would provide for the passenger traffic between Vancouver and West Vancouver which now goes by ferry direct to West Vancouver, but, owing to the deficits occurring in the municipal operation of these and the North Vancouver ferries, it is proposed to divert traffic by the North Vancouver ferries and the Pacific Great Eastern, if adequate service is provided by electrification.

Premier Oliver proposed that the province enter upon a 10-year agreement with West Vancouver for the joint operation of the line on a basis of cost, whereby fares would meet all charges, including the cost of electrification. The province would assume the interest on the investment already made. When our Vancouver correspondent wrote on April 8, West Vancouver municipality had declined to enter into the proposed arrangement, and it is possible that the scheme will fall through for the present at least.

Winnipeg-Quebec Railway Gradients.

Senator Casgrain asked the following questions in the Senate recently, the answers being given by Sir James Loughheed.

Q. "What is the total ascent in feet overcome going from Winnipeg to Quebec on the National Transcontinental Ry.?" A. "8,252 ft."

Q. "The same on the C.P.R. between the same points eastbound?" A. "No information."

Q. "The same on the Canadian National Ry., between the same points, also eastbound?" A. "9,256 ft."

The Grand Trunk Railway's Transfer to the Dominion Government.

The Grand Trunk Ry. Co.'s shareholders met in London, Eng., May 12, to consider the question of transferring the company's property to the Dominion Government, under the provisions of the act passed by the Dominion parliament recently, which was given in full in Canadian Railway and Marine World for May, pgs. 258-259. Sir Alfred Smithers, Chairman of the Board, who presided, is reported to have said in part:—"The directors cannot conceal from the shareholders that the Government has acted in a manner which could not have been anticipated, and judging from the reports of speeches made in the Canadian Parliament, there is considerable misapprehension as to the reasons for the company's present position. I have purposely kept from making any premature announcement while negotiations were going on. I do not wish to say anything that will increase the Government's difficulties, but the statements made in the Canadian Parliament are so misleading that I am bound in justice to my staff and ourselves to state the G.T. Ry. position in answer to criticisms in the Dominion House of Commons. We only decided to recommend the new contract after Premier Meighen's letter recognizing fully our right of appeal. The directors, in view of the rejection of evidence of the physical value of the company's properties, are of the opinion that the arbitrators must disagree in their award, and if so, the directors believe an appeal is vital in the interests of the shareholders. Obviously an appeal cannot be concluded within four months. Believing in the impossibility of any government taking over the property on a finding which is other than the final award provided for in the agreement as the only basis of payment, the board believes that, should either party desire to exercise the right of appeal recognized in the Premier's letter, the Government must grant the necessary extension of time, particularly as the Government, being in full control of the property, would not be prejudiced by any unnecessary delay."

A motion to transfer the property, as required by the act, having been moved, an amendment was proposed to defer action until a better guarantee could be secured concerning future action by the Dominion Government. This was, however, withdrawn, and the motion was carried, only three shareholders voting against it.

H. G. Kelley, President, who was in London for the meeting, will, it is said, bring back full power to carry out the transfer.

The Government Names Directors.

The act passed by Parliament recently provides "that forthwith the directors of the company and of 16 of the companies comprised in the Grand Trunk System as the Government may designate shall resign or vacate their offices as directors at such time or times and in such manner as may be requested by the Government, and that nominees of the Government shall be duly appointed directors."

The Dominion Government passed the following order in council May 18:—"The committee of the Privy Council, on a report dated May 11, from the Minister of Railways and Canals, referring to

the Act respecting the Grand Trunk Arbitration, which was assented to on May 3, and to the agreement between the Government and the Grand Trunk Ry. Co. of Canada recently executed in pursuance thereof, recommend that the company be requested immediately to cause five of its directors, including Sir Alfred Smithers, the Chairman of the Board, and Howard G. Kelley, the President, to resign and vacate their offices as such directors, as provided by sec. 4 of the said act, and to elect in place of these as nominees of your Excellency's Government Sir Joseph Flavelle, Bart., of Toronto; J. N. Dupuis, of Montreal; H. G. Kelley, of the G.T.R. Co.; E. L. Newcombe, K.C., Deputy Minister of Justice, and A. J. Mitchell, of the Canadian National Railways, and that thereupon the remaining directors forward their resignations as such directors to the Chairman of the Board at Ottawa through the High Commissioner for Canada in London, Eng."

J. N. Dupuis is a Montreal dry goods merchant, A. J. Mitchell is Vice President, Finance and Accounts, Canadian National Ry. It is said that the new board will act until the Canadian National Ry. Act, providing for united management of all Dominion Government railways, is brought into effect by proclamation.

In the House of Commons, on May 25, F. S. Cahill, Pontiac, Que., asked if a report he had seen in a morning paper, stating that certain persons had been appointed by the Government as Grand Trunk directors was correct, and for as many of them they had been appointed. Prime Minister Meighen replied: "The gentlemen named have not been appointed by the Government, because we have not the power of appointment. To make up the required number, they have been nominated by the Government for appointment by the directors themselves upon the resignation of individual directors, which resignations are called for by the order in council making the nominations. The order in council further provides, in accordance with the act and the agreement, that when one retires after the other, until five have retired, and these five nominated by us have been appointed, the remaining directors shall resign. Whether the appointments have yet taken place, I am not certain, but the order was cabled over the day it was passed, and I would presume that if the appointments have not taken place yet, they will very shortly. Under the statute, it was necessary that the directors be nominated by the Government, and these gentlemen are the directors so nominated. They are merely in charge until the calling into effect of the Canadian National Railways Act, upon which it is intended that the Grand Trunk shall be placed under that directorate. That is expected to take place shortly. The new directorate will take charge, and unless there is some reason to the contrary, almost immediately afterwards it is the intention to call the act into effect."

Out of 200 U.S. railways reporting to the Interstate Commerce Commission for February, 106 failed to earning their operating expenses and taxes.

Pacific Great Eastern Railway Construction and Operation.

In reply to questions in the British Columbia Legislature recently, the Premier stated that the Pacific Great Eastern Ry. was taken over by the B.C. Government in 1918, the present directors of the company being Hon. John Oliver, Hon. John Hart and Hon. J. W. deB. Ferris. The deficits upon the operation of the line were in 1918 \$115,255; in 1919 \$202,113, and in 1920 \$324,328. The General Manager is A. B. Buckworth, who is paid \$6,000 a year. The Northern Construction Co. has the contract for the completion of the line to Prince George, at cost, plus 5½%, based on unit price. Since the railway was taken over in 1918 the Government has loaned the company \$3,974,668.40 under the Construction Act; \$625,000 under a Special Warrant; \$4,800,000 under the Note Repayment Act, and \$5,000,000 under the Loan Act 1916, a total of \$14,399,668.40.

The Legislature is being asked to provide a further sum of \$4,000,000 on account of construction of the railway. The Premier is reported to have said in explanation that the consideration of the \$4,000,000 voted in 1920 had to be diverted from construction, owing to the deficit in operation, etc. Construction proved expensive, on account of washouts on the partially completed grade, which necessitated new fills, and the fact that diversions from the original locations had been made to secure a better line. The \$4,000,000 asked for this year was expected to provide for the maintenance of the existing line, for the loss on operation, for the completion of the line into Prince George, and to take care of all outlays up to March 1922. By the time the line is completed to Prince George the province will have expended approximately \$4,000,000.

The Government is not at present asking for any provision to be made for the projected cut off from Clinton to Ashcroft, surveys for which have been made.

An estimate made by C. Williams, at the Government's instance, for the extension of the line from Prince George to the B.C.-Alberta boundary, has been laid before the Legislature. The cost is put at about \$18,000,000. Two routes are suggested: one from Prince George to Swan Lake, via Pine River Pass, about 316 miles, and the other from Vanderhoof to Hudson's Hope, thence to Pine River, and Swan Lake, 426 miles.

A press report states that it is expected to have over 700 men at work by April 1, on the line to Prince George. One gang will start on the section between Quesnel and Ten-mile Lake, and the other between Cotton River and Prince George. (Mar., pg. 143.)

The American Railway Association's Mechanical Division's program for its meetings at Chicago, Ill., June 15, will include 16 cover committee reports on the following subjects:—June 15, nominations, arbitration, prices for labor and material, leading rules, standard method of packing journal boxes; June 16, car construction, brake shoe and brake beam equipment, train brake and signal equipment, tank cars, specifications and tests for materials. The election of officers will take place June 15, immediately after the consideration of the report of the nominations committee, which will be made on the first day of the meetings.

The Railway Wages Question.

The law governing the regulation of railway wages in the U.S. was fully explained in Canadian Railway and Marine World for May, pg. 257, and the membership of the first Labor Board constituted under it was given. The terms of the three members of this Board, who were appointed for one year, having expired, President Harding on April 16 sent to the Senate his nominations for their successors, viz., B. W. Hooper, formerly Governor of Tennessee, to succeed H. T. Hunt, of the public group; Samuel Higgins, formerly General Manager, New York, New Haven & Hartford Rd., to succeed W. L. Park, of the railway group, and W. L. McMenimen, Deputy President of the Brotherhood of Railway Trainmen, to succeed J. J. Forrester, of the labor group. Mr. McMenimen's appointment was protested against by the representatives of maintenance of way employees' organizations, on the ground that he would be the second representative of the train service branch of railway labor to be a member of the Board, but the Senate confirmed the nominations on April 25.

The long-standing dispute between U. S. railways and certain classes of their employees, concerning the national agreements put into effect by the U. S. Railway Administration, was terminated by the U. S. Labor Board's decision on April 14, which decision abrogated these agreements, and directed each railway to enter into new agreements with its own employees, thus upholding the railways' definition of collective bargaining, and their contention that varying local conditions should be a large factor in the drafting of rules and working conditions. The decision also stated that 16 principles, for the maintenance of which the labor leaders had consistently argued, should be applied in the making of individual agreements. The sixteen principles to be respected in the new agreements are of a broad and general nature, none of which could be considered as imposing uneconomical conditions upon the carriers. The principle of the 8-hour day is upheld, but the Board states ".... it should be limited to work requiring practically continuous application during 8 hours.... For 8 hours pay, 8 hours work should be performed by all railroad employees, except those in train service, who are paid on a mileage, as well as on an hourly, basis." The decision becomes effective July 1.

The wages hearing was reopened before the Labor Board at Chicago on April 18, when 92 cases, involving applications from as many railways, for the Board's authority to reduce wages, were docketed for hearing. The railways were asked to present their case first. J. G. Walber, representing Eastern U.S. lines, cited decreases in living costs and wage reductions of 10 to 30% in other industries as a cause for reducing railway wages. He stated that figures of the U. S. Labor Department, and of the National Industrial Conference Board showed that in July 1920 the cost of living was 104.5% higher than in 1914, but in March 1921 it was only 87% higher, and still declining. C. L. Bardo, General Manager, New York Central & Hudson River Rd., called attention to the financial position of the railways, and to the fact that they are incurring deficits, despite increased rates. Then followed the

representations of the individual railways, the Pennsylvania leading. Western U.S. roads presented their testimony on the second day of the hearing. In connection with the rates of pay of unskilled labor, it was shown that the official railway rate is much higher than that in other industries, so that, with the railways in their present financial condition, the season for employing the greatest number of men on maintenance work is passing through the work being done, while thousands of men are out of work.

On April 28, the labor representatives began the presentation of their case. B. M. Jewell stated that up to that time no reductions had been made in wages in the steel and coal mining industries. (A 20% cut has since been made in wages in the steel industry.) He said that for 18 months preceding the making of the wage award of July 1920, railway workers received wholly inadequate rates of pay, and maintained that the fact of relief having come so late should be considered. He claimed that the Board's award of July 1920 was based on the prices and living costs as of Dec. 1919, and not on the peak prices of July 1920. He stated that he would show that the Board could not reduce the pay of unskilled workers without abandoning the principle of the living wage or without lowering the U. S. standard of living. He also stated that while he recognized that wage cuts had been made in certain outside industries, they were not on the same basis as the basic industry of transportation, and the comparison as between them and the railways, so far as wages were concerned, was valueless. He objected to wages being discussed until the new individual working agreements had been drawn up.

W. Jett Lauck, an economist retained by the railway employees' organizations, presented voluminous statistics which he claimed would show that U.S. railways are grossly mismanaged, and that if they were properly managed, savings of over a billion dollars a year would result. He reviewed the past financial history of the railways generally, claiming that railway management, by issuing fictitious securities, imposed a perpetual drain upon railway operating revenues. He claimed that the inadequacies in management should be remedied before a wage reduction could be considered, and declared that the present plight of the railways in this time of depression is the result of accumulated evils of financial mismanagement, which are expressed now in physical infirmities and impossibility of economical operation.

On May 7 the railway companies representatives concluded their rebuttal statements; the eastern roads being represented by J. G. Walber, and the western roads by F. W. Sargent, General Solicitor, Chicago & North Western. Six presidents of western roads were represented by R. M. Shaw, General Counsel, Chicago Great Western, and the Pennsylvania was represented by E. H. Sennett, General Counsel. Mr. Shaw denied absolutely that U.S. railways are over-capitalized, and pointed out that it would not make any difference if they were, if the Interstate Commerce Commission determined the value of the properties on which the prescribed rate of return should be earned. He flatly denied a previous charge of labor representatives that rail-

ways pay fabulous prices to concerns under the same financial control for most of their materials, and stated that they buy their supplies from hundreds of independent companies scattered all over the country. In reply to a charge of Mr. Lauck that railways are wasteful in not modernizing their locomotives, he stated that this work is being done as fast as is humanly possible, but is handicapped by the railways financial condition. He showed, in proof of the progress made, that the average train load on the western railways increased from 393 tons in 1915 to 643 tons in 1920, or 61%. He said that when Mr. Lauck maintained that the roads were being inefficiently managed, and in the same breadth said that the recent reductions in the number of employees were unnecessary, it demonstrated the baselessness and inconsistency of his propaganda. Practically all of the testimony of the railway representatives on this date was to show the theoretical and fallacious nature of Mr. Lauck's charges.

On May 5 and 6 further statements were made by the employees' representatives, including L. E. Sheppard, speaking for train service employees; W. S. Stone, President of the Brotherhood of Locomotive Engineers; G. W. Easty, Vice Grand President of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and W. S. Carter, President of the Brotherhood of Locomotive Firemen and Enginemen. Mr. Carter spoke at length against the open shop movement, and attacked the accuracy of the statistics compiled by the U.S. Department of Labor, stating that because of lack of funds the Department is unable to compile complete and accurate data. The hearings continued on May 11 and 12. B. M. Robinson, President of the American Short Line Railroad Association making a statement, and E. P. Curtis, Vice President of the Order of Railway Conductors, speaking in rebuttal.

Press reports state that the Labor Board has announced that a decision will be announced on June 1, covering all the applications for authority to reduce wages, principally of unskilled labor, made by the railways prior to April 18, and that another decision will be given on June 6, covering all cases brought up since April 18. The announcement forecasted a reduction in wage scales, but no intimation was given as to the probable extent of the cut. It is reported that the employees representatives state that they will appeal to the courts to have a restraining order granted, to prevent the wage cuts going into effect on July 1 (the date specified in the Board's announcement for the cuts to take effect), and will also appeal to have the Labor Board's decision set aside. They claim there is ample precedent for this, as the courts have reviewed, and reversed, many decisions of the Interstate Commerce Commission, which, like the Labor Board, is a quasi-judicial body, created by legislation. Such are developments in the United States to date. The Canadian Situation.—We are officially advised that an agreement has been entered into between the Railway Association of Canada and six organizations of labor, viz., Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Or-

der of Railway Conductors, Brotherhood of Railroad Trainmen, Order of Railroad Telegraphers, and United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, to perpetuate the Canadian Railway Board of Adjustment No. 1, which came into existence by an agreement of Aug. 7, 1918. This Board consists of 12 members, 6 representing the Railway Association of Canada, and 6 representing the above named organizations. A feature of the agreement is that after a matter has been considered by the Board, and agreement has not been reached, any 6 members of the Board can appoint a referee to decide the dispute. If a satisfactory referee cannot be agreed upon, they can ask the Dominion Minister of Labor to appoint a referee, although there is no provision to make the decision of any referee legally binding.

The Federated Shop Trades have no representation on the Board of Adjustment. This organization is one of the two in Canada (the other being the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers) having a national agreement, applying to all railways. The present agreement of the Federated Shop Trades, known as "Wage agreement no. 4, between Canadian Railway War Board and Division no. 4, Railway Employees' Department," dated Nov. 12, 1919, and modified by an important supplement which took effect May 1, 1920, was made between a committee of the Railway Association of Canada, which succeeded the Railway War Board, and the representatives of the Federated Shop Trades. Any dispute arising between the Federated Shop Trades employees and the railways, is dealt with by a committee of the Railway Association of Canada, and any dispute arising between the maintenance employees and the railways, or between any of the other five organizations represented on the Board of Adjustment, and the individual railways with which they have agreements, is decided by the Board of Adjustment.

Railway wages have continued to be widely discussed throughout the country, and official action in connection with them and with working conditions has been taken. The Railway Association of Canada sent out notices early in May to the organizations having national agreements, viz, the shopmen and maintenance men, and at the same time the individual railways sent out similar notices to the other organizations, stating the intention of revising present wage scales and working conditions, so that at present practically all employees have been advised of the intention of the railways to effect a change. No indications were given in the notifications, as to the extent or nature of the proposed changes, but that these contemplate lower wage scales, and alterations in working conditions making for greater economy in operation, seems certain. The agreements provide 60 days notice of change for maintenance of way employees and 30 days for other employees.

L. L. Peltier, legislative representative of the Order of Railway Conductors, in a statement issued May 16, said that the contentions that railway employees are overpaid, relate to exceptional cases of over-earning, and cited statistics to show that the average earnings of railway conductors for 1920 were \$2,245.65, freight for passenger conductors \$2,329.70. A. R. Mosher, Grand President, Canadian

Brotherhood of Railway Employees, an organization of clerks and station employees, independent of the international organizations, said that the men here presented would vigorously oppose a reduction in wages. Jas. Murdock, Vice President, Brotherhood of Railroad Trainmen, is reported, when asked what stand his organization would take, to have replied that it would be judged from the attitude of the organizations affected by similar notices from U.S. railways. On the other hand, a press report states that Michigan Central shopmen in St. Thomas, Ont., are prepared to accept wage reductions, if they are not excessive, and there is a large body of opinion among railway employees to the effect that a reasonable decrease in wages would be acceptable, provided proof is offered that such will hasten the return of good business conditions, and provide sufficient work to keep all labor employed on full time.

The Toronto Viaduct and New Union Station Questions.

The Board of Railway Commissioners sat in Ottawa, May 2, to consider two matters, first the Toronto Terminals Ry. Co.'s application on behalf of itself, the G.T.R. Co. and the C.P.R. Co., for an extension of time for the completion of the Toronto viaduct works, ordered by the Board in 1913; and second the Toronto Terminals Ry. Co. was required to how cause why some arrangement should not be entered into for making the new union station available for use at the earliest possible moment.

The Toronto Terminals Ry. Co.'s applicator has an antecedent of time for three years for the building of the viaduct, on the ground of the increased cost of the work ordered, and the present difficulties of securing the necessary funds. The cost was estimated at \$10,000,000 in 1918, exclusive of the station and land damages, and the present estimated cost of the whole works, including station and land damages, is \$34,000,000. The Chief Commissioner expressed the opinion that the Board's order must be carried out, but said the practical question was whether it can be carried out at once. G. R. Geary, K.C., for the Toronto city council, contended that while the Board had power to extend the time for the completion of the works, it had not power to vary it for the commencement.

A temporary compromise plan, proposed by the Board's Chief Engineer, G. A. Mountain, was submitted and discussed. It provides for making an immediate start on the viaduct, certain sections of the work to be done at once, and other sections to be done later, but the whole plan, as originally ordered to be carried out. The area included in the original viaduct order extend from Bathurst St. to Cherry St., and the work suggested to be taken in hand at once covers the construction of four viaducts, and four subways. Bridges would be built at Spadina Ave., John St., Princess St. (temporary), and Parliament St. (temporary); and the subways would be at York, Bay, Yonge and Church Sts. The building of these structures would raise the tracks at Bathurst St. $5\frac{1}{2}$ ft., at John St. 12 ft. and at Simcoe St. 17 ft., continuing at that level to Yonge St., where they would drop gradually on a $\frac{1}{2}$ of 1% gradient on a line of the Parliament St. viaduct, to the present track

level. These suggestions, it is said, are approved by the Toronto City Council, and the Toronto Harbor Commissioners, but not by the railways interested. The suggestions outline a plan by which a portion of the viaduct could be built to utilize the new union station, to get access to the Toronto Harbor Commission's development and all the frontage; and practically nothing would be thrown away when the final work was completed. It is contended that there would be little inconvenience to the railways, or to the city. The hearing was further adjourned so that estimates might be made as to the cost of carrying out the works on the plan suggested by Mr. Mountain.

Canadian Railway Club's Annual Meeting.

At the Canadian Railway Club's annual meeting at Montreal May 10, it was reported that the club had a membership of 1,385, and that the past year had been the most successful in the club's history.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., was presented with a past president's jewel on retiring from office as President. The following officers, etc., were elected: President, A. Crumpton, Valuation Engineer, G.T.R.; 1st Vice President, G. M. Wilson, Superintendent, Motive Power Shops, G.T.R.; 2nd Vice President, E. E. Lloyd, Assistant Comptroller, C.P.R., Executive committee: E. R. Battley, Superintendent, Motive Power, Eastern Lines, G.T.R.; H. R. Naylor, Assistant Works Manager, Angus shops, C.P.R.; C. E. Brooks, Mechanical Assistant, Locomotive Department, Canadian National Ry., Toronto; R. J. Needham, Mechanical and Electrical Engineer, G.T.R.; J. A. Shaw, Electrical Engineer, C.P.R.; W. U. Appleton, General Superintendent of Rolling Stock, Canadian National Ry., Moncton, N.B. Audit Committee:—W. H. Langridge, Auditor, Stores and Mechanical Accounts, C.P.R.; F. Needham, Assistant to General Superintendent, Motive Power and Car Departments, G.T.R.; J. Burns, Works Manager, Angus shops, C.P.R.; Secretary, W. A. Booth, Engineer of Locomotive Construction, G.T.R.; Treasurer, P. P. Reynolds, Chief Mechanical Engineer's office, C.P.R. Where addresses are not given above, the persons are located in Montreal.

Reid Newfoundland Co.'s Finances.—A member of the Newfoundland Legislature asked recently that a detailed statement of the Government's alleged counter claim against the Reid Newfoundland Co., amounting to \$51,887.57 be laid on the table. The Minister of Marine and Fisheries, who is also chairman of the Railway Commission, said in reply: "The Reid Newfoundland Co. will be indebted by agreement to the Railway Commission for loss on operation at end of June an amount of \$100,000. The accrued amount to end of April is \$83,343.33."

Inter-Territorial Transportation Limited has been incorporated under the Ontario Companies Act, with authorized capital of \$500,000 and office at Toronto, to carry on business as a general carrier, railway and forwarding agent, transfer and express agent and any other similar business. The provisional directors are: A. R. Lawrence, H. L. Proulx, G. E. Galbraith, W. W. Perry, and G. N. Shaver, Toronto.

House of Commons Committee on Canadian National Railways and Shipping.

Canadian Railway and Marine World for May contained on pgs. 245-247 full particulars of the appointment of this committee and of its proceedings up to April 27. On April 29, on motion of the Prime Minister, C. A. Fournier, Bellechasse, Que., and A. McGregor, Pictou, N.S., were placed on the committee instead of Jacques Bureau, Three Rivers and St. Maurice, Que., and A. L. Davidson, Digby and Annapolis, N.S.

It may be well to repeat the questions which the committee was instructed to enquire into, viz.:—1. What information as to operations of Canadian National Rys. and shipping as conducted by the board of directors and management, should, in the public interest, be brought down in Parliament on questions, motions for production of papers, or otherwise?

2. When, by what method, and under what conditions, if any, should such information be given, regard being had for the necessity of securing to Parliament and the public all facts requisite for the determination of policy, including finance, and to the board of directors the best possible conditions for efficiency of management?

3. What system of auditing should be adopted, and what extent of detail should be given in the annual report?

4. What, if any, improvement could be made in the general scheme of management?

5. Whether and for what purpose the committee should be continued, and that, for the above purposes, and for such other purposes as the committee deem in the public interest, there be referred to the committee the board of directors annual report, and that the committee have power to examine witnesses under oath, to send for papers, persons and records, and to report from time to time?

On May 3, the examination of S. J. Hungerford, Vice President, Operation and Maintenance, C.N.R., was resumed. The question of wages was first brought up, but Mr. Hungerford stated that President Hanna was desirous of making a general statement concerning wages, and that he preferred to have the entire question of wages referred to Mr. Hanna. Several questions in connection with passenger service between Ottawa, Toronto and Montreal were answered by Mr. Hungerford, after which in answer to further questions, he informed the committee concerning the Canadian Railway War Board and the Railway Association of Canada. Following this, R. J. Manion, Port William and Rainy River, Ont., asked the illuminating question whether it is possible for a station agent to know when a late train will arrive. In replying to questions by G. B. Nicholson, Algoma East, Ont., and Major General McLean, Royal, N.B., Mr. Hungerford pointed out that the bad effects which would follow interference in the disciplining of employees and minor officials, the giving out of information in connection with proposed betterments prior to all arrangements being completed, and the making public of information as to earnings of trains of a competitive character. Passenger service being brought up again, Mr. Hungerford explained why it is impossible to determine the exact cost of operating any particular train, after which he answered questions dealing with the Board of

Railway Commissioners' jurisdiction in connection with passenger train accommodation. Asked by Mr. Nicholson as to the possibility of arranging a conference with the C.P.R. for the purpose of eliminating some duplicate services, he said that such a conference would not be likely to result in the C.P.R. agreeing to take off any trains. Mr. Hungerford stated that it was a logical expectation to secure advantages from consolidation with the Grand Trunk, and declared himself in favor of building the Long Lake cut off, between the C.N.R. and the National Transcontinental Rys. in northern Ontario. Questioned by T. M. M. Tweedie, West Calgary, Alta., Mr. Hungerford explained that the fact of there being two main lines east of Fort William and Armstrong, Ont., made operation expensive, and pointed out the necessity for more traffic for them. At this point R. J. Manion, who represents a constituency at the head of Lake Superior, called attention to the wealth and population of his district and stated that if through trains were operated by way of the Long Lake cut off, people in his district would be apt to patronize a competing road. Mr. Manion also brought up the question of seniority of employees on the various roads in the system, and Mr. Hungerford explained that the organization to which the employees belong determine the respective seniority standings of their members, this determination being acceptable to the railways. Mr. Hungerford showed the nature of the proposition that the Canadian National system is up against in the matter of train tonnage, and submitted a list of the train tonnages for the various lines constituting the system.

A. B. Copp, Westmoreland, N.B., suggested that some Canadian Government Rys. officials had been reduced in rank and their places filled by C.N.R. men, and Mr. Hungerford said that it was the policy of the management to change officers around, so as to widen their experience and knowledge, and that all had been treated fairly. Mr. Copp asked what sort of position L. S. Brown holds, and he was informed that Mr. Brown is now occupied as Assistant General Manager at Montreal, whereas previously he was a General Superintendent at Moncton. The change was a promotion. F. S. Cahill, Pontiac, Que., brought up the question of two passenger trains operating between Winnipeg and Biggar, Sask., necessitating another explanation by Mr. Hungerford as to why it is impossible to determine accurately the expense of operating any particular train, and also as to the necessity of these two trains when passenger traffic is heavy. Mr. Cahill said he had heard a lot of criticism about the C.N.R. being late; and was informed that the effort is to keep all trains on time, but that on all railways it is a difficult matter to eliminate delay entirely. He also desired to learn whether a late passenger train would be given right over a way freight running on time, and was informed answered in the affirmative. He also asked why the management should hesitate about giving out information concerning a reduction in the number of section men employed on any division, and also sought information, which he received, as to what an extra gang is. The question of equipment was brought

up by W. H. White, Victoria, Alta., who complained strenuously of car shortage experienced by farmers on a western division last year. This was discussed widely, the universal car shortage at that time being pointed out, and also the facts of the large C.N. coal movement and the number of Canadian cars held in the U.S. at the time. Mr. Hungerford said that practically all of the western grain crop has been moved, and that the C.N.R. handled 46% of it. He showed that ability to handle the peak load of the autumn as quickly as freight offered would necessitate a great deal more equipment than a prudent railway management would feel justified in acquiring. Mr. Hungerford also made another explanation, for the benefit of Hon. C. Murphy, Russell, Ont., as to the impossibility of determining accurately the total expense attributable to any particular train.

D. B. Hanna, President, C.N.R., then explained to the committee that in a short time the management would meet the employees' representatives to discuss wages, and pointed out that it would be unfair that the officers should be asked to discuss, before the committee, the wages and working conditions of railway employees who work under agreements not confined to the C.N.R., but in several cases applying collectively to Canadian railways. He also pointed out the complex nature of railway wage agreements, and the danger of judging their effect by a partial knowledge of their contents, or by statistics which cover merely the rates.

C. A. Hayes, Vice President, Traffic, C.N.R., then read a statement dealing with the organization and functions of the traffic department.

The committee met again on May 4, when R. C. Vaughan, Vice President, Purchases and Supplies, C.N.R., outlined the organization of the department and detailed the duties of the general and local purchasing agents, general and local storekeepers, general Fuel Agent, general Tie Agent and other officers. The questioning started on ties, Mr. Vaughan stating that, except where ties would have to be hauled an unduly long distance, the lowest tenders are accepted. Ties in small lots are obtained from several sources, and are generally at a somewhat lower price than paid for the big operators. Some of the members of the committee appeared very solicitous of the welfare of the small tie producers, but Mr. Vaughan was able to show that they are being fairly treated, and that it is necessary for him to operate his department on strictly business lines in this connection as in all others. He made it clear that all steel rails are obtained in Canada, except the heavy ones at the Duluth, Winnipeg and Pacific and that the Canadian price is lower than the U.S. price when duty and exchange and the expense of the long haul are reversed. He had never heard of a case wherein a man wanted to submit a tender and was not given the opportunity to do so. He made it abundantly clear that all mines having the ability to supply coal have a chance to compete. He stated that, on the whole, the C.N. Rys. give a larger number of firms an opportunity to bid than most railways do, and also said that if he felt himself at liberty to negotiate privately, instead

of calling for tenders, he might get better prices in some lines. He contended it would be injurious to give out information concerning the amount the railways pay for materials, either after the completion of purchases, or before deals are completed.

On May 10, A. J. Mitchell, Vice President, Finance and Accounts, C.N.R., presented a report of special traffic mileage, which had been called for, and also a comparison of average U.S. and Canadian freight rates. The average U.S. ton mile rate for 1920 was 1.052c. and for the C.N.R. it was 0.989c. He gave a very technical explanation of how, by making use of a great many assumptions in the division of indirect costs of operation, the expenses of any individual train can be arrived at. He was asked to explain why the average train mile cost was \$4.12 on the Canadian National and \$3.93 on the C.P.R., when the average train loading on the C.P.R. was 529 tons and that on the Canadian National only 393 tons. In reply he dwelt on heavier maintenance costs, traffic density, etc. The examination then turned to the differentiation as between capital and operating costs, in making the charges for maintenance work, which he fully explained. It was brought out that the C.N.R. capitalization is \$32,000 a mile. The Drayton-Acworth report gave it as \$54,000, but the difference was accounted for by the capital cost of the equipment, figuring out at \$8,000 a mile. The question as to how much it would cost to put the C.N.R. properties in "first class shape" started a long discussion among the members, some maintaining that the property is in that condition now. The Minister of Railways and others took the stand that it would be poor policy to name a further lump sum amount required for railway purposes, and that it would produce a bad effect on the people, when, as a matter of fact the necessary improvements will be made currently, and as necessary, and largely as maintenance paid for out of earnings.

On May 12, R. B. Teakle, Manager, Canadian Government Merchant Marine, appeared before the committee. He stated that he is operating 54 steamships, a total of 302,597 tons, outlined the services operated and pointed out the advantages enjoyed by Canada in owning the fleet. Wm. de L. Langburg, N.S. asked questions covering the accounting end of the business and the nature and volume of traffic handled by the ships. Mr. Teakle gave an explanation of the effects of the present depression in business, which is affecting shipping very adversely, and made clear his policy of operating the ships on a schedule of sailings, as opposed to a possible policy of running them as tramps. Hon. A. K. Maclean, Halifax, N.S., asked a long series of questions based on the fact of the C.G.M.M. taking traffic from the Canadian National Rys. at Montreal, which, in his opinion, robs the railway of the haul on the freight from Montreal to Halifax, and he contended that one branch of the National transportation system is competing against another branch for the same traffic. Mr. Teakle said he was not in a position to discuss rail rates and differentials. Various members of the committee advanced numerous theories respecting export rates, the effects of competition, seasonal changes, etc., and the traffic matter discussion became so involved that no definite conclusion was reached concerning it.

Mr. Maclean mentioned that the C.G.M.M. proposes to run a service every three weeks to St. John's, Nfld., and asked for information about cargoes, etc. Mr. Teakle admitted that, at present, cargoes are somewhat limited, but expressed confidence in his ability to make the Newfoundland service successful. Mr. Maclean, by his questions and remarks, conveyed the impression that he considered the Government and the C.G.M.M. management guilty of poor policy in putting ships on this route. He wanted to know if this was done as a result of study, showing that there is business enough to justify it, or just because the C.G.M.M., having the ships on hand, decided to experiment a little with them. Mr. Teakle said that no experiments were being indulged in. The questions asked Mr. Teakle nearly all had to do with matters of management, and had

but a remote connection with the broad questions of policy submitted to the committee for solution, gave him an opportunity to demonstrate his optimism as to the ultimate success of the venture. He was also able to show that the C.G.M.M. is being operated efficiently and on a business basis, and stated that it will continue to be so operated, if kept free from the destructive influences of political interference.

On May 17, G. W. Hensley, of Pickford & Black, Halifax; R. A. Corbett, of G. S. Campbell & Co., Halifax; F. K. Warren, ship broker, Halifax, and R. B. Teakle, Manager, Canadian Government Merchant Marine, were examined. On May 18, D. B. Hanna and A. J. Mitchell again appeared before the committee, and J. T. MacFarlane, Accountant, Dominion Finance Department, Ottawa, was examined.

Railway Statistics for Calendar Year 1919.

The Statistics Act and the Railway Act 1919 changed the reporting year for railways from the year ended June 30 to the calendar year. The Dominion Bureau of Statistics issued recently a complete report for the year ended June 30, 1919, a summary of which was given in Canadian Railway and Marine World for February, pg. 83, with tables of operating statistics in the March issue on pg. 145, income statistics in the April issue on pg. 182, and traffic statistics in this current issue on pg. 000. A report for the calendar year 1920 is being completed by the Bureau. The figures for the six months Jan. to June 1919 are thus included in both reports, viz., for the year ended June 30, 1919, and for the calendar year 1919. Future reports will be for the calendar year. The Bureau has issued a preliminary report for the calendar year 1919 to which are attached tables showing the total capital stock, funded debt, operating revenues, operating expenses and income account, also main operating statistics of all railways, also for the Canadian Pacific, Canadian National (old Canadian Northern System), all other Canadian Government lines, including Intercolonial, National Transcontinental, Prince Edward Island and other smaller lines operated by the Government, Grand Trunk and Grand Trunk Pacific, and G.T.P.R. branch lines. These five systems operate over 85% of the total single track mileage of Canada and their operating earnings were over 85% of the total of all steam railways in Canada.

Under the Canadian National, the two electric railways, the Niagara, St. Catharines & Toronto and the Toronto Suburban are not included. The figures for these are:—

Gross earnings	\$926,390
Niagara St. Catharines & Toronto	394,994
Operating expenses	752,062
Niagara St. Catharines & Toronto	352,472

The operating statistics of these two railways are included in electric railway statistics.

In addition to the capital shown the amounts of principal expenditure on Canadian Government lines to March 31, 1920 (small branch lines are only to Dec. 31, 1919) are reported by the Railways Department as follows:—

Intercolonial	\$140,991,709.07
Prince Edward Island	12,749,112.00
International of N.B.	2,858,394.60

New Brunswick & P.E. Isl.	529,331.32
Elgin & Havelock	73,837.09
Moncton & Bouchette	133,819.12
Salisbury & Albert	186,991.65
St. Martins	58,810.07
York & Carleton	8,749.53
Quebec & Saguenay	7,374,505.74
National Transcontinental	166,698,645.64
Rolling stock	38,748,236.94

Quebec bridge	\$370,413,823.77
Hudson Bay Ry. and terminals	22,616,017.66
	20,566,886.19
	\$413,590,678.12

Provincially owned lines are the Timiskaming & Northern Ontario and New Brunswick Coal and Railway, showing an investment in road and equipment of \$21,880,808, and \$1,960,479 respectively.

There is a correction on June 30, 1919, figures, an addition of \$5,915,200 stock of affiliated companies of Canadian National that was not shown in the report for June 30, 1919. The loans made by the Government to the Canadian National are not included in the funded debt but in \$229,483,759 of loans and bills payable, against that road.

The single track mileage increased 162 miles. The freight carried decreased 5,211,792 tons, or 4.5%; tons carried one mile decreased 773,798,880 ton miles, or 2.8%; indicating an increase in average haul of 4.2 miles or 1.8%.

Passengers carried increased 4,186,262 or 9.6%; the average length of ride also increased 6.08 miles, making an increase in passengers carried one mile of 583,828,347 passenger miles or 19%. The increased rates, which gave an increased average receipt per passenger per mile of .075 cents, increased the passenger receipts (rail line) \$17,652,370, or over 22%.

The loaded freight car miles increased 31,732,067, indicating a lighter loading of cars. The average load was 22.21 tons, against 23.46 for year ending June 30, 1919.

The average number of employees increased 14,951 or 9.4%, and the salaries and wages increased \$24,383,079 or 11.7%. The average wage per hour increased from \$0.484 to \$0.523 or 8%. The ratio of salaries and wages to the operating expenses was 62% and to gross earnings 57.1%.

There were only five steam railways that paid dividends during the year. They were: The Canada Southern (Michigan Centre), \$450,000; Canadian Pacific, \$29,227,277; Napierville Junction, \$36,-

000; Thousand Islands, \$4,200; and Toronto, Hamilton & Buffalo, \$270,750.			
Year ended			
Dec. 31, 1919	June 30, 1919

The tables showing earnings, expenses, etc., of the Canadian Government, Canadian National, Canadian Pacific, Grand Trunk, Grand Trunk Pacific, and G.T.P.R. Branch Lines, are not produced here, as later figures have been given, either in the companies' reports, or in Parliament.

The Maritime Provinces' Demand for Special Railway Rates.

Canadian Railway and Marine World for May gave, on pg. 259, the reasons advanced by the maritime provinces for demanding preferential treatment in freight rates, and particulars of the Board of Railway Commissioners' jurisdiction, and other factors in the case, were given. Agitation on this matter is continuing, and increasing. A meeting was held at Moncton, on April 29, under the auspices of the Maritime Board of Trade and the Canadian Manufacturers Association's maritime branch, the complaint of nearly all speakers being that excessive freight rates are prejudicial to Maritime interests. Governments of New Brunswick and Nova Scotia, Maritime Stockbreeders' Association, Nova Scotia Department of Industries and Emigration, United Farmers of New Brunswick, Truro Agricultural College, Nova Scotia Department of Agriculture, the Woodstock, St. Stephen, Bathurst, Chatham, Amherst, St. John, Halifax and Moncton Boards of Trade were represented.

Hon. R. E. Finn, of the Nova Scotia Government, stated that the Intercolonial Ry. was built as a condition precedent to the maritime provinces entering Confederation, and that it was always recognized that the road was not merely a commercial venture which should pay its own way. He contended that every management before 1916 had fixed rates to promote trade east and west, and traced the increases in freight rates and their effect in bringing about the present situation, which he pictured as hopelessly bad, from the maritime provinces viewpoint. He called on all public bodies to pass resolutions on the subject, in supporting the stand of the provincial governments, and said that when these resolutions were received the governments would send delegates to Ottawa to press the matter. He stated that as the maritime provinces pay one-eighth of the upkeep of the canals in Quebec and Ontario and the deficits on the Canadian Northern and National Transcontinental Railways, the whole country should bear I.R.C. deficits instead of the latter being met by extra freight rates.

J. E. Walsh, General Manager, Canadian Manufacturers' Association, stated that the Association had assisted in drawing up an application to the Board of Railway Commissioners, advocating: 1. The desirability for cancellation of arbitrariness existing prior to the Eastern Rates Case. 2. Through commodity rates between points in the maritime provinces and points in Quebec, Ontario and the west. 3. Local and export commodity and class rates within, and from mari-

time province points. 4. The establishment of special services, such as milling-in-transit and stop-off privileges within the maritime provinces. 5. Through class and commodity rates from the maritime provinces to the United States. He said that a circular had been issued by the secretary of the Association's Maritime Division, asking members to furnish information as follows: 1. Nature, source, and approximate yearly consumption of each kind of raw material. 2. Principal markets and approximate yearly quantities of manufactured products shipped to each. 3. Location of competitors, and their source of raw materials, with any special advantage they may have in competition. 4. If competitors located in other provinces are able to successfully compete in the local markets, it is important to ascertain if they have the advantage of any special or more favorable rates. 5. Import and through joint ocean and rail rates on commodities shipped by foreign competitors to local markets, or competitive markets in Upper Canada, and the west. 6. Comparison of rates, showing changes and advances over a period of about 10 years. This is of particular importance if the advances in rates total more than 100%. Special note to be made of the cancellation of any commodity rates. 7. Comparison of freight cost to unit costs of production. 8. Comparison of freight cost to profit on unit of production. 9. Any detrimental effect which the advancing rates, or other changes in economic conditions, may have had on your particular industry. 10. Whether an industry may not now be considered properly indigenous or natural to its location, it will be advisable to prepare a short statement outlining the establishment, progress and evolution of such industry. He added that when the information was received and a proper presentation prepared, the proposed delegation would, in his opinion, receive a hearing.

Several other speakers addressed the meeting, all emphasizing the harm done the maritime provinces' industries by the increases in freight rates and destruction of the old differentials, one going so far as to state that if the injustices were not remedied, the maritime provinces would unanimously vote to secede from Confederation. The concrete results of the meeting, given in the following resolutions, all of which passed unanimously, the names of the movers and seconders of each being given:—

1. L. W. Simms, St. John, N.B., and J. S. Smiley, Amherst, N.S.:—Whereas, this meeting has been advised that it is in the interests of the Nova Scotia, New

Brunswick and Prince Edward Island Governments to make representations to the Dominion Government in respect to the management and rates on what was formerly the Intercolonial Ry. of Canada; therefore be it resolved that this meeting do request the governments of the maritime provinces to pass resolutions in respect to the subject passed at a representative meeting held in Moncton, April 29, to the Dominion Government. And also resolved that the secretary of this meeting be asked to notify each civic, commercial, labor and agricultural organization in the maritime provinces to appoint delegates to accompany the government delegates on this mission.

C. L. Martin, and W. J. Power, Amherst, N.S.:—That each maritime government be requested to appoint two members of a committee, these six to appoint a chairman, to act as a special committee, to investigate the matter of best methods of advancing the commercial, agricultural and industrial interests of these provinces.

3. H. J. Logan, Amherst, N.S., President Maritime Board of Trade, and A. E. Tritts, Salisbury, N.S., President Maritime Stock Breeders' Association:—That this meeting declares that the old Intercolonial Ry. should be operated directly under the Railways Department, and that the freight and passenger rates on said road should be made in accordance with the terms and promises under which Nova Scotia and New Brunswick entered Confederation.

The third resolution demands that freight and passenger rates on the I.R.C. should be made in accordance with the terms and promises under which Nova Scotia and New Brunswick entered Confederation. As stated in our last issue, we are unable to find any provision about special rates in the act provided for the building of the I.R.C. If there was such an agreement we should be glad to be furnished with evidence of it. The Canadian Pacific Ry. was built as a condition of British Columbia entering Confederation, but we are not aware of that province having sought special rates, or having advanced the claim that the C.P.R. should be operated as a non-commercial enterprise so far as B.C. is concerned. The resolution proposes, in effect, to destroy the solidarity of the Canadian National Rys. system before it is really consolidated and organized as a complete transportation entity. That the Dominion Government, or the Canadian people, outside of the maritime provinces, who are fully acquainted with the results that would attend an attempt-

ed injection of political influences into the realms of economics and industry, would for a moment countenance such a proposition, is wholly unthinkable. The matters of industry and production in the maritime provinces, together with the freight rates affecting them, is wholly an economic one, and all experience goes to prove that it should be regulated on an economic basis. Canadian Railway and Marine World recognizes, as every informed individual or association of individuals should recognize, that national solidarity necessitates the existence of a sovereign political power, but that that political power, while exercising supervision over all activities which may effect either the individual or national welfare, should not interfere unduly with the economic agencies of the country. Embodying this fundamental principle, the Board of Railway Commissioners was established by the sovereign political power, the Dominion Parliament, to regulate railways, which are individual enterprises, and among the greatest agencies in the economic life of the country, on an economic basis, and on a basis wherein questions of political expediency, past, present or future, should play no part.

There is no denying the fact that the producers of the maritime provinces have a grievance which deserves thorough consideration, although the effects of the present business depression may be adding to exaggerate it, inasmuch as many of them may ascribe many of their business troubles to present freight rates, while the real causes of many of them are deeper than that, and are of worldwide applicability at this time. But we maintain that this grievance is an economic one, to be settled on economic grounds, without the introduction of any political considerations whatever. The board which settles this matter is the Board of Railway Commissioners, the matter should be confined to its proper economic limits, and the disposal of it by the Board would so confine it. For that reason, the sooner all the railways which go to make up the National system and which are not under the Board of Railway Commissioners' jurisdiction, that is, the Prince Edward Island, the Intercolonial and the National Transcontinental are brought under the Board, the better it will be for the country. With the experience in transportation costs and their effect on industry; independent of political considerations, and empowered to take into consideration the desirability of bringing industrial expansion and business prosperity to sections which may be at some geographical disadvantage, so long as discrimination is not involved, it is reasonable to expect that the Board, if presented with a clear presentation of facts, would give a decision in the matter that should be satisfactory to all concerned. We repeat, the sooner the Board is given absolute jurisdiction and an opportunity to render such a decision, the better. The day when, in this country, a system of railway regulation, which has no superior anywhere, can be applied to some railway system, when other railways, even though they are government owned, are regulated only by various and changing manifestations of political power, should be past, and should never have existed. Any attempt to introduce matters of political expediency into matters of business means the end of efficiency, which, when analyzed, means nothing more nor less than a reduction in national produc-

tive capacity, and a lowering of the standards of living and all the other standards by which a people is judged. The proposition to place the Intercolonial Ry. back under political control is repugnant to a highly improper way to gain what might be a highly proper object, and the passing of that resolution is a matter for regret. Regarding the matter from the viewpoint of the national interest, which, after all, must forever take precedence over any local or sectional interest, any serious attention to it would pave the way for a serious backward step in the development, not only of the Canadian transportation industry,

but of the country's entire economic and industrial life.

A Halifax, N.S., press report of May 20 states that Hon. R. E. Finn had received a telegram from Prime Minister Meighen stating that a delegation from the maritime provinces would be received by the Government in Ottawa on June 1, to hear representations regarding freight rates on the Canadian Government Ry's. The delegation will consist of members of the maritime provincial governments, representatives from Boards of Trade, civic bodies, United Farmers Association, Canadian Manufacturers Association, etc., etc.

The Railway Problem in the United States.

That Canada is not the only country with a railway problem is evident, in view of the fact that a Senate committee is now engaged in a thorough enquiry into the entire railway situation in the United States. After the Transportation Act was passed, early in 1920, it was felt that the railway problem in the U.S. was well on the way to solution; the six months extension of the Government guarantee to the railways was provided to take care of the concluding portion of the readjustment period, and it was hoped that the increased rates provided would compensate for increased operating expenses, and enable the railways to operate with satisfactory financial results. But they have not been able to do so. The guarantee period came to an end in Sept. 1920, and although the railways in the following three months carried a record-breaking traffic, and operated with the highest degree of efficiency yet attained, operating expenses were such that in Sept. 1920 they earned at the rate of but 4.1% on the investment; in October at the rate of 4.6%; in November at the rate of 3.3%; and in December at the rate of 1.4%. Under the Transportation Act they are entitled to earn 5½%, or, at the discretion of the Interstate Commerce Commission, 6%. In December, 88 railways had operating deficits; in Jan. 1921, 166 had deficits, and results since then have been equally discouraging, despite efforts to effect economies in all directions. Many complaints in connection with the present rates have been and are being made, and the rate-making clauses of the Transportation Act have been widely attacked. The Interstate Commerce Commission's power to regulate intrastate rates has been challenged by numerous state regulating commissions, leading to much legal procedure and preventing the railways from obtaining remunerative rates on intrastate traffic.

For some time past, President Harding and members of his cabinet have been holding conferences in connection with the transportation situation, and the President has made it clear that, in the national interest, railway rates and railway operating expenses must be reduced. Senator A. R. Cummins, who was very active in framing the Transportation Act, presented the Senate on April 12 "That the committee on Interstate Commerce is hereby authorized and directed to enquire into and report to the Senate, as speedily as practicable, upon the following matters: 1. The operating revenues and expenses of the railways which under the law make reports to the Interstate Commerce Commission,

comparing these revenues and expenses with those since 1912. 2. The reasons which led to the extraordinary cost of maintenance and operation from March 1, 1920, to March 1, 1921. 3. The reasons which induced the diminished volume of traffic in the latter part of 1920 and first two months of 1921, and in that connection the influence of the increased freight and passenger rates prevailing during that period. 4. The efficiency or inefficiency of railroad management during Federal control and during the year beginning March 1, 1920, and the efficiency, or inefficiency of labor employed by the management during the same periods. 5. The best means of bringing about a condition that will warrant the Interstate Commerce Commission in reducing freight and passenger rates." The Senate adopted the resolution on April 19 without debate.

May 10 was set as the date for the hearings to begin, and it was decided to have representatives of the railway executives appear as the first witnesses. In discussing the situation, Senator Cummins is reported to have said: "The railways are in no different situation from the other industries of the country. Like many other producing industries, they are confronted with a sudden and violent shrinkage of business, which helps to make the selling price of what is produced lower than the cost of production. They will have to solve the problem in the same way as other producers are trying to solve it, by the bringing of the cost of materials, and the cost of labor, into line with the proceeds of what they have to sell. To assume the contrary would be to assume that a national transportation system cannot be self-supporting in this country. If that were so, there would be nothing to do but for the Government to take it over and pay the annual deficit, however heavy, out of the Treasury. But there is no reason to imagine anything of the kind." In opening the hearing on March 10, Mr. Cummins stated that for the year ended March 1, 1921, the net operating income of U.S. railways was only \$2,578,922, compared with \$787,610,435 in 1913. In 1913 the operating ratio was 69%, in 1917 it was 70%, in 1918 73%, and in the year ending March 31, 1921, it was 94%. He gave numerous other figures to show the state of the U.S. railway industry, but the object was not to demonstrate its present condition. As stated above, the railway executives were to appear for hearing first; A. P. Thom, Counsel for the Association of Railway Executives, was given control of the presentation of their case. The first witness was Julius Kruttschnitt,

Chairman of Executive Committee, Southern Pacific Co., who stated that the Senate investigation was welcomed by the executives, and that everything possible would be done by them to make it successful. He explained that the railways' difficulties are not due to the Transportation Act, which he considers a good measure, but simply to the fact that operating expenses have increased in greater proportion than earnings. He explained that the providing of facilities is a more important matter than small differences in rate levels. In the main, he was optimistic as to the future and said: "The railroads will show that they are rapidly surmounting their difficulties, and from now on will realize a progressively improving situation." On May 11 he traced the large growth in railway operating expenses, and also showed just how large a part of those

expenses are fixed by government action. On May 12, he traced the rise of labor costs on U.S. railways, the wage bill in 1916 being \$1,466,576,394, and in 1920 being \$3,698,216,351. He also discussed the freight rate situation, and, by the use of numerous examples and clear reasoning, showed that present freight rates play, and have played, no part in causing the present business depression. On May 13, he reviewed the railways operating record, and cited various statistics to demonstrate that operating efficiency during the past year was at its highest point. On May 15, he showed how the rules and working conditions introduced by the U.S. Railroad Administration increased the costs of operation.

Hearings before the committee are continuing, and other representatives of the Association of Railroad Executives are being heard.

Traffic Orders by Board of Railway Commissioners.

Western Canada Coal Freight Rates Reduced.

General order 341. May 21.—Re application of Fuel Dealers' Association of Greater Winnipeg, the Winnipeg Board of Trade, and others for a reduction in freight rates on coal in Western Canada, between April 1 and Oct. 1 of each year. Upon hearing the application at Winnipeg, April 27, the Fuel Dealers Association of Greater Winnipeg, the Dominion Collieries of Saskatchewan, the Provinces of Manitoba, Saskatchewan, and Alberta, coal operators and coal dealers of the Edmonton, Drumheller and Calgary districts, the Calgary Betaail Dealers' Association, the Trades Commission of Alberta, the Montreal and Toronto Boards of Trade, and the Canadian Pacific and the Canadian National Railways being represented at the hearing, and what was alleged, the Board orders that all railway companies subject to its jurisdiction interested in the coal movement in the three prairie provinces be required to reduce the rates on coal from mines in Alberta and Saskatchewan to points in Alberta, Saskatchewan and Manitoba by 10%, including coal actually billed out up to and including Aug. 31, 1921; such companies to file tariffs to this effect, effective on June 1.

Coal Rates in Edmonton District.

30,960. May 2.—Re complaint of Swift Canadian Co., of Edmonton, Alta., against rates charged by Grand Trunk Pacific Ry. on coal from its mines in Edmonton district to Edmonton. Upon hearing the complaint at Edmonton, April 20, the Swift Canadian Co. and the Canadian National Ry. being represented, and what was alleged, the Board orders that the complaint be dismissed.

Maple Sugar and Maple Syrup Rates.

30,961. May 2.—Re complaint of F. A. Wilson, of Vancouver, against the refusal of railway companies to allow mixed cars of maple sugar and maple syrup to be carried at rates named in item 1290, of G. C. Ransom's Tariff C. R.C. 14. Upon hearing the complaint at Vancouver, April 7, in the presence of counsel for the Canadian Pacific and Canadian National Railways, the complainant appearing in person, and what was alleged, the Board orders that the complaint be dismissed.

Switching for Davidson & Smith.

30,971. May 4.—Re application of

Davidson & Smith, Fort William, Ont., for an order directing the Canadian Northern Ry. to allow the C.P.R. to switch cars to and from the Canadian Government elevator at Port Arthur, over the Canadian Northern Ry.'s spur and property from and to the C.P.R., so as to afford the applicants the same privileges as the Canadian Government elevator at Port Arthur. Whereas, by order 27,695, Sept. 16, 1918, the C.P.R. was authorized, subject to and upon certain conditions therein specified, to use and operate the Canadian Northern Ry.'s spur line into the applicants' elevator, and whereas, by order 30,855, April 6, 1921, the C.P.R. was required to furnish and continue to furnish and maintain, to the applicants' elevator, under the permission granted by order 27,695, the same traffic facilities the company had been and was furnishing to the Government elevator at Port Arthur, under the permission granted by order 20,593, Oct. 17, 1913, and whereas the C.P.R. has applied to the Board for an order extending the time within which it may obtain leave to appeal to the Supreme Court of Canada from order 30,855, the time within which it may make such application expiring at Ottawa, May 3, in the presence of counsel for the C.P.R., and it being represented to the Board that, on account of the absence of the company's Assistant Solicitor, who was attending sittings of the Board in Western Canada during the whole of April, the application for leave to appeal was not made, the Board orders that, under the special circumstances herein, the C.P.R. be allowed a further period of one month from May 6 within which to apply to the Board for leave to appeal to the Supreme Court of Canada from order 30,855.

Charge for Switching Stone Dust.

30,972. May 4.—Re order 30,794, March 16, 1921, declaring that the charge of 3½¢. per 100 lb. made by the C.P.R. for switching stone dust from the Thames Quarry Co.'s plant to Deviney & Campbell's factory at St. Marys, Ont., was wrongfully made and should have been 2¢. per 100 lb.; and authorizing the C.P.R. to refund the overcharge to Deviney & Campbell. Upon it appearing that order 30,794 did not correctly interpret the Board's judgment, dated March 15, the Board orders that the C.P.R. publish and file a tariff establishing a rate of 2¢. per

100 lb., for switching stone dust from the Thames Quarry Co.'s plant to the complainants' factory at St. Marys, the said rate to apply to shipments made on and after March 16, 1921, and the Board further orders that order 30,794 be rescinded.

Regulations for Transportation of Dangerous Articles by Express.

31,065. May 9.—Re application of Express Traffic Association of Canada, on behalf of express companies subject to the Board, for approval, under secs. 349 and 350 of the Railway Act, 1919, of a proposed addition to the Regulations for Transportation by Express of Dangerous Articles, being Supplement 1 to C.R.C. no. E.T. 694. Upon reading what is filed in support of the application, and the report and recommendation of the Board's Chief Traffic Officer, it is ordered that the said proposed addition to the Regulations for the Transportation by Express of Acids, Inflammables, Oxidizing Substances, etc., be approved.

Railway Finance, Meetings, Etc.

Interprovincial & James Bay Ry. Co.—A special meeting of shareholders will be held in Montreal, June 15, to approve of a lease of the company's railway and undertaking to the C.P.R. Co., and to authorize the directors to issue bonds.

Kettle Valley Ry. Co.—A special meeting of shareholders will be held in Montreal, June 15, to authorize the directors to issue bonds to and in the construction and equipment of the company's railway, and to approve the form of mortgage to be given to secure them.

Railway Earnings.

Canadian National Railways.

Following are monthly gross earnings for the system, for 1921, compared with 1920:—

	1921	1920
January	\$8,781,839	\$7,267,562
February	8,150,341	6,516,059
March	9,187,441	7,761,326
April	8,641,565	7,937,478
	\$34,594,695	\$29,482,425

Approximate earnings for 1920:—
May 14, \$3,678,056, against \$3,969,364 for the same period 1920.

Canadian Northern Railway System.

Following are monthly gross earnings for 1921, compared with 1920:—

	1921	1920
January	\$5,994,100	\$4,260,700
February	5,410,500	3,862,300
	\$9,934,600	\$8,363,000

Canadian Pacific Railway.

Following are monthly gross earnings, operating expenses and net earnings, for 1921, compared with 1920:—

	Gross	Expenses	Net	Increases
Jan.	\$14,465,430	\$13,824,005	\$641,425	\$55,484
Feb.	12,768,987	11,956,595	813,392	99,518
Mar.	14,705,727	12,254,818	2,405,909	493,144
	<u>\$41,940,144</u>	<u>\$38,905,725</u>	<u>\$3,905,725</u>	<u>\$648,146</u>

	\$41,948,144	\$38,905,725	\$3,965,725	\$648,146
Incr.				648,146

Deer. \$1,247,466 \$1,895,612

Approximate earnings for April, \$13,411,000, and for two weeks ended May 14, \$15,879,000, against \$13,586,000, and \$7,006,000 for same periods 1920.

Grand Trunk Railway.

Following are gross earnings, operating expenses and net earnings, monthly, for 1921, compared with 1920:—

	Gross	Expenses	Net	Increase
Jan.	\$6,402,587	\$6,954,707	*\$543,120	\$270,100
Feb.	5,733,447	5,332,627	400,820	888,653
Mar.	6,223,007	5,624,893	598,113	332,880

\$18,359,041 \$17,903,227 \$7,410 \$1,491,633

Incr. \$2,896,907 \$1,395,274 \$1,491,633

Approximate earnings for April, \$7,349,351, against \$7,006,556 for April 1920.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—A press report states that since the opening of the season's work the Northern Construction Co., which has the contract for the rehabilitation of the line from Lac la Biche to the Clearwater Lake, and the completion of the construction into McMurray, Alta., has distributed 25,000 new ties along the track; has completed a new trestle over the Christina River at mile 198 from Carbondale Jct., and is proceeding with the grading of the newly located line from the present end of track to McMurray. (May, pg. 241.)

Alberta Railways.—The Alberta Legislature has passed an act to provide \$70,000 for the construction, maintenance, operation or improvement of railway within the province.

The Canadian Transit Co. has been incorporated by the Dominion Parliament to build a railway and general traffic bridge across the Detroit River from, at or near Windsor, Ont., to the opposite side of the river in Michigan, and to use electric or steam locomotives on it; to build railways not exceeding 20 miles to connect the bridge with existing lines; to acquire land for terminal purposes in connection with the bridge; and to do other things necessary for the undertaking. Construction is not to be started until authorization has been obtained for the work in the United States. The Canadian and U.S. companies together are authorized to borrow not exceeding \$30,000,000 for carrying out the undertaking. The company's capital stock is fixed at \$5,000,000 and power is given to railway companies to invest in the same, or to lend their credit to the bridge company. The provisional directors are: W. J. Pulling, Br. E. Campbell, of Windsor, Ont.; C. S. King, Walkerville, Ont.; and C. E. Fowler, New York. C. E. Fowler, the engineer who prepared the bridge plans, is reported to have stated that it is expected to start construction work within six months, that operations will be started on the Detroit side first, in the vicinity of 24th St., that the Canadian terminal will be located at the extreme easterly end of the town of Sandwich, one mile west of Windsor, that the bridge will be of cable suspension type, with single span 1,800 ft. long, stretching from shore to shore, that there will be a clearance 110 ft. for vessels, that construction is expected to take at least six years and that the cost will be close to \$50,000,000. (Feb., pg. 82.)

Central Canada Ry. Co.—The Alberta Legislature has authorized the raising of \$600,000, to be lent to the C.P.R. Co. as manager of the railway, for its extension westward from Peace River for 25 miles, the loan to be secured by a first charge on the whole of the line, and to be paid out by the Government as construction is proceeded with. The Central Canada Ry. extends from Winagami, on the Edmonton, Dunvegan & British Columbia Ry., to Peace River, 485 miles. A bridge has been built across the Peace River, and some grading has been done on the further side of the river. The C.C. Ry., together with the Edmonton, Dunvegan & British Columbia Ry., is being operated by the C.P.R. under an agreement, details of which are given on another page of this issue.

Dominion Atlantic Ry.—We are officially advised that the company con-

templates the following works during this year:—Ballasting, from mile 4, near Rockinham, N.S., to mile 13, near Windsor Jct.; and from mile 90, near Aylesford, to mile 103, near Middleton; laying 8 miles of 85 lb. steel rails on the main line, and 2 miles of 85 lb. rails on the Truro Subdivision. The new machine shop, blacksmith shop, erecting shop and boiler shop at Kentville, N.S., have been in use since Feb. 1, and are now practically completed. (Jan., pg. 16.)

Edmonton, Dunvegan & British Columbia Ry.—J. A. McGregor, Manager, is reported to have stated recently that a large amount of ballasting, filling, bridge repairs, tie replacements, additions to stations, and landing platform, and other work will be done this year on the line from Edmonton to the Peace River, and to the Grande Prairie district. Two steam shovels are at work, one between Smith and Edmonton, and the other at Smokey River, for ballasting; pile drivers are at work in connection with works for the prevention of slides; 350,000 new ties will be put in along the line; a number of trestle bridges will be repaired and others filled; and ditching and drainage will be done to bring the line up to a higher standard. (April, pg. 198.)

Esquimalt & Nanaimo Ry.—Progress is being made with the foundation and other work of the railway and general traffic bridge at Johnson St., Victoria, B. C. The first of the three caissons to be used is reported to have been sunk into position at the end of April, and a second was reported to be ready May 7. The City Engineer, who has charge of the work, expects that the railway part of the bridge will be ready for use in Dec., 1922. (May, pg. 241.)

Fecunis Limited is a mining company which has been incorporated by the Ontario Legislature with authorized capital of \$1,000,000 and office in Toronto, and with power, among other things, to steam or electricity, from the C.P.R., in build a tramway to be operated by Dowling Tp., through Dowling, Leavack, Morgan, Foy, Lumsden, Bowell and Wismer Tps., to the Canadian National Rys. in Wismer Tp. The provision directors are: L. A. McElroy, B. S. Fletcher, R. C. McClenathan, Erie, Pa.; and R. J. Copland and J. A. McEvoy, Toronto.

Grand Trunk Ry.—We are officially advised that the company is making some substantial repairs to its bridge at Breslau, Ont., with its own forces.

Kettle Valley Ry.—The Dominion Parliament has authorized the company to issue securities up to \$150,000 a mile for the construction of a branch line from Sumner, or One Mile Creek, to the Copper Mountain and Voigt mining camp, 15 miles southwest of Princeton, B.C., instead of \$70,000 a mile as authorized in 1914. This branch line has been completed, but its construction involved some exceptionally heavy work.

Grading on the line from South Penit to the north end of Dog Lake has been completed, and track is expected to be laid thereon shortly.

We are officially advised that it is the intention to make a start this year on the building of a railway from the south end of Dog Lake, to the British Columbia Demonstration Farm at Oliver. Surveys have not been completed. (May, pg. 241.)

Lacombe & North Western Ry. Co.—The Alberta Legislature has authorized the company, which is owned by the Alberta Government, to extend its line from its present terminus at Rimby northwesterly to the western end of Pigeon Lake, thence northeasterly to Edmonton, 125 miles. Authority is given to issue bonds for not exceeding \$30,000 a mile. The act also authorizes the Government to raise by way of loan and to advance to the company \$150,000 in addition to the sums loaned prior to Jan. 1, 1921.

Lake Huron & Northern Ontario Ry. Co.—The Ontario Legislature has granted an extension of time for one year for the completion of this line from the present terminus at Rock Lake, mile 17 from Bruce Mines, northerly to a junction with the National Transcontinental Ry. (April, pg. 198.)

Luscar Collieries Limited.—Tenders were received to May 12 for building a five mile branch railway from Leyland siding on the Grand Trunk Pacific Ry.'s Mountain Park branch to the Luscar Collieries, Alta. Contractors were asked to submit prices for the complete work, including six miles of track laying and ballasting. R. W. Jones, 708 Tegler Building, Edmonton, Alta., is Chief Engineer. (May, pg. 242.)

The Mayo Valley Ry. Co. has been incorporated by the Dominion Parliament to build a railway from the junction of the Mayo and Stewart Rivers, Yukon Territory, northerly along the valleys of several rivers specifically named to connect with and to include the valleys of the McQuesten, Ladeau and Beaver Rivers; or in the alternative, from Gordon's Landing, on the Stewart River, via Janet Lake, to the junction of the Mayo River and Dunsmuir Creek; with branch lines not to exceed in any one case 10 miles long. The company may issue \$750,000 of capital stock, and bonds for \$30,000 a mile of its railway under contract. The provisional directors are:—A. J. Gillis, Dawson, Y.T.; R. B. Young, W. A. H. MacBrien, N. J. Robinson, Toronto; and J. McDougall, Ottawa. (April, pg. 198.)

Northern Light Rys. Co.—The Ontario Legislature has authorized this company to build the following lines in addition to those authorized by the statutes of 1920, chap. 152, sec. 2:—From Svaestika station in the Muskoka Division, Northern Ontario Ry. westerly and southwesterly to Fort Matchewan, with branches or extensions at different points to connect with the T. & N.O. Ry., and any other railways that may be built; and to build light narrow gauge railways on Manitoulin Island, and from Little Current to Gore Bay. Work on the lines on Manitoulin Island is to be commenced by Mar. 1, 1922, and completed within two years thereafter.

A special general meeting of shareholders was called to be held in Toronto, May 30, to authorize the issue of bonds for \$15,000 a mile for all or any part of the projected lines; to make provision for the sale of the same and of the company's capital stock; to authorize the increase of the capital stock to \$2,500,000; to authorize an agreement with the Canadian Light Ry. Construction Co. Ltd., to finance the sale of bonds and stock and the construction of the company's undertaking, or part thereof; and for

other general purposes. (May, pg. 240.)

Pacific Great Eastern Ry.—The British Columbia Government is reported to have sold \$3,000,000 of treasury bills at 100.01, the proceeds to be devoted to construction work on the P.G.E. Ry.

Construction is reported to be advancing with considerable speed on the extension from Quesnel, and A. F. Proctor, Chief Engineer, B.C. Railway Department, expects the track will be laid from the present end of rail into Quesnel, 19 miles, by July 1. The Chief Engineer stated in his annual report that the Canadian Bridge Co. commenced the erection of the big viaduct over Deep Creek valley early in July, and the first train was taken across it Nov. 3.—The viaduct is 1,192 ft. 11 in. long between parapet walls, and the central portion is 285 ft. high from foundation to base of rail. There are 4,200 cu. yd. of concrete in the foundation and 2,000 tons of steel in the superstructure. On the completion of the bridge 36 miles of track were laid to 19 miles south of Quesnel. In order to complete the line into Prince George, 98 more miles of track has to be laid. Of this distance 51 miles of grade is ready for tracklaying, but 46.5 miles of grading done by the old company will have to be reconditioned. There are also 36 timber bridges as well as one steel viaduct yet to be built, together with the ballasting and other finishing up work. A small locomotive house will be built at Quesnel. (Mar., pg. 143.)

Pere Marquette Rd.—We are officially advised that the press report that the company contemplates building a passenger station in Chatham, Ont., is incorrect. The P.M.R. trains use the C.P.R. station. (Dec., 1920, pg. 645.)

Port Canada Docks Ry. Co.—The New Brunswick Legislature has granted the company an extension of time within which it may build its projected railway from L'Etang Harbor to St. Croix, N.B.

Quebec Central Ry.—The Dominion Parliament has extended for five years the time within which the company may build the line authorized by the Quebec Legislature in 1901, from Scotts station on its present line, to the St. Lawrence River near the southern extremity of the Quebec Bridge, and thence eastward along the St. Lawrence River bank for 5 miles, the total length of the line being 5 miles. The company is also given an extension of time for two years for the construction of a line, authorized by the Quebec Legislature in 1912, from Leeds station to a connection with the first mentioned line near St. Lambert, Levis County, 35 miles. Authority is also given to issue securities not exceeding \$40,000 a mile in respect of these lines. (May, pg. 242.)

St. John & Quebec Ry.—The Dominion Parliament has granted an extension of time for two years within which the projected extension of the railway from the present northerly terminus at Centerville, to Andover, N.B., may be built. The New Brunswick Legislature has also passed an act providing among other things for an extension to Dec. 31, 1923, for the construction of the extension mentioned above. The railway is owned by the N.B. Government and is operated by the Canadian National Ry.s., along its own tracks, from Centerville to Westfield on the C.P.R., and thence over the C.P.R. into St. John. (May, pg. 242.)

Timiskaming & Northern Ontario Ry. We are advised that an order for 2,960

tons of 90 lb. A.R.A. section steel rails placed recently includes the 8 miles of rails for which the Ontario Legislature provided \$15,000 in the supplementary estimates at its recent session.

A press report states that a proposal for the development of a water power at the Kettle Falls of the Abitibi River, 25 miles north of Cochrane, is under consideration. The development will, it is stated, be made by the Hollinger Consolidated Mining Co. It is said that the

falls in question will supply 35,000 h.p., and the suggestion is that 10,000 h.p. will be at the Ontario Government's disposal for use in connection with the proposed electrification of the T. & N.O. Ry. which has been under consideration. (May, pg. 242.)

Toronto, Hamilton & Buffalo Ry.—Work is reported to have been started on the straightening of the company's tracks on Hunter St., immediately east of John St., Hamilton, Ont.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Bridge.—The question of the height of the bridge over the St. John River, near the reversible falls, has been settled after a series of delays. The Board of Railway Commissioners passed an order March 5 approving the company's plans, which was published in Canadian Railway and Marine World for May, pg. 250. Some marine interests at St. John then asked the Minister of Public Works to interfere so as to secure a bridge 7 ft. higher. The Minister heard the application at Ottawa in April and decided that the Government's decision as expressed by order in council on Nov. 1, 1920, should stand. That order approved the following report by the Minister:—"That application has been made by the C.P.R., under chap. 68, sec. 248, of the Railway Act, 1920, for approval of the plan showing the new cantilever bridge proposed to be built to replace its existing cantilever bridge 1.8 on the St. John Subdivision, over the St. John River, at St. John, N.B., the new bridge being 30 ft. north of the existing bridge; that the Engineer in Charge at St. John has reported with respect to this matter, in part, as follows: 'The span of the proposed new bridge is 27 ft. less and the vertical clearance is 2.58 ft. more than the existing bridge. The decrease in length of span will not in any manner impede navigation or the general flow of the river. I, therefore, recommend that the Department issue the usual approval for the construction of the proposed bridge.' That the Chief Engineer of the Public Work Department has concurred in the Engineer in Charge's recommendation, subject to the condition that the company will be responsible for any damage which might have been done to shipping in the channel by work performed on the new bridge antecedent to the approval of the application. That the matter was referred to the Marine and Fisheries Department, with regard to the company's right to use the site of the bridge, and that Department reported that there was great difficulty in deciding as to the ownership of the bed of the stream at the point in question, and added that it was prepared to recommend the issue of a quit claim to the actual sites of the piers in favor of the C.P.R. Co. for a nominal sum, on condition that all the subsidiary works which might in any way interfere with navigation be removed on the completion of the piers, or earlier if possible, and that it considered that a report to the Privy Council might be prepared subject to these conditions. The Minister, therefore, recommends the approval of plan submitted by the C.P.R., showing the proposed new cantilever bridge, such approval to be subject to the following conditions: That the applicant company will be responsible for any damage which might have been done to

shipping in the channel by work performed on the new bridge antecedent to the approval of the application. That the applicant company shall secure from the Marine and Fisheries Department a quit claim to the actual sites of the piers of the bridge, and that it shall remove, at its own expense, on the completion of the piers, or earlier if possible, all the subsidiary works which may in any way interfere with navigation."

We are officially advised that the company's original plans will now be carried out in their entirety. Full particulars of them were given in Canadian Railway and Marine World for March, pgs. 118-120.

Electrification Projects.—J. M. R. Fairbairn, Chief Engineer, C.P.R., in giving evidence before the House of Commons special fuel committee on May 10, is reported to have said that the company had not recently made any extensive investigations into the feasibility of electrifying its lines. It had not been able to find anything to tempt it to abandon coal burning locomotives for electric locomotives. If electrification were resorted to, he thought, the mountain sections would be first taken in hand. He did not think the density of traffic sufficient to justify electrification of the Ontario lines. He favored letting the United States railways reach a higher development in electrification, and then Canadian roads could benefit by their experience.

Fort William Coal Dock.—A press report states that a contract has been let to the Hurst Engineering & Construction Co., Fort William, Ont., for the erection of a concrete and steel addition to the C.P.R. coal dock there, at an estimated cost of \$250,000. (May, pg. 256.)

Exchange and Surcharges on International Traffic between Canada and United States.—In accordance with the Board of Railway Commissioners' judgment of Jan. 13, and its general order 326, published in Canadian Railway and Marine World for February, pg. 85, the rate of exchange in connection with shipments of freight, between points in Canada and the United States from May 1 to 14, was 11 15/16% and from May 15 to 31, it was 11 3/4%. The surcharge on international freight shipments during May was 7%. The authorized rate of exchange to determine additional collection on international passenger traffic during May was 12%.

The London & Northwestern Ry. will, it is reported, absorb the Lancashire & Yorkshire Ry. The London & Northwestern mileage is 2,066, and the Lancashire, 601. The latter has the densest traffic of any road in Great Britain, its gross earnings in 1917 being \$53,081 a mile.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines.—F. S. ISARD, heretofore Director of Finance, has been appointed Managing Director. J. W. NORCROSS, heretofore President and Managing Director, continues as President and chief executive officer.

W. L. McDOUGALD, President, Ogdensburg Coal & Towing Co., and Century Coal Co., Montreal, is reported to have been appointed Director of Operation, Canada Steamship Lines, succeeding H. W. Cowan, who resigned to enter the service of G. U. Price & Co. Ltd., an English insurance corporation, which has a branch in Montreal. Mr. Cowan has left for England.

Canadian National Rys.—G. BALDWIN, heretofore Locomotive Foreman, Yorkton, Sask., has been appointed Locomotive Foreman, at Belmont, Man., Yorkton having been abolished as a terminal point.

G. C. BRIGGS, heretofore Engineer of Buildings, and Architect, Toronto, has been transferred to Engineering Department, Western Lines, Winnipeg, the Toronto position having been abolished.

C. E. BUCKLEY has been appointed Local Treasurer, Canadian Northern Ry. System and Grand Trunk Pacific Ry., with jurisdiction over territory Edison, Alta., and west. Office, Vancouver, B.C.

G. S. COOKE, Assistant Superintendent, Dauphin Division, Prairie District, Dauphin, Man., now has jurisdiction over Kamsack, Winnipegosis, Swan River, Erwood, Hudson Bay, Thunderhill and Assiniboine Subdivisions.

G. M. HEMS WORTH, heretofore City Passenger and Ticket Agent, C.N.R., Victoria, B.C., has been appointed Traveling Passenger Agent, C.N.R.-Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., with territory covering lines west of Edmonton, Alta., as reported in a previous issue. Office, Vancouver, B.C.

J. P. JOHNSON, Assistant Superintendent, Prince Albert Division, Prairie District, Prince Albert, Sask., now has jurisdiction over Prince Albert, Shellbrook, Crooked Lake, Duck Lake, Cudworth and St. Brieux Subdivisions.

R. KING, heretofore Superintendent, Saskatoon Division, Prairie District, Saskatoon, Sask., has been appointed Superintendent, Calgary Division, Western District, vice T. J. Brown, transferred to Dauphin, Man. His territory is Kindersley to Calgary, including Kindersley; Big Valley to Munson Jct., excluding Big Valley; Medicine Hat Jct., to Cressford; and Eaton to Alaskan. Office, Calgary, Alta.

A. E. MACDONALD has been appointed Superintendent, Saskatoon Division, Prairie District, vice R. King, transferred, with jurisdiction, North Saskatoon to East Prince Albert, 85.6 miles; Hudson Bay Jct. to Prince Albert, 160.4 miles; Melfort to St. Brieux, 21.5 miles; Prince Albert to Denholm, 116.5 miles; Humboldt to North Battleford, including Shellbrook to Big River, 56.5 miles; including Humboldt, 147.6 miles; Dalmeny to Carlton, 35.8 miles; Yorath to Kindersley, 122.3 miles; Delisle to Lucky Lake, 79.2 miles; Lucky Lake to Beechy, under construction, 14.6 miles; Thielfield to Eaton, 114.4 miles; Watrous to Big-

gar, 118.3 miles; Young to Cudworth Jct., 108.7 miles; Saskatoon terminals, 10.6 miles. Office, Saskatoon, Sask.

Lieut.-Col. C. N. MONSARRATT, formerly Consulting Engineer, Railways and Canals Department, Ottawa, who entered into partnership recently with P. R. Pratley, M.Eng., as Monsarratt & Pratley, consulting engineers, Montreal, has been appointed Consulting Engineer of Bridges, Canadian National Rys. and Grand Trunk Pacific Ry., reporting to C. B. Brown, Engineering Assistant to Vice President, Operation and Maintenance. Office, Toronto. Canadian Railway and Marine World understands that he will devote only a portion of his time to C.N.R. and G.T.P.R. work, carrying on private practice in addition.

F. NICHOLSON has been appointed Locomotive Foreman, Russell, Sask., which has been made a terminal point in place of Yorkton, Sask.

George D. Perry,
Vice President and General Manager, Canadian
National Telegraphs.

G. D. PERRY, Vice President and General Manager, Great North Western Telegraph Co., and heretofore General Manager, Canadian National Telegraphs, has been appointed Vice President and General Manager, Canadian National Telegraphs. Office, Toronto.

C. S. G. ROGERS, heretofore Inspecting Bridge Engineer, Toronto, has been appointed acting Bridge Engineer, Moncton, N.B.

T. DUFF SMITH, formerly Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, and Interly Assistant Fuel Agent, Canadian National Rys., Edmonton, Alta., has been appointed Lake Forwarding Agent, C.N.R., Cleveland, Ohio, succeeding H. T. Rawlings, who resigned to become Vice President, Baier Coal Co.

Canadian Pacific Ry.—E. Y. BRAKE, heretofore Car Foreman, Nelson, B.C., has been appointed Car Foreman, Revelstoke, B.C., vice W. J. Shepherd, transferred to Nelson, B.C.

H. G. BYRNE, heretofore Assistant Local Treasurer, has been appointed Local Treasurer, Vancouver, B.C., vice W. F. Salisbury, who has retired.

W. DICKSON, heretofore Assistant Superintendent, Aroostook Division, New Brunswick District, Aroostook, N.B., has resumed his former position as locomotive man at Smiths Falls, Ont.

A. HAYWARD, heretofore Locomotive Foreman, Red Deer, Alta., has been appointed Locomotive Foreman, West Calgary, Alta., vice J. W. Sindall, transferred.

W. J. HENRY, heretofore acting Roadmaster, Lindsay, Ont., has been appointed Roadmaster, Kingston, Ont., vice F. W. Nicholls, transferred.

C. N. KENDALL, heretofore Shop foreman, Lethbridge, Alta., has been appointed Night Locomotive Foreman, Medicine Hat, Alta., vice W. H. Sorel, promoted, and his former position has been abolished.

J. S. LALONDE, heretofore Assistant Superintendent, Three Rivers Division, Quebec District, Three Rivers, Que., has been appointed agent, Hochelaga, Que.

S. T. LEWIS, heretofore Roadmaster, Medicine Hat, Alta., has been appointed Roadmaster, Empress, Alta.

W. E. MCGILL, heretofore Assistant Superintendent, Montreal Terminals, has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, vice C. J. MacGregor, transferred. Office, Smiths Falls, Ont.

C. J. MACGREGOR, heretofore Assistant Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Assistant Superintendent, Three Rivers Division, Quebec District, vice J. S. Lalonde, transferred. Office, Three Rivers, Que.

F. W. NICHOLLS, heretofore Roadmaster, Kingston, Ont., has been appointed Roadmaster, Lindsay, Ont., vice W. J. Henry, transferred to Kingston, Ont.

T. D. RUGGLES has been appointed Roadmaster, Medicine Hat, Alta., vice S. T. Lewis, transferred.

W. J. SHEPHERD, heretofore Car Foreman, Revelstoke, B.C., has been appointed Car Foreman, Nelson, B.C., vice E. Y. Brake, transferred to Revelstoke.

W. H. SOREL, heretofore Night Locomotive Foreman, Medicine Hat, Alta., has been appointed Locomotive Foreman, Red Deer, Alta., vice A. Hayward, transferred to West Calgary, Alta.

R. E. TAYLOR, night chief dispatcher, London Division, Ontario District, has been assigned to other duties at Toronto, his former position having been abolished.

The position of Assistant Chief Engineer, Canadian Government Rys., etc., at Moncton, N.B., vacated by the appointment of W. A. Duff as Engineer of Standards, at Toronto, is not to be filled.

European Offices and Officers.—In connection with the appointment of the Canadian Pacific Ry. as sole Traffic Manager for the Canadian Pacific Ocean Services, Ltd., in Europe, a number of changes have been made as regards officers and officers.

In London the C.P.O.S. offices, at 18 and 19 Pall Mall, have been closed, and the traffic staff transferred to the head European office, 62 to 65 Charing Cross. In the City the C.P.R. office at 91-93 Bishopsgate St. has been closed, and the staff transferred to the C.P.O.S. office at

103 Leadenhall St., which has become a C.P.R. office.

In Liverpool the C.P.R. office at 6 Water St. has been closed, and the staff transferred to the C.P.O.S. office, Royal Liver Building, Pier Head, which has become a C.P.R. office.

In Glasgow the C.P.R. office at 120 St. Vincent St. has been closed, and the staff transferred to the C.P.O.S. office, 25 Bothwell St., which has become a C.P.R. office.

Wm. Baird, heretofore Passenger Agent, C.P.O.S., Liverpool, has been transferred to London and is now with H. G. Dring, European Passenger Manager, C.P.R., 62-65 Charing Cross.

David Drummond, heretofore General Freight Agent, C.P.O.S., Liverpool, has been transferred to the European Freight Manager's Department, C.P.R. (T. J. Smith), and is located with Thos. McNeil, Liverpool Agent, C.P.R., Royal Liver Building, Pier Head, Liverpool.

D. H. Pearson, heretofore Publicity Agent, C.P.O.S., London, has been transferred to the Publicity Agent's office, C. P.R. (E. E. Gill), 62-65 Charing Cross.

The following is a revised list of C.P. R. offices in Europe, outside of London: Liverpool, Royal Liver Building, Pier Head, T. McNeil, Liverpool Agent, Bristol, 18 St. Augustine's Parade, A. S. Ray, Agent,

Birmingham, 4 Victoria Square, W. T. Treadaway, Agent.
Glasgow, 25 Bothwell St., M. L. Duffy, Agent for Scotland.
Belfast, 41-43 Victoria St., W. McCalla, Agent.
Manchester, 1 Mount St., J. W. Maine, Agent.

Antwerp, 25 Quai Jordeans, W. D. Grosset, Agent.

Paris, 1 Rue Scribe, A. Catoni, Agent.
Warsaw, 117 Marsalkowska.

Rotterdam, 42 Coolingsingel, J. Springett, Agent.

Brussels, 98 Boulevard Adolphe Max, C. de Mey, Agent.

Christiania, 4 Jernbanetorget, E. Bordevick, Agent.

Hamburg, 24 Alsterdamm, C. F. A. Plugge, Agent.

Grand River Ry.—Lake Erie & Northern Ry.—R. A. McNAUGHTON, heretofore chief clerk, General Auditor's Department, C.P.R., Montreal, has been appointed General Accountant, C.P.R. and L.E.&N.R., vice A. McL. Campbell, transferred. Office, Galt, Ont.

Grand Trunk Ry.—F. FOSTER, Assistant to Superintendent of Motive Power, Ontario Lines, Allandale, Ont., has been assigned to other duties, the position having been abolished.

F. FOSTER, heretofore Assistant to Superintendent of Motive Power, On-

tario Lines, Allandale, Ont., has been appointed General Foreman, Motive Power Department, Allandale, Ont., vice G. McBride, assigned to other duties, and his former position has been abolished.

R. A. INNES, heretofore Locomotive Foreman, Stratford, Ont., has been appointed Inspector of Locomotive Houses, Eastern Division. Office, Montreal.

J. R. LECKIE, heretofore Assistant to Superintendent of Motive Power, Ontario Lines, London, Ont., has been appointed General Foreman, Motive Power Department, London, Ont., vice J. A. Walton, transferred, and his former position has been abolished.

W. J. LITTLE, Trainmaster, Allandale, Ont., has had his jurisdiction extended over districts 13 and 14, A. F. Sharpe having been assigned to other duties.

E. LOGAN has been appointed Locomotive House Inspector, Ontario Lines. Office, Toronto.

R. E. MARKS, Passenger Trainmaster, Eastern Lines, Montreal, has been assigned to other duties, the position having been temporarily abolished.

A. F. SHARPE, heretofore Trainmaster, Allandale, Ont., has been appointed Chief Dispatcher, London, Ont., as reported in our last issue.

Lake Erie & Northern Ry.—See Grand River Ry.

Canadian National Railways Construction, Betterments Etc.

Orangedale to Cheticamp.—A railway extension committee for Inverness County, N.S., is reported to be asking the Dominion Government to take over the old Inverness Ry. & Coal Co.'s railway and to build a line from Orangedale to Cheticamp. The line extends from Inverness Jet, about a mile from Point Tupper on the Intercolonial Ry., and runs north-easterly on Cape Breton Island, to Inverness, 62 miles. Cheticamp is a station on the line near Inverness, and Orangedale is a station on the Intercolonial Ry. 29 miles northerly from Point Tupper. The construction of this piece of line has been asked for several times during the past few years, and provincial and Dominion subsidies have been voted toward its construction.

Peticodiac River Bridge.—We are officially advised that a contract has been let to Gorman & Perkins, Halifax, N.S., for the substructure of the new bridge across the Peticodiac River, 54 miles from Salisbury on the branch between Salisbury and Albert, N.B.

Quebec District Concrete Structures.—Tenders are under consideration for the construction of four concrete structures on the Quebec District.

St. Rosalie Jet Terminals.—Hon. R. Lemieux asked in the House of Commons recently: "Is it the intention of the Canadian National Rys. to erect a division railway shops at Ste. Hyacinthe, Que., and, if so, what is the estimated cost?" The Minister of Railways replied: "No; but the management proposes to enlarge a small locomotive house at Ste. Rosalie Jet, about 2.3 miles east of Ste. Hyacinthe, sufficiently to take care of Canadian National and Grand Trunk locomotives. The cost will be about \$34,000."

Ontario District Concrete Structures. We are officially advised that a contract has been let to the Dominion Construction Co. for putting in 8 concrete structures as follows:—Abutments at miles

13 and 15, and abutments and piers at mile 55.9, Muskoka Subdivision; abutments at mile 20.4, and culverts at miles 42, 50.3, 135.1 and 135.5 North Bay Subdivision.

North Bay Connection.—We are officially advised that a track connection is being put in at North Bay, Ont., between the C.N.R. and the Timiskaming & Northern Ontario Ry., to enable the through Grand Trunk-T. & N.O. Ry. trains to use the C.N.R. station instead of the C.P.R. station as at present. This work is in line with the policy of co-ordination between the C.N. Rys. and the G.T.R.

Port Arthur, Duluth & Western Ry.—A Port Arthur, Ont., press report states that A. Mitchell and H. H. Clarke, engineers, arrived there recently to arrange for a preliminary survey for the extension of the P.A.D. & W. Ry. from the present end of track at Gunflint Narrows to Duluth, about 40 miles. The "P.D." as it is commonly called, was projected a number of years ago, the late D. F. Burke (who was also associated with the projected Nipigon & St. Joe Ry.) being one of the promoters, to connect Port Arthur with Duluth, Minn. The line was built from Port Arthur to Gunflint Narrows, near the International Boundary, and subsequently was taken over by the Canadian Northern Ry., and is now part of the Canadian National Rys. system. The line is being operated to North Lake, near the International Boundary, and 70 miles from Port Arthur.

A press report states that the Palatine Mining & Development Co. of Chicago, Ill., which has recently taken over the Attikam blast furnaces and iron ore mines, has arranged with the C.N.R. management to put the 21 miles, from North Lake, to the old terminus at the International Boundary, into running order, and to operate it in connection with the mines and furnaces. The company was reported May 14 to have about 50

men ballasting on the 21 mile section, and to have asked for tenders for the construction of two timber structures, one of over 1,000 ft. long, and the other of 500 ft. The line is expected to be ready for operation Oct. 1. The company is further stated to have acquired some 2,000 acres of iron ore lands in Cooke County, Minn., which will be developed immediately. Cooke County is directly over the boundary from the present end of track, and it is said that the line may be extended to this property. Another press report states that an ore dock is to be built at Port Arthur.

Melville Water Supply.—We are officially advised that a contract has been let to Tomlinson & Fleming, 431 Walmer Road, Toronto, for the construction of an earth dam and the excavation for a reservoir for a water supply system at Melville, Sask., and that a contract has been let to C. L. DeVall, Edmonton, Alta., for the excavation and laying of water pipes from the reservoir to the water tank in Melville yard.

Acadia Valley Line.—We are officially advised that the revised general location of a branch line through Tps. 25-27, ranges 3-15, west 4th meridian, mile 27 to 118, approved recently by the Board of Railway Commissioners, is a projected extension of the Acadia Valley branch line. The section of this line from Eston to Alask was put under construction in 1919, and the location, part of which is covered in the order referred to above, is for an extension of the branch which, as shown on the company's maps, will connect with another line at Coronation, Alta.

Kamloops - Kelowna - Vernon - Lumby Line.—A press report states that track laying on this branch line will shortly be started, an order for rails for the same having been given the Algoma Steel Co., Sault Ste. Marie, Ont.

British Columbia Terminals.—The re-

port of the British Columbia Minister of Railways for 1920 states that during the year \$542,832.69 was paid by the Government from the proceeds of the guaranteed terminal securities on account of work done on the terminals on the Vancouver Island and mainland water fronts. The estimated total cost of the terminals

was \$9,141,503.40, and the total amount of cash available from the securities issued was \$9,403,843.12. The total amount earned up to Dec. 1920 was \$7,353,906.19, of which \$84,250.34 was being retained under the terms of the contract. The following table shows the distribution of these sums:—

Terminal work	Estimated cost	Cash available	Earned to Dec. 1920
Vancouver	\$1,308,455.19	\$1,263,363.21	\$1,626,118.44
New Westminster	2,203,601.50	2,179,118.97	1,822,458.41
Port Mann	1,213,424.62	1,200,570.16	1,175,129.92
Steveston	353,988.89	349,996.73	246,892.54
Patricia Bay	201,909.28	205,009.39	204,904.65
Victoria	853,125.00	843,799.66	238,202.20
(May, pg. 247.)			

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received 12 dining cars from Canadian Car & Foundry Co., completing an order for that number.

The G.T.R., between Apr. 11 and May 12, received 2 switching locomotives from its Montreal shops, 160 automobile cars, 80,000 lb. capacity, from Canadian Car & Foundry Co., 50 flat cars, 100,000 lb. capacity, from National Steel Car Co., and 4 express horse cars from Osbourne Bradley Car Co.

shops; and 2 box cars to C.P.R. from its Fort William, Ont., shops. The company reports an order from Toronto Transportation Commission for 100 motor cars and 60 trailer cars, as mentioned in our last issue.

The Timiskaming & Northern Ontario Ry. has received 4 Pacific (4-6-2) type locomotives from Canadian Locomotive Co., all equipped with boosters. Following are the chief details:—

Weight on drivers 155,000 lb.

Truck wheel, type Steel-tired, cast steel center
Truck wheel, diam. 36 in.
Truck journals $2\frac{1}{2}$ x 10 in.
Brake beams Simplex high speed

Rhodesia Ry. Locomotives.—As stated in Canadian Railway and Marine World for Nov. 1920, the Rhodesia Rys., South Africa, ordered 12 mountain type (4-8-2) locomotives from Montreal Locomotive Works, which have been completed. These locomotives, an illustration of one of which is given herewith, are superheated, and equipped with brick arch, piston

Mountain Type Locomotive, Rhodesia Railways, South Africa, built by Montreal Locomotive Works.

The item of \$150,000 in the estimates for the year ending Oct. 31, 1922, passed by the Ontario Legislature recently, as mentioned in Canadian Railway and Marine World for May, is for two additional Mikado locomotives for the Timiskaming & Northern Ontario Ry. We were advised recently that it had not then been actually decided to order these.

The C.P.R., between Apr. 14 and May 11, received 10 steel sleeping cars, the

Weight, total 252,000 lb.
Wheel base of engine, rigid 12 ft. 2 in.
Wheel base of engine, total 32 ft. 6 in.
Wheel base of engine and tender 60 ft. 3½ in.
Heating surface, firebox and arch tubes, 217 sq. ft.
Heating surface, tubes and flues 2,716 sq. ft.
Heating surface, total 2,933 sq. ft.
Driving wheels, diam. 69 in.
Driving wheel centers Cast steel
Driving journals 10 x 13 in.
Cylinders, diam. and stroke 23 x 28 in.
Boiler, type Radial stayed
Boiler pressure 200 lb.
Tubes, no. and diam. 170—2¼ in.; 32—5½ in.

valves, outside valve gear, etc. The chief details are as follows:—

Gauge 3 ft. 6 in.
Fuel Soft coal
Wheel base, driving 12 ft. 9 in.
Wheel base, engine 30 ft. 7 in.
Wheel base, engine and tender 56 ft. 10½ in.
Weight, engine 173,000 lb.
Weight, tender 108,000 lb.
Weight on drivers 119,000 lb.
Weight on leading truck 29,500 lb.
Weight on trailing truck 24,500 lb.
Boiler, type Belpaire, straight top

Pacific Locomotive, with Booster, Timiskaming & Northern Ontario Railway.

frames of which were built by Canadian Car & Foundry Co., and the cars finished at Angus shops, Montreal; 282 steel frame box cars from Eastern Car Co., and 2 steel frame box cars from Canadian Car & Foundry Co., Fort William.

Canadian Car & Foundry Co., between Apr. 15 and May 15, delivered the following rolling stock:—12 dining cars to Canadian National Rys., 38 tank cars to Imperial Oil Ltd. from its Montreal

Tubes, length 18 ft. 8 in.
Injectors Ontario
Safety valves 150 lb.
Brakes Westinghouse American
Packing Paxton-Mitchell
Superheater Superheater Co.'s type A
Booster engine Franklin Railway Supply Co.
Speed recorder Buyer
Cab Vestibule type, all steel
Weight of tender loaded 116,000 lb.
Tender capacity, water 6,500 imp. gall.
Tender capacity, coal 12 tons
Tender, type Water bottom, vestibule attachment
Truck, type 4 wheel, Commonwealth

Boiler, diam. inside first ring 65 in.
Boiler pressure 180 lb.
Firebox, length and width 80½ x 62½ in.
Tubes 129 2½ in. diam.; 26—6½ in. diam.
Tubes, length 14 ft. 9 in.
Heating surface, tubes 1,418 sq. ft.
Heating surface, firebox 695 sq. ft.
Heating surface, arch tubes 137 sq. ft.
Heating surface, total 2,253 sq. ft.
Superheating surface 549 sq. ft.
Grate area 31.2 sq. ft.
Maximum tractive effort 37,000 lb.
Factor of adhesion 3.22

The lettering on the tenders, "V.F.R.R. C.S.," is an abbreviation of Via Ferrea Rio Grande do Sul.

Algoma Eastern Ry. has received 2 consolidation (2-8-0) locomotives, with cylinders 25 by 30 in., from Montreal Locomotive Works.

Regulations for Transportation of Explosives.—The Board of Railway Commissioners passed general order 339 May 7, as follows:—Re Regulations for Transportation of Explosives and Other Dangerous Articles by Freight, approved by general order 204, Aug. 11, 1917; and the matter of reporting accidents and explosions to the Board. Upon reading what is filed on behalf of the Bureau of Explosives, and the report and recommendation of the Board's Traffic Officer, the Board orders that sec. 143 of the said regulations be amended by striking out the words after the words "Union station, Toronto, Ont.," in subsec. (a) thereof, and substituting therefor the words, "Accidents and explosions must also be reported to the Secretary of the Board of Railway Commissioners, Ottawa, Ont.," and that sec. 1715 of the said regulations be amended by striking out the words after the words "Union station, Toronto, Ont.," in subsec. (a) thereof, and substituting therefor the words, "Accidents or fires must also be reported to the Secretary of the Board of Railway Commissioners, Ottawa, Ont."

Boston & Maine Rd. shareholders, at the annual meeting held recently, voted unanimously that free passes should not be issued except to employees travelling on the road's business. No official announcement having been made in this connection, it appears that the action of the meeting was not confirmed by a stock vote.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
Proprietor and Editor.

AUBREY ACTON BURROWS,
Business Manager.

Assistant Editors,
JOHN KEIR, DONALD F. KEIR
and EDWIN WINFIELD.

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York

Member of
Associated Business Papers,
Audit Bureau of Circulations
Canadian National Newspapers
and Periodicals Association,
Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year in advance.

SINGLE COPIES, 25 cents each, including pos-
tage.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque it should be added to cover cost of
collection, unless cheque is payable at par in
Toronto or Montreal.

NOTICE TO ADVERTISERS.

ADVERTISING SPACES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

Special Instruction E. re Station Limits.

The Board of Railway Commissioners passed general order 340 May 19, as follows:—Re general order 322, Dec. 10, 1920, requiring railway companies to withdraw Special Instruction E from their working timetables, and hereafter observe the Uniform Code of Rules for Canadian Railways approved by general order 42, July 12, 1909; the necessary changes and instructions to employees to become effective June 1, 1921; and re matter of the application of Canadian Pacific and Canadian National Railways for an extension of time beyond June 1. Upon hearing the matter at Ottawa, May 17, the Canadian Pacific and Canadian National Railways, Michigan Central Rd., Railway Association of Canada, Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Locomotive Enginemen, and Brotherhood of Railroad Trainmen, and Brotherhood of Railway Conductors being represented, and what was alleged, the Board orders that, pending further hearing of the matter, within which the changes and instructions, required under general order 322 to become effective June 1, 1921, be extended until June 15, 1921.

The Alberta Government and the McArthur Railways.

The Lieutenant Governor's speech at the opening of the Alberta Legislature recently stated that an arrangement had been made whereby the C.P.R. Co. had taken over the Edmonton, Dunvegan & British Columbia Ry. system, with an option of purchase, and that the Government had acquired the Alberta & Great Waterways Ry.

The agreements connected with the taking over of these lines from the McArthur interests were subsequently submitted to the Legislature by the Attorney General. The parties to the agreements concerning the Edmonton, Dunvegan & British Columbia Ry. are the Alberta Government, J. D. McArthur Co. Ltd., Union Bank, E. D. & B.C. Ry. Co. and C.P.R. Co. The agreements state that default had been made in payment of interest on \$9,420,000 of bonds guaranteed, and of interest on a lease of \$2,000,000 advanced by the Alberta Government; that an agreement had been made with the C.P.R. for the operation of the line; that the Government has provided \$1,000,000 for the improvement of the line, and agreed to provide an additional \$1,500,000 for the same purpose, the amount to bear 6% interest and to be repayable July 1925 or July 1930. These amounts are to be disbursed through a Manager appointed by the Alberta Government, and are secured by a first mortgage on the property and equipment. The liabilities against the railway, outside the funded debt, and interest paid on the debenture stock by the Alberta Government, are stated to be \$39,999.95 for a mortgage covering terminal purchases in Edmonton. The C.P.R. agrees to provide connection with its system in Edmonton, and to maintain a certain schedule of traffic charges in conformity with the rest of its system. J. D. McArthur waives for four years all claim to representation or the management of the line.

The parties to the agreements respecting the Alberta & Great Waterways Ry. are the Alberta Government, J. D. Mc-

Arthur Co. Ltd. and Union Bank. The agreements state that the bonds guaranteed by the Government and outstanding amount to \$7,400,000, and that the Government takes over the line free from all liabilities of J. D. McArthur Co. Ltd. and the Union Bank. The J. D. McArthur Co. is given a seven year option to reclaim the line on paying the Government all expenditures on it while in its possession, and if the Government decides to sell the line during the seven year period, it may do so, on payment of \$710,000, which is the amount owing the Union Bank for advances.

Compensation to British Railways for Government Possession During War.

London, Eng., cablegram May 4.—The British Government's plan for a settlement with the British railways for the possession and operation of them during the war, is embodied in a bill which will be presented to Parliament proposing that the railways claims be commuted for £51,000,000 in two payments, one to be made at the end of 1921 and the second at the end of 1922. The proposition seems to be regarded as fairly reasonable by the public, especially as the alternative to a substantial payment to the railways is endless litigation. Originally the railways presented claims aggregating £200,000,000. Argument was advanced by the Protective Association of Scottish Shareholders that the Government's system of railway bookkeeping did not take account of much freight and passenger traffic, carried for war purposes, and that if the usual rates had been allowed on this traffic Government operation would have shown a profit which should be turned over to the shareholders. Other claims for compensation over and above the guarantee of average returns to shareholders were based on the ground that the Government had not kept the railways in proper condition.

Fuel and Fire Protection Appliances, New York Central Railroad.

The Board of Railway Commissioners passed order 30,911, April 19, as follows:—Re general order 107, July 4, 1913, prescribing requirements with respect to fuel and fire protecting appliances used by railway companies, and the application of the New York Central Rd., operating the Ottawa & New York and the St. Lawrence & Adirondack railways, for an order modifying the provisions of general order 107 so as to permit of the equipping of its locomotives with the Mudge-Slater front end. Upon the report and recommendation of the Board's Mechanical Expert, and reading what is filed in support of the application, the Board orders that the New York Central Rd., operating the said Ottawa & New York and the St. Lawrence & Adirondack Railways be permitted to use on its locomotives, in lieu of the requirements with respect to wire mesh netting contained in general order 107, what is known as the Mudge-Slater front end; provided that the openings of the mesh shall not exceed $\frac{1}{4}$ in. in width by $\frac{1}{4}$ in. in length, made of wire not less than 0.135 in. diameter. And the Board further orders that order 20,408, Sept. 24, 1913, made herein, be rescinded.

Mainly About Railway People Throughout Canada.

William James Atkinson, whose appointment as Superintendent, St. Maurice Division, Quebec District, Canadian National Rys., Quebec, Que., was announced in our last issue, was born at Levis, Que., Feb. 14, 1880, and entered railway service March 1, 1898, since when he has been, to March 1, 1899, freight clerk, G.T.R., Point Levis, Que.; March 1, 1899 to Nov. 1900, brakeman, G.T.R., Montreal and Island Pond, Vt.; Nov. 1900 to Apr. 1, 1903, locomotive fireman, Canadian Government Rys., Levis and Montreal; Apr. 1, 1903 to June 1915, locomotive man, Canadian Government Rys., Montreal, Que., and Edmundston, N.B.; June to Oct. 1915, conductor, National Transcontinental Ry., Quebec and O'Brien, Que.; Oct. 1915 to May 1916, Master Mechanic and Assistant Superintendent, Edmundston Division, Canadian Northern Ry., Edmundston, N.B.; May 1, 1916 to Dec. 1, 1918, Assistant Superintendent, Canadian Northern Ry., Levis, Que.; Dec. 1, 1918 to Apr. 1, 1921, Superintendent, Edmundston Division, Quebec District, Canadian National Rys., Edmundston, N.B.

Burton H. Bennett, General Agent, Chicago & North Western Ry., Toronto, died there May 7 from double pneumonia. He was born at Cobourg, Ont., in 1857, and entered railway service with the G.T.R. at Toronto about 25 years ago. While in G.T.R. service as Soliciting Passenger Agent, he also acted as General Agent for the Pullman Co. there and after about five years service he transferred to the Chicago & North Western Ry. as Canadian Passenger and Freight Agent, Toronto, subsequently becoming General Agent there. During the period that U.S. railways were under the United States Railroad Administration, and their Canadian offices closed, he was temporarily Traffic Agent, C. & N.W.R. at De Kolb, Ill., and on the reopening of Canadian offices in March 1920 he resumed his former position at Toronto. He was a charter member of the Toronto Transportation Club, and a member of the Canadian Club and also of the Red Chalk Club, composed of transportation men in Canada and the U.S. The funeral took place at Toronto, May 9, from the house of his son-in-law, F. S. Livingstone, Traffic Manager, Toronto & York Radial Ry., the pallbearers being J. J. Ross, Robert Reford Co.; W. Fulton, Assistant District Passenger Agent, C.P.R.; W. J. Moffatt, City Passenger Agent, G.T.R.; G. W. Vaux, General Agent, Union Pacific Ry., Toronto; G. Donaldson, Travelling Freight Agent, Chicago & North Western Ry., Chicago, Ill., and W. B. Stannard, General Agent, Chicago & North Western Ry., Detroit, Mich. Among the numerous transportation officials present were C. A. Cairns, Passengers Traffic Manager, H. Gross and W. P. Dempsey, Chicago & North Western Ry., Chicago, Ill., and the officers and members of the Toronto Transportation Club.

Hon. F. C. Carvell, K.C., Chief Railway Commissioner for Canada, has been given the honorary degree of LL.D. by New Brunswick University.

James Gorman, whose appointment as Superintendent, Sleeping, Dining and Parlor Cars, Western Lines, Canadian National Rys., Winnipeg, was announced in our last issue, was born at Hamilton, Ont., Oct. 7, 1874, and entered railway

service in 1889, since when he has been, to 1899, clerk, G.T.R., Hamilton, Ont.; 1899 to 1908, dining car conductor, G.T.R., Toronto; 1908 to 1910, dining car inspector, G.T.R., Toronto; 1910 to March 1921, Superintendent, Sleeping, Dining and Parlor Cars, Grand Trunk Pacific Ry., Winnipeg.

George Ham, of the C.P.R. headquarters staff, addressed the Electrical Association at Montreal, May 4, on world events in general, from original sin to the present status of the League of Nations.

John Kyle, of the Car Service Department, Canadian National Rys., Moncton, N.B., was presented with a chest of silver, on his marriage recently.

William Edward McGill, who has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., was born at Toronto, Apr. 5, 1884, and entered C.P.R. service in 1900, since when he has been, to 1916, trainman and conductor, Farnham, Que., London and Toronto, Ont.; Feb. to Oct. 1916, Assistant Superintendent, Bruce Division, Ontario District, Toronto; Oct. 1916 to May 1918, Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, Ont.; May 1918 to May 1, 1921, Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal.

Stuart MacTier, son of A. D. MacTier, Vice President, Eastern Lines, C.P.R., is to be married in Winnipeg, in June, to Miss Dorothy Martin.

William Ferriman Salsbury, who has retired from the position of Local Treasurer, C.P.R., Vancouver, B.C., was born in Surrey, Eng., in 1847, and entered railway service at Brighton, Eng., in 1861. He came to Canada in 1870, and entered G.T.R. service, becoming assistant to Jos. Hickson (afterwards Sir Joseph Hickson), then Treasurer of the company. He entered C.P.R. service in 1881, and went to British Columbia on the first C.P.R. transcontinental train, arriving at Port Moody, then the Pacific terminal, July 4, 1886. He became Local Treasurer, C.P.R., Vancouver, the same year, and held the position until his retirement, May 1, 1921.

W. F. Tye, consulting engineer, Montreal, formerly Chief Engineer, C.P.R., spent the winter in Nice, is now in Paris, and will probably return to Canada in August.

H. H. Vaughan, consulting engineer, Montreal, formerly Assistant to Vice President, C.P.R., and Mrs. Vaughan, will spend July and August at Chatham Bars, Cape Cod, Mass.

R. C. Vaughan, Vice President, Purchases and Supplies, Canadian National Rys., left Toronto, May 12, on a business trip to the Pacific Coast.

Isidore Verschelden, whose appointment as Bridge and Building Master, Farnham Division, Quebec District, C.P.R., Farnham, Que., was announced in our last issue, was born at Ste. Therese, Que., May 15, 1879, and entered C.P.R. service in July 1897, since when he has been, to Jan. 1, 1907, carpenter, Eastern Division; Jan. 1, 1907 to May 1, 1910, assistant bridge and building inspector and clerk, Quebec Section, Eastern Division; May 1, 1910 to Jan. 18, 1915, Assistant Bridge and Building Master, Ste. The-

rese, Que.; Jan. 18 to Apr. 1, 1915, Bridge and Building Foreman, Ste. Therese, Que.; Jan. 1 to Apr. 24, 1916, in Bridge and Building Department, District 3, Eastern Division; Apr. 24 to Dec. 1, 1916, Bridge and Building Foreman, Ste. Therese, Que.; Dec. 1, 1916 to Aug. 1, 1918, General Foreman, Laurentian Division, Quebec District; Aug. 1, 1918 to Aug. 1, 1919, General Foreman, Ste. Therese, Que.; Aug. 1, 1919, to Apr. 1, 1921, Bridge and Building Master, Montreal Terminals.

John Benjamin Windross, whose appointment as Manager, Macdonald Hotel, Canadian National-Grand Trunk Pacific Rys., Edmonton, Alta., was announced in our last issue, was born at Whitehaven, Eng., July 5, 1873, and has been at various times from Aug. 1907 to Feb. 1921, Assistant Manager, Chateau Louise, C.P.R., Lake Louise, Alta.; Assistant Manager, Chateau Frontenac, C.P.R., Quebec, Que.; acting Manager, Chateau Frontenac, C.P.R., Quebec, Que.; Manager, Empress Hotel, C.P.R., Victoria, B.C.; Assistant Manager, Davenport Hotel, Spokane, Wash.; Assistant Manager, Hotel del Coronado, California.

Intoxicating Liquor Transportation by Mail.—The Post Office Department has given notice of a modification of the parcel post regulation whereby the transmission of intoxicating liquor by post is prohibited, providing that where an act has been passed providing that delivery of intoxicating liquor shall be made by a Government commission by parcel post, parcels containing intoxicating liquor, which are handed in at the post office of any city or town in the said province, by the Government commission may be accepted for transmission to any place within the said province, with the proviso that such a parcel so posted cannot in any circumstances be redirected to a place outside the province, and that the parcel must in every case comply with the general parcel post regulations, including those relating to packing.

Dimming of Electric Headlights.—The Railway Association of Canada has issued the following circular:—To reduce the glare from electric headlights on locomotives, which, in the interests of safety, it is advisable to do in yards, at stations, and when passing trains on double track, it is recommended that the following regulations be adopted on Canadian railways:—"When regulations require headlight to be displayed, electric headlights on locomotives will be dimmed (a) where yard engines are employed; (b) at meeting points; (c) approaching stations where stops are to be made, where trains are receiving or discharging passengers, or where train orders or clearances are to be picked up; (d) when standing; (e) on two or more tracks when approaching trains running in opposite direction."

Railway Y.M.C.A., Point Richards, Montreal.—At the annual meeting it was reported that the building had been used by a larger number of men than in the preceding year. The receipts were \$8,718.20, and the expenditures \$8,616.66. Officers were elected as follows:—Honorary Chairman, C. Manning; Chairman, W. Hyman; Vice Chairman, S. Pugh; Treasurer, C. F. Needham; Recording Secretary, A. G. Mitchell.

Electric Storage Battery Passenger Car Test on Canadian National Railways.

As stated in Canadian Railway and Marine World for May, the Canadian National Rys. are testing a storage battery car on their Ottawa-Montreal line between Belleville and Trenton, Ont., 11.4 miles. The car carries nothing to generate its own power; its source of power being electric storage batteries, which are charged at a central station and the car operates on the energy thus stored. An illustration of this car is given herewith, also a plan showing the

persons in this compartment, which is connected by a doorway to the middle or smoking compartment, where the seats, 4 on each side of the aisle, are similarly arranged, seating 16 passengers. The seats in the main compartment are upholstered in green plush, and those in the smoking compartment are of rattan. The third compartment, 13 ft. long, is for baggage, and also contains the switch cabinet and heating apparatus. The side doors of this compartment are of the

trains, the several cars may be controlled on the multiple unit system.

The source of power is a set of 240 type A-12-H Edison storage batteries, located beneath the car floor. On a single charging, these are capable of propelling the car 140 miles under average operating conditions. The maximum speed which the car can attain on straight and level track is 45 miles an hour. The car is equipped with a G.E. type 261-A motor of 25 h.p. for each pair of wheels, that is, 4 motors in all; power being transmitted through a single reduction spur gear. In addition to the battery equipment mentioned above for propelling power, there are 8 additional cells for lighting purposes. The car is mounted on 4-wheel trucks of special design, the journals operating in frictionless bearings; the wheels are 33 in. diameter, the axles in each truck being 5½ ft. c. to c.

The car is equipped with a small motor driven air compressor, and G.E. straight and automatic air brakes. Couplers, wheels, axles and all interchangeable parts conform to M.C.B. standard designs. An ampere hour meter is used to ensure the proper charging of the batteries. The car has been furnished to the C.N.R. for test purposes by Railway Storage Battery Car Co., New York, N.Y. The car body and trucks were built in Philadelphia, and the motors and electrical control equipment are General Electric Co. product.

Previous tests of similar cars are claimed to have resulted in an average current consumption of 2½ kilowatts a car mile, measured on the basis of input at the charging station, and at a demonstration of a car of this type in

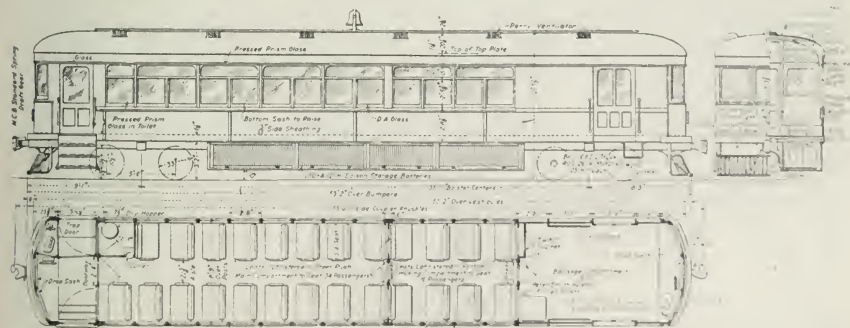

Electric Storage Battery Passenger Car.

interior divisions and seating arrangements. It is of steel construction, and weighs complete 30.3 tons; is 55 ft. long inside coupler knuckles, 52 ft. 2 in. long over vestibules; and 35 ft. 10 in. between bolster centers. The extreme width is 8¾ ft., extreme height 12 ft. 5½ in.; from rail, and the storage battery holders, on the bottom of the car, clear the rail by 10¼ in. The side posts are of 2 x 2 x ¼ in. T section, and the side sheath-

sliding type, designed to facilitate the quick loading and unloading of trunks and other baggage. The side windows are fitted with blinds and the front windows are equipped with drop sash. The compartment partitions are fitted with large panes of plate glass, as are also the doors between compartments and the vestibule doors. The ceiling is finished in agasote.

The car is heated by a forced draft

Floor Plan and Elevations, Electric Storage Battery Passenger Car.

ing 3/32 in. thick. The car has a 3¼ x ½ in. belt rail, and pressed steel window sills, letter board, carlines, etc. The roof is of composite construction, roof boards being ¾ in. thick. The front and side window arrangement is clearly shown in the illustration.

The interior of the car is divided into three compartments; the main one contains 17 double seats, reversible, 3 1/3 ft. wide, arranged transversely along both sides of the aisle, which is 22¾ in. wide. Seating is thus provided for 34

equipment, such as is used in street railway cars in many cities, the heated air from a small coal stove being forced through ducts by a small motor driven fan. The car roof is equipped with 6 ventilators; the lights in the car are suspended from the ceiling in two longitudinal rows, while each end of the car is equipped with a golden glow concentrated filament handlight, so that the car may be operated in either direction, duplicate control apparatus being installed in both vestibules. When operated in

1919 at Atlantic City, during American Railway Association Mechanical Section's convention, the cost of power per car mile is said to have been 0.0437 cent. The development of such equipment has been retarded by the unsuitable type of storage batteries formerly in use, but with the light and compact batteries now available, the successful operation of it is looked for. As pointed out in Canadian Railway and Marine World for May, such a car should be specially suitable for branch lines, where steam operation

is carried on at a loss, and where the capital cost of electrification, considered in relation to traffic returns, is prohibitive.

The car's first run on the Canadian National Ry. was made on May 16, from the C.N.R. Don station, Toronto, to Trenton, on the Toronto-Ottawa line, 108.4 miles. Running as a passenger extra, it left Toronto at 10 a.m., and arrived at Trenton at 1.30 p.m., maintaining the schedule closely at all points, and making several stops at way stations. Speeds of 40 miles an hour were made on stretches of level track, and the run was completed without trouble, or delay, of any kind. At Trenton the car was coupled to two large business cars, which it moved for short distances, but the car is not designed for drawing a trailer, or other cars of considerable weight, although storage battery "locomotives," for hauling heavy loads over comparatively short distances, are used, particularly in mine service.

After two hours at Trenton, the car proceeded to Belleville, 11.4 miles, covering the distance in 25 minutes and making 4 stops. The car then returned to Trenton (and being equipped for operation from either end, it was not necessary to turn it), making a total distance of 131.2 miles covered on the one charging of the batteries, received before leaving Toronto. The condition of the batteries, after completing this mileage, was such as to indicate that the stated capacity of 140 miles in a single charging, under average conditions, can be easily attained. The time required for a complete charging of the batteries is between 6 and 7 hours.

The power consumption on the run from Toronto to Trenton was 50 k.w.h., and from Trenton to Belleville and return 13 k.w.h. With cost of power figured at 1½¢ per k.w.; with liberal allowances for interest, depreciation, maintenance and overhead costs, and with prevailing wage rates, the car mile costs amount to 34.8¢. Figuring the power cost at 2¢ per k.w., the cost per car mile comes to 38.3¢, and with power costing 3¢, the car mile cost comes to 39.3¢. It is difficult, if not impossible, to calculate the expense of operation attributable to any individual passenger train, but on the assumption that one of these cars can, in two or three trips, do the work of a local train on a short branch run, the opportunity for effecting large savings is evident. The average passenger train mile cost on the Canadian Northern last year was \$2.5, the total of all costs, direct and indirect, of running a passenger train, composed of a locomotive and several cars, one mile, but this figure must necessarily be based, in large part, on an arbitrary division of many items of expense, so that actual comparisons are difficult. The fact remains, however, that the possible savings, although incapable of exact determination, are large, in the particular field in which the electric storage battery car is designed to operate. A particularly noticeable feature of the car is the absence of machinery to get out of order, making for low maintenance costs. The first cost of such a car for use in Canada, including complete equipment and counting freight, duty and exchange, is below \$50,000.

The following C.N.R. officials went on the trip:—E. B. Walker, Chief Electrical Engineer, Toronto; W. R. Devenish, General Superintendent, Ontario District, Toronto; W. R. Kelly, Superintendent,

Ottawa Division, Ontario District, Ottawa; L. W. Buller, Assistant Superintendent, Ottawa Division, Toronto; P. H. Fox, Assistant Superintendent, Ottawa Division, Trenton; J. H. McAlpine, Master Mechanic, Ontario District, Toronto; R. L. Fairbairn, Assistant Passenger Traffic Manager, Toronto; W. J. Whiteside, Publicity Agent, Toronto; W. H. Robinson, Official Photographer, Toronto, and J. Sterling, Chief Electrician, Leasehold shops, Toronto. The Railway Storage Battery Car Co. was represented by L. Klopman, General Manager, and C. W. Wipf, Chief Mechanical Engineer. Other guests present were:—D. C. Wilson, Manager, Railway Department, Edison Storage Battery Co.; Edwin Winfield, Assistant Editor, Canadian Railway and Marine World, and representatives of daily and weekly newspapers.

On the initial trip the car was driven by C. A. Wipf, Chief Mechanical Engineer, Railway Storage Battery Car Co., who was accompanied by J. E. Cote, locomotive man, C.N.R., who is now operating the car. The conductor was T. N. Milne, Toronto. The car was left at Trenton, the party returning to Toronto via G.T.R. on the business car of W. R. Devenish, General Superintendent, Ontario District, C.N.R.

The car is being given a thorough month's trial between Belleville and Trenton, making 11 round trips a day, leaving Trenton on the first trip at 8.25 a.m., and arriving at Trenton on the last trip at 10.10 p.m. Power for re-charging the batteries is obtained from the Ontario Hydro Electric Power Commission at Trenton at about 1¢ per k.w.

E. H. Fitzhugh Sues the Grand Trunk Railway, Etc.

Concord, N.H., press dispatch, May 17. Hearing was begun in the Superior Court here this morning of the suit brought by Earl H. Fitzhugh, former President, Central Vermont Ry., against the Grand Trunk and Central Vermont Rys., Sir Alfred W. Smithers, of London, Eng., and E. J. Chamberlin, of Ottawa, and E. C. Smith, of Newport, Vt. The case has been on the docket since April 1919. The amount of damages asked is \$200,000. Mr. Fitzhugh claims that the defendants maliciously forced his resignation as President of the Central Vermont, and also that they have prevented him from obtaining employment in a similar position. The defendants last week filed several motions in the case, all of which were denied, except that requiring the plaintiff to set forth more specifically how, when and where he had been prevented from obtaining employment.

The suit is the outcome of negotiations which Fitzhugh entered into while President of the Central Vermont, to obtain an entrance into Boston and Providence for the G.T.R. He alleges that while he was negotiating the defendants entered into a secret agreement with C. S. Melten, then President of the New York, New Haven & Hartford, to abandon the extensions. He further alleges that the defendants "conspired to ruin his career" by claiming he had testified falsely in an investigation held in connection with the negotiations. The defendants deny all the allegations in the suit.

E. H. Fitzhugh was born in Montgomery County, Mo., Feb. 1, 1853, and entered railway service in 1873, since when he was, to 1889, successively, clerk

in Master Car Builder's office, St. Louis, Kansas City and Northern Ry., in car mileage office, same road, and chief clerk to Superintendent, Western Division, Wabash, St. Louis & Pacific Ry.; 1889 to Jan. 1896, Master of Transportation, Wabash Rd., Moberley, Mo.; Jan. 1896 to May 1899, Superintendent, Middle Division, G.T.R., Toronto; May 1899 to March 1901, Vice President and General Manager, Central Vermont Ry.; March to Dec. 1901, Assistant to President, Southern Pacific Co.; Feb. 1902 to Dec. 1904, Vice President and General Manager, Central Vermont Ry., St. Albans, Vt.; Jan. 1, 1905, to Jan. 7, 1910, Third Vice President, G.T.R., Montreal; and Vice President, Central Vermont Ry.; Jan. 7, 1910, to Oct. 2, 1911, First Vice President, G.T.R., and to July 27, 1911, Vice President, Central Vermont Ry., when he was appointed President, Central Vermont Ry., Central Vermont Transportation Co., Southern New England Rd. Corporation, Southern New England Ry. and Montreal & Southern Counties Ry., resigning the last named positions in Jan. 1913.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg, and other points on the western division, during April, and for 8 months ended Apr. 30, 1921, and Apr. 30, 1920.

	Apr. 1921	8 mo to Apr. 30, 1921	8 mo to Apr. 30, 1920
Canadian Northern Ry.	4,554	60,513	44,981
Canadian Pacific Ry.	3,976	93,675	63,632
Grand Trunk Pacific Ry.	1,010	20,013	18,367
Great Northern Ry.	9	171	495
Total	9,569	174,372	126,875

A. B. Calder's Quick Rejoinder.—Percival Marshall, Chairman, British Association of Trade and Technical Journals, who visited Canada last year as one of the delegates to the Imperial Press Conference, in referring recently in the Model Engineer and Electrician, of which he is the proprietor, to A. B. Calder of the C.P.R. executive staff, who accompanied the press party on its transcontinental tour, says, in speaking of the return trip eastward from Vancouver on the Canadian National Ry.:—"The C.N.R. for many miles run parallel to the C.P.R. on the other side of the Fraser River, and this gave rise to a rather neat bon mot from A. B. Calder, our C.P.R. guide, philosopher and friend. Seated next to him on the platform of the observation car, I thought I would quietly pull his leg, and said: 'I think the travellers on the Canadian National Ry. on this side have a much better view than your passengers on the other side of the river.' 'Yes,' replied friend Calder, with a little twinkle in his eye, 'they can see the C.P.R.'"

The Canadian Forestry Association has had a second car equipped for giving instruction in forest conservation, etc. It was at Bonaventure station, Montreal, May 5, and started a few days later for a tour in New Brunswick, Quebec and Ontario.

Five C.P.R. conductors charged with misappropriation of ticket money alleged to have been taken on trains running between Quebec and Montreal, were acquitted recently by Montreal juries.

Locomotive Booster Tests on Timiskaming & Northern Ontario Railway.

As stated in Canadian Railway and Marine World previously, Timiskaming & Northern Ontario Ry. has received recently 4 mikado locomotives, one of which is equipped with a locomotive booster, and 4 Pacific type locomotives, all of which are equipped with it. A very complete, illustrated description of the appliance was published in Canadian Railway and Marine World for Dec., 1920, pg. 661.

Tests of two of the locomotives equipped with boosters were made on the T. & N.O.R. on May 9, 10 and 11. Mikado locomotive 150 took a train from North Bay to Englehart, 138 miles, on May 9, and returned the following day. On May 11, Pacific type locomotive 157 took the Canadian National transcontinental passenger train no. 1 from North Bay to Englehart, and Canadian National transcontinental train no. 2 from Englehart to North Bay. The Canadian National Rys. business car 84 was loaned to the T. & N.O.R. for the tests, its apparatus consisting of drawbar pull recording device, with gauge, buffing force recorder, air brake train line automatic pressure recorder, standard speed recorder, train line and auxiliary reservoir pressure gauges, together with charts for the quick determination of drawbar horsepower from various speed and tractive effort combinations.

In the test of May 9, mikado locomotive 150 handled freight train of 1,450 equivalent tons, from North Bay to Englehart, the ruling grade and other hard pulls being got over with ease with the booster cut in. The regular northbound tonnage for power of this class, without the booster, is 1,200 equivalent tons. Returning on May 10, this locomotive was given 1,995 equivalent tons out of Englehart, to ascertain how far up the grade into Cobalt it could handle the tonnage before stalling. This grade is about 9 miles long, the northern one third of it being 0.7 and 0.8%, the remainder being 1%. The standard tonnage rating for it is 1,660 equivalent tons, so that the locomotive handled an excess of 335 equivalent tons. Instead of stalling on the grade, the tonnage was handled over it, and into Cobalt, without trouble, with the booster cut in on the hard places. From Cobalt, mile 102.8, south to Kiddle, mile 33.9, there are many short grades, but the ruling grade for southbound traffic is between Riddle and mile 22.5 from North Bay, portions of it running as high as 1.2%. The standard tonnage for this is 1,460 equivalent tons. To the train of 1,995 equivalent tons, another car, of 48 gross tons, was added, and this train was taken over these ruling grades, without stalling, with the booster cut in.

In the Pacific type locomotive tests, locomotive 157 was started from North Bay with Canadian National Rys. train no. one, 1 3cars, 950 tons. The initial lift was on a heavy grade, where, without the booster, it would be impossible for the locomotive to lift the train; but, with the booster cut in, the train was lifted without taking the slack, the drawbar pull showing as 45,000 lb. Acceleration on this grade was such that a speed of 15 m.p.h. was attained in 2 min. 50 sec. The train was delivered in Englehart on time, the booster having been used successfully on grades and in starting from stations. The rate of accelera-

tion made possible by the booster is shown by the following example of a start out of Tonikio, mile 27.3, on level track.

Time, seconds	Drawbar pull, lb.	Speed, m.p.h.
0	38,000	0
10	38,000	2.5
20	32,000	5.0
30	29,000	8.5
40	27,000	11.5
50	25,000	15.0
60	23,000	15.5

On the return trip, Englehart to North Bay, with Canadian National Rys. train no. two, 12 cars, 890 tons, the booster was employed successfully on the grades and in increasing the acceleration in starting after station stops. The train left Englehart 30 min. late, and reached North Bay on time.

These tests demonstrated the value of the booster in aiding locomotives on grades, and in increasing acceleration. On the mikado type locomotive it showed an increase in tractive effort of 20%, and of 26% on the Pacific type locomotive. As stated in our May issue, the T. & N.O.R. has many short, steep grades, for both north and southbound traffic, and heavy ruling grades, limiting the trainload for the whole division. In addition, many of the stations are on very steep grades. For these reasons, it was anticipated that the booster would be satisfactory for use on that line, and the result of these tests, so far as actual performance is concerned, was to demonstrate the booster's ability to fulfill the expectations in regard to it. The tests were also in the nature of tests of the locomotives themselves, as to steaming capacity, fuel economy, tractive power, etc.

Specifications of the Pacific locomotives were given in Canadian Railway and Marine World for Dec. 1920, pg. 646, and Jan. 1921, pg. 15. Specifications and an illustration of the mikado locomotives were given in the May issue, pg. 252. The tractive effort of the Pacific type locomotives is 36,600 lb. without the booster. The rated tractive effort of the booster is 10,700 lb., giving a ratio of weight on trailing truck to tractive effort, due to booster engine, of 4.44.

In the application of the booster on T. & N.O.R. locomotives a radical change was introduced, the exhaust steam from the booster engine, instead of being carried back through a pipe, to exhaust from the top of the tender, or being carried back to exhaust into the water in the tank, as has been the practice in the installation on U.S. railways, was carried through a pipe under the boiler, and tapped into the exhaust steam cavity in the saddle castings, and exhausts through the stack, with the steam from the main locomotive cylinders. Before this application was made, it had been contended by some people that the additional exhaust steam would tend to build up back pressure to a prohibitive degree; however, in a test at the Canadian National Co.'s works, at Kingston, Ont., where the boosters were applied when the locomotives were being built, it was found that cylinder back pressure was not materially increased by having exhaust steam from the booster engine pass through the nozzle and stack, which led to this design being applied. We are officially advised that this method of handling the exhaust steam from the booster engine will be followed in future applications.

Among those present at the tests were:

S. B. Clement, Chief Engineer; A. A. McRoberts, Office Assistant to Chief Engineer; and H. L. Rodgers, Mechanical Engineer; T. & N. O. Ry. C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance; W. U. Appleton, General Superintendent of Rolling Stock, Eastern Lines; A. H. Eager, General Superintendent of Rolling Stock, Western Lines; W. F. Connal, Mechanical Engineer, Toronto; and Frank Williams, Mechanical Designer, Moncton, N.B.; Canadian National Rys. C. E. Rafferty, Master Mechanic, Algoma Central & Hudson Bay Ry. C. B. Lathrop, Sales Manager, F. R. Peters, Division Engineer, W. T. Conley, Service Manager, R. P. Peckett, Jr., Service Representative, and F. Lumb, Inspector, Franklin Railway Supply Co. W. Casey, Vice President and General Manager, and G. Cavin, Mechanical Engineer, Canadian Locomotive Co. Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

Reduction in Lumber Rates from British Columbia

Rail rates on lumber and shingles from British Columbia to eastern points have been reduced to enable B.C. mills to compete in the eastern markets against other producers, particularly U.S. ones, and to strengthen the eastbound movement of these commodities, which has decreased materially of late. We are officially informed that the rates on lumber published in C.P.R. tariff C.R.C. no. W-2588, which became effective April 21, are, to main line points in Ontario, east of North Bay and Toronto, to and including points in Quebec, 95c. per 100 lb. from coast mills, and 88c. per 100 lb. from interior mills, against corresponding rates in effect Jan. 1 of \$1.06½ and \$1.02. To main line points, Toronto Windsor and Sarnia, and territory south thereof, the new rates are 90c. per 100 lb. from coast mills and 81c. per 100 lb. from coast mills and against rates of \$1.03½ and 94½c. respectively. The rates to territory on branch lines, north of the main lines in Ontario, and north of Ottawa in Quebec Province, also to the Maritime Provinces, are the usual differentials over main line rates. The following comparison of rates from Vancouver has been furnished by the Canadian National Rys. Traffic Department:—

	New rate	Old rate
To Toronto	90c.	\$1.03½
To Montreal	90c.	\$1.06½
To Quebec	80c.	\$1.12½

"Eastern Tours through the Canadian Pacific Rockies," the latest folder issued by the C.P.R., may easily be said to be the best in place before the public a great transcontinental railway. With characteristic illustrations, and a breezy story depicting Canada from the western shores of Vancouver Island to the apple blossomed slopes of Evangeline Land, this booklet tells a new story of the Dominion. Its cover design, by a Canadian artist, is a twilight scene at Lake Louise, in a color scheme of ivory and gold, showing this spot in the Rockies in a new and majestic phase. This folder is outstanding and is a proof of what may be done in Canada by the artist, writer and printer.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 339, May 7.—Amending secs. 1434 and 1715 of Regulations for Transportation of Explosives and Other Dangerous Articles by Freight.

30,908, 30,909. Apr. 16.—Approving Bell Telephone Co. agreements with Woodford Telephone Co. and Centre Road Telephone Co., Grey County, Ont.

30,910. Apr. 19.—Authorizing City of St. Thomas, Ont., to operate May 23 St. Thomas P.M. P.M. cars over Pere Marquette Ry. on Wilson Ave.

30,911. Apr. 19.—Authorizing Ottawa & New York and St. Lawrence & Adirondack Rys. to use on its locomotives what is known as the Mudge-Slater front end.

30,912. Apr. 20.—Ordering Brantford & Hamilton Electric Ry. to provide for crossing of E. Leeks and N. Slater property, on part of Lot 28 on south side of Glenferrie Ave., Con. 4, Barton Twp., Ont.

30,913. Apr. 20.—Authorizing Canadian Northern Pacific Ry. to build spur for Arrow Lakes Lumber Co., mile 85.7 Blue River Subdivision, B.C.

30,914. Apr. 20.—Ordering C.P.R. to keep station building at Stratfordville, Ont., open, and, when necessary, heated and lighted, for 30 min. prior to arrival of trains 656 and 657 (changed by order 30,968 to trains 659 and 662).

30,915. Apr. 19.—Approving agreement between Bell Telephone Co. and Lake Telephone Co., St. Hyacinthe County, Que.

30,916. Apr. 20.—Dismissing C.P.R. application for order relieving it from agreement under limitations on trains at St. Henri St., Hull, Que.

30,917. Apr. 20.—Approving Chatham, Wallaceburg & Lake Erie Ry. Standard Mileage Tariff, C.R.C. 646.

30,918. Apr. 20.—Ordering Toronto, Hamilton & Buffalo Ry. to provide protection at crossing 1,400 east of Belleville station, Ont.

30,919. Apr. 16.—Recommending to Governor in Council for approval, lease to C.P.R. of Kaslo & Sloo Ry.

30,920. Apr. 23.—Authorizing Michigan Central Ry. to issue supplement to its tariff C.R.C. 30,916 to give effect to proper rates on cheese.

30,921. Apr. 21.—Authorizing Ontario Streetcar & Electric Ry. to make highway crossing over C.P.R. opposite Third St.

30,922. Apr. 21.—Authorizing Alberta Public Works Department, on behalf of Little Bow municipal district 98, to make a highway crossing over C.P.R. in Sec. 10, Tp. 11, Range 23, west 4th meridian.

30,923. Apr. 22.—Authorizing the British Columbia Public Works Department to make highway crossing over C.P.R. at chainage 2181-30.7, west of Yehk.

30,924. Apr. 21.—Authorizing the Canadian National Ry. to terminate agreement under which siding was built for Gairford Collieries, Ltd., in Sec. 14, Tp. 53, Range 6, west 3rd meridian.

30,925. Apr. 21.—Ordering C.P.R. to appoint station agent at Crestwynd, Sask., by June 1.

30,926. Apr. 21.—Ordering Canadian National Ry. to provide protection at east crossing, Selkirk, Man.

30,927, 30,928. Apr. 20.—Authorizing C.P.R. to remove two months to westward the location of its tracks at mile 12.7 and 9.7, west of Revelstoke, B.C.

30,929. Apr. 21.—Approving clearances between C.P.R. loading track and pier leg of new coal bridge at Island No. 1, Fort William, Ont.

30,930. Apr. 21.—Approving Halifax & South Western Ry. to fill in triangle at mile 31, Selkirk Subdivision, Chester, N.S.

30,931. Apr. 22.—Authorizing London & Port Stanley Rys. to build spur for City Gas Co., London, Ont.

30,932. Apr. 22.—Authorizing Canadian Northern Pacific Ry. to build spur for Island No. 1, s.w. ¼ Sec. 24 and a ½ Sec. 23, Tp. 53, Range 27, west 4th meridian, Alta., mile 0 to 1.42.

30,933. Apr. 23.—Approving location of portion of C.P.R. Parleyville Branch, over C.R.C. Sec. 7, Tp. 12, Range 3, at mile 0 to Sec. 18, Tp. 16, Range 1, west 4th meridian, at mile 32.15, and authorizing crossing of 29 highway at mile 32.15.

30,934. Apr. 25.—Authorizing Esquimaux & Nanaimo Ry. to build spur for Wells Lumber Co. at River 9.18, west of Highway 29, B.C.

30,935. Apr. 25.—Authorizing Canadian National Ry. to alter and extend spur for Great West Land Co. through sec. ¼ Sec. 7, Tp. 53, Range 23, west 4th meridian.

30,936. Apr. 25.—Ordering C.P.R. to improve view at Glen Nevis crossing, between Lots 16 and 17, Con. 7, Lancaster Twp., Ont.

30,937. Apr. 25.—Recommending to Governor in Council for approval, rules and regulations for movement of trains and locomotives over electrified tracks.

30,938. Apr. 25.—Approving location of Canadian Northern Saskatchewan Ry. Meeting Lake Branch, through Tps. 61-62, Range 21 to 18, west 3rd meridian, mile 0 to 23.91, Sask.

30,939. Apr. 25.—Dismissing application of C.P.R. and G.T.R. for order rescinding order 28,586, July 17, 1919, requiring crossing of Fredrick St., Toronto, to be protected by day and night watchmen.

30,940. Apr. 20.—Approving Canadian National Ry. revised route map showing general location through Tp. 22, Range 16, west 3rd meridian, mile 32 to 35, Sask.

30,941. Apr. 25.—Authorizing C.P.R. to build spur for Ontario Public Highways Department, mile 65.6, Windsor Subdivision, Lot 22, Con. 1, Raleigh Twp., Ont.

30,942. Apr. 26.—Authorizing Ontario Government to build its Sault Ste. Marie and Sudbury trunk road across C.P.R. near Algoma station, mile 404.3, These Islands Subdivision.

30,943. Apr. 25.—Dismissing Canadian National Ry. standard fourth class station, to be built at Notre Dame de Lourdes, Man.

30,944. Apr. 25.—Authorizing Namo Collieries Ltd. to make two entries under Edmonton, Dunvegan & British Columbia Ry. at Carbondale, Alta.

30,945. Apr. 27.—Ordering G.T.R. to provide proper facilities at Sarnia Tunnel station, Ont.

30,946. Apr. 28.—Authorizing Namo Collieries Ltd. to make two entries under Edmonton, Dunvegan & British Columbia Ry. at Carbondale, Alta.

30,947. Apr. 28.—Ordering Lake Erie & Northern Ry. to stop its southbound trains just north of crossing at Belleville, Ont.

30,948. Apr. 28.—Extending to May 20, time within which Great Northern Ry. may build station at Crescent, B.C.

30,949. Apr. 28.—Extending to July 15, time within which Canadian National Ry. may install gates at Dufferin St., Trenton, Ont.

30,950. Apr. 28.—Ordering Toronto, Hamilton & Buffalo Ry. and G.T.R. from maintaining interlocking operator at crossing in Dunnville, Ont., on Sundays, and between 11 p.m. and 7 p.m. on week days.

30,951. Apr. 27.—Extending to Oct. 31, time within which G.T.R. may complete branch with crossing at Williamstown, Ontario, between C. and Bateman-Wilkinson Co., Toronto, Ont.

30,952. Apr. 29.—Authorizing C.P.R. to build spur for 29 Highway Department, mile 158.42 Three Rivers Subdivision, between Carillon and Renaud Sts., Quebec, Que.

30,953. Apr. 29.—Ordering protection at crossing of Victoria Ave. by Canadian National Ry., Fort Frances, Ont.

30,954. Apr. 29.—Authorizing Canadian Northern Pacific Ry. to build across Third Ave. (not open), North Bay, Ont.

30,955. May 1.—Authorizing Canadian Northern Pacific Ry. to buy, erect, and divert highway in n.w. ¼ Sec. 2, Tp. 52, Range 20, west 3rd meridian, Sask.

30,956. May 7.—Ordering C.P.R. to restore track between Calgary and Macleod, Alta., which was discontinued in Jan. 1920; and rescinding order 30,001, re withdrawal trains 540 and 541 to and from Macleod.

30,957. May 2.—Authorizing C.P.R. to build spur for J. Arabi and A. Abrahamson, Winnipeg, to make crossing at Macleod, Man.

30,958. May 2.—Authorizing C.P.R. to remove Belluz, Fort Frances, Ont., against noise and smoke caused by operation of International Bridge & Terminal Co.'s switching locomotives in Fort Frances, Pulp & Paper Co.'s yard.

30,959. May 2.—Dismissing application of residents of Dodland, Sask., and vicinity for order rescinding order 28,586, July 17, 1919.

30,960. May 2.—Dismissing complaint of Swift Canadian Co., Edmonton, Alta., against Grand Trunk Ry. to allow mixed cars with mines in Edmonton district to Edmonton.

30,961. May 2.—Dismissing complaint of F. A. Wilson, Vancouver, B.C., against refusal of railway companies to allow mixed cars of maple sugar and maple syrup to be carried at rates named in item 1290, Tariff C.R.C. 14.

30,962. May 2.—Dismissing complaint of Woodlea rural municipality, Man., for order directing Canadian National Ry. to provide station and platform for Interlocking Dept. station.

30,963. May 2.—Declaring that, for present, C.P.R. crossing of highway near east switch at Port Huron, Ont., is protected to Board's satisfaction.

30,964. Apr. 13.—Revising book of reference approved under order 29,723, June 8, 1920, re proposed revision of Canadian Northern Quebec

Ry. near St. Boniface, Que., mile 87.6 to 91.60 from Quebec.

30,965. Apr. 21.—Declaring that, for the present, Michican Central Rd. crossing of first highway east of Chatham, Ont., station, Ont., is protected to Board's satisfaction.

30,966. May 2.—Authorizing Canadian National Ry. to build spur for Elgin Coal Co. at Drumheller, Alta.

30,967. May 2.—Authorizing Quebec Central Ry. to build across St. Lambert Road, St. Lambert de Lotbiniere, Que.

30,968. May 2.—Amending order 30,914, Apr. 20, 1921, changing numbers of C.P.R. trains affected at Stratfordville, Ont., from 656 and 657, to 659 and 662.

30,969. May 3.—Dismissing application of Mayo Lumber Co. for order directing Esquimaux & Nanaimo Ry. to provide station and agent at its mill at mile 7.2 Cowichan Branch, Vancouver Island, B.C.

30,970. May 4.—Authorizing G.T.R. to enter W. Upper's lands and remove trees obstructing view at highway crossing just north of Allambury station, Ont.

30,971. May 4.—Allowing C.P.R. because of special circumstances, an extension of one month from May 6, within which to apply to Board for leave to leave the Court of Queen's Bench, under order 30,855, re furnishing similar traffic facilities to Davidson & Smith Elevator Co., Fort William, Ont., as furnished Dominion Government elevator there.

30,972. May 4.—Ordering C.P.R. to file tariff establishing rate of 2c per ton, on switching stone down from Esquimaux Quarry Co. plant to Deviney & Campbell's factory, St. Mary's, Ont., to apply to shipments made on and after Mar. 28, and rescinding order 29,794.

30,973. May 4.—Permitting free transportation for the ex-Speaker of the British House of Commons, car and baggage, from Ottawa to St. John's, Nfld.

30,974. May 3.—Ordering C.P.R. to keep station open until 7 p.m. on Tuesdays, Wednesdays, Thursdays and Fridays.

30,975. May 4.—Approving plan showing in red additions to interlocking plant installed under order 28,586, July 17, 1919, at Canadian Northern Ontario Ry. and Timiskaming & Northern Ontario Ry., at North Bay.

30,976. May 4.—Declaring that, for the present, G.T.R. crossing of Colborne St., Brantford, Ont., is protected to Board's satisfaction, and rescinding order 26,192, June 5, 1917.

30,977. May 4.—Approving agreement, Apr. 18, 1921, between Bell Telephone Co. and Sparta Rural Telephone Co., and rescinding order 22,726, Oct. 13, 1914, approving agreement of Sept. 23, 1914.

30,978. May 6.—Approving location and details of Canadian National Ry. station at St. Casimir, Que.

30,979. May 6.—Authorizing Canadian National Ry. to open for traffic its second track, Drumheller Subdivision, between mile 30.2 and 31.5, Alta.

30,980. May 6.—Extending to Sept. 1, 1921, within which Great Northern Pacific Ry. may build station at Bechar, Sask.

30,981. May 6.—Authorizing Quebec Central Ry. to build across Beauséjour Road, St. Jean Chrystiophe, Que.

30,982. May 6.—Authorizing Woodford municipal district No. 650, Alta., to erect streetcar trail along north side of Canadian National Ry., 470 ft. east center of station; cost to be divided between municipality and C.N.R., and maintenance to be paid by C.N.R.

30,983. May 6.—Authorizing C.P.R. to remove station agent at Wanapitci, Ont., caretaker to be made responsible for station.

30,984. May 6.—Relieving Toronto, Hamilton & Buffalo Ry. and Michican Central Rd. from maintaining watchman to operate interlocking plant on Sullivan and St. George Sts., between 11 a.m. and 7 p.m., at crossing at mile T.H. & R.R. Erie and Ontario Branch, 9.46, and M.C.R. 10.5, Montreal, Que.

30,985. May 6.—Approving agreement, Dec. 19, 1914, in so far as it relieves companies from maintaining night signalman there, and also order 29,800, re same.

30,986. May 9.—Authorizing Canadian National Ry. to construct its Eston Southeastern Branch across highways between mile 30 and 10, s.w. ¼ Sec. 18, Tp. 2, Range 16, west 3rd meridian, Sask.

30,987. May 1.—Authorizing Quebec Central Ry. to build across La Grande Road and La Grande Ligne Road, St. Isidore Parish, Que.

30,988. May 9.—Authorizing C.P.R. to build spur for Interlocking Dept. station, Ont.

30,989. May 7.—Authorizing Canadian National Ry. to rebuild bridge over Shawinigan River, Shawinigan, Que., and rescinding order 23,804, May 7, 1917.

30,990. May 7.—Approving agreement, Apr. 22, 1921, between Bell Telephone Co. and East Luther Telephone Co., Dufferin County, Ont., and rescinding order 25,841, Feb. 15, 1917.

proving agreement dated Feb. 6, 1917.

30,590. May 7.—Authorizing Canadian National Ry. to rebuild bridge over Metabetchouan River, Metabetchouan Tp., Que., at mile 151 from Quebec.

30,591. May 7.—Authorizing Canadian National Ry. to close interlocking plant on Sundays at crossing of Grand Trunk Pacific Ry. Melville-Regina Branch at Regina, Sask.

30,592. May 7.—Approving Canadian National Ry. to close crossing of lower on Sunday, at crossing of Grand Trunk Pacific Ry. Melville-Regina Branch over C.P.R. Buleva Branch in n.w. 1/4 of Township 17, Range 18, west 2nd meridian, mile 31.13 to 35.22, Sask.

30,593. May 7.—Relieving Canadian National Ry. from maintaining night signalman, and authorizing closing of tower on Sunday, at crossing of Grand Trunk Pacific Ry. Melville-Regina Branch over C.P.R. Buleva Branch in n.w. 1/4 of Township 17, Range 18, west 2nd meridian, Assiniboia District, Sask.

30,594. May 7.—Authorizing Canadian National Ry. to rebuild bridge over Belle River, Simard Tp., mile 191 from Quebec, Que.

30,595. May 6.—Ordering G.T.R. and C.P.R. to operate trains at Sunnyside station, Ont., at crossing not exceeding 6 miles an hour; keep freshly painted safety lines on platform; and maintain officer in uniform on platform during hours passenger trains arrive and depart. C.P.R. duty will be to direct and protect passengers so as to minimize danger from congestion.

30,596. May 6.—Rescinding order 27,455, June 28, suspending cancellation of district rates between Weston and Islington, New Toronto; Dundas and Hamilton; Ridgewell-Welland and Marshville and St. Catharines; and between Rockwood and Guelph, Ont.

30,597. May 10.—Authorizing Dominion Public Works Department to build and maintain bridge jointly with the State of Maine over the St. John River between Edmundston, N.B., and Madawaskam, Me., across the Canadian National and Temiscouata Rys.

30,598. May 9.—Authorizing G.T.R. to build spur for Long Lumber Co., Hamilton, Ont., to 30.36, May 9.—Relieving G.T.R. and Grand Trunk Pacific Ry. from maintaining signalman on Sundays and from 6 p.m. to 1 a.m. on week days at interlocking plant at crossing mile 118 from Regina.

31,000. May 10.—Authorizing C.P.R. to build extension to siding for Pembroke Lumber Co., Pembroke Tp., Ont.

31,001. May 10.—Authorizing C.P.R. to remove station agent at Victoria Mines, Ont.

31,002. May 10.—Authorizing Alberta Public Works Department to make highway crossing over Edmonton, Dunvegan & British Columbia Ry. in Sec. 12, 22, 62, Range 27, west 2nd meridian.

31,003. May 9.—Authorizing Toronto Township, Ont., to make highway crossing over G.T.R. about center line of south half of Lot 1, Con. 2, south of Dundas St.

31,004. May 9.—Extending to July 1, 1922, time within which C.P.R. may build freight shed at Kingston, Ont.

31,005. May 9.—Approving additions to Regulations for Transportation by Express of Axes, Inflammables, Oxidizing Substances, etc., Supplement 1 to C.R.C. no. E.T. 634.

31,006. May 10.—Declaring protection at crossing by G.T.R. of St. Paul's Ave., Brantford, Ont., is satisfactory to the Board.

31,007. May 10.—Authorizing Etobicoke Tp., Ont., to make highway crossing over G.T.R. at Kingsway Ave.

31,008. May 9.—Authorizing Canadian Northern Ontario Ry. to build spur for S. McCord, Toronto.

31,009. May 10.—Rescinding order 27,895, Nov. 2, 1918, re G.T.R. application to remove siding built for Ontario Government, in Hunter Tp.

31,010. May 9.—Extending to July 31, 1922, time within which Canadian Northern Ontario Ry. may install interlocking plant at junction with C.P.R. near Harwood station.

31,011. May 10.—Authorizing Toronto Tp., Ont., to make highway crossing over G.T.R. in Lot 1, Con. 2, south of Dundas St.

31,012. May 10.—Rescinding order 21,903, May 23, 1914, approving agreement between Bell Telephone Co. and Alnwick Telephone Co.

31,013. May 10.—Approving Bell Telephone Co. agreement with Pine Grove Telephone Association.

31,014. May 11.—Approving location and details of G.T.R. new station at Glen Sandfield, Ont.

31,015. May 11.—Extending to Aug. 1, 1921, time within which Canadian National Ry. may build station at Birch Hills, Sask.

31,016. May 9.—Ordering C.P.R. to install, in addition to electric bell, a wigwag signal at Drummond St., Perth, Ont., 25¢ to be paid out of Railway Grade Crossing Fund, and remainder by company.

31,017. May 11.—Authorizing free transportation for Prime Minister of New South Wales, his wife, daughter and secretary.

31,018. May 11.—Approving Boston & Maine Rd. bylaw authorizing Vice President, Maine Assistant Freight Traffic Manager, General Pass-

senger Agent, Chief of Traffic Bureau, and Car Accountant, to issue rules, regulations and tariffs of tolls.

31,019. May 11.—Authorizing London & Port Stanley Ry. to make highway crossing on Carleton Place, Ont.

31,020. May 12.—Declaring protection at first public crossing west of Beach Road, Ont., by G.T.R., is satisfactory to Board.

31,021. May 2.—Approving agreement between Bell Telephone Co. and Hamam, Bayham and Tilsonburg Telephone Association.

31,022. May 2.—Rescinding order 25,819, Jan. 23, 1917, approving agreement between Bell Telephone Co. and Norfolk & Tilsonburg Telephone Co.

31,023. May 3.—Extending to Sept. 30, time within which Caterham & Ontario Rys. may raise rates at crossing of C.P.R. at Bay Bridge Road, Belleville, Ont.

31,024. May 12.—Dismissing application of Tilbury West Tp., Ont., for approval of plans and specifications of the Dodson Drain, to be laid on Michigan Central Rd. lands.

31,025. May 13.—Extending to Aug. 29, time within which C.P.R. may build spur for Ruggies Motor Truck Co., London, Ont.

31,026. May 13.—Ordering C.P.R. to make highway crossing on west boundary of District Lot 19, Group 1, New Westminster District, B.C.

31,027. May 12.—Authorizing C.P.R. to build spur for Knechtel & Sons and Poppler Brothers Co., Hanover, Ont.

31,028. May 12.—Amending order 30,701, May 9, re cutting Caterham & Ontario Rys. to remove trees obstructing view near Allensburg station, Ont.

31,029. May 13.—Ordering C.P.R. to remove its station at Pritchard, B.C., 100 ft. east of boundary of north and south highway.

31,030. May 16.—Authorizing C.P.R. to build siding for Toronto Asphalt Roofing Mfg., Mount Dennis, Ont.

31,031. May 16.—Ordering Canadian National Ry. to install a new telephone message signal at crossing between Secs. 8 and 17, Tp. 21, Range 12, West 2nd meridian, Sask.

Telegraph, Telephone and Cable Matters.

The Manitoba Government estimates for this year provide for the installation of a wireless telegraph service for northern Manitoba.

G. Gallienne, Superintendent, Dominion Government Telegraph Lines on the north shore of the St. Lawrence, died at Seven Islands, Que., May 3, aged 73.

Ewan Cameron, who was for 50 years in charge of the Great North Western Telegraph Co.'s office at Brantford, Ont., died there May 13, aged 82. In his day he was one of the best telegraph operators, and was connected with the transmission of the first telephone message over a telegraph wire, which took place between Brantford and Paris, Ont., Andrew Graham Bell conducting the experiments.

The Yukon Legislature has decided to memorialize the Dominion Government to extend the Yukon trunk road and the Dominion Government telegraph system to the Fort Norman oil fields, Mackenzie River district. This, it is claimed, is the shortest, and the Government telegraph system reaches to within 360 miles of Fort Norman. The completion of this section would give direct connection to the coast at Skagway.

George D. Perry, who has been appointed Vice President and General Manager, Canadian National Telegraphs, Toronto, was born at Whithy, Ont., Apr. 19, 1858. He commenced his business career in Nov. 1877 as clerk at the Standard Bank at Colborne, Ont., and left there July 1879. From Feb. 1880 to Feb. 1881 he was cashier, Credit Valley Ry., Toronto; Feb. to Sept. 1881, bookkeeper, Dominion Telegraph Co., Toronto; Sept. 1881 to Dec. 1891, chief clerk and Travelling Auditor, Great North Western Telegraph Co., Toronto; Dec. 1891 to Sept. 1902, Secretary and Auditor, same company, Toronto; Oct. 1902 to March 1911, Secretary-Treasurer and Superin-

tendent of Supplies, same company, Toronto; March 1911 to Dec. 1920, General Manager, same company, Toronto; Jan. to Apr. 1921, General Manager, Canadian National Telegraphs, Toronto, and from April, Vice President and General Manager, Canadian National Telegraphs and also Vice President, Great North Western Telegraph Co., Toronto.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Zephyr, Ont., and Tichfield, Sask.

W. A. Perkins is reported to have been appointed agent, Canadian Ex. Co., Fredericton, N.B.

R. Fennell, agent, Dominion Ex. Co., Maple Creek, Sask., has been retired on pension, on account of ill health.

Canadian National Ex. Co. has opened offices at Hydro and Macdiarmid, Ont., and has closed its office at Cameron Falls, Ont. The name of Eaton, Sask., has been changed to Eatonia.

A. W. Gordon, who died at Winnipeg, recently, was a brother of W. M. Gordon, Superintendent, Western Division, Dominion Ex. Co. there. He was 55 years old, and was on the Dominion Ex. Co.'s staff for about 10 years.

Judgment was reserved, May 11, in the appeal to the Supreme Court of Canada, of Gold Seal Ltd., Calgary, Alta., against the decision of the Supreme Court of Alberta's Appellate Division, which held that an express company is not bound to accept shipments of intoxicating liquor either into or out of Alberta.

The Dominion Ex. Co. has arranged with the C.P.R. Passenger Department for foreign and domestic money orders and letters of credit, or travellers' cheques, to be placed with C.P.R. agents and representatives. They are now procurable at all C.P.R. hotels, on Great Lakes, British Columbia coast and Atlantic and Pacific Ocean steamships, and at all passenger offices in Canada and the U.S.

Frederick Gillespie, who has been appointed Claims Agent, Canadian National Express Co., Toronto, was born at Alliston, Ont., Aug. 21, 1894, and entered express service in 1909, since when he has been, to 1911, clerk, Canadian Northern Ex. Co., Toronto; 1911 to 1915, cashier, same company, Toronto; 1915 to 1920, chief clerk, same company, Toronto; 1920 to Apr. 12, 1921, chief clerk, Canadian National Ex. Co.

The Dominion Parliament has passed the Dominion Ex. Co.'s bill, amending its act of incorporation, and providing that it may convey roads, as well without, as within, the Dominion, and also increasing its capital stock from \$2,000,000 to \$5,000,000. While the bill was before the House of Commons railway committee, it was stated that, during 1920, the company lost \$1,537,000 in operation, which could be attributed to increased wages, increased cost of material, etc. It was also stated that the company owed the C.P.R. a considerable amount, and that the C.P.R. would take up the new stock.

Victoria Bridge Automobile Tickets.—The G.T.R. announces that for the convenience of automobile owners, tickets for crossing Victoria Bridge, Montreal, can be bought either at Bonaventure station or ticket office, or at the city ticket office, 330 St. James St.

Electric Railway Department

Toronto Transportation Commission's Motor and Trailer Cars

As stated in Canadian Railway and Marine World for May, the Toronto Transportation Commission has ordered 100 motor cars and 60 trailer cars, perspective views and ground plans of which are given herewith. The cost of the car bodies and trucks, without motors, controllers and other equipment, will be about \$1,270,000, and the average cost of the cars fully equipped will be between \$17,000 and \$18,000 each.

The total weight of the motor car will be 49,000 lb.; distance between truck centers 26 ft.; length over all 51 ft. 8 in.; width over all 8½ ft., and height, rail to trolley base, 11 ft. 4 in. The underframing, side and end framing, sheathing, earlines, etc., will be of steel con-

car, near the side doors, and the passenger will pay his fare while leaving the front portion of the car, or while passing from the front to the back section. The front doors will be sufficiently wide to permit two passengers to enter abreast, which will permit a large number of passengers to embark in a short time. The interior finish of the car will be birch, stained to resemble cherry, and the seats will be of the wood slat type, as being the most sanitary. Exit from both the front and rear sections of the car will be by side doors. Both the entry and exit doors will be electro-pneumatically interlocked with the control apparatus, so that power to move the car will not be available until the passengers are

600 volt. The control will be Canadian General Electric K-35 with the C.G.E. type 241-B, 55 h.p. and Canadian Westinghouse 533-T-4, 50 h.p. motors, and Canadian General Electric Q2-D with Dick-Kerr motors. The airbrakes will be of Canadian Westinghouse semi-automatic type, with compressor on car. Hand brakes will also be provided. The gearing for the motors will be of the helical type. Heating will be supplied by a coal burning stove, and ducts through which the heated air will be forced by motor driven fan. Sleeve armature bearings will be used. The cars will be equipped with anti-climber bumpers and Consolidated car signal system, Tomlinson couplers, H.B. fenders and

51' 8" over Buffers

Motor Car, Toronto Transportation Commission.

struction. The roof will be of composite construction, of wood and canvas, the roof boards being of poplar. The plain arch will be used. Head-lining will be of ¾ in. agasote. The flooring will be built up of ¾ in. transverse pine underflooring, with ¾ in. longitudinal maple top flooring, with mat strips in the aisles.

These cars will involve a radical departure from the types now used in Toronto. The interior of the motor car will be divided into two compartments, the forward one being equipped with seats placed lengthwise along both sides of the car. In the rear section there will be a row of transverse seats along both sides of the center aisle, with a circular bench seat around the rear of the car. Instead of entering the car at the rear, as is the present practice in Toronto, passengers will enter the car at the front door. Instead of the car being of the pay-as-you-enter type, the conductor will be stationed at the center of the

all off, or on, and the doors closed. The normal seating capacity of the motor car will be 57 persons. The front portion of the car is designed for use by passengers making a comparatively short trip, while the rear portion, with the transverse seats, is intended for passengers making a longer journey. Inspection of the illustration will show a large window area, to provide a well lighted interior. The cars will not be equipped with window shades. The door frames and window sashes will be of the same material as the other interior woodwork, viz., birch stained in cherry. Interior lighting will be supplied by fifteen 36-watt tungsten lamps in the body of the car, equipped with opal reflectors.

The cars will be of the 4-motor type, an inside-hung motor geared to each axle. Three types of motor will be used on the different cars, viz.: Canadian General Electric type 241-B, 55 h.p.; Canadian Westinghouse 533-T-4, of 50 h.p., and Dick-Kerr type 83, of 56 h.p., all

wheel guards, and National Pneumatic Co. door operating mechanism. Three different types of lightning arrestor will be used on the different cars,—Westinghouse, Dick-Kerr, and C.G.E. The cars will be equipped with air sanders, slack adjusters, lead filled stop treads, and U.S. 13-D trolley base, and trolley wheels and catchers will be used. A special feature will be a signal light on the front of the car, in addition to the head-light, which will light up automatically as soon as the doors close and the car is ready to proceed, thus conveying information to traffic policemen and others. At the rear will be two signal lights, one showing red, when the car is stopped, or when the power is shut off to make a stop, and the other showing green when the car is moving, or when the power is turned on and the car is about to move.

The trucks, with a wheel base of 5 ft. 10 in., will be of the arch bar type. The motor cars are to be equipped with

roller side bearings. Axles are to be to A.E.R.A. specifications. Journals will be of $3\frac{3}{4}$ x 7 in., and the wheels, of cast iron, will be 30 in. diam.

Trailers.—The general design of the trailer car is shown in the illustration. They will weigh 28,000 lb. each complete, will be 26 ft. between truck centers, 49 ft. long over all, $8\frac{1}{2}$ ft. wide over all, and 10 ft. 6 in. high from rail to highest point of roof. They will be of steel construction, with underframing, and side and end framing, substantially similar to that of the motor car, and also having the plain arch type roof. Like the motor cars, the interior finish of the trailers is to be of birch, stained in cherry, while roof and floor construction are along similar lines.

The trailer cars will differ from the motor cars in method of operation, in that entrance to, and exit from, the trailers will both be by the side doors. The entry side door will open into the forward section. The fare will be paid

signal system, bronze interior trimmings, roller side bearings, National pneumatic door operating mechanism, hand brakes, American E-1 slack adjuster, filled step treads, and Tomlinson couplers.

The order for the cars was given by the Toronto Transportation Commission to Canadian Car & Foundry Co. on April 27, and deliveries are to commence in August. As pointed out in our last issue, the rush hour transportation problem in Toronto is a serious one, and the new cars, with their larger capacity, designed to permit quick pick-up and discharge of passengers, and ample power to permit of quick acceleration, should aid materially in solving the city's transportation problems.

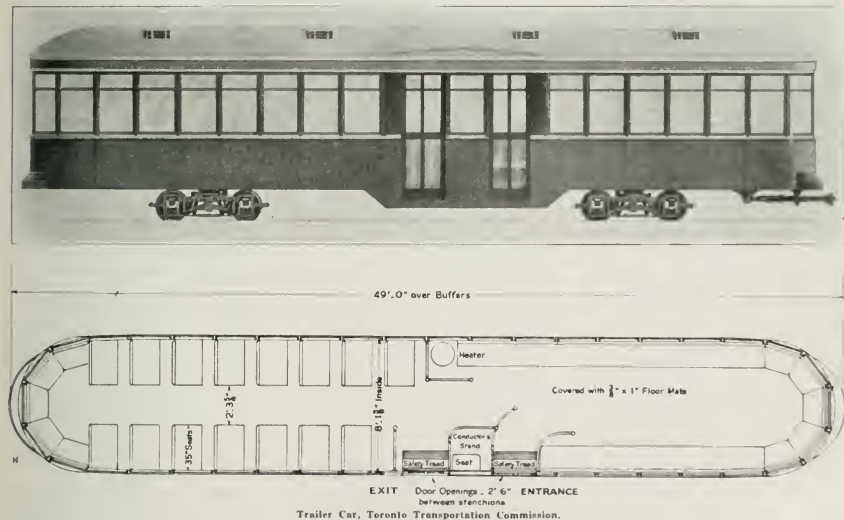

British Columbia Electric Railway and the Rule of the Road.

A settlement has been arrived at between the B.C. Government and the B.C.

for intersections, and all electric switches and points will have to be changed. The company has some 33 cross-overs on the mainland lines which must be changed. The company does not expect to give a car service in Vancouver for several days immediately after the change is made and for some months afterwards the cars will be undergoing alterations and finishing work. It is probable that the change will be made on the mainland before Vancouver Island, owing to mechanical difficulties involved. On the company's interurban lines no changes will be necessary in rolling stock, but the stations, in many cases, must be removed to new locations.

Ontario Highway Travel Act.

The Ontario Highway Travel Act, R. S.O. 1014, chap. 206, provides in sec. 9 as follows:—"Where a person, travelling upon a bicycle or tricycle, in a northerly

while passing from the front to the back section, or while leaving the car. The seating arrangement in both sections of the trailer will be similar to that in the corresponding sections of the motor car. The seating capacity of the trailer will be 61 persons.

The trailer trucks will be of the same design as those of the motor cars, but the wheel base will be considerably shorter, being only 4 ft. 2 in. The same size journal, $3\frac{3}{4}$ in. x 7 in., will be used. The cast iron wheels will be smaller than those of the motor car, being only 22 in. diam. Westinghouse air brakes will be used on the trailer, but it will not be equipped with a compressor, the compressor on the motor car supplying both cars when the two are operated together. The trailer will be heated in the same manner as the motor car, and will be equipped with the following specialties: Anti-climber bumpers, Consolidated car

Electric Ry. as to the amount to be paid by the Government towards the cost of altering the company's railways lines, cars, etc., to conform to the change in the rule of the road to the right hand side. The Legislature authorized the payment of one half of the cost, the amount to be paid not to exceed \$400,000. As the result of negotiations the amount which the Government will pay is reported to have been fixed at \$350,000, and the agreement is said to contain a provision that if the total cost of the work is less than \$700,000 there will be a corresponding rebate to the Government. The company's officials estimate that the work will cost approximately \$1,000,000.

We are officially advised that the company will start immediately to take out one side of the car platforms in Vancouver, New Westminster and North Vancouver. Special steel will be required

or westerly direction, upon the central strip between the double tracks of a surface railway, meets another person on a bicycle or tricycle travelling in an opposite direction, he shall turn out to the right, allowing such other person the whole of the central strip."

The Minister of Public Works introduced a bill at the current session to amend the above section by adding thereto the words "except where a safety zone has been authorized by the municipal council and is defined on the street."

On the order of the day for the second reading the bill was withdrawn.

Yarmouth Street Ry. Co. Limited.—The Nova Scotia Registrar of Joint Stock Companies has announced that at the company's request its certificate of registration under the Domestic, Dominion and Foreign Corporations Act 1912, has been revoked.

The British Columbia Electric Railway Co.'s Proposed New Franchise.

Following upon the agreement between the B.C.E.R. Co. and the municipalities within which it operates, which preceded the withdrawal recently of the company's application to the Dominion Parliament for an amendment to the Vancouver, Fraser Valley & Southern Ry. Co.'s charter to provide for amalgamating the company's undertakings under that title and so bringing them under the Board of Railway Commissioners' jurisdiction, negotiations were opened between the company and Vancouver City Council, with a view of arriving at a new agreement. The terms under which the company is operating on the mainland expire July 1, 1922, and six months was allowed for arranging the terms of a new charter. After several meetings between representatives of the company and the city council, a tentative agreement was reported to have been arrived at on May 4. This agreement covers the company's gas, electric light and power business, as well as its electric railway lines. The following are reported to be the principal terms of the agreement referring to the electric railways.

The company is to be allowed to earn 6% on capital actually and necessarily invested up to Jan. 1, 1921, and 8% on capital invested after that date, the sum already invested to be ascertained by Price, Waterhouse & Co., chartered accountants. The fares to be charged are not to exceed 7c. cash, or 4 tickets for 25c., and 10 children's tickets for 25c., with free transfers. Until the accountants have fixed the capital value of the properties and decided upon the rates to be charged, the company is to continue to charge the existing fares. The accountants' report must be completed within six months from June 30. The rates so fixed are to remain in operation for three years and are to be subject to revision and again every three years thereafter. At the revision periods, if the company is found to be earning more than the percentages allowed, the surplus is to be divided, one half going to the company as a reward for efficient management, and the other half to be appropriated to the reduction of fares during the next period. The rate of interest to be earned is to be subject to revision at the end of six years from June 1921, and every three years thereafter, provided that the rate shall not be more than the company may be actually paying, nor less than 6%, nor more than 8%. The city to have the right to buy out the company at the expiration of each three year period, on giving a year notice of its intention so to do. The company agrees to give a continuous service under a penalty of \$1,000 a day, unless such default is due to causes beyond its control. Disputes with employees are to be submitted to arbitration and the company agrees to abide by the awards. All differences between the city and the company under the agreement are to be submitted to arbitration. An arbitration board is to be appointed, after the accountants' findings are made, to decide what fares shall be charged in areas outside the city. The company agrees that during the lifetime of the agreement it will not take any steps to have itself placed under the Board of Railway Commissioners, or any other Dominion or provincial jurisdiction.

George Kidd, General Manager, is reported to have stated May 5, that the benefits of the new agreement will be extended to the surrounding municipalities. The company started with Vancouver, because it is the largest of the contracting parties and it is easier to negotiate with one party than with several. It is intended to offer all the benefits of the agreement to all the other interested municipalities. T. Blundell Brown, of London, Eng., one of the directors, was in Vancouver while the negotiations were in progress, and is reported to have stated that the company can now go ahead and raise the capital necessary for extensions and betterments.

Representatives of public and semi-public organizations of Vancouver met there, May 8, in connection with the proposed new agreement. The City's Council and Comptroller explained the proposal, and answered questions in regard to it. W. H. Gallagher, of the Central

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway, Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co. Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.

Treasurer, A. Gaborau, Superintendent, Montreal Tramways Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. McLiment, Vice President, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Ry., Light & Power Co.; Col. C. Boyce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Road Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.

Secretary, L. E. Morland, Chief Clerk, Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and Marine World, Toronto.

Ratepayer's Association, is reported to have said that the agreement should be dropped altogether, and the company be allowed to go under the Board of Railway Commissioners' jurisdiction. Another meeting has been called for more general discussion of the agreement.

Remodelled Car, Hull Electric Co. — The Hull Electric Co. has had one of its older single truck cars, no. 46, remodelled, and equipped with complete safety appliances, by Ottawa Car Manufacturing Co. The car was originally 31 ft. long over bumpers, and 7 ft. 3 in. wide, 21E truck, 2 Westinghouse 101B 40 h.p. motors 2 K10 controllers, hand brakes, manual sanders, double end operation, weight 22,000 lb. The remodelled car is 31½ ft. long over bumpers, 7½ ft. wide, and is equipped for single end operation, with 1 K10 controller, hand and air brakes, air sanders, complete new underframing, reinforced with steel plates, and weighs 22,500 lb. Its number has been changed to 48.

Board of Conciliation, Niagara, St. Catharines & Toronto Ry.

On application by Niagara, St. Catharines & Toronto Ry. employees, the Minister of Labor has appointed a board of conciliation consisting of, G. D. Kelley, barrister, Ottawa, representing the company; and Jos. Gibbons, a Toronto controller, representing the men. D. Dick, Jr., of Welland, Ont., is chairman. The cases submitted to the board are as follows:—

Conductor Bauer and motorman Lampman, commanding the crew of a regular passenger train, from Niagara Falls to St. Catharines, left Thorold on Oct. 2, 1920, without, it is alleged, having a proper clearance, and met an opposing passenger train, resulting in injuries to 18 passengers. The men were dismissed, and the union has asked for their reinstatement, with pay from time of dismissal.

Conductor Phillips was charged with using obscene and profane language to a passenger. The circumstances were thoroughly investigated, and the management found that even provocation was absent. The conductor was dismissed, and the union has asked for his reinstatement, with pay from date of dismissal.

Conductor Bowman was suspended five days for over-running train orders. The union has asked that he be paid for time under suspension.

Conductor Worley entered the service Aug. 11, 1918. The union wants him dropped to the foot of the list as of Aug. 11, 1920.

Conductor Wilson was suspended for not putting in accident reports. The union asked for his pay while suspended, but the case has been withdrawn by the conductor.

Conductor Hannah was removed from the cars on a charge of defrauding the company. He admitted his guilt and no restitution having been made, and as prosecution is still pending, the management withheld money due him, between \$5 and \$6. The union has demanded that this be paid him.

It is evident from the above that the most important question involved is whether the company's management is to be left with the officials, or whether it is to be handed over to the employees.

Municipal Councillors Disqualified from Electric Railway Management.—The Ontario Legislature has passed an act adding to sec. 53 of the Municipal Act, which deals with the disqualification of persons as members of a council, a subsection which disqualifies a person who is a member of a board or commission appointed or elected for the construction, management or control of an electric railway, owned, leased or controlled by a municipal corporation, or by any trustee, board or commission on behalf of such corporation. This disqualification is to operate notwithstanding the provision of any general or special act, or any bylaw of a municipal corporation.

Strapholding and Righteousness.—Thos. Adams, Town Planning Adviser, Dominion Conservation Commission, told a Toronto audience why the city is called "Toronto the good," the reason being the people through holding their hands up to Heaven when hanging on to the straps in the street cars.

Changes in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—See under "The B.C.E.R. Co.'s Proposed New Franchise" on another page of this issue.

Nipissing Central Ry.—Members of the Board of Railway Commissioners sat at Haileybury, Ont., May 13, to hear the Timiskaming & Northern Ontario Railway Commission's application for authority to put in operation the increased fares, which were detailed in Canadian Railway and Marine World for May, pg. 266. Residents of Haileybury, Liskeard, Cobalt and North Cobalt opposed the application.

Peterborough Radial Ry., owned by the Ontario Government, and operated by the Hydro Electric Power Commission of Ontario, started a Sunday service on May 1, from 9 a.m. to 11 p.m., the fare being 10c. No change has been made in the week day fares, as given in Canadian Railway and Marine World, for January, pg. 33.

Windsor, Essex & Lake Shore Rapid Ry.—A. Eastman, Vice President and General Manager, issued a circular to the company's patrons recently, announcing an increased service to be put in operation on May 1, and also an increase in passenger fares as follows:—

One way from from 2.5c. a mile to 2.75c. a mile.
Round trip fare from 2.25c. a mile to 2.47c. a mile.

School books from 1c. a mile to 1.30c. a mile.
Monthly commutation books from .5c. a mile to 1c. a mile.

5c. coupons, from 1.75c. a mile to 2.16c. a mile.

In commenting on these changes, Mr. Eastman said:—"This increase ranges from 10% on the one way fare to 30% on school books, or an average of about 15% based on the average. This is clearly a proposition presented and used. In putting this increase in effect, we feel the public are entitled to know why this advance is necessary in view of the fact that costs are supposed to be on the decline. Our gross receipts for 1920 were the largest in the road's operation, while our net earnings did not equal those of 1913, 1914 or 1916, and were only sufficient to meet our operating charges, and a part of our interest on investment."

"No advance in passenger fares has been made by the company since 1910, with the exception of some slight adjustment. The general public are conversant with the fact that even with substantial advances allowed both steam railways and interurban electric railways in both Canada and the United States, they are piling up, and the problem is a serious one. This is clearly shown by the report of the Railways Department covering the operation of Government owned railways for 1920.

"Only that we have enjoyed a splendid patronage and that operating expenses have been kept down to the lowest possible point consistent with safety, this company would not have been able to continue operation during the past three years at the old rate of fare. At present we are faced with an additional financial obligation of \$88,000, invested for additional equipment. We will also be obliged to meet heavy expenditures in connection with additional terminal facilities and paving in some municipalities. We have reached the limit of our borrowing capacity and from now on we will be compelled to meet the above mentioned financial obligations from earnings.

"A few outstanding facts may be of interest. In 1910, our operating costs were \$77,000.00, in 1920 they had increased to \$216,606.73, without any allowance being made for interest on investment, or depreciation. The average earning per passenger being about 25c., it required an increase in traffic of about 300% to break even with 1910. In 1912, we bought two passenger cars at a cost of \$18,000 each. Today's quotation for practically the same car is \$62,000. In 1910, our fuel bill was \$6,891.81; while in 1920 it reached \$48,285.47. The pay roll for 1910 was \$35,914.82; in 1920 it was \$104,483.42. From the above figures it can be easily seen just what use has been made of the earnings from the increased travel we have enjoyed.

"Developments in the territory through which we operate demand an increased service and we will make every effort to meet this demand. The interest of these municipalities and our company are mutual and are closely allied, and co-operation will result in the mutual benefit of both. We are asking you for an increased fare. We will try and furnish an increased service. We believe the public are willing to pay for what they get by way of service and we propose to meet the growing demand in this respect. One additional overhauled passenger car will be ready for service in a few days, and two more will be put into service as soon as they can be put through our shops. With three additional passenger cars, we feel we can furnish a satisfactory service."

Investigation and Valuation of Chatham, Wallaceburg & Lake Erie Railway.

The Ontario Government passed an order in council recently under the provisions of the Hydro Electric Railway Act, 1914, authorizing the Hydro Electric Power Commission of Ontario to investigate and report upon the matter of acquiring the Chatham, Wallaceburg & Lake Erie Ry., with a view to its operation as a hydro electric railway, as asked for by the City of Chatham, the Town of Wallaceburg, Erie Beach village and Chatham, Dover, Harwich, and Raleigh townships. Members of the Commission's staff are reported to have arrived at Chatham, April 27, and to have started valuing the property.

The Chatham, Wallaceburg & Lake Erie Ry., which for some years has been one of Sir Wm. Mackenzie's enterprises, extends from Erie Beach, on Lake Erie, to Wallaceburg, Ont., with a branch from Painscourt Jet, to Painscourt, a total of 40.77 miles. The power station and car repair shops are at Chatham, about half way between the terminal points. For some time past the line has been operated by Hydro Electric Power Commission of Ontario's power. The company has 8 motor passenger cars, 2 trailer cars, 80 freight cars, 1 other car, and 2 electric locomotives.

For the year ended June 30, 1919, the gross earnings were \$184,470, and operating expenses were \$152,971, leaving a net income from operation of \$31,499. Taxes and interest on funded debt were \$42,663, leaving a loss on the year's operations of \$11,064. The company carried during the year 239,390 fare passengers and 111,562 tons of freight, its cars running 460,000 miles.

The officers and officials are:—President, R. G. O. Thompson; Vice President, J. D. Morton; Secretary, H. S. Gasby; Auditor, J. A. Hogg, all of Toronto; Assistant to President, W. Keemle; General Superintendent, W. J. Curle; Accountant, R. C. Bissett; Freight Claims Agent, C. F. Waugh, all of Chatham, Ont.

Electric Railway Statistics for Calendar Year 1919.

The Statistics Act, and the Railway Act, 1919, changed the reporting year for railways from the year ending June 30, to the calendar year. Electric railway operating statistics for the year ended June 30, 1919, were given in Canadian Railway and Marine World for March on pages 156 and 157 and for April on pg. 212. The Dominion Bureau of Statistics, which is now preparing its report for the calendar year 1919, has issued the following summary of its principal items, with comparisons for the year ended June 30, 1919, as follows:—

Single track mileage, 1,687, a decrease of 10 miles. Total mileage of all tracks 2,400 miles; no change.

Capital stocks outstanding, \$91,757,418; funded debt, \$81,283,922; total, \$173,041,340, a decrease of \$14,950 in stocks. This was due to the removal of \$2,000,000 of stock of the London & Lake Erie Ry., which has ceased operation, and the stocks have been taken up. The funded debt increased \$2,431,734.

Gross earnings from operation, \$140,698,586 including passenger earnings, 37,427,456 and freight earnings, 2,259,598. This was an increase over gross earnings of June 30, 1919 of operation of 5,002,954.

Operating expenses—	
Maintenance of way and structures	\$3,470,306
Maintenance of way and structures	3,470,306
Maintenance of equipment	4,717,614
Operation of power plant	4,682,297
Operation of cars	13,046,108
General and miscellaneous	4,709,377
Total	\$81,385,702

This was an increase of 4,546,621

Income account—	
Gross earnings from operation	\$140,698,586
Operating expenses	81,385,702
Net operation revenue	5,912,884
Miscellaneous income	2,921,097
Total income	\$12,233,951

Deductions—	
Taxes	\$2,590,134
Interest, funded debt	4,043,081
Interest, floating debt	936,171
Other deductions	960,803
Total deductions	\$8,529,999

Net income, \$3,703,952

Reserves, etc., \$1,810,297

Dividends, 684,29

4,495,266

Total corporate deficit, \$971,460

This was an increase of \$10,460 in net operating revenue and a decrease of \$64,000 in corporate deficit.

Wages were, \$9,811,776

An increase of 5,960,545

Number of employees was, 16,940

A decrease of 302

The fare passengers carried were 749,334,880,

an increase of 63,010,117, or over 8%.

The passenger receipts gave an average of 5.01c per passenger, against 4.78c for year ended June 30, 1919, and 4.50c. for year ended June 30, 1918.

This does not include transfer passengers, but includes passengers in the interurban lines.

Ninety-one persons were killed by accidents and 4,173 injured, against 94 and 3,111 for year ended June 30, 1918.

Brantford, Ont., City Council is reported to have asked the Brantford Street

Railway Commission to cease running

one-way cars over level crossings of

steam railways which are not guarded by

a watchman.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—A press report states that plans are practically completed for the extensions proposed to be made this year of lines serving Mohawk Park, West Mill St., West Oxford St., Holmesdale and Terrace Hill, and Eagle Place, the estimated cost of which is \$79,852. The city council has authorized the issue of \$80,000 of debentures. (May, pg. 268.)

British Columbia Electric Ry.—We are officially advised that matters in connection with the change of the rule of the road in B.C. have been finally settled as between the company and the B.C. Government, and that work will be taken in hand shortly in regard to the changing of switches, cars, etc. A conference between members of the Government and George Kidd, General Manager, W. G. Murrin, Assistant General Manager, and A. T. Goward, Local Manager, Victoria, was held at Victoria, May 1, at which the whole matter was discussed. The work to be done will consist of changing the points of all switches, changing overhead wiring, and changing the fronts and ends of the cars. (May, pg. 268.)

The Grand River Ry. on May 1 began using its new line, on private right of way, in Kitchener, Ont., to Queen St. south, near Mill St., where a temporary station has been built. Previously the company had been using a line along King St., which has been abandoned and sold to the Kitchener & Waterloo St. Ry. The length of the new track is 1.742 miles, and the length of track abandoned is 0.935 mile. (Feb., pg. 92.)

Hamilton St. Ry.—A press report says that at a conference on May 17 between the Hamilton City Council's street railway committee and Hamilton St. Ry. officials, E. P. Coleman, General Manager, stated that the matter of laying new tracks on York St. rested with the directors. Members of the committee are reported to have asked for the laying of new tracks on King St., and some other lines. The city council is holding the question of the paving of York St. in abeyance until the company has settled about the track laying. (April, pg. 213.)

Kitchener & Waterloo St. Ry.—We are officially advised that the Kitchener, Ont., Light Commissioners, who operate the K. & W.S.Ry., have acquired from the Grand River Ry. Co. its abandoned line on King St., from the city limits to Water St., and installed a Y for turning cars at Maple Lane, 406 ft. east of the city limits. The K. & W.S.Ry. cars now make connection with the G.R.Ry. cars at this point, and it is probable that a joint waiting room will be built there. A 10 minute service is being given over this extension, which is about a mile from the Albert St. car barns, to which point the K. & W.S.Ry. operated up to May 1. (March 1920, pg. 145.)

London & Port Stanley Ry.—The Ontario Legislature has passed an act respecting the City of London, which provides, among other things, that the city council may, without the ratepayers' assent, issue \$275,000 30-year debentures, at not over 6% interest, to pay for an electric locomotive, steam shovels, rails, car barn, freight shed and passenger station extension, road crossings, platforms and shelters, overhead bridge at St. Thomas, coal ferry slip and scales, and

other works on the L. & P.S. Ry. (May, pg. 268.)

Montreal Tramways Co.—J. S. Archibald, of the Montreal Tramways Commission, is reported to have suggested a plan for the improvement of the company's lines terminating at Place d'Armes, The Square, to have waiting rooms on the east and west sides, connected by shelters; each waiting room to be the length of two cars, and passengers to pay their fares on entering.

The building of a line from Atlantic Ave. up Bremner St. to Ball St. has been under the Tramways Commission's consideration, and it is said that a single track line will be built during the summer. The contract with the city is for a double track line, but the Board of Railway Commissioners would only authorize the building of a single track above the level crossings near the C.P. R. Outremont yards, and would only permit empty cars to be over the crossing. The Tramways Commission, under the circumstances, will only order a single track line, and operate it as a stub line.

The Tramways Commission and company officials went over the system on May 9, to inspect track alterations completed recently, work in progress, and work contemplated. The season's work was started at the end of April, and is expected to be completed by Nov. 1. It is said to involve the expenditure of from \$1,500,000 to \$2,000,000, and the employment of some 1,500 men. The work in hand, or contemplated, includes the extension of a number of tracks, which will add about 15 miles to the lines; the laying of about 1,000 tons of new rails, and the putting in of about 60,000 new ties. The extensions to be made are on the Park Avenue and Bordeaux Avenue, Kelly St., and Sherbrooke St. lines, and the other work completed, in hand or contemplated is on the following lines:—St. Lawrence St., from Mount Royal to Bernard; the intersection of Notre Dame and Craig; intersection of St. Catherine and Marlborough; intersection of St. Denis and St. Catherine; St. Catherine from St. Lawrence to Green; St. Catherine from Glen to Victoria; Ontario from St. Lawrence to Frontenac; St. Denis St. from Decarie to Isabeau.

The Tramways Commission has decided to delay until May 1922 the following works authorized in the contract between the city and the company in 1918:—Laying of second track on Kelley St.; building of track from the De Fleury street line eastward, and laying of a second track on the Iberville Masson line. (May, pg. 268.)

New Brunswick Power Co.—At a meeting of the St. John, N.B., City Council, May 9, Commissioner Thornton recommended that the city pave Douglas Ave., and tear up the rails and posts carrying the New Brunswick Power Co.'s overhead work if the company refuses to comply with its alleged agreement to lay grooved rails. At another meeting, May 11, the city's road engineer reported that the city has the right to remove the rails and tie on the Avenue, to lay down a base and surface, and that when the company has to restore the tracks the council could prohibit the laying of the old rails and ties, on the ground that the material is a menace to public safe-

ty. The Mayor is reported to have advised the council that an arrangement was likely to be effected as to the purchase of new rails required for the work. (May, pg. 268.)

Ottawa Electric Ry.—We are officially advised that the company proposes to renew about two miles of double track during this year, and has ordered 200 tons of steel rails in the United States. (April, pg. 213.)

Regina Municipal Ry.—D. W. Houston, Superintendent, is reported to have informed the Regina, Sask., City Council recently that he intended to recommend that when the existing Y's give out at the ends of the lines, loops be installed instead. (Aug., 1920, pg. 450.)

Saskatoon Municipal Ry.—Tenders are reported to be under consideration for the supply of approximately 5,000 ties for replacement on this line. (Feb., pg. 92.)

Toronto Civic Ry.—The Ontario Legislature has authorized the city council to issue debentures, without submitting bylaws to the ratepayers, for the following works:—Building street railway, Prince Edward viaduct, from Sherbourne St. to Broadview Ave., \$185,000; installation of insulated negative feeder cable, Danforth Ave. line, to prevent electrolysis, \$31,350. (Jan., pg. 36.)

Freight Traffic in Montreal.—The Montreal Administration Commission and the Montreal Tramways Co. are reported to have agreed upon the operation of freight traffic. The new regulations provide that no delivery be made in the streets after 5 p.m., that no cars stop on the streets between 5 p.m. and midnight, and that from Nov. 1 to April 1, no delivery shall be made after 4 p.m.; that the chief of police be informed when freight is to be delivered in the streets; that, unless precautions are taken, no freight liable to damage the pavements shall be delivered; that no freight be delivered to consignees who neglect to remove it promptly; that the city on giving 12 hours notice may prevent the delivery of freight on any street; that 5c. a ton be paid by consignees, not doing work for the city in compensation for the cleaning and upkeep necessitated by the unloading of freight on the pavements, this 5c. a ton not to be collected on materials required for municipal works; and that the city may prevent permanently the carrying of freight by giving the company notice on or before any Oct. 1, the notice to take effect on Jan. 1 following.

London & Lake Erie Ry. and Transportation Co.'s Liquidation.—The Dominion Parliament has passed an act authorizing the company to sell its right of way and other property of all kinds, in block or in parcels, subject to the consent of the Fidelity Trust Co. of Toronto, trustee for the bondholders, and the approval of two thirds in value of the stockholders. The company, in winding up its affairs, has already sold the steel rails lifted from the track, the overhead work, and some other property. A recent press report states that a portion of the old right of way may be acquired by the Ontario Government to widen the highway between Lambeth and Talbotville.

Electric Railway Employees' Wages, Working Conditions, Etc.

Cape Breton Electric Co.—Notice of a reduction in salaries and wages of from 8 to 10% to affect all grades of employees was announced April 30, to take effect May 1. The reason given by C. C. Curtis, Manager, for the reduction, is decreasing business owing to the industrial depression. A press report states that the men accepted the reduction. The existing fares on the company's lines will not be affected by the reduction in wages, as it is stated that owing to the decreased patronage of the cars the company is barely able to make ends meet.

Detroit United Ry.—A Detroit, Mich., press dispatch of May 7 said that 80% of the car men employed by the D.U.R., in Detroit, Port Huron, Flint, Ann Arbor, Pontiac and Mount Clemens, had voted to accept a wage reduction, and that the new scale, effective May 18, would be 55, 58 and 60c, an hour, against 70, 73 and 75c, under the old scale.

Montreal Tramways Co.'s employees are reported to have been advised that the company will not renew the present agreement as to wages, etc., which expires June 30. The employees met subsequently and are reported to have expressed a desire to work under a contract including the conditions embodied in the present agreement, and a committee was appointed to communicate the decision to the management. It was stated May 14 that the men's representatives had decided not to wait on the company's officers on that date, as had been arranged.

The New Brunswick Power Co. is reported to have notified its employees that it will not renew the agreement as to wages, etc., which expires June 14, and that it will insist on a reduction.

The Winnipeg Electric Ry. has signed an agreement with its motormen and conductors for the next twelve months, giving conductors and motormen the same wages and working conditions as prevailed under the previous agreement. The 1920 agreement was made between the company and the Street Railway Men's Union, this union being an independent organization, with no affiliation with the Internationals or any other body. Since the agreement was signed, May 1, 1920, the trainmen joined the One Big Union, a political organization with revolutionary tendencies, and which was directly responsible for the six weeks strike in Winnipeg in 1919. When the expiry of the 1920 agreement was near, the Street Railway Men's Unit of the O.B.U. demanded that the company sign its new agreement with them as representing the O.B.U., thus giving recognition to this body. This the management positively refused to do, and declined to negotiate with the O.B.U. at all. The company said it was prepared to negotiate an agreement with a committee of the men, but that if the men insisted on recognition of the O.B.U. the company would go to arbitration and insist on the whole agreement as to wages and working conditions. After several mass meetings the demand for recognition of the O.B.U. was withdrawn, the men appointed a committee to represent them, and an agreement was signed on May 9 between the company and motormen and conductors of Winnipeg Electric Ry. Co., as represented by a committee executing this agreement. In

all its agreements so far executed with its employees the company has agreed to maintain the same rate of wages as prevailed last year, and all agreements contain the following: "If at any time during the currency of this agreement, by any reason of something beyond its control, the company is deprived of any considerable portion of its revenues, and is thereby rendered unable to pay the wages herein agreed to, the company shall be at liberty to give 30 days notice to terminate this agreement, in no far as it affects the rates of wages."

The conductors and motormen's wages under the old agreement, which has been continued, are as follows per hour:—First six months 50c, second six months 53c, second year 57c, after second year 60c. Sunday work, 5c. an hour extra. Overtime paid for as time and a half.

Mainly About Electric Railway People.

Sir George Garneau attended a sitting of the Quebec Public Service Commission, April 26, to say farewell to his former colleagues and the members of the staff. A. W. McAllister, who succeeds Sir George, assumed office April 27.

Major Paul A. Lazenby, who was appointed Engineer, Toronto Transportation Commission, recently, was born in Lancashire, Eng., Aug. 6, 1880. He graduated in arts from Glasgow University in 1900, and subsequently took a course in civil engineering at the Massachusetts Institute of Technology, graduating in 1904. Later he spent about four years in general engineering and construction work, Chicago, Burlington & Quincy Ry., in charge of grade separation in the Chicago district, and subsequently entered Grand Trunk Pacific Ry. service at Winnipeg, where he had charge of construction at various points for about two years. He was then Assistant Engineer on construction of the Point du Bois hydro electric plant for the City of Winnipeg, and later returned to Chicago, Burlington & Quincy Ry. service. In 1910 he was engaged on valuation work for the New York Central Rd., and in 1911 was Assistant Engineer, with the Chicago Planning Commission, engaged on the preparation of a city plan, in the course of which he made a study of the various transportation problems there. He resigned this position in 1915 on becoming Principal Assistant Engineer for the Toronto Civic Transportation Commission, and on the outbreak of war he enlisted with the 2nd Canadian Pioneers and served until the signing of the armistice at the end of 1918. On returning from overseas he engaged in private practice in New York City until his present appointment.

Col. C. W. McLean, Member of the British Parliament for Trigg, Lincolnshire, and Parliamentary Secretary to the Colonies, who has announced that he will retire at the next general election, is a son of Major General H. H. McLean, M. P. for Royal, St. John, who was at one time President, N.B. Ry.

R. A. MacNaughton, who has been appointed General Accountant, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., was presented with a gold watch, May 4, by his associates in C.P.R. General Auditor's office, Montreal, where he had been chief clerk for some time. He

was for some years Secretary-Treasurer, Kingston & Pembroke Ry., and entered C.P.R. service when it absorbed the K. & P.R.

Percy W. Thomson has been appointed General Manager, New Brunswick Power Co., which operates the St. John Ry., St. John, N.B.

Electric Railway, Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	8 mos. to Feb. 28, 1921	8 mos. to Feb. 28, 1920
Gross	\$792,590	\$746,039
Expenses	558,055	493,222
Net	234,535	252,809

The Detroit United Ry. is asking the Michigan State Public Utilities Commission for authority to issue \$275,000 par value capital stock to provide for a dividend of 2½% on the \$15,000,000 capital stock now outstanding, to be paid to stockholders June 1, in lieu of the regular cash dividend. The directors state that this action is taken because of the abnormal business conditions and to conserve the company's cash resources.

Fort William Municipal Ry.—The following statement of earnings for the four months ended April 30 have been published in a local paper:—Jan., \$18,406.15; Feb., \$16,810.71; March, \$18,109.68; April, \$15,760.68.

Hydro Electric Power Commission of Ontario Bonds.—We are officially advised that an issue of \$1,340,000 of 4½% bonds by the Commission, and guaranteed by the Ontario Government, has been oversubscribed. They constitute a first mortgage on the Sandwich, Windsor & Amherstburg Ry. and the Windsor & Tecumseh Ry., subject only to underlying bonds totalling \$679,000, of which \$490,000 mature Dec. 1922, and \$189,000 in 1927. The two railways mentioned were taken over by the Commission in 1920, and are operated as the Hydro Electric Ry. Essex Division, under the powers conferred upon the Commission by the Hydro Electric Railway Act of 1914, and amendments to the same.

Oshawa Ry. Co.—The Dominion Parliament has authorized the directors to fix the date of the shareholders' annual meeting, as they may determine from time to time, instead of the fixed day provided in the Dominion Statutes of 1900, chap. 70.

Port Arthur City Ry.—The following comparison of earnings for the four months ended April 30 has been published in a local paper:—

	1920	1921
Jan.	\$15,361.64	\$17,608.28
Feb.	13,066.63	17,988.91
March	15,508.78	17,461.59
April	14,808.54	14,688.62

Toronto Ry., Toronto & York Radial Ry. and allied companies:—

	2 mos. to Feb. 28, 1921	2 mos. to Feb. 28, 1920
Gross	\$1,129,741	\$1,115,717
Expenses	824,912	742,502
Net	304,829	373,215

Winnipeg Electric Ry. and allied companies:—

	3 mos. to Mar. 31, 1921	3 mos. to Mar. 31, 1920
Gross	\$495,209	\$456,915
Expenses	390,535	353,274
Net	104,674	103,641

Surplus after allowing for fixed charges for March, \$56,015.

Sale of Toronto Railway Co.'s Subsidiary Companies to Hydro Electric Power Commission of Ontario and the City of Toronto.

The Ontario Legislature has passed an act authorizing the purchase and operation of certain radial railways by the Hydro Electric Power Commission of Ontario on behalf of the City of Toronto and another act respecting the purchase by the City of Toronto of the assets of certain companies. These two acts deal with the proposed purchase from the Toronto Ry. Co. of its electric railways, power plants, etc., outside the Toronto Ry.'s property, the details of which are being worked out, and the ratification of the agreements for which sale was to be voted upon by the shareholders of the company at an adjourned special meeting on May 27.

The first act authorizes the Toronto Ry. Co. to sell and the H.E.P.C. of Ontario to buy, on terms to be agreed upon, the shares, securities, property and rights of the Toronto Power Co., formerly the Toronto & Mimico Ry. Co., the Toronto & York Radial Ry. Co., the Schomberg & Aurora Ry. Co., the Toronto & Scarborough Electric Ry., Light & Power Co. and the Metropolitan Ry. Co. Upon completion of the purchase the properties of the Metropolitan Division (including the Schomberg & Aurora Ry.), the Mimico Division, and the Scarborough Division, shall be vested in the Commission on behalf of the City of Toronto, subject to the making of agreements as of Dec. 1, 1920, drafts of which are given in schedule A of the act. The properties so acquired and vested shall be controlled, equipped and operated by the Commission, which shall exercise, in respect to them, all the powers, duties and obligations it is empowered to exercise in respect of lines constructed under the Hydro Electric Railways Act, 1914. Agreements may be made with any municipalities through which any of the lines pass, to admit them to parties to the agreement in respect of such portion of the line, or extension thereof, as may be within their boundaries, such agreements to be approved by the Ontario Government, and submitted to a vote of the ratepayers. Provision is made for the issue of debentures in connection therewith without further vote of the ratepayers. The purchase price of the railways to be acquired shall not exceed \$2,375,000, in payment of which the Commission may issue 20-year 6% bonds dated Dec. 1, 1920. Of the bond issue \$1,875,000 is to be a charge on the Metropolitan Division, \$260,000 on the Mimico Division, and \$240,000 on the Scarborough Division. The Commission is authorized to dispose of any of the property not required for railway purposes, and to utilize the proceeds for expenditures on capital account, or to invest them in Ontario securities towards the retirement of the bonds at maturity. The Toronto City Council is authorized to issue \$2,375,000 of 50-year 6% bonds, to be charged as stated above on the several divisions, and to deposit the same with the Commission. Additional bonds or other securities may be issued to meet the capital cost of extensions, additional equipment, etc., and provision is made for the establishment of a sinking fund after 10 years from the date of the agreement. In the event of the revenue of the several lines not being sufficient to meet the operating and all other charges, the deficits shall

be paid by the City of Toronto. The bonds to be deposited by the city are declared to be collateral security held by the Commission and may only be used for certain specific purposes mentioned in the act and agreements.

During the discussion of the bill in the Legislature a section providing for the barring of any present or future claim by the County of York against the City of Toronto or the Metropolitan Ry. Co., or the Toronto & York Radial Ry. Co., arising out of any agreement between the county and the Metropolitan Ry. Co. was dropped. This matter has to do with the agreement under which a certain number of express cars, principally carrying milk, are taken into Toronto daily, and negotiations are reported to have taken place between the county authorities, the H.E.P. Commission and the Toronto Ry. with a view to a settlement.

The second act authorizes the City of Toronto to buy the distribution systems of the Toronto & Niagara Power Co. and the Toronto Electric Light Co., or either of them, upon terms to be agreed upon, and the tracks, poles, lines and works of the Toronto & York Radial Ry. Metropolitan Division, situated on the highways within the city limits. The City Council is authorized to issue \$7,811,295 of 20-year 6% debentures, dated Dec. 1, 1921, in payment for the properties. The properties acquired are to be placed under the Toronto Hydro Electric Commission for operation as part of the system for the supply of electric light, heat and power at present operated. The railway property acquired is to be controlled and operated as part of the city's municipal street railway system. The City Council is authorized to transfer to the H.E.P. Commission of Ontario certain railway assets it now owns within the city on the Kingston Road and on the Lake Shore Road, and to enter into an agreement with the Commission for the construction by the latter, or by the city, of a railway upon these roads, and for the giving by either party to the other of running rights or, in the case of the Lake Shore Road, of a right of way.

Alleged Car Ticket Thefts by Winnipeg Electric Railway Employees.

Walter Inman, who is reported to have had charge of fare boxes used on a section of the Winnipeg Electric Ry., and Charles Outerson, one of the company's office staff, were charged recently with dealing fraudulently with car tickets, involving an amount estimated at from \$15,000 to \$20,000, during the last eight months. Inman was arrested in Winnipeg, May 7, and Outerson was arrested in Montreal, on the same date, after having taken passage on the s.s. Minnedosa for England. Superintendent Brown of the Manitoba Provincial Police, who is in Montreal, May 10, took Outerson back to Winnipeg. Inman was taken before the Winnipeg Police Magistrate, May 11, and remanded for a week, to await Outerson's arrival.

The two men arrested are alleged to have been taking about \$70 worth of tickets a night, and to have been selling them in small bundles through some 35 accomplices. The case has been in po-

lice hands for about two months, and their investigations led to the arrest of Inman in the alleged act of selling tickets in a cobbler's shop at Norwood. Inman is stated to have made a confession in which he gave the names of a number of accomplices, and on the strength of which the Montreal police were telegraphed to arrest Outerson. Inman, who collected about 20 fare boxes every night at the north end car barns, is said to have appropriated quantities of tickets therefrom, which he handed over to Outerson, who disposed of them to a number of others who acted as wholesale distributors. The tickets were retailed in bundles of 100, tied with white string, in Norwood, Transcona, the Labor Temple, the Canadian National Ry. shops and at stores where passengers waited for cars. Prices ranged from \$2 to \$3.50 for 100 tickets, and credit is stated to have been extended to the retailers, who were called upon weekly for settlements. Six persons are said to have confessed to participation.

London Street Railway, Operation, Wages, Etc.

The Ontario Railway and Municipal Board made an order on April 20 declaring that the directors of the London St. Ry. Co., having undertaken to take possession of the railway property and to operate the railway upon terms and conditions agreeable to the Board, having regard to the company's revenues and the requirements of the property, plant and equipment of the company, the Board rescinded its order of May 5, 1920, under which it took possession of the company's railway, etc., and operated it under the management of A. B. Ingram, the Board's Vice Chairman. The Board fixed midnight, April 30, as the time when the railway would be handed back to the company.

In preparation for taking over the line the company's officials had a conference with the men's representatives on April 29 as to wages, and proposed to continue the guaranteed rate of 48c. an hour, but stipulated that the wage question might be re-opened by either party on giving 30 days notice, during the year for which the agreement would be made. The men at a meeting on April 30, did not take any action on the proposal. The company started to operate the line May 1, the men continuing to work under the old agreement. The men held an adjourned meeting May 5, when it was decided to take a secret vote as to whether there should be a strike or not. The principal question at issue does not seem to be the rate of wages, but the clause that the working agreement may be reopened by either party giving 30 days notice. The company having refused to comply with the men's demands as to the proposed agreement, the men's executive decided May 9 to apply to the Labor Department for a board of conciliation, and to withhold taking a strike vote until after the Board makes an award.

Street Railway Conductors as Church Ushers.

"How is it the Rev. Mr. Cooper always has the front seats in his church well filled?"

"His head usher is a street car conductor."—Winnipeg Electric Railway Service News.

Proposed Abolition of Manitoba Public Utilities Commission.

The usefulness of the Manitoba Public Utilities Commission was questioned in the Manitoba Legislature, April 22, by members of the labor party, and the Attorney General stated that while the Government would consider the question of doing away with the Commission, it would refuse to entertain proposals for a reduction in salaries, and the curtailment of the Commission's powers in regard to contracts entered into since the Public Utilities Act was passed, until after the British Privy Council's decision had been given. A motion to reduce the vote for the Commission's expenses from \$17,700 to \$10,000 was defeated.

Subsequently P. A. Talbot moved that the Commission, having outlived its usefulness, should be abolished, and its duties transferred to the Provincial Secretary's Department. The discussion was adjourned and resumed on April 28, when the Premier invited members to give a straight expression of opinion, but contended that the Commission had justified its existence, independent of matters affecting the Winnipeg Electric Ry. The Attorney General pointed out that the Commission had issued 441 orders, of which 107 were against the Winnipeg Electric Ry., 27 against the Rapid Transit Co., and 57 against the Winnipeg, Selkirk & Lake Winnipeg Ry. The motion was carried by 24 to 21.

The passing of this resolution does not mean that the Commission will cease to exist at once, but as an expression of the Legislature's opinion which the Government will have to consider, and possibly bring a bill next session to give effect to it.

A bill was introduced by J. Trisen to amend the Public Utilities Act by limiting the Commissioner's powers to change provisions of contracts, but it was rejected by the Legislature subsequent to the passing of the Talbot resolution.

Address in Ottawa on Service at Cost.

An address on the service at cost plan of street railway operation was given before the Ottawa Board of Trade recently by W. E. Cann, Street Railway Commissioner of Toledo, Ohio, where the street railways are operated on the service at cost plan. He pointed out that a street railway is as necessary to a community's development as water service or sewers. Almost everything is bought on a fluctuating scale, and there is no reason why street railways should sell transportation on a fixed price plan. It is the right of citizens to have transportation at cost as they have water service. Service at cost could not be satisfactorily supplied under municipal ownership. Of the 45,000 miles of street railway only 310 are under municipal ownership and these in every case charge higher fares than when under private ownership.

Private ownership had not proved a great success, for one, among other reasons, viz., that capital for extensions cannot be obtained except at ruinous rates. The public will either have to pay higher fares or put up with a poor service, or else the investor will get no return on his money. Service at cost steers between the two conditions. It allows investors a fair return on their money, it allows a community to say

just what sort of street car service, and what extensions it desires, and the community in question has to pay only for such service as it demands. Service at cost sets up company and municipal machinery that works in co-operation to provide a satisfactory service, and has to do with fixing suitable rates, upward or downward. The first object of any franchise is to give a good service to the public; the next is to give service at rates acceptable to the public as low as the utility can give and still live. Under a service at cost system, there should be sufficient elasticity to allow the rates to be readily readjusted to meet fluctuating costs, otherwise somebody has to suffer. The preparation of such a franchise is a matter requiring great care, proper consideration being given to questions of existing trackage and future extensions; the valuation must be based on the real values, and the rate of return to investors should be reasonable. Care should be taken in the appointment of the city's representatives on the board of management; the street railway commission should have absolute direction over the service, and the rate of fare should be on a sliding scale with provision for periodical adjustments, and a fund should be provided to take care of fluctuations.

The various points in the address were illustrated with facts from the experience of places where the service at cost plan is in operation. A number of pertinent questions were asked and answered.

Proposed Purchase of Ottawa Electric Railway.

Ottawa City Council passed a resolution April 5 asking the Hydro Electric Power Commission of Ontario to make a valuation of the Ottawa Electric Ry. Co.'s property. On April 30 the City Council was advised that T. U. Fairlie, of the Commission's engineering staff, would make the valuation, and he arrived in Ottawa May 5 to make arrangements for the work. The city board of control invited the company to give him permission to make the valuation, and on May 6 the company's Secretary-Treasurer replied that the agreement between the city and the company provides for the determination of the value of the company's assets by arbitration, and not by a valuation at the instance of either one party. If the company were to facilitate a valuation on behalf of the city alone the result would only be still more confusion in the minds of the ratepayers who might not realize that such a valuation would not be binding on the company. It is reported, however, that Mr. Fairlie is proceeding with a valuation and that the city's commissioner of works is co-operating with him.

The company's position, in connection with the matter, is expressed as follows: "No one is more anxious for an early settlement of the street railway matter than we are, but we do not believe that a valuation of our property by Mr. Fairlie would help to attain a settlement, or result in anything more than an appraisal for, and at the request of, one party to the contract under which we operate. Nor would his report be of any more value because a representative of this company went over the ground with him and made a similar report at the same time. Thirty years ago we signed a contract for the operation

of an electric railway in Ottawa. That contract was drawn up by the city, and considerable space in it is devoted to a description of how a valuation shall be made and what the basis of such a valuation shall be. It insists upon a board of arbitration instructed to determine the actual value of the tangible assets necessary for the operation of the railway. This was the method specified by the city, and is the only one that we can agree to under any circumstances. Any preliminary or tentative valuation which does not follow the procedure laid down in the contract will entail a needless waste of time and money and lead to unprofitable argument. It could only be regarded as an estimate by a man representing one party to the contract, and could never be used as a foundation for a new agreement. We do not question Mr. Fairlie's fitness as a valuator or as a member of a properly constituted board of arbitration. Nor do we know why the city should at this late date attempt to obtain a valuation by some other method than that prescribed by the contract. A fair valuation of the property is essential in the settlement of our street railway problem, and we stand ready to co-operate with the city at any time in a valuation conducted in accordance with the terms of our contract."

Guelph Radial Railway Transfer.

The Ontario Government passed an order in council April 27 authorizing the transfer of the Guelph Radial Ry., which is owned by the city, to the Hydro Electric Power Commission of Ontario. The order confirms the agreement made between the city, the Hydro Electric Power Commission of Ontario, and the Guelph Radial Ry. The terms of the agreement were stated fully in Canadian Railway and Marine World, and it was voted on by the ratepayers on Jan. 1, 1920. The city undertook to sell to the Commission the whole of the Guelph Radial Ry. Co.'s property and assets, for \$150,000, payable in 20 instalments of \$11,700 each. The city council agreed to bear the cost of acquiring, equipping, maintaining and operating the line as established by the Commission, and to provide the funds therefor, and agreed to issue \$300,000 of 5% debentures to be deposited with the Commission either on completion of the agreement or as required. The agreement has been ratified by the Ontario Legislature.

The railway has been under the Commission's management for over a year, and its ownership has now been transferred to the Commission as from May 1. Conferences have been held to arrange for paying and other works to be taken in hand, and it is reported that 10 new one-man cars have been ordered.

Steady Employment on Electric Railways.—From surveys made it is shown that of the 2,000,000 unemployed men in the United States not one is a street railway worker. The street railway industry provides work for men year in and year out. Many industries which made fabulous profits during war years, while the street railways were struggling along on a bare existence, have been the first to cut wages and reduce staffs. In these uncertain times those men are fortunate who have steady positions with street railway companies.—Winnipeg Electric Railway Service News.

Electric Railway Notes.

The New Brunswick Power Co. will, according to a press report, place one-man cars in operation in June.

The Chatham, Wallaceburg & Lake Erie Ry. put in operation on May 1 Standard Freight Tariff C.R.C. 646.

Peterborough, Ont., Radial Ry. began operating Sunday cars on May 1. A 20-minute service is being given with a 10c. fare.

St. Thomas, Ont., Municipal Ry. began Sunday operation on May 8. Agitation for a Sunday car service there had been going on for about 20 years.

Lightning struck a street car on Ontario St., Montreal, on May 22, and in the panic that ensued when the car took fire a woman jumped from the car and fractured her skull and broke her arm.

Winnipeg Electric Railway has changed the system of handling fares on its Westminster Ave. and Stockyards motor busses, from pay-as-you-leave to pay-as-you-enter, the latter system being in force on its electric cars.

The Quebec Ry., Light & Power Co. has arranged for the showing in Quebec of a series of motion pictures illustrating street dangers. The first films, it was arranged, would be shown from May 23 to 28; the second from June 15 to 17, and the third later in the month.

The Calgary, Alta., City Council is reported to have had a discussion on seniority as affecting night work on the Calgary Municipal Ry., and to have adopted the Commissioners' recommendation that senior motormen work on night duty one month out of every four. The motormen have agreed to this recommendation.

D. W. Houston, Superintendent, Regina, Sask., Municipal Ry., is reported to have stated that the cost of converting the cars for one-man operation would be between \$13,000 and \$14,000. It is suggested that the cost be spread over two years instead of charging it all against 1921 revenues.

Edmonton, Alta., Radial Ry. officials have decided to enforce the rule that a passenger must pay his or her own fare on getting on a p.a.y.e. car. A local paper says:—"The public will have to blime what inconvenience the rule imposes upon them, to the reaction of the public who are dishonest enough to cheat a crippled enterprise out of the price of a street car ticket."

Negotiations with respect to operating conditions, etc., authorized to be carried on by the Winnipeg City Council, with the Winnipeg Electric Ry. Co., details of which were given in Canadian Railway and Marine World for May, pg. 265, have been entrusted to a sub-committee of the public safety committee, the members of which are:—Mayor Parnell, Aldermen G. Fisher, J. K. Sparling and W. Douglas.

T. Blundell Brown, of London, Eng., one of the British Columbia Electric Ry. directors, who is visiting Vancouver, unveiled a brass tablet honor roll recently containing the names of all employees who served in the great war. The tablet is affixed to the wall in the main hall of the company's Vancouver office. The number of employees serving in the war was 615, of whom 490 were from the mainland staffs, 117 from the Vancouver Island staffs, and 8 from the London, Eng., office.

The Quebec Court of King's Bench gave judgment recently, reversing a Superior Court judgment directing the Montreal Tramways Co. to pay \$2,000 to the Compagnie d'Immeubles de Montreal for right of way over a piece of land on Queen Mary Rd., Cote des Neiges. The right to lay tracks on the land was originally granted by the then owner, D. J. Decaire, in June, 1895, on certain conditions. The Superior Court held that the conditions had not been complied with and that the "gift" was subject to the law of articles 776 and 791 of the Civil Code. A majority of the King's Bench judges were of opinion that the Tramways Co. had fulfilled all the obligations imposed upon it by the grant of the right of passage; it was not a conveyance of the land, but a granting of a right of passage, to be enjoyed by the company so long as it fulfilled the conditions. The judgment of the court below was therefore reversed.

Ontario Hydro Electric Railways Enquiry.

The commission appointed by the Ontario Government to enquire into the proposed system of hydro electric interurban railways to be built by the Hydro Power Commission of Ontario held a number of sittings in Toronto during May, when evidence in support of the proposals was given. The principal witnesses examined were Bion J. Arnold, of Chicago, and F. A. Sager, a member of his staff.

The Prime Minister of Ontario stated, during the closing sitting of the Legislative Assembly, on April 30, that it was impossible to state definitely when the enquiry would be completed, but that it was reasonable to hope that the taking of evidence, and counsels' arguments, would be finished by the end of May, or early in June. It was difficult also to estimate what time would be necessary to enable the commissioners to prepare and complete their report, but it would be done as soon after that as possible. There had been received by the Commission, and expended on the taking of evidence, and copies thereof, the fees of the commissioners, their secretary, counsel and expert fees and expenses, about \$55,000. The Commission did not feel that they could safely estimate how much further expense might be involved, beyond saying that it would be a very substantial sum.

Detroit United Railways and the City, Canadian Railway and Marine World for May stated on pg. 268 that Detroit voters had "approved of an ordinance to buy the company's lines as the franchises fall in." We are advised that the vote authorizes the Street Railway Commission to buy from the company certain tracks and properties built by the company from time to time, under "day-to-day" ordinances which specifically provided that the city, if it entered municipal ownership, would have the right to buy under the terms as set forth. The referendum vote was the public consent to the Commission conducting such negotiations, the price to come out of a \$15,000,000 bond issue approved the year before. Further purchases, if made, will require further negotiations, involving the company's consent as well as the people's approval.

Answers to Questions on Electric Railway Topics.

Answers have been sent by Canadian electric railway officials, to questions through the American Electric Railway Association's question box, as follows:—

Wrecking Crews.—(a) Do emergency wrecking crews report to overhead line department or to transportation department? (b) Are emergency vehicles horse-drawn or motor operated? (c) How many men constitute the crew? (d) As a result of change to motor equipment has it been possible to increase radius of action and territory served and thus reduce number of stations? (e) What capacity of vehicle is used in this service? (f) What other advantages result from motor operation?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—(a) Emergency crews looking after overhead wire report to line department. If trouble is found by transportation department it is reported to line room. (b) Motor operated. (c) For a small trouble such as broken wire, one lineman goes out, the driver being a groundman. If wire down, at least two linemen are sent. Ordinary repair crew consists of two linemen and driver. (d) Have not used other than motor equipment since 1911. (See answer to f.) (e) One 3-ton and one 2-ton; the latter having higher speed is held for emergencies when the former is out on repair work. (f) Advantages of motor service are shorter time in getting away and reaching scene of trouble, and greater mobility while at the job.

F. L. Butler, Manager, Winnipeg Electric Ry.—(a) Emergency crew reports to overhead line department. (b) Emergency truck is motor driven. (c) Emergency linemen and driver form the crew. (d) Yes. (e) One-ton Studebaker. (f) Quicker service and more service with less men.

Car Body Balance.—What means have member companies used to balance car bodies on trucks, and what results have accrued, in riding qualities, wheel wear, etc., from same?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—When arranging equipment, we obtain the weight of each piece, and as nearly as possible arrange the load so that the center line X weight so that all pieces on each side will balance. This results in less side bearing friction, easier riding, and consequent saving in both power and maintenance of wheels.

H. E. Weyman, Manager, Levis County Ry.—We have had 12 safety cars in operation for 20 months now and have had no trouble from nosing. Some of them are operated on suburban lines at 20 miles an hour and no trouble has developed. We think that if such did develop it would be due entirely to the track condition and not the cars.

Car Failures.—Are any records of car failures kept; if so, what is the car mileage per failure?

D. E. Blair, Superintendent, Rolling Stock, Montreal Tramways Co.—Complete records of car failures are kept and a monthly analysis of these is sent to each car barn foreman. Average mileage per car failure, including trivial defects, year ended July, 1920, was 1,530 miles; eight months ended February, 1921, was 1,480 miles.

Marine Department

Canadian Government Merchant Marine, Ltd., Annual Report.

Canadian Government Merchant Marine Ltd. directors' second annual report for the calendar year 1920, has been issued over the signature of D. B. Hanna, President, addressed to the shareholders, as follows:—

Ships in Operation.—During 1920 your fleet of ocean going cargo steamships has been increased from the 19 covered by the first annual report, to 47 ships, with a total deadweight tonnage of approximately 255,000 gross tons. Of these, 25 are new ships completed by the various shipyards throughout Canada during the year, while the steamships Drummond, Sheba and McKee were transferred from the Railways and Canals Department on April 1. The financial statement herewith submitted covers the operations for the full year of the 19 ships delivered during 1919, for nine months only of the Drummond, Sheba and McKee, and for a portion of the year, according to the date of delivery, of the 25 new ships delivered during 1920.

Ownership.—As explained in the previous report, a separate company has been organized for each ship, and the capital stock of each company is owned by Canadian Government Merchant Marine Ltd. Under an operating agreement with each of these companies, Canadian Government Merchant Marine Ltd. operate all of the ships, and keep separate accounts for each company. Promissory notes have been given to the Minister of Finance and Receiver-General of Canada for the total capital stock of each ship, with interest payable at the rate of 5½%. The results are here shown, for the sake of convenience, for the entire fleet.

The balance sheet submitted with the first annual report showed only the operating results, as it was impossible at the time, on account of the capital charges not having been settled with the builders, to include the capital cost of the ships, or make provision for interest and depreciation. Statements are submitted for both fiscal years 1919 and 1920:—

Income Account 1919.	
Gross earnings, closed voyages.....	\$ 2,779,633.98
Operating expenses, closed voyages.....	1,722,566.60
Operating profit.....	1,056,767.38
Deduct—	
Interest due Dominion Gov- ernment to Dec. 31, 1919.....	\$415,353.36
Depreciation.....	150,995.01
	666,353.37
Balance to profit and loss account.....	\$ 490,414.01
Income Account 1920.	
Gross revenue, closed voyages.....	\$10,027,442.77
Operating expenses, closed voyages.....	8,733,917.22
Operating profit.....	\$ 1,293,525.55
Deduct—	
Reserve for depreciation.....	\$667,665.46
Reserve for outstanding liabilities.....	22,000.00
Incorporation expenses.....	5,400.00
	695,065.46
Net earnings after all charges, includ- ing depreciation, but before allow- ance for interest.....	598,460.09
Net earnings on voyages closed since January applicable to 1920.....	183,000.00
Total net earnings available for in- terest.....	\$ 781,460.09

The above is equal to 2.35% on notes given by the Dominion Government for purchase price of ships.

Conditions During the Year.—In reviewing this statement, it should be remembered that conditions during the year developed very unfavorably for all steamship companies, and the operating situation, particularly towards the end of the year, became one of great difficulty. As is well known, the total world tonnage has been tremendously increased, while business in practically all countries suffered a depression. Keen competition, therefore, existed for what business was offering, and rates for nearly all commodities declined; in fact, toward the end of the year some rates were down to less than one half of the former level. It is a matter of general knowledge that many ships of other lines were tied up through inability to secure cargoes, and it has required hearty co-opera-

tion of Canada's foreign ocean borne trade, your company has been called upon to place in operation 47 ships in less than two years. Efficient officers, engineers and crews, have had to be engaged, trade routes arranged, cargoes secured, and an organization created to properly handle what is a very large enterprise. In such an intensive development the difficulties encountered have naturally been many, but these have been largely overcome, with the result that a large proportion of Canada's trade is being carried in Canadian ships, the product of Canadian shipyards which are manned largely by Canadians, who are engaged and paid in Canada. In this way, a very large sum has annually been conserved to the country that would be disbursed elsewhere if the C.G.M.M. had not been established on the basis outlined.

Trade Routes.—With a view to establishing first hand information as to trade and shipping conditions in various countries with which merchant marine services have been established, special representatives of your company have visited a number of such countries, and while the reports received are optimistic as to the possibilities of increasing trade, yet it is pointed out that there will have to be a closer co-operation between our exporters and importers, if full advantage is to be obtained for Canada of the ocean cargo services established and to be established by the C.G.M.M.

In addition to those inaugurated during 1919, new services were established during the year from Vancouver to Australia and New Zealand, and from Atlantic ports to British India and Straits Settlements, and on all of these a satisfactory business is being obtained under prevailing conditions. Regular cargo services are now established to points in the United Kingdom, to Australia and New Zealand, to British India and Straits Settlements, to the West Indies, to Newfoundland, and to South America. The present schedule provides regular sailings as follows:—

United Kingdom—Fortnightly services to Liverpool and to London; three weekly service to Glasgow, monthly services to Cardiff and Swansea, and to Liverpool via Sydney, N.S., in summer only.

West Indies—Fortnightly service to Barbados, Trinidad and Demerara, three weekly service to Nassau, Kingston and Belize monthly service to Havana, Cuba.

South America—Monthly service to Pernambuco, Santos, Rio de Janeiro, Montevideo and Buenos Ayres.

Orient—Monthly services to Mediterranean, Straits Settlements, Java and India, from Atlantic ports, and to Straits Settlements, Java and India from Vancouver.

Australia—Monthly service to Australia and New Zealand, to Australia direct and to New Zealand direct.

Newfoundland—Three weekly service to St John's, Nfld., via Charlottetown, P.E.I.

All of the above are freight services. The ships on the Nassau, Kingston and Belize service have some passenger accommodation, as will be referred to later. New cargo services are also in contemplation and will be established as additional ships are delivered, and as trade conditions warrant. Reports received indicate that there is a keen desire on the part of the various British possessions to increase trade direct with Canada, and your European Manager reports that

Dominion Marine Association.

President, A. A. Wright, President Tide-water Shipbuilders Ltd., and Vice President and Managing Director, Davis Shipbuilding & Repairing Co., Montreal.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines Ltd., Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, W. E. Burke, H. W. Cowan and T. R. Enderby, Canada Steamship Lines, Ltd., Montreal; C. W. Davidson, Vancouver, B.C.; J. W. McCaig, Alameda Central Steamship Co., South Sea, Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Col. G. E. Murphy, C.M.G., Ottawa; Transportation Co., Ottawa, Ont.; W. F. Oliver, Niagara, S. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Kershstone Transportation Co., Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; A. A. Wright, Toronto, and L. L. Henderson, Montreal.

Counsel, Francis King, M.A., Kingston, Official Organ, Canadian Railway and Marine World, Toronto.

ation of all officials and employees, and untiring efforts to keep your fleet in steady operation. Strikes, labor unrest, and dock congestion at various ports have also often delayed the movement of your ships, and have consequently had an adverse effect on the earnings. Considering the conditions which prevailed during the year, your directors feel that it is a matter for congratulation that all of the company's ships have been kept in operation. In view of the falling off in tonnage and the reduction in rates, the operating profit for the year may be considered satisfactory.

Organization.—The task of organizing the merchant marine service has been the more difficult on account of the large number of ships placed in service within such a short time. Ordinarily established steamship companies add to their fleets gradually as their business increases and as trade conditions warrant. In carrying out the policy of establishing a Canadian Merchant Marine to transport a substantial percentage of

this same feeling exists with some of the continental powers. The question of foreign agencies has received careful attention, and your own representatives have been appointed where it was considered advisable, while at other points arrangements have been made with strong connections to look after the company's interests.

Services Performed.—During the year a total of 144 voyages were made, as follows, as compared with 47 during 1919, viz., to the United Kingdom 65, West Indies 45, St. John's, Nfld., 15, Australia and New Zealand 9, South America 8, India, Mediterranean, etc., 2.

Commodities Carried.—The importance of the C.G.M.M. to Canadian trade cannot be too strongly emphasized. Canadian goods to the value of over \$50,000,000 were transported during 1920 in Canadian built ships, each named ship with its prefix "Canadian" being the best advertisement for Canada in the principal markets of the world. A wide range of goods and products is transported. The cargoes carried have been made up largely of the commodities included in the following list:—

Exports.

United Kingdom—Lumber, paper, newprint, pulp, grain, apples, hardware, steel goods, cheese, miscellaneous.

Australia and New Zealand—Lumber, paper, cement, fish, machinery, rubber goods, corsets, paint, etc.

India, Ceylon, etc.—Agricultural implements, grain, flour, iron pipe, auto, miscellaneous, tires, enamelware.

South America—Newprint, agricultural implements, malt, lumber, dried fish, steel goods, etc.

West Indies—Grain, lumber, newprint, furniture, paints, hardware, steel rails, etc.

Southland—Wool, hay, oats, cement, iron and steel goods, butter, etc.

Imports.

United Kingdom—Whiting, lead, tea, salt, tute, rope, lumber, general hardware, linoleum.

Australia and New Zealand—Hemp, tallow, copra, gum, hides, dried fruits.

India, Ceylon, etc.—Dried fruits, nuts, onions, etc.

South America—Maize, hides, coffee, caseln, etc.

West Indies—Sugar, molasses, coconuts, cocoa.

Southland—Cod, liver oil, codfish, etc.

West Indies Passenger Service.—In accordance with the trade agreement consummated during the year with the British West Indies, two of your ships, Canadian Fisher and Canadian Forester, of 5,100 tons each, have been fitted with passenger accommodation, and a regular service every three weeks is being established between Canada and the Bahamas, Jamaica, and British Honduras. While the ships now in commission only carry 26 cabin passengers, the accommodation provided is of such excellent character that they should attract a full passenger list for each sailing. It is hoped that the regularity of the service will build up a fine freight business in the interchange of the products of these islands and Canada. The first ship sailed from Halifax on July 25, 1921, with a full complement of passengers and a cargo of flour, potatoes, oats, cement and general merchandise. It must be remembered in connection with this service that the C.G.M.M. is pioneer in opening up a new route with a view to developing and extending Canada's trade. As it has been the practice of many governments to supplement the earnings of companies engaged in the work, and as steamship subsidies are paid by the Dominion Government for services that are much more remunerative than this West Indies service, it would only be reasonable that your company should be guaranteed against loss, when engaged, as in this case, in opening up a new route at the request of the Government.

Insurance and Accidents.—Your directors have continued the policy of fully insuring all ships. A very favorable insurance contract is in effect. Your directors are pleased to be able to report that the ships of your fleet were free from any serious accidents during the year. The Canadian Recruit, which became stranded in the St. Lawrence in Dec. 1919, and which threatened to be a total loss, was floated during the summer, and drydocked, where she was completely repaired. She was placed in service again in Dec. 1920, and sailed from Halifax for the West Indies on Dec. 31. It is also gratifying to your directors that they are able to report arrangements having been made with the underwriters whereby the officers and crew of the Canadian Spinner, whose gallant efforts for three weeks in Dec. 1919, saved the ship and cargo from destruction, are to receive a reward of \$10,000, which is to be distributed among them.

Maintenance.—From the first policy of maintaining all ships in a high state of repair has been adopted; all are regularly dry docked and necessary repairs are made.

Co-operation with Canadian National Rys.—Your directors again call attention to the valuable connections between the C.G.M.M. fleet and the Canadian National Rys. Traffic to both companies has benefited to a large extent by the co-operation of both services.

Employment of Canadian Officers and Crews.—In all cases preference is given to Canadians in filling the various positions, and it is a matter of considerable satisfaction to find that a large number of Canadians realize the opportunities which the service has to offer and are identifying themselves with their country's merchant marine. In co-operation with the Navy League of Canada, training is being given to young Canadians to qualify them to become ship's officers.

Management.—The handling of such a large fleet, the development of a proper organization, pioneering new routes and securing cargoes to keep all ships in operation throughout a year of unfavorable conditions, has entailed heavy work on the part of your officials and employees. To them, as well as to the ships' officers and crews who have performed their work faithfully and well, often under difficulty, the directors wish to express their thanks.

Note.—No profit has been included in the operating account shown above in respect of uncompleted voyages at Dec. 31, 1920. It is estimated by the company's officials that the profit from these will amount to \$290,000 of which \$183,000 would be applicable to the year 1920.

General Officers.—The C.G.M.M. general officers are as follows: D. B. Hanna, President, A. J. Mitchell, Vice President, A. J. Hills, Assistant to President, R. P. Ord, Secretary, C. E. Friend, Comptroller, H. G. Foreman, Treasurer, C. H. Hickie, Assistant Treasurer, Toronto; R. B. Teakle, Manager, Montreal; W. Phillips, European Manager, London, Eng.; H. Milburne, Assistant to Manager, Montreal; J. J. Tait, Superintendent Engineer, Montreal; Capt. E. E. Tedford, Marine Superintendent, Montreal; Capt. L. M. Hatfield, Assistant Marine Superintendent, Halifax; N. S. Cant, H. Monks, Assistant Marine Superintendent, Montreal; W. A. Cunningham, General Freight Agent, Montreal; Capt. W. B. Binglass, Assistant Marine Superintendent, Vancouver; F. G. Wood, General Ontario Freight Agent, Toronto; J. P. Doherty, Export Freight Agent, Montreal; W. H. Thomson, Import Freight Agent, Montreal; B. C. Keely, General Agent, Vancouver; Geo. Bunting, Manager for Australasia, Auckland, N.Z.; F. A. Young, Special Representative, Toronto; W. Y. Muirhead, Insurance Commissioner, Toronto; F. Davidson, Accountant, Montreal; J. W. Corbett, Purchasing Agent, Montreal.

Montreal-New York Transport Co. Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital and office at Montreal, to carry on business as shipping agents, etc., and to own and operate ships of every description for navigation within and without Canada. The incorporators are: F. Callaghan, F. X. A. Biron, J. D. Kearney, J. E. Duckett and P. A. Gregory, Montreal.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launchings of Steamships.—We have been advised of the launching of the following steel cargo steamships, for Canadian Government Merchant Marine, in addition to those mentioned in previous issues:—

May 12, s.s. Canadian Pathfinder, Marine Department contract 48, builder's yard no. 1, approximately 3,500 d.w. tons. The contract for this ship was given the Dominion Shipbuilding & Repair Co., Toronto, and after that company became bankrupt the Collingwood Shipbuilding Co., Collingwood, Ont., was given a contract to complete her, on a cost plus basis, the work being done at Toronto.

May 12, s.s. Canadian Scottish, Marine Department contract 42, builder's yard no. 1, approximately 8,390 d.w. tons. The contract for this ship was given the Prince Rupert Drydock & Engineering Co. and after that company became bankrupt the Wallace Shipbuild-

ing Co., Collingwood Shipbuilding Co., Kingston, Ont. She was delivered to the Marine Department May 5, sailed for Montreal May 7, arrived there May 9, was transferred to Canadian Government Merchant Marine, and loaded for Barbadoes, Trinidad, and Demerara, sailing May 21.

May 6, s.s. Canadian Leader, Marine Department contract 53, builder's yard no. 80, approximately 8,390 d.w. tons. She was built by Canadian Vickers Ltd., Montreal, and delivered provisionally to the Marine Department, Dec. 21, 1920, subject to satisfactory trials on the opening of navigation this spring. These trials having been held, she was delivered to Canadian Government Merchant Marine on May 6, and was loaded with cargo, sailing May 18 for India, via the United Kingdom.

May 16, s.s. Canadian Skirmisher, Marine Department contract 56, builder's yard no. 104, approximately 8,390

wood Shipbuilding Co.; Canadian Logger, Midland Shipbuilding Co.; Canadian Challenger, Davie Shipbuilding & Repair Co., Lauzon, Que.; Canadian Transporter and Canadian Freighter, J. Coughlan & Sons, Vancouver, B.C.

Officers of Steamships.—The following masters of steamships have been appointed, or transferred, in addition to those mentioned in previous issues:—Canadian Freighter, Capt. A. B. Watson, heretofore master, Canadian Inventor; Canadian Harvester, Capt. J. Slater, heretofore master, Canadian Recruit; Canadian Inventor, Capt. F. Dudley, vice A. B. Watson, transferred to Canadian Freighter; Canadian Miner, Capt. A. E. Seaman, vice Capt. W. G. Tudor; Canadian Prospector, Capt. W. Wallace, vice Capt. H. S. Hilton, transferred to Canadian Skirmisher; Canadian Recruit, Capt. H. Makepeace, heretofore master, Canadian Rover, vice Capt. J. Slater, transferred to Canadian Harvester; Canadian Rover, Capt. A. Forsen, vice Capt. H. Makepeace, transferred to Canadian Recruit; Canadian Skirmisher, Capt. H. S. Hilton, heretofore master, Canadian Prospector.

Ports of Registry.—We are officially advised that ships now under construction for Canadian Government Merchant Marine at Halifax, N.S., and Vancouver, B.C., will be registered at those ports respectively. This decision does not affect any of the ships built at those ports, and now registered at other ports.

Montreal Sailings.—The following dates have been announced:—

Liverpool service—Canadian Conqueror (cold storage), June 15; Canadian Trapper, June 29; Canadian Mariner, June 15; Canadian Victor, July 13; Canadian Conqueror, July 27.

London service—Canadian Rancher, June 8; Canadian Raider, June 22.

Glasgow service—Canadian Aviator, June 11; Canadian Navigator, July 2.

Cardiff and Swansea service—Canadian Hunter, June 25.

India and Far East service—B.I.S.N. Co. Tre-hawke, June 11; Canadian Pioneer, July 11.

Australia and New Zealand service—Canadian Commander (cold storage), June 25; Canadian Rancher, July 23.

Rio, Santos, Montevideo and Buenos Aires service—Canadian Explorer, June 23; Canadian Miller, July 29.

Barbadoes, Trinidad and Demerara service—Canadian Observer, June 7; Canadian Gunner, June 21; Canadian Harvester, July 5.

Nassau, Kingston and Belize service—Canadian Fisher, June 14; Canadian Forester, July 5.

Havana, Cuba service—Canadian Sailer, June 8; Canadian Adventurer, June 17; Canadian Miner, July 1.

St. John's, Nfld. service—via Charlottetown, P.E.I.—Canadian Sapper, June 17; Canadian Sapper, July 8.

Vancouver Sailings.—The following dates are announced:—For Australia and New Zealand, Canadian Importer, June 20. For the Orient, Canadian Exporter, June 20.

The s.s. Canadian Explorer, which sailed from Halifax, N.S., March 10, for Galveston, Texas, to deliver grain to the Greaves, a wharfe at the mouth of the River Kara, near Salonica, Greece, Apr. 29, and was refloated May 1, after having had about 5,000 tons of cargo lightered. She proceeded to the harbor at Salonica, where, after examination, she was reported to have suffered little or no damage.

Canadian Vickers Ltd., Montreal.—The s.s. Canadian Commander, Marine Department contract 52, builder's yard no. 79, approximately 8,390 d.w. tons, was delivered provisionally to the Marine Department, at Montreal, Dec. 21,

Steel Cargo Steamship Canadian Conster, approximately 3,890 d.w. tons, built for Canadian Government Merchant Marine, by Collingwood Shipbuilding Co., Kingston, Ont.

ing & Drydock Co., North Vancouver, B.C., was given a contract to complete her, on a cost plus basis, the work being done at Prince Rupert.

Deliveries of Steamships.—In addition to the ships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation.

April 26, s.s. Canadian Commander, Marine Department contract 52, builder's yard no. 79, approximately 8,390 d.w. tons, built by Canadian Vickers Ltd., Montreal. This ship was delivered provisionally to the Marine Department, Dec. 21, 1920, subject to satisfactory trials at the opening of navigation this spring. These having been made, she was delivered to the C.G.M.M. for operation, and sailed from Montreal, May 6, for Birkenhead and Avonmouth, Eng., with a general cargo below, and livestock on deck.

May 5, s.s. Canadian Conster, Marine Department contract 58, builder's yard no. 16, approximately 3,890 d.w. tons,

d.w. tons, built by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C. We were officially advised May 18 that this ship was being loaded for New Zealand and Australia, and was expected to sail from Vancouver May 30.

May 17, s.s. Canadian Harvester, Marine Department contract 61, builder's yard no. 45, approximately 3,890 d.w. tons, built by Port Arthur Shipbuilding Co., Port Arthur, Ont. We were officially advised May 18 that this ship was taking a cargo of grain from Fort William to Montreal, where she would be loaded for Swansea, Wales.

The above deliveries leave 10 ships to be delivered to complete the Dominion Government's shipbuilding programme as follows:—Canadian Cruiser and Canadian Constructor, Halifax Shipyards, Ltd.; Canadian Scottish and Canadian Thrasher, Prince Rupert Drydock & Engineering Co. (being completed by Wallace Shipbuilding & Drydock Co.); Canadian Pathfinder and Canadian Engineer, Dominion Shipbuilding & Repair Co. (being completed at Toronto by Colling-

1920, subject to satisfactory trials at the opening of navigation this spring. These having been held, she was transferred to Canadian Government Merchant Marine on April 26, and sailed from Montreal, May 6, for Birkenhead and Avonmouth, Eng., with general cargo below deck and live stock on deck.

The s.s. Canadian Leader, Marine Department contract 55, builder's yard no. 83, approximately 8,390 d.w. tons, was delivered provisionally to the Marine Department at Montreal, Dec. 1, 1920, subject to satisfactory trials at the opening of navigation this spring. These having been held, she was transferred to Canadian Government Merchant Marine on May 6, loaded at Montreal, and sailed May 18, for India via the United Kingdom.

Collingwood Shipbuilding Co., Collingwood, Ont. See Dominion Shipbuilding & Repair Co., Toronto.

Collingwood Shipbuilding Co., Kingston, Ont.—The steel cargo steamship Canadian Coaster, Marine Department contract 58, builder's yard no. 10, approximately 8,390 d.w. tons, built for Canadian Government Merchant Marine, the keel of which was laid May 6, 1920, and which was launched March 24, 1921, underwent her trials on the Bay of Quinte May 2, developing an average speed of 12.42 knots. She was delivered to the Marine Department May 5, was transferred to Canadian Government Merchant Marine, and left for Montreal May 7, where she arrived May 9. She was loaded there and sailed May 21 for Barbadoes, Trinidad and Demarara.

J. Coughlan & Sons Ltd., Vancouver, B.C., is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Transporter and Canadian Freighter, Marine Department contracts 62 and 63, builder's yard nos. 20 and 21, the keels of which were laid Jan. 6, 1921. We were advised recently that approximate dates for the launchings had not been decided.

Davie Shipbuilding & Repair Co., Lauzon, Que., is building a steel cargo steamship, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, the keel of which was laid May 14, 1920. We are advised that she will probably be launched about the end of June.

Dominion Shipbuilding & Repair Co., Toronto, which went into liquidation, July 31, 1920, had under construction for Canadian Government Merchant Marine, two single screw steel cargo steamships, Canadian Pathfinder and Canadian Ensign, Marine Department contracts 48 and 49, builder's yard nos. 10 and 11, each approximately 3,500 d.w. tons, the water bottoms of both ships being about 75% complete, and the hulls about 60% framed. After some negotiations the Marine Department decided, in view of the unemployment prevailing, that the ships be completed and arranged with the Collingwood Shipbuilding Co., Collingwood, Ont., to carry out the work on a cost plus basis, at the Toronto yard. The company was placed in possession of the yard, Dec. 14, 1920, but on account of delays in obtaining the necessary workmen, and material, active work did not actually start until about the middle of January. Owing to the unwillingness of Dominion Shipbuilding & Repair Co.'s employees to accept the wages fixed by the Minister of Marine and the Collingwood company it was ne-

cessary to get a new staff. At the outset the Collingwood company made it known that it desired to obtain as many men in the yards as possible who had seen overseas service. A great number of these had no previous knowledge of the particular work, but special opportunities for training were afforded them. As a result, in a short time a very strong and effective organization was built up and the progress made has been very satisfactory. H. B. Smith, President, Collingwood Shipbuilding Co., who lives in Toronto, has taken a very active interest in the work, which is under the general direction of J. S. Leitch, Managing Director, who is also Assistant to the President, Halifax Shipyards Ltd., another of Mr. Smith's positions.

The Canadian Pathfinder was launched May 12, being christened by Miss Jean Smith, daughter of President H. B. Smith, and she was presented with a gold mesh bag by J. S. Leitch, on behalf of the builders. The Canadian Pathfinder is expected to be ready for delivery about the middle of June. The Canadian Engineer will probably be launched in June.

These ships are of the single deck type, with poop deck and forecastle. They are canal size, built for ocean service, and dimensions being—length over all 261 ft., breadth moulded 43 ft., depth moulded 24 ft., draft loaded 21 ft. They will be equipped with triple expansion engines with cylinders 20-33-54 x 40 in. stroke, which were being built by the Dominion Shipbuilding & Repair Co. at the time of its failure, and have been completed by John Inglis Co., which firm also supplied the two Scotch boilers, 14½ ft. diameter by 11 ft., working under a pressure of 150 lbs. Four large hatches will be provided and 7 winches and 8 derricks for handling cargo. The ships will have a speed of about 11 knots.

Halifax Shipyards Ltd., Halifax, N.S., is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Cruiser and Canadian Constructor, Marine Department contracts 38 and 39, builder's yard nos. 3 and 4, respectively, each approximately 10,500 d.w. tons, the keels of which were laid Oct. 2, 1919 and Oct. 6, 1919. We are advised that Canadian Cruiser is expected to be launched early in June, and Canadian Constructor during July.

Midland Shipbuilding Co., Midland, Ont., is building a steel cargo steamship, Canadian Logger, for Canadian Government Merchant Marine, Marine Department contract 54, builder's yard no. 10, approximately 3,890 d.w. tons, the keel of which was laid June 9, 1920. No date for delivery has been announced, much delay having been caused by non-delivery of the engines.

Port Arthur Shipbuilding Co., Port Arthur, laid the keel of the steel cargo steamship Canadian Harvester, Marine Department contract 61, builder's yard no. 45, approximately 3,890 d.w. tons, March 30, 1920, and launched the hull Nov. 20, 1920. The ship was completed and delivered to Canadian Government Merchant Marine for operation on May 17, and was loaded with a cargo of grain at Fort William for Montreal, where she will be loaded with another cargo for Swansea, Wales.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—When this company went into bankruptcy in 1919, it was building for Canadian Government Merchant Marine, two steel cargo steam-

ship, Canadian Scottish and Canadian Thrasher, Marine Department contracts 42 and 43, builder's yard nos. 1 and 2, respectively, each approximately 8,390 d.w. tons, the keels of which were laid Sept. 27, 1919 and Oct. 20, 1919, as stated previously in Canadian Railway and Marine World. When work on the ships was suspended by the Prince Rupert company, the Canadian Scottish was about 90% completed, and the Canadian Thrasher about 60%. The ships are being completed, at Prince Rupert, by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., on a cost plus basis, as stated previously in Canadian Railway and Marine World, the work being supervised by H. A. Butt, Overseer for the Marine Department. H. Turney is in charge for the Wallace Shipbuilding & Drydock Co., T. Allen being the hull superintendent. The Canadian Scottish was launched May 12, being christened by Mrs. C. W. Peck, wife of Lt. Col. C. W. Peck, V.C., M.P., 26 members of whose old regiment, the Canadian Scottish, formed a guard of honor. The Canadian Thrasher is expected to be launched about the middle of August.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., laid the keel of the steel cargo steamship Canadian Skirmisher, Marine Department contract 56, builder's yard no. 104, approximately 8,390 d.w. tons, Oct. 14, 1920, and launched the hull March 17, 1921. The ship was completed and delivered to Canadian Government Merchant Marine for operation, on May 16, when she proceeded to load for New Zealand, and was expected to sail from Vancouver May 30.

See also, Prince Rupert Drydock & Engineering Co.

Shipbuilding in Canada in 1920.

Returns for 1920, prepared by the Marine Department, show that Canadian shipbuilders turned out 351 ships, with a total gross tonnage of 204,635 ships, built and registered in 1920, numbered 329, as follows:—Wooden sailing ships 121, wooden steam ships 53, wooden gas ships 119, metal ships, steam 35, gas 1. In gross tonnage the steam metal ships led with 120,127 tons; wooden sailing ships, 62,758 tons; steam wooden ships, 12,829 tons; gas wooden ships, 3,495 tons; gas metal ships, 116 tons. Twenty-two ships were built, but not registered, in Canada during 1920, 13 of them being wooden steam, 9 steel steam and 1 wooden sailing, with the following gross tonnage: steel steam, 31,135 tons; wooden steam, 13,829 tons; sailing, 348 tons.

British Columbia, with 138 ships to her credit, led the provinces in the number of ships turned out, but Quebec, with only 96, led in gross tonnage, with 103,339 tons, compared with British Columbia's 66,561 tons. Nova Scotia turned out 90 ships, all small. Ontario is credited with but 17, showing how the industry has fallen off in that province. New Brunswick turned out 5, Prince Edward Island 4, and Saskatchewan 1. Prospects for 1921 are not as good. There were 45 ships for 1921 for Canadian Government Merchant Marine at Dec. 31, 1920, still to be delivered, these representing about 100,000 d.w. tons.

On Dec. 3, 1920, there were 7,909 ships of all kinds on the Canadian register, of which 3,623 were sailing and 4,281 steam. The gross tonnage of sailing ships was 505,630, and of steam 1,105,010 tons, making a total of 1,610,640 gross and 1,151,880 net tonnage.

Canada Steamship Lines Finances, Etc.

A special general meeting of shareholders of Canada Steamship Lines Ltd. was held at Montreal May 14 to consider and if found advisable—

Confirm and sanction a bylaw to authorize the creation and issue of such further amounts of first mortgage 5% debenture stock or bonds as the directors may consider advisable, not to exceed in the aggregate \$8,186,521.80 par value, or its equivalent in sterling at \$4.86 2/3 to the £, until the total outstanding issue of such debenture stock and bonds, including the amount thereof now outstanding, but excluding the amount purchased and held by the trustees for sinking fund purposes, be brought up to an aggregate amount of \$15,000,000, the whole in accordance with the terms and conditions set forth in trust deeds entered into between the company and Prudential Trust Co. and the Royal Exchange Assurance, and the execution by the company of such further supplemental trust deed or deeds and such mortgages and hypothecs upon certain properties, and pledges and transfers of same, and other documents and instruments as may be considered proper in connection with the creation and issue of such debenture stock and bonds, and the securing of same in accordance with the terms of the bylaw and trust deeds.

Authorize the directors to pledge, hypothecate and transfer, should they deem it advisable so to do, the said \$8,186,521.80 par value of the company's debenture stock or bonds, or its equivalent in sterling, or such part thereof as they may consider proper, to secure advances or loans to the company of an aggregate amount not exceeding \$5,000,000, or its equivalent in sterling, with interest not exceeding 8%, upon such terms and conditions as the directors may consider proper, and confirm and sanction a bylaw to authorize the directors to create and issue, at such time or times as they see fit, 8% collateral trust debenture stock and bonds or notes, or bonds or notes of such designation and description and of such denominations as they may consider advisable, for an aggregate amount not exceeding \$5,000,000, or its equivalent in sterling, same to be secured by pledge, hypothecation and transfer of the said \$8,186,521.80 of the company's first mortgage 5% debenture stock and bonds, or of such amount thereof as the directors may consider advisable, and in connection therewith to enter into a trust deed with such trustee as may be chosen, the trust deed to contain such provisions with reference to redemption and sinking fund and such other terms and conditions as the directors may consider proper, as also to execute such pledges, hypothecations and transfers of such first mortgage 5% debenture stock and bonds, or any part thereof, and such other documents and instruments as may be considered proper in connection with the creation and issue of said collateral trust debenture stock and bonds or notes, and the securing of same in accordance with the terms of the bylaw and the trust deed or deeds to be entered into, as aforesaid.

The notice to shareholders was accompanied by the following statements of Canada Steamships Lines Ltd. and subsidiary companies:—

Consolidated Balance Sheet, Dec. 31, 1920.

Fixed assets—	Assets.
Ships as at Dec. 31, 1919	\$25,697,823.81
Add, net additions for year, being excess of additions to fleet over ships lost and sold	1,611,136.46
	\$27,308,960.27
Real estate, buildings, docks and wharves as at Dec. 31, 1919	\$6,351,017.10
Add, net additions for year	334,047.20
	6,685,064.30
Other fixed assets as at Dec. 31, 1919	1,432,992.48
Add, net additions for year	41,699.44
	1,474,691.92
	\$35,468,716.49
Less depreciation reserve	6,261,584.83

Chats Falls Navigation Co. Ltd. in Difficulties.—This company, which was incorporated under the Dominion Companies Act in March 1919, with \$50,000 authorized capital and office at Ottawa, has submitted a proposal to its creditors under the Bankruptcy Act, offering its unsecured creditors 40c. on the dollar in full settlement of all claims. The statement shows nominal assets of \$19,100, current liabilities \$13,907.90, and stock liabilities \$16,200, less unpaid calls of \$348.10. The principal creditors are Royal Bank of Canada \$6,805.39, and Aylmer Coal & Supply Co. \$3,288.87. The only asset is the s.s. Weldon, valued at \$18,900, but which the trustee states would probably not realize anything like that amount. She was built at Aylmer, Que., in 1919, and is screw driven by engine of 24 h.p. Her dimensions are—length 88.4 ft., breadth 19 ft., depth 6.9 ft., tonnage 197 gross, 65 net. She was operated between Britannia Bay and Fitzroy Harbor on Lake Dechenes and the Ottawa River, making two trips a day.

Vancouver Terminal Charges Abolished.—G. C. Duggan, Asiatic Freight Agent, C.P.R., advises that it has been the practice to assess a terminal charge at Vancouver of 30c. per 2,000 lb. on export traffic and 25c. a ton (either or measurement) on import traffic. Arrangements are being completed whereby these charges will be abolished.

Vancouver Harbor Pier and other Development Work.

Great Lakes Levels.

Canadian Railway and Marine World for January contained some general information about the Vancouver harbor development work, including the Bantyne pier, an illustration of which was given. This pier will be on the main 1½ miles from the city post office. The harbor front in Burrard Inlet, nearly opposite the foot of Hawks St., and about pier will be approximately 1,200 ft. long by 340 ft. wide, with a shore quay about 900 ft. long by 350 ft. wide. Several alternative designs for different types of construction were prepared by the engineer, such as concrete crib walls, with cellular block foundations; the same type of wall, on rubble foundations; reinforced concrete cylinder pier; reinforced concrete pile pier; solid sand and gravel embankment filling, with reinforced concrete cylinders along the sides and outer end, etc., and the last mentioned design has been adopted, as it affords a thoroughly substantial, permanent, fireproof structure.

The sand and gravel filling, forming the heart of the pier, will be about 134 ft. wide at the top, and at the inner berths, where the basins are to be dredged 35 ft. below ordinary low water, there will be four rows of reinforced concrete cylinders, resting on solid rock, and carrying pre-cast concrete trusses, which will support the floor or deck of the pier. At the outer berth, where there is a minimum of 45 ft. below average ordinary low water, there will be three rows of reinforced concrete cylinders.

The front line of the transit sheds will be built about 30 ft. back from the cope line of the pier, so as to allow two lines of railway tracks to run along the front of the shed, as well as a single rail at cope level, for the semi-portals cranes. Transit sheds, three of which will be 500 ft. long, and one 400 ft., are all to be of reinforced concrete, two stories high, by 110 ft. wide, with loading platform in addition at the back of the shed. Between the sheds, along the center line of the pier, there will be accommodation for three railway tracks and for a roadway for cart and motor traffic. The floor of the sheds at the front will be at the same level as the cope of the pier, and the ground floor of the sheds will be constructed on an easy gradient, from the

front to the back, so as to obtain the requisite height to permit of the floors of the railway cars being at the same level as the floor of the shed, the roadway level being practically the same as the cope level.

In addition to the four transit sheds, a warehouse for the storage of canned salmon, or other merchandise, will be built on the shore quay. This building will be about 200 x 82 ft., and three stories high, all of reinforced concrete, and will be equipped with electrical conveyors, for the rapid handling of goods from vessels, as well as with spiral chutes and elevators, for handling goods inside the warehouse.

The most modern mechanical quayside equipment will be provided, consisting of a number of semi-portals electrical cranes, running along the front of the sheds, and capable of handling cargo between both floors of the sheds and the hold of the largest steamship afloat. Inside the sheds, motor trucks, electrical conveyors and elevators will be provided.

The approximate total cost of the harbor commissioners' work, the first unit of which is now being proceeded with, will be about \$7,500,000, and when the pier transit sheds and warehouses are completed, the commissioners hope to have one of the most up-to-date, commodious and best equipped piers in Canada and one that will compare favorably with any in the world.

The plans and specifications were prepared by A. D. Swan, M.Inst.C.E., Montreal, who is consulting engineer to the harbor commissioners. Major W. G. Swan, the commissioners' Chief Engineer, is in direct charge of the work. As stated previously, the contractors for the dredging are Grant & MacDonald, Vancouver; and the Northern Construction Co. and Stewart (Major General J. W. Stewart, C.B., C.M.G.) have the contract for the other work mentioned above, including the pier and transit sheds.

On Shipboard.

She: "Goodness! What is that horrible noise?"

He: "Why, my dear, that was nothing but the dog-barking at a passing cat-boat!"—Brown Jug.

The U.S. Lake Survey reports mean stages of the Great Lakes, in feet above mean sea level, for April, as follows:—Superior, 601.69; Michigan and Huron, 580.34; St. Clair, 575.41; Erie, 572.79; Ontario, 246.38.

Lake Superior was 0.14 ft. higher than March, 0.52 ft. lower than April 1920, 0.01 ft. below the average April stage of the last 10 years, 1 ft. below the high stage of Apr. 1860, and 1.15 ft. above the low stage of Apr. 1911.

Lakes Michigan and Huron were 0.44 ft. higher than March, 0.20 ft. lower than April 1920, 0.05 ft. above the average April stage of the last 10 years, 2.89 ft. below the high stage of April 1886, and 1.12 ft. above the low stage of Apr. 1896. During the last 10 years the April level has averaged 0.3 ft. higher than the March level, and 0.3 ft. lower than the May level.

Lake Erie was 0.67 ft. higher than March, 1.17 ft. higher than April 1920, 0.44 ft. above the average April stage of the last 10 years, 1.39 ft. below the high stage of Apr. 1862, and 1.53 ft. above the low stage of Apr. 1895. During the last 10 years the April level has averaged 0.7 ft. higher than the March level, and 0.4 ft. lower than the May level.

Lake Ontario was 0.59 ft. higher than March, 0.83 ft. higher than April 1920, 0.06 ft. above the average April stage of the last 10 years, 2.05 ft. below the high stage of Apr. 1886, and 1.54 ft. above the low stage of Apr. 1872. During the last 10 years the April level has averaged 0.7 ft. higher than the March level, and 0.3 ft. lower than the May level.

Government Radiotelegraph Operators.

The following promotions of Naval Service Department radiotelegraphic operators are announced:—E. G. Bennett, senior operator, to chief operator, east coast; W. J. Bowerman, senior operator, to chief operator, west coast; R. Ainslie, senior operator, grade 2, to chief operator, west coast; S. C. Jackson, senior operator, to chief operator, west coast; T. C. Raine, senior operator, grade 2, to chief operator, west coast; W. Howard, chief operator, to radiotelegraph inspector, west coast.

Ships Registered in Canada During February, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Canadian Pacific Railway's Atlantic and Pacific Steamships.

E. W. Beatty, President, C.P.R., in moving the adoption of the directors' report at the annual meeting on May 4, said:—"The general trade depression has, of course, reflected itself in the results during the present year's operations of the company's steamships, but the passenger business is well maintained and the prospects of immigration on a large scale are very promising. The construction of the new steamships for the Atlantic and Pacific, to which reference is made in the annual report" (as published in Canadian Railway and Marine World) "has been very seriously delayed by the joiners' strike in Great Britain, which is still apparently far from settled, and which will defer the delivery of these ships until at least the end of this year. They are of a class that would render great service during the summer and autumn of this year, and the fact that they will not be available is to be

regretted, as both the direct and indirect benefits of the continuation of an adequate service is very great. It may be desirable to purchase other ships if such can be obtained at moderate prices."

The shareholders subsequently passed the following resolution:—"Whereas the company has statutory power to issue consolidated debenture stock, in aid of the acquisition of steamships, to the extent of their cost, upon being authorized so to do by the votes of at least two thirds of the shareholders present, or represented, at an annual meeting, or at a special meeting, called for the purpose, and whereas there are now being built for the company under contract the following steamships for the Atlantic and Pacific services, viz., the Empress of Canada, 625 ft. long, with beam of 77 ft., moulded depth of 53 ft., and having a gross tonnage of about 22,000 tons; and the Montrose and Montclare, each 545 ft. long, with beam of 70 ft., moulded depth of 51 ft., and having a gross tonnage of about 15,600 tons; the aggregate cost of which steamships, including

rigging, appurtenances and auxiliaries, is estimated at \$22,500,000, therefore be it resolved that, for the purpose of paying the cost of the steamships above described, the directors are authorized to issue and dispose of consolidated debenture stock bearing interest at 4% a year, to such an amount as they may deem expedient, not exceeding in the aggregate the cost of the said ships."

Canadian Railway and Marine World is officially advised that the C.P.R. has bought the German steamships Kaiserin Auguste Victoria and Prinz Friedrich Wilhelm from the Reparations Commission, and have renamed them Empress of Scotland and Empress of China respectively. Their principal dimensions are as follows:—Empress of Scotland, length 677.5 ft., width 77.3 ft., depth 50.2 ft., tonnage 24,581 gross; Empress of China, length 589.9 ft., width 68.3 ft., depth 38.6 ft., tonnage 17,082 gross. The Empress of Scotland will be operated between Quebec and Liverpool, and the Empress of China between Vancouver and Hong Kong, etc.

The Canadian Ship and Boat Building Industry During 1919.

A preliminary report on the ship and boatbuilding and repairing industry in Canada has been completed by the Dominion Bureau of Statistics for the calendar year 1919. The report is divided into two sections, the first of which deals with the shipbuilding and the second with the boatbuilding industry. The number of plants engaged in each section is given below by provinces:—

	Shipbuilding	Boatbuilding
Alberta	1	2
British Columbia	14	12
Manitoba	1	54,449
New Brunswick	4	1
Nova Scotia	37	20

Disposal of British Government's Trawlers and Drifters in Canada.

We are officially advised that after the war there were 60 trawlers, and 89 drifters, owned by the British Government, in Canadian waters, to be disposed of. Of the trawlers 14 were sold, and the remaining 46 were taken to Great Britain for disposal. Of the drifters 35 were sold, one was presented by the British Government to Dr. Grenfell's Labrador Mission, one was retained by the Canadian Naval Service Department, one was retained by the British Government at Bermuda, one still remains to be disposed of at Norfolk, Va., and the remaining 49 were taken to Great Britain for disposal. Following is a list of sales made in Canada:—

Trawlers.

- Nos. 2, 3, 6, 12, 22 and 35, Mexican Government.
- Nos. 41, 42 and 43, Fisheries et Armaments, La Rochelle Ocean, France.
- No. 44, Anglo Newfoundland Development Co., St. John's, Nfld.
- No. 45, Gulf of St. Lawrence Shipping & Trading Co., Quebec, Que.
- Nos. 46, 56 and 57, Dominion Steamship Co., New York, N.Y.

Drifters.

- Nos. 3 and 4, Puerto Monte Agency Co., Peru.

Northern Alberta Water Transportation.

The Alberta & Arctic Transportation Co. Ltd. the organization of which was announced in a previous issue, is chiefly for providing modern transportation facilities to the Fort Norman oil fields and points throughout the Mackenzie River basin. The organizers are the owners of the British Columbia Express Co., now out of business, and which operated transportation facilities throughout the Caribou district of British Columbia, from the time of the gold rush there early in the century, and up to a short time ago, had in operation about 1,000 miles of horse stage lines, and an extensive river service on the Upper Fraser River.

The company has bought the British Columbia Express Co.'s equipment, including its steamboats, and these have been transferred to the new territory. In addition to these, the company has bought the transportation equipment of the Lamson & Hubbard Canadian Co., which was operating steamboats on the rivers and lakes in Northern Alberta and Mackenzie District. The steamboats owned and operated by the new company include the D. A. Thomas, Distributor, Lady Mackworth and Slave River, and in addition it operates several gasoline boats for special trips off the regular routes.

It is building at McMurray a river steamboat, to be named B. C. Express, which will have the following dimensions—length 165 ft., breadth 29 ft., draft 18 in. She will be equipped with modern conveniences, staterooms, electric light, steam heat, etc., and will be run from Vermilion Chutes, on the Peace River, to Fitzgerald, and from McMurray, on the Athabasca River to Fitzger-

ald, and is expected to be ready for service during June. Another steamboat, to be named B.X., is to be built at Fort Smith, and will have the following dimensions—length 175 ft., breadth 30 ft. She will be equipped with compound condensing engines, with up to date accommodation for passengers, and will be operated on the Mackenzie River out of Fort Smith.

On the route going north on the Peace River to Fitzgerald, the company has provided equipment for the transfer of freight and baggage at the portage of about 5 miles around the Vermilion Chutes, and on the portage between Fitzgerald and Fort Smith, on the Slave River, a caterpillar tractor has been provided, at a cost of \$35,000, for transfer of freight.

From Peace River, the time taken by the s.s. D. A. Thomas to the upper end of Vermilion Chutes, going down stream, is about 24 hours, returning up stream in 48 hours, the distance being 330 miles. The s.s. Slave River, from the lower end of Vermilion Chutes to Fitzgerald, on the Slave River, going down stream, takes 20 hours, and returning up stream 50 hours, the distance being about 300 miles. The s.s. Distributor, from Fort Smith to the Fort Norman oil well, will take about 3½ days, going down stream, and about 5 days returning up stream. From McMurray to Fitzgerald, the trip down stream will take 24 hours, and up stream 50 hours.

Return tickets are being sold for use on the company's connecting steamships from Peace River on the Peace River, and from McMurray on the Athabasca River, to the Fort Norman oil well about 25 miles below Fort Norman for \$200, berths being provided at \$1.50 for lowers and \$1 for uppers, and meals at \$1 each.

Canadian Navigators' Federation Pacific Division.

The Canadian Navigators' Federation has been organized, with the following board of management:—President, Capt. F. H. Parker; Secretary, Andrew Goodlad; Treasurer, Capt. O. G. Kimmie. Vice Presidents—Vancouver, Capt. W. W. Best; Victoria, Capt. T. H. Brown; Prince Rupert, Capt. J. J. Mulligan; West Westminster, Capt. C. J. House; Nanaimo, Capt. D. Martin; Yukon District, Capt. J. O. Williams; B.C. Lakes, Capt. F. L. Orr. Representatives for—Ocean going ships, Capt. H. E. Lawrey; local passenger ships, Lieut. H. Shadforth, R.N.R.; local freight ships, Capt. B. Owen-Jones; Government ships, Capt. H. R. Bilton; licensed pilots, Capt. C. J. Harris. The trustees, who are not members of the board of management, are Captains L. R. W. Beavis, T. S. Guns and J. E. Noel.

The Pacific Division is not divided into districts, as the Great Lakes Division is, the whole war being conducted through the head office. The vice presidents are elected by the resident members for each port having not less than 10 members.

The head office is at 1101 Rogers Building, Vancouver. There are branch offices at 308 Union Bank Building, Victoria, and Exchange Building, Prince Rupert, for the accommodation of members who may live at those ports, or call there.

The Federation is working under the constitution of the Canadian Merchant Service Guild, which was incorporated by the Dominion Parliament in 1919.

Uniform Shipping Legislation.

The report of the Imperial Shipping Committee, which was appointed some time ago, to enquire into matters connected with ocean freights and facilities, and with the development and improvement of sea communication between different parts of the Empire, was issued recently. The main point dwelt on is the advantage of uniformity of the shipping laws of the several countries forming the Empire. With respect to the limitation of shipowners' liability under bills of lading, legislation is already in existence, as between the United Kingdom, Canada, Australia and New Zealand, but there is no corresponding legislation between the United Kingdom, India, South Africa and Newfoundland.

The committee made analyses of the Canadian, Australian and New Zealand acts, which showed that they are not uniform, and it was shown that considerable advantage would accrue if a uniform law on the subject prevailed throughout the Empire. It therefore advises that uniform legislation dealing with shipowners' liability be obtained, on the lines of existing legislation, but more precisely on the lines of the Canadian Water Carriage of Goods Act of 1910, subject to further provisions as to exceptional cases, where goods should be carried at owners' risk; the precise definition of the physical limits to shipowners' liability; and the fixing of maximum values for packages, up to which shipowners would be liable to pay. The committee states: "We make the Canadian Water Carriage of Goods Act, and not the Harter Act, which it closely resembles, the basis of our recommendation, because it embodies the latest experience."

Canadian Grain Taking its Proper Route.

Buffalo, N.Y., press dispatch May 8.—The recent reduction in rail rates on grain from Georgian Bay, and other ports to Montreal has caused diversion of an immense quantity of grain from Buffalo to Canadian ports. Large stocks of grain in Chicago, Milwaukee, and at the Canadian head of the lakes are scheduled for delivery at Canadian ports. Yesterday there were eight grain-laden ships waiting at Port Colborne to be unloaded, while the greater number of elevators in Buffalo are idle, and hundreds of empty cars are waiting on side tracks of the trunk lines. The Buffalo Corn Exchange has asked trunk line associations to meet the rate reduction made by Canadian railways immediately, and a reply is expected within a day or two.

Royal Mail Steam Packet Co.'s Atlantic and Pacific Services.

The Royal Mail Steam Packet Co., which has not operated any steamships in the trans-Atlantic service for nearly 60 years, has re-entered that service with its steamships *Orbita*, *Orduna* and *Oropesa*, which will be operated between Liverpool and other United Kingdom ports and New York. It is stated that, in addition to the Atlantic service, the company will operate a line between U. K. ports and Vancouver, B.C., in co-operation with the Holland-America Line. The company's history since its organization in 1839 is very interesting. It commenced business with a small fleet of iron paddle wheel steamships with sails, ranging from the s.s. *Actaeon*, of 650 tons, to the *Dee* of 1,849 tons, which in those days were considered large ships. Each of the ships at that time was armed with guns, after the style of a war frigate, the chief reason for this being that steamships mostly carried mails, and piracy on the high seas was at that time in fairly flourishing condition. In 1849 the company organized a combined transportation service, consisting of mules and canoes, across the Isthmus of Panama, thus opening a route via Colon to South American ports and to San Francisco, and many of the "forty-niners" travelled to California by this route. In that year the company put into service its first screw driven steamship. Today, with its affiliated companies, including the Pacific Lamport & Holt, Union-Castle, Elder-Dempster and Shire Lines, it controls approximately 2,000,000 tons of shipping.

The Owen Sound Transportation Co. Ltd., Owen Sound, Ont., the incorporation of which was announced in a recent issue, owns the s.s. *Michipicoten*, owned formerly by the North American Bent Chair Co., of which it is practically a subsidiary. The steamship is operated between Owen Sound and Sault Ste. Marie. The officers of the company are: President, W. G. Hay; Vice President, J. H. Hay; Secretary-Treasurer, J. Garvey.

Eastern Stevedores Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Montreal, to carry on business as stevedore, shipowner, shipwright, wharfinger, etc., and general carrier by land and water, and to own and operate other ships of every description. The incorporators are: J. McNaughton, J. G. Cartwright, E. B. Taylor, A. McIntyre and T. J. Griffin, Montreal.

North Atlantic Ice Patrol.

For the purpose of carrying on the International Ice Observation and Ice Patrol Service, provided for by the International Convention for the Safety of Life at Sea, 1913-1914, the United States coast guard cutter *Seneca* is locating ice-fields and icebergs near the Newfoundland Grand Banks, and is communicating information by radiotelegraph to passing ships and to the U.S. branch hydrographic office at New York, for general dissemination. A continuous patrol has been established by the cutters *Seneca* and *Yamacraw*, the calls being NRE and NRY respectively. The patrol will continue throughout the system of dangerous ice conditions. Communication will be dispatched to passing ships on a wave length of 600 meters.

The work of these cutters, which is continuous throughout the season of dangerous ice conditions, generally April, May and June, will be greatly facilitated if the principal trans-Atlantic steamship companies instruct their captains to report the following data by radiotelegraph,—icebergs or obstructions sighted, giving date, time, latitude, longitude, and direction of drift, if an iceberg, together with the temperature of the water at the time of observation, temperature of the sea water every 4 hours at the surface and at the bottom in junction between lat. 39 deg. and 48 deg. north, when crossing long. 51 deg. and 44 deg. west, bound east or west, giving latitude and longitude, course and speed at the time of each observation. This data will facilitate the plotting of a temperature curve which will be useful in locating the branches of the Labrador current.

C.P.R. Asiatic Traffic Arrangements. The C.P.R. have completed traffic arrangements with the Osaka Shosen Kaisha (Osaka Mercantile Steamship Co.) and the Nippon Yusen Kaisha (Japan Mail Steamship Co.) whereby these two companies' ships will call at the C.P.R. docks at Vancouver, and will handle import and export freight in conjunction with the C.P.R. The C.P.R. have also completed traffic arrangements with all the principal steamship companies operating to and from the Far East, whereby traffic can be handled on either steamship bills of lading or through C.P.R. bills of lading.

Proposed Ontario Taxation of Navigation Companies.—A bill to amend the Corporation's Tax Act, introduced at the Ontario Legislature's recent session, contained the following section:—"Every navigation company, and every company transacting business in Ontario by operating, leasing, or hiring steamboats, shall pay a tax of one-tenth of 1% per annum on the paid up capital thereof." The Dominion Marine Association protested very strongly to the Ontario Government respecting this provision, and the section was withdrawn during the passage of the bill through the house.

Radiotelegraph Operators' Working Conditions.—It is reported that the Naval Service Department's radiotelegraph operators on the Atlantic and Pacific coasts are to have their wages increased and working conditions bettered. It is stated that there will be shorter hours of service, increased leave of absence and higher wages, and that there will be some increase in the staffs, with better housing accommodation at the different stations.

Ships Added to and Deducted From the Canadian Register During February, 1921.

Added.	Steam.		Sailing

Atlantic and Pacific Ocean.

Between May 1 and 11, 191 ships were cleared from Montreal for the ocean.

The Cunard Line s.s. *Venusia*, which arrived at Montreal Apr. 28, was the first trans-Atlantic steamship to arrive there this year. The master, Capt. L. Doyle, was presented with a gold mounted cane by the Harbor Commissioners.

The Nippon Yusen Kaisha has announced increases in its steerage fares between Japan, Manila and Puget Sound ports, covering Victoria, Vancouver and Seattle, the new fares being \$70 to Yokohama, Kobe and Nagasaki, and \$75 to Shanghai, Hong Kong and Manila.

The C.P.R. s.s. *Empress of France* is said to have established a record on the trans-Atlantic route recently, in making the run from Liverpool to St. John, N.B. in 6 days, 8 hours and 42 min. actual running time, an average of 19.01 knots an hour. She carried 1,466 passengers.

Canadian Western Steamships Ltd., a subsidiary of J. Coughlan & Sons, shipbuilders, Vancouver, B.C., is reported to be arranging to operate a steamship service with the s.s. *City of Victoria* from Vancouver to Halifax, N.S., and Montreal, via the Panama Canal, calling at the West Indies.

The Cunard Line, which opened the St. Lawrence Navigation season this year with its s.s. *Venusia*, is reported to have decided not to continue its passenger steamships up the St. Lawrence for the present, and it is stated that the steamships *Carmania*, *Caronia*, and *Saxonia* will land passengers at Halifax, N.S.

A Liverpool, Eng., press report states that 165 ships, aggregating 282,294 tons, are tied up in the Liverpool and Birkenhead docks, due almost wholly to the coal strike, and the impossibility of obtaining coal for bunkers. Most of the trans-Atlantic passenger steamships have been able to obtain coal from overseas ports.

Some of the British steamships arriving at Montreal, instead of taking coal on this side, as is usual when there is coal trouble in England, are filling their bunkers at Rotterdam, for the west-bound trip. This is stated as being arranged through the Reparations Commission dealing with the German indemnities.

It is reported from England that British shipowners have locked out about 30,000 members of the national union of ship stewards, butchers and bakers, on account of their refusal to accept a reduction in wages. In several cases passenger ships across the Atlantic are carrying a number of members of local office staffs who volunteered to take the place of the strikers.

The C.P.R. s.s. *Montreal*, formerly the German s.s. *Koenig Friedrich August*, was scheduled to sail from Antwerp, Belgium, May 31, via Havre, France, for Montreal and is expected to arrive about June 11. She will make another trip over the same route, arriving at Montreal about July 23, when it is announced, she will be placed on the route between Montreal and Genoa, Italy, in conjunction with the *Navigazione Generale Italiana* Co.'s *Caserta*, the two steamships providing a monthly service between the two ports. The s.s. *Montreal* was bought some time ago by the C.P.R. from the British Government and has been thoroughly overhauled and reconditioned at Antwerp. She was built

at Hamburg in 1906 and her dimensions are—length 476 ft., breadth 55 ft., depth 31 ft. She has accommodation for two classes of passengers, viz., cabin and third class. The s.s. *Caserta* was built in 1904, by Sir W. G. Armstrong-Whitworth & Co., Newcastle-Upon-Tyne, Eng.

The Canadian Robert Dollar Steamship Co. has issued a schedule of its sailings for this year. It operates 7 steamships on both oceans via the Panama Canal. The s.s. *Robert Dollar* was expected to arrive at New York, May 30, and to leave there June 15 for Vancouver, whence she will sail about July 20 for the Orient, returning to Vancouver about Oct. 24. The s.s. *Melville Dollar* is expected to reach Vancouver from the Orient June 14, sail for New York via the Panama Canal June 21, arrive at New York about July 19, and return to Vancouver via the same route by Sept. 1, leave for the Orient about Sept. 8, and return to Vancouver about Dec. 11. The s.s. *Harold Dollar* will operate on the same route between June 23 and Dec. 29, and the steamships *Esther Dollar*, *M.S. Dollar* and *Grace Dollar* will run on the round-the-world service, making calls at New York, San Francisco, Vancouver, Kobe, Shanghai, Hong Kong, Manila, Singapore, Calcutta and Colombo.

Maritime Provinces and Newfoundland.

The C.P.R. shipped out of the port of St. John, N.B., last winter, 9,414,000 bush. of grain.

The s.s. *Constance* is reported to have been placed in service between Pictou, N.S., and Charlottetown, P.E.I.

The U.S. s.s. *Chickamauga*, bound from New York to Sverburg and Copenhagen, had to put in at Halifax May 7, with disabled steering gear.

The name of the s.s. *Manola*, owned by Canada Steamship Lines, and operated between Montreal and St. John's, Nfld., has been changed to *Mapledawn*.

The name of the s.s. *Clare Hugo Stinnes* I, formerly German owned, and now owned by H. A. Powell, K.C., St. John, N.B., has been changed to *Phillip T. Dodge*.

Halifax lights no. 15 was removed from her station at Sambro, May 13, for general overhaul, before taking up her station for the summer in the Gulf of St. Lawrence.

Magdalen Transports Ltd., incorporated recently, has acquired the s.s. *R. W. Hendry* for operation between Pictou, N.S., Souris, P.E.I., and the Magdalen Islands. The Managing Director is W. Frass, Pictou, N.S., and R. W. Hendry and W. Leslie, Halifax, are interested.

The following Nova Scotia companies have had their certificates of registration revoked:—La Have Shipping Co., Tusket Shipbuilding Co., William Duff Shipping Co., Shipping Syndicate Ltd., Steam Trawlers Ltd., Schooner D.W.D. Ltd., McKay Shipbuilding Co., and Baker Shipping Co.

The s.s. *Bernard M.*, which has been operating for about 3 months in freight service between Yarmouth and Halifax, N.S., has been withdrawn, owing, it is stated, to the owners' failure to obtain a subsidy from the Dominion and Provincial Governments. She is being overhauled at Wedgeport, N.S.

The French s.s. *Pro Patria*, bound from

Halifax for North Sydney, N.S., and St. Pierre, Miquelon, went ashore at Cranberry Head, May 18, with a full cargo of freight, but no passengers. She was reported as resting on a rocky bottom in a somewhat dangerous position. It was hoped to refloat her at high tide.

Imperial Oil s.s. *Impoco*, which stranded on Blonde Rock, off the Nova Scotia coast Apr. 6, was refloated May 4, by the Maritime Wrecking Co., Halifax, N.S. She was hauled to deep water by the company's tugs *Maggie Marshall* and *Sarnia City*. She is stated to be the first ship to be refloated after stranding on Blonde Rock.

The s.s. *North Shore*, which arrived at Quebec, Que., towards the end of April from North Shields, Eng., is intended for the Clarke Steamship Co.'s service between Quebec and Gulf ports. She is a screw driven steamship of about 800 tons, with good passenger and cargo facilities. A second ship for service to south shore ports is reported to be in Halifax undergoing general overhauling and was expected to be ready for service toward the end of May.

Province of Quebec.

Montreal Harbor Commission's employees' salaries were reduced on May 1 by 10 to 12%.

Anticosti Island (Henri Menier Estate) owns the s.s. *Savoy*, with Capt. E. Caron as master and N. Lecours as chief engineer.

The Quebec Harbor Commission has entered a seizure action against the French Government s.s. *Bouzonville*, one of the French wooden steamships built at Three Rivers, Que., recently. A claim for \$35,000 is made for damage caused to the drawbridge at the Louisa basin when the ship was being towed in there by the tug *Belle*.

The icebreaking steamship *John D. Hazen*, which was built for the Dominion Government, by Canadian Vickers Ltd., Montreal, in 1916, for use on the St. Lawrence, and which, at the British Government's request was sold to the Russian Government at cost in the early stages of the war, is reported to be at Cherbourg, France. When she was handed over to the Russian Government, she was intended for keeping open ports in the White Sea. After the Russian revolution, all trace of her was lost for some time. It is possible that she may be acquired by the Dominion Government again.

Ontario and the Great Lakes.

The s.s. *Prince Ito*, owned by B. Dick, Jr., Welland, Ont., has had her name changed to *Baxter Dick*.

The Spanish River Pulp & Paper Mills has changed the name of its s.s. *John Hunsader* to *Pukasaw*.

The steam tug P. S. *Hiesordit*, owned by E. F. and D. J. Burke, Midland, has had her name changed to *Ruth B.*

The s.s. *Traveller*, owned by the Lake Superior Paper Co., Sault Ste. Marie, has had her name changed to *G. R. Gray*.

The s.s. *Minnie A. Clark*, owned by Booth Fisheries Canadian Co., Toronto, has had her name changed to *Red Fox*.

The George Hall Coal Co.'s s.s. *John B. Ketchum* 2nd, bound from Lorrain, Ohio to Montreal, with a cargo of coal lost her rudder near Farrans Point in

the St. Lawrence River, May 6. She anchored opposite Croils Island and awaited a tug.

The Governor in council has approved the transfer of the license for the operation of a ferry across the St. Clair River between Port Lambton, Ont., and Roberts Landing, Mich., from J. H. Ansell to W. G. Dawson for 10 years from Jan. 1, 1921, at an annual rental of \$1.

The motor ship Schoolcraft, owned by Manly Chev. Midland, Ont., which sank after burning last autumn near Wolfe Island, in the St. Lawrence River, is to be salvaged. It is stated that when she is raised the machinery will be removed to Midland for installation in another hull.

The s.s. Iona was offered for sale by tender up to May 14, by the Marshal of the Admiralty Court, Toronto Admiralty District, Exchequer Court of Canada. She was built at Meaford, Ont., in 1904, and is screw driven by steeple compound engine of 9 h.p. Her dimensions are—length 58.2 ft., breadth 13.2 ft., depth 5.6 ft.; tonnage, 29 gross, 20 net.

The Great Lakes Transportation Co., Midland, Ont., has bought the steam tug Mary R., owned formerly by A. J. Brydges, Cornwall, Ont., and has changed her name to Strathbungo. She was built at Port Colborne, Ont., in 1897, and is screw driven, by engine of 27 h.p. Her dimensions are—length 47.3 ft., breadth 16 ft., depth 9.6 ft.; tonnage, 44 gross, 30 net.

The Honey Harbor Navigation Co., the incorporation of which was announced in our last issue, was formed to take over the business operated formerly by the Motor Boat Transportation Co., Midland, Ont., of which N. K. Wagg was sole owner. The company has bought the s.s. City of Dover, and now owns, in addition to that, the yacht Tenno and the launch Water Bus. The officers are: President and Manager, N. K. Wagg; director, M. G. Wagg, Secretary-Treasurer, R. R. Wilson.

The Dominion Public Works Department is reported to have served notices on owners of dismantled ships in and about Port Arthur harbor, that immediate steps must be taken to remove all derelicts and hulks which have been lying around the harbor for some years, as soon as possible. It is stated that between No. 5 dock and the Booth Line dock upwards of 20 of these derelicts are impeding navigation for small craft and giving the water front a very untidy appearance. Where owners cannot be located, the Department will probably remove the obstructions.

James Richardson & Sons Ltd., grain merchants, Kingston, Ont., have bought the s.s. Susie Chipman, from Cheboygan Steamship Co., Cheboygan, Wis., for the coal trade. She is of the well deck type, with oak hull, and was built at Milwaukee, Wis., in 1885, and rebuilt there in 1913. Her dimensions are—length b.p. 122 ft., breadth moulded 26 ft., depth moulded 9 ft. She is equipped with high pressure non condensing engine, with cylinder 24 in. dia. by 24 in. stroke, 225 h.p., at 140 r.p.m., supplied with steam by a firebox boiler 6½ ft. dia. by 12 ft. long, at 90 lb. She is 216 tons gross, 164 tons net, and has a carrying capacity of 400 tons.

The Georgian Bay Tourist Co. is reported to have bought the s.s. America from Canada Steamship Lines, for operation in Georgian Bay district summer

trade. The America was built at Kingston, Ont., in 1895, and named Maud. She has a composite hull, her dimensions being length b.p. 153 ft., depth moulded 6 ft., breadth 4 in.; tonnage 521 gross, 266 net. She is equipped with an inclined tangent compound engine, with 2 cylinders 20 and 36 in. dia. by 36 in. stroke, 400 i.h.p., at 65 r.p.m., supplied with steam by a firebox boiler 7½ ft. dia. by 13 ft. long. She was overhauled and repaired by Davis Drydock Co., Kingston, during May.

Manitoba, Saskatchewan and Alberta.

The Mackenzie River Transportation Co. Ltd. has been incorporated, with head office at McMurray, Alta.

James Anderson, of Peace River, Alta., is reported to have been in Vancouver, B.C., during May to order a steamboat for operation on the Peace and Mackenzie Rivers. It is stated that the boat is for an Eastern syndicate, which is exploring for oil north of Fort Norman.

The fiftieth anniversary of the sailing of the s.s. Selkirk down the Red River, from Fort Forks, N.D., to Fort Garry (now Winnipeg), Man., was celebrated, May 1. This is not claimed to have been the first boat to have navigated the river, as this was accomplished in the early part of 1859 by the s.s. Anson Northrup, some details of which, with an illustration of the boat, were given in Canadian Railway and Marine World in Sept. 1919.

British Columbia and Pacific Coast.

The Dominion Public Works Department received tenders to May 26, for building a pile bent and timber decking wharf, at loco townsite, Burrard Inlet, B.C.

Navigation was opened on the Yukon River about May 13, when the main river south of Dawson, between Lake Labarge to Carmache, was reported practically clear of ice.

A Dawson, Yukon, press report of May 13, stated that U.S. ships will be allowed to carry silver lead ore from May. Landing this year owing to the shortage of Canadian bottoms and the increased output of the silver works at Ceno Hill.

The ferry steamboat North Vancouver, No. 1, originally named North Vancouver, and owned formerly by the City of North Vancouver, B.C., at present owned by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., has had her name changed to Norvan.

The C.P.R. s.s. Princess Victoria, which had three new funnels fitted by Victoria Machinery Depot Co., recently, had her interior furnishings overhauled at Victoria, and new propeller shafts fitted by Yarrows Ltd. during May, and was placed in service on the Gulf route May 23.

The Hudson's Bay Co. is having built at Vancouver, by its own builder, Geo. Askew, two gasoline tugs, each 60 ft. long, with tunnel screw, and 90 h.p. Wisconsin motor engines; also three freight barges, 75 ft. long, with a freight capacity of from 50 to 60 tons, for Mackenzie and Athabaska Rivers transport.

Lt. Col. G. H. Kirkpatrick, President, Vancouver Harbor Commissioners, re-

turned to Vancouver recently, after spending some time in Ottawa, where he consulted with the Minister of Marine on matters concerning the port. It is stated that among them were the letting of a contract for the North Vancouver ferry service and the title to certain waterfront property which is in dispute between the C.P.R. and the Commissioners.

The steamships War Changer and War Chariot, built by J. Coughlan & Sons, Vancouver, B.C., for the British Government, under orders from the Imperial Munitions Board, and subsequently sold to Greek interests, and renamed Navarchos Koundouriotis and Iocasti, respectively, have both been destroyed by fire. They were both steel cargo steamships, and during construction in 1918 were both damaged by fire in the ship-builder's yard.

The Grand Trunk Pacific Coast Steamship Co.'s summer schedule becomes effective June 12. The steamships Prince Rupert and Prince George will run between Seattle, Wash., Victoria, Vancouver, Ocean Falls, Swanson Bay, Prince Rupert, Anyox, and Stewart, the s.s. Prince Rupert leaving Seattle, Sunday, arriving at Anyox, Thursday and returning to Seattle the following Sunday; the s.s. Prince George leaving Seattle, Wednesday, arriving at Stewart, Sunday, returning to Seattle the following Wednesday. The s.s. Prince Albert will continue on her present route to Prince Rupert and Queen Charlotte Islands.

Senator Taylor, New Westminster, B.C., called attention in the Senate, recently, to the undertakings of successive governments to maintain the Fraser River as a highway for ocean traffic and to the failure to make satisfactory progress with the permanent improvements at the sand heads at the river entrance; and asked who assigned to three Public Works Department employees the investigation of prospective trade on the Fraser River; the names and addresses of the three persons assigned and their qualifications; were any opinions they made, if offered, to the Minister of Public Works accepted as superior to those of Fraser Valley business men and those representing that their interests are suffering loss because of the delay in making the river accessible to shipping. On an assurance being given that satisfactory arrangements had been made for an enquiry into the matter the questions were withdrawn.

The Supreme Court of Canada reserved judgment recently in the appeal of Thorndyke Trenholme Co. against the British Columbia Court of Appeal's judgment in favor of William Lysal Shipbuilding Co. on claim for \$135,000, being commission of 5% upon six ships built and sold by the respondent company to a Belgian purchaser in Paris, France. In the original trial it was held that the purchaser did not carry out the sale by paying the money as required, and as a matter of fact he refused delivery of the ships, and was demanded to pay the building company \$1,300,000 damages for breach of contract. The B.C. Court of Appeal held that there had been no contract, and in the Supreme Court it was held by Mr. Justice Gallacher that the commission became due only when the whole purchase money had been paid. The other two judges, Martin and McPhillips, dissented, holding that the commission was due from the moment the contract had been agreed on.

Mainly About Marine People.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, and of the Naval Service, will probably sail for England in June, accompanied by Mrs. Ballantyne and their sons, to spend most of the summer.

H. P. Cousins, first officer of the C.G.S. Aras, and E. G. McCormick, first officer of the C.G.S. Laviolette, have been appointed fishery officers in the Fisheries Protection Service.

Capt. G. Edmund Mack, Superintendent of Bay Transport, Hudson's Bay Co., Montreal, paid a brief visit to England recently.

J. W. Norcross, President, Canada Steamship Lines, Montreal, and family, will spend the summer at their country house at Dorval, Que.

Sir Frederick Orr-Lewis, President, Canadian Vickers, Ltd., Montreal, returned to Canada, May 8, from England, via New York, having sailed on the s.s. Mauretania.

R. R. Russell has been appointed harbor master, Digby, N.S., succeeding Capt. O. R. Dakin, deceased.

Miss Jean K. Smith, only daughter of Horace B. Smith, President, Collingwood Shipbuilding Co., Halifax Shipyards Ltd., etc., Toronto, will be married on June 1 to Lt. Col. W. G. Barker, V.C., D.S.O., M.C., etc.

R. M. Wolvin, President, British Empire Steel Corporation, and who is interested in several steamship enterprises, and Mrs. Wolvin, have opened their country house at Dorval, Que., for the summer.

Longshoremen's and Shipliners' Wages at Montreal.

The Shipping Federation of Canada has made agreements with the Montreal longshoremen and shipliners on the basis of those in force during 1920, the only changes being in the rates of wages. Following are the new rates compared with those for 1920:—

	General cargo	Bulk cargo	Grain	Coal
7 a. m. to 6 p.m.				
1921	60c.	75c.	75c.	65c.
1920	70c.	85c.	85c.	75c.
7 to 11 p.m.				
1921	85c.	95c.	95c.	95c.
1920	\$1.05	\$1.27½	\$1.27½	\$1.27½
12 to 1 a.m.				
1921	90c.	1.12½	1.12½	97½c.

The agreement with the shipliners provides for a reduction of about 15%, the new rates being 60c. an hour for day work, 75c. an hour for night work, and double time for Sundays.

The Glen Transportation Co. Ltd.

Some details of the management of this company's ships were given in Canadian Railway and Marine World for May. We have since been officially advised that the company owns the following steamships:—Cicoa, Glenadam, Glenafon and Glenclava, and that these will be operated on the Great Lakes, by the company, of which James Playfair, President, Great Lakes Transportation Co., Midland, Ont., is President; A. E. Matthews, President, Matthews Steamship Co., Toronto, is Vice President and Manager, and E. P. Farley, 6 North Michigan Ave., Chicago, Ill., is Secretary. The names of these steamships were included under the name of the Matthews

Steamship Co. in our list of ocean, coast, lake and river steamship officers for 1921, published in the April issue, according to information supplied, but this was an error, as they should have appeared under the name of Glen Transportation Co.

The s.s. Cicoa was owned formerly by the Charcoal Iron Co., Detroit, Mich., and has a steel hull with the following dimensions,—length overall 260 ft., length b.p. 255 ft., breadth 41 ft.; tonnage 1,614 gross, 2,600 cargo capacity. She has six 12 ft. cargo hatches spaced 2 ft. centers, and the hull is divided into 3 compartments. She is equipped with triple compound engines with cylinders 14, 25 and 42 in. dia., by 30 in. stroke, supplied with steam by 2 Scotch boilers, each 11 x 11 ft. Details of the other three ships were given in our May issue, pg. 282.

Welland Ship Canal Contracts.

The contract for the completion of the work on section 5 of the Welland Ship Canal, the bulk of which consists of dredging, has been awarded by Railways and Canals Department to Canadian Dredging Co., Midland, Ont., which has done all the work on this section up to date. In addition to the remaining portion of the dredging, which was included in the original section 4, has been incorporated with section 5, the Canadian Dredging Co.'s new contract covering the whole.

We are officially advised that tenders for sections 1 and 2 will be invited within the next month or two, and for section 3 later on. Section 1 covers the construction from Lake Ontario for about 3 miles, including pier and trestle work at the entrance to the canal, construction of lock 1, and canal work to bridge 2. The original contract was given to the Dominion Dredging Co. Aug. 1, 1913, the amount of the contract based on schedule rates at that time was \$3,487,727, and when the work was suspended, it was considered to be about 69% completed. Section 2 covers the work from bridge 2 to bridge 5, about 4½ miles, including locks 2 and 3. The contract was let Dec. 31, 1913, to Baldry, Yerburch & Hutchinson, the amount based on schedule rates at that time being \$5,377,185.75, and when work was suspended it was considered to be about 59% completed. During the last two years considerable additional work has been done on section 2 by the original contractors, on the basis of cost, plus 8%.

U.S. Marine Strike.—A general strike of the mariners in the U.S. was called May 1, as a response to the United States Shipping Board's proposal to reduce wages by 15%. Most of the ports in the U.S. were affected, although some attempts were made, more or less successfully, to operate some ships. Representations were reported to have been made on the matter to the President, who is said to have declined to interfere. The matter has been left with the U.S. Secretary of Labor to deal with, and conferences were held during May with the different parties affected, but up to the time of writing, May 21, no settlement had been reached, the U.S. Shipping Board confirming its stand and insisting on a 15% reduction. The number of men affected is estimated at 125,000, of whom about 40,000 are in New York port.

Certificated Masters for Auxiliary Powered Schooners.

Some trouble arose at Quebec, Que., recently, stated to be on the initiative of the Masters and Mates Association, relative to the operation of schooners, equipped with auxiliary power, without the services of a certificated master or other officer. The law requires that all ships equipped with auxiliary power be registered as steamships, a steamship being described as "any ship propelled wholly or in part by steam or motive power other than sails or oars." On the one side it was held that such ships, sailing without a certificated officer, are a menace to navigation and on the other a registered tonnage of 10 and even less, side it was urged that many ships, with are so equipped, and that it would be impossible for such ships to earn sufficient to pay for such services, and that in any case there is not menace to navigation, as they are in charge of competent men. In addition it was urged that such ships are operated into, and out of, Montreal without certificated masters. It is reported that on the submission of the matter to the Marine Department, instructions were sent to the Quebec customs officers that ships under 100 tons register and equipped with auxiliary power are to be cleared at Quebec without certificated masters. The Collector of Customs at Montreal is reported to have stated that only sailing ships of 150 tons and over, equipped with auxiliary power, are required to be in charge of certificated masters.

Welland Canal Lock Gate Accident.—Canada Steamship Lines' s.s. Arabian, while upbound, light, struck and carried out the two upper gates of lock 8, in the Welland Canal, May 3. The water from the reach above washed out the rear slopes of the banks at the head of lock 7. Two spare gates were placed in position, and navigation was resumed the same day, after a suspension of approximately 16 hours, a number of ships being delayed. The Arabian had her rudder stock, propeller shaft, and one propeller blade damaged, and was docked at Port Dalhousie for repairs. It is said that the accident was due to the ship entering the lock at too great speed, and failure to get out the lines on the snubbing posts, on account of their fouling in the compressor. The cost of the repairs to canal works is estimated at \$9,000.

The Dominion Government's Arctic is being overhauled and equipped at King's wharf, Quebec, and we are officially advised that she will sail for northern waters shortly under the Interior Department's orders. One report from Quebec states that she will sail in June in another attempt to reach the North Pole, and another report states that she will sail in July for the Mackenzie River to act as a patrol vessel in connection with the oil well in that district. She made a cruise in Arctic waters a year ago in charge of Capt. J. Bernier.

The Hudson's Bay Co.'s Motorship Lady Kindersley, the launching of which by B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., was announced in a recent issue, will, when completed, sail from Vancouver through Behring Sea and Strait round Cape Barrow to Mackenzie River. Capt. G. Toolin, has been appointed master, and G. R. Priestman, chief engineer. The ship has been registered at Vancouver.

Wreck Commissioners Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Stranding of s.s. Princess Beatrice.

Held at Vancouver, B.C., March 9, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commander F. W. Evans, R.D., R.N.R., and Capt. A. P. W. Williamson, as assessors, into the stranding of the C.P.R. British Columbia Coast Service s.s. Princess Beatrice, on Jedidiah Island, Sabine Channel, Feb. 10. The evidence showed that she left Vancouver on the night of Feb. 9, for Prince Rupert, and after clearing the Narrows, and before reaching Cape Roger Curtis, the mate, F. R. Springall, took charge of the watch, the weather being clear, sky overcast, wind moderate, and visibility good. The master, Capt. W. J. Boyce, after writing the night orders up, and assuring himself that the ship was on her proper course, retired to rest, which, under the circumstances, the court considered he was justified in doing. A proper course was set for Bare Island, where the course would have to be altered to enter Malaspina Strait. After passing Merry Island light, where the change should have been made, it was, for some unaccountable reason, which there was not sufficient evidence to establish, not made by F. R. Springall, the officer in charge of the watch, and the ship proceeded on her course some 50 mins. longer than she should have done, with the result that she entered Sabine Channel, instead of Malaspina Strait, thus making Texada Island on the starboard, instead of on the port, bow. When the officer realized his mistake, there were two evolutions left for him to perform, either of which would have averted the casualty. One was to proceed on through the Sabine Channel, which, though narrow and congested, is perfectly safe and navigable, and the other, the more prudent and seamanlike action, was to stop the ship, verify his position, and turn her round under port helm, with the aid of the engines, the ship having a right handed propeller. He, however, presumably acting on the assumption that there was ample space in which to turn the ship around at full speed under starboard helm, ordered the helm put hard a starboard, with the result, there being insufficient room, she struck on Jedidiah Island, with the engines still going at full speed. The force of the impact was such that she was extensively damaged, and took water rapidly. The master, on coming from his cabin, quickly realized the situation, and anticipating that the ship would slip off the rocks with the rising tide, very properly and prudently gave instructions to lower the boats and land the passengers without delay. The passengers were no sooner landed than, as the master surmised, the ship floated off into deep water, and he at once proceeded, with all possible dispatch, to Toke Bay, the nearest anchorage, about 5 miles distant, with the view of beaching her if necessary. The court expressed the opinion that considerable credit is due to the master for the energy and initiative he showed under very trying circumstances, and also to the owning company, for the prompt manner, in response to wireless messages from the s.s. Princess Beatrice, in which another

of the company's ships was diverted from her usual run, to re-embark the stranded passengers and carry them to their destinations with little loss of time. The court held that the casualty was entirely due to the inexcusable negligence, and inattention to his duties, displayed by the first mate, F. R. Springall, who was in charge of the watch at the time, and therefore found him solely in default, and suspended his certificate of competency, no. 5539, as master of a passenger steamship in the coasting trade, for three months, with the remark that this leniency is shown in consideration of his hitherto good record and long service in the C.P.R., coupled with the fact that his services have been dispensed with by the company. No blame was attached to the master, or any member of the crew, or to the owners, but on the contrary, it was stated that considerable credit was due to all concerned for the prompt manner in which all the passengers were safely landed, and shortly after re-embarked on another of the company's ships.

Stranding of the s.s. Kaduna.

Held at Halifax, N.S., March 15, before Capt. H. St. George Lindsay, commissioner, assisted by Capt. C. L. Willate and Neil Hall, as nautical assessors, into the stranding of Elder Dempster & Co.'s s.s. Kaduna on Pot Rock near Fourchu Head, N.S., Feb. 23. The evidence showed that the ship sailed from Barry Roads, Wales, in ballast, for Louisburg, N.S., Feb. 9. The compasses had been adjusted before sailing, and observations for errors were taken on all possible occasions, and apparently all corrections were properly applied to the courses. The ship was fully supplied with charts, sailing directions, etc. The position of the ship on Feb. 23 was ascertained by good cross bearings and verified off St. Esprit Island light, and the compass course set was a safe and proper one under the conditions. The lead was not used, as there was apparently no necessity, and a good lookout was kept. The ship struck off Pot Rock, having been, in the court's opinion, gradually carried inshore by ice pressure to starboard, which was not perceptible to those in charge. The unanimous opinion was expressed that the ice drift was to the north and westward, or toward land. The navigation was carried out in a careful and seamanlike manner, and the court exonerated the master and officers from blame, but expressed the opinion that the risk undertaken in navigating a ship during darkness, in such close proximity to land, and under the then existing circumstances, was not justifiable, and therefore cautioned the master, Capt. R. Owens, for the future not to allow his better judgment to be influenced by information and reports, somewhat belated when received, on ice conditions, which are liable to continuous and rapid change, more especially in light winds and fine weather. The court also expressed the opinion that had the master been aware of the non existence of the light on Fourchu Head, the casualty would not have occurred, and therefore strongly recommended that all shore lights and lighted buoys in the Light Lists, which are either extinguished or removed during winter, should have a note to that effect in the remark column of that publication.

Loss of s.s. City of Colombo.

Held at St. John, N.B., March 29, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Mulcahy and John Hall, as nautical assessors, into the stranding and loss of the British s.s. City of Colombo, about 16 miles west of Digby, N.S., in the Bay of Fundy, March 20. The evidence showed that the City of Colombo left St. John, N.B., March 20, and that, after dropping the pilot near Partridge Island, a course was steered to make the outer St. John harbor buoy, after passing which a course was set to pass Pointe Lepreau, when another course was shaped, and the master, Capt. J. J. Robertson, after hearing the fog signal at Pointe Lepreau, determined that he was about $2\frac{1}{2}$ to 3 miles from it, but did not cast the lead nor obtain a cross bearing. His intention was to pass west of Grand Manan, but the weather becoming thicker, he changed his mind. His first error, especially for one who was a stranger, and not having noticed whether his cargo of iron had affected his compass, was his failure either to take cross bearing of the fog horn, or cast the lead, to assure himself as to the position of his ship. This was necessary, in view of the fact that nothing could be seen, owing to the fog, and more especially as he admitted lack of knowledge, and the error of his log which he thought was fast, even erratic, and the possible drift of his ship, it then being abn. tide. The court refrained from saying that at the distance the iron was from the standard compass, the magnetic influence would have necessitated a greater deviation than that observed on the passage out, but a disturbance was possible under the circumstances. The lead was cast frequently, and had not the master had a fixed idea that he was near Grand Manan it is possible that he might have been taken oftener still, especially as he felt he was lost in his calculation. The court expressed its surprise that he did not avail himself of the direction finding station at Red Head. He had a wireless equipment on board and could have cleared the situation by availing himself of this very useful aid to navigation, and he could have asked for several bearings, more especially as he was in a fix. At the time of grounding, the ship was going half speed, and had it remained stationary, with the southwest wind, it would have been brought toward deeper water, or the master could have let his anchor run down slowly and awaited events. The court felt that the master, who remained constantly at his post, used the lead with some frequency, and this precluded a charge of carelessness, but it considered that he erred gravely in not availing himself of the means, easily obtainable, to determine his position. The court therefore found that the master was solely in default and suspended his certificate for three months, from March 29 to June 28, inclusive. The officials and engineers were exonerated from all blame. A rider was added on the pilot pointing out to the court that he had often seen fishing vessels at a point which he marked on the chart 45.35n. 66.20w., which is only an approximate bearing, which is supposed to be shoaler than other places, and which is not shown on the chart amongst the soundings. In view of this, the court

suggested that further enquiries as to the existence of such a bank should be made. From the court's knowledge of the Bay of Fundy it was stated that fishermen have frequently been seen in all parts of the bay fishing, but that does not indicate that such places are shoaler than shown on the chart.

Stranding of S.S. Impoco.

Held at Halifax, N.S., Apr. 14, before Capt. L. A. Demers, Dominion Wreck Commissioners, assisted by Capt. Neil Hall, Port Warden, and Capt. T. R. Coffin, master of Canadian Government Merchant Marine s.s. Canadian Forester, in to the stranding of Imperial Oil's s.s. Impoco, on Blonde Rock, off the Nova Scotia coast, Apr. 5. The evidence showed that the ship was supplied with three compasses, and all the necessary apparatus to carry on navigation. The compasses were adjusted in New York in Aug. 1920. The navigation book was left on the ship, but the log had been brought off. The ship was bound from Halifax, N.S., for St. John, N.B., and left Halifax, Apr. 4, at 1:35 p.m., striking on Blonde Rock at 6:36 a.m. the following day, the sea being smooth. The master was asleep in the chart room, having been up during the night. He had allowed two points deviation on the compass, and the ship steered well. He had given the course to the chief officer, with instructions to call him when Blonde Rock buoy was sighted. After the ship had struck, the chief officer had stated that he had not seen the buoy, but the master saw it later, and it appeared to be in position. It was daylight, and the chief officer had kept his watch on the bridge. He appeared to be a reliable officer, and had been on the ship since February. The course steered should give a mile clear of Blonde Rock buoy. The tide was flood, and the ship struck about two hours before high water. He knew the influence of the tides in the neighborhood. He took soundings after the striking. She went aground to 'midships and was practically open from the forepeak to 'midships, with 2 fathoms of water forward, 3 amidships and to 6 fathoms aft. She was abandoned Apr. 7, after attempts had been made to float her off at high tide. The chief officer, Charles Pope, who holds a Newfoundland sailing ship command certificate, granted in 1920, stated that his experience was nearly all in deep water, and he joined the ship in February as second officer, and was promoted during this last trip. At the time he got the course, which would lead about a mile from Blonde Rock buoy, no reference was made, by the master, to the tide. He watched the course by the steering wheel, and all the time she seemed to be making inside her course, and he thought it might be due to tide. He looked for the buoy, but did not see it, and after the ship struck, the buoy was 3 points on the port bow. He could not account for not seeing it. The ship was setting in to starboard all the time, and his idea as to compensation was to steer a little bit on the other side.

The court found that the master, W. R. Smeltzer, had, in view of the weather conditions, plotted down and given a proper course, which, with steering and attention, would have cleared the ship of all outstanding danger, viz., Blonde Rock; also that upon coming on the bridge at the time the ship touched and after, he used proper and necessary means to get her out of her dangerous position. He was therefore exonerated from

all blame. The loss of the ship was found to be due, solely to the default of the chief officer, C. Pope, in failing to supervise the steering properly, which was carelessly executed; failing to make himself acquainted with the stage of the tide and its possible influence; for not calling the master when instructed to do so; for not taking proper bearings of the objects in view, and for lack of proper and efficient lookout. The court could not detect from the evidence that there was wilfulness in bringing about the stranding of the ship. It therefore suspended the certificate of the chief officer, Charles Pope, no. 421 Newfoundland, for 12 months from Apr. 13.

Harbor Development and Drydock Construction at St. John, N.B.

A very complete illustrated description of the work being done in Courtenay Bay, St. John, N.B., for the Dominion Government, by the St. John Drydock & Shipbuilding Co., was published in Canadian Railway and Marine World for May 1920. As therein stated, the company's contract provides for the construction of 2,500 lin. ft. of breakwater extension; dredging of an entrance channel, 500 ft. wide, with 22 ft. depth at lowest water (maximum tide 28 ft.), involving the removal of about 2,500,000 cu. yd. of sand, gravel and clay; dredging for a turning basin to a depth of 32 ft. at lowest water, requiring the removal of about 4,500,000 cu. yd. of sand, gravel and clay; the removal of some 140,000 cu. yd. of submarine rock, leading into the entrance of the drydock; and the construction of a series of deep water piers.

When the article referred to above was published in May 1920 the rock excavation in the prism of the drydock, and the construction of the breakwater, were under way, and the cofferdam for unwatering the entrance channel to the drydock had been completed. Excavation of the rock within the cofferdam area was started in May 1920, and has been carried on concurrently with the excavation in the drydock prism. Up to the end of April approximately 120,000 cu. yd., of the total of 140,000 cu. yd. of rock in the entrance channel, had been removed without any serious trouble from water, a 6 in. centrifugal pump taking care of the water coming in.

About 18,000 cu. yd. of rock remain in the drydock prism. It will thus be seen that the excavation, both in the entrance channel and the drydock prism, are very near completion.

The 20 in. hydraulic pipe line discharge dredge Tornado started work in the basin towards the end of Oct. 1920, and by the beginning of March had very nearly completed the reclamation to the north of the drydock. During this period some 900,000 cu.yd. of material were pumped, to make up an area of 40 acres, which will be the location of the proposed ship repair plant and service ground. The dredge Tornado has been undergoing repairs and renewals and during May resumed dredging operations in the basin and main channel.

The breakwater is completed, with the exception of the laying of some 15,000 cu. yd. of cover stone.

Drydock.—Under the terms of the Drydocks Subsidies Act 1910, and the Drydocks Amendment Act 1917, the St. John Drydock & Shipbuilding Co. has undertaken to build and operate drydock of the first class, for naval and general purposes, which will have the following dimensions,—length 1,150 ft., width at coping 133 ft., depth on sill at high water 44 ft. The drydock will be the only one on the Canadian Atlantic coast capable of taking ships over 600 ft. long, and will embody in its construction the latest and most efficient features of drydock construction. Provision will be made by an intermediate sill and caisson, to use separate portions of the dock, 650 ft. and 500 ft. long, to suit the size of ships to be accommodated. The inner and outer entrances will be closed by floating caissons, two of which will be provided. The pumping equipment will consist of three 52 in. vertical centrifugal motor driven pumps, capable of unwatering the dock in 2½ hours. The dock will be equipped with a travelling crane, capable of lifting 40 tons at a reach of half the width of the dock. Preparations are being made to proceed with the concrete construction of the drydock during this summer.

A. R. Dufresne, B.A.Sc., C.E., is the company's Engineer and Manager.

The Dominion Coal Co.'s steamships Daghill, Lingan and Maskinonge, loaded 11,000, 7,000 and 7,000 tons of coal respectively, during May, for British ports.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during April, 1921:

General Shipbuilding Matters Throughout Canada.

B.C. Engineers and Shipbuilders Ltd., Vancouver, B.C. — The Hudson's Bay Co.'s motor ship *Lady Kindersley*, the launching of which was mentioned in our last issue, is nearing completion at this company's yard. Her dimensions are—length overall 200 ft., length at loaded waterline 188.6 ft., beam 36 ft., moulded depth 15 ft., draft loaded 12 ft., tonnage 714.48 gross, 549.76 registered. She is a three masted schooner equipped with auxiliary power, consisting of a 2-cycle Beardmore semi Diesel engine of 360 h. p. She has been built especially for the Arctic trade, and the hull, from the keel to the lower guard, is entirely sheathed with 2 in. iron bark. The stem and forefoot are cut away for ice breaking, and are further protected by a heavy electrically welded shoe. Her speed will be 7 knots an hour. The accommodation for officers and 6 passengers is arranged aft, and that for the crew in the fore-castle. The trial trip has been arranged for June 6 and it is expected that she will sail shortly after for Herschel Island and the mouth of the Mackenzie River.

Our last issue, was launched from this yard May 5, and named *Topdalsfjord*, by Mrs. G. M. Bosworth, wife of the Chairman, Canadian Pacific Ocean Services. This ship, like her sister, is for the Norwegian America line, Christiania, Norway, and was designed and built under the personal supervision of A. Macfarlane, naval architect, New York, assisted by F. H. Bodin, Capt. Halvorsen and M. Yggersteth, chief engineer, officers of the Norwegian America Line. She will be classified under Norwegian Veritas, and is capable of carrying a cargo of 6,400 tons on 23½ ft. draft. Her dimensions are—length 365 ft., breadth 49½ ft., depth 29 ft. The propelling machinery consists of triple expansion engines, with cylinders 27, 43 and 70 in. diam., by 48 in. stroke, equipped with Mitchell thrust bearing for which Canadian Vickers Ltd. is Canadian licensee, and they will develop sufficient power for a speed under full load of 11½ knots an hour. Steam will be generated by three Scotch boilers, each 14½ ft. diam. by 11½ ft. long, fitted with forced draft, and superheaters. They are adapted to burn either

north shore, carrying provisions to the various settlements. The company is operating two other schooners on the same route.

B. M. Melanson, Gibberts Cove, N.S., has completed the s.s. *R. W. Hendry* for Magdalen Transports Ltd. Her dimensions are—length overall 150 ft., length b.p. 139 ft., breadth 28.4 ft., depth 11.1 ft., tonnage 479 gross, 353 net. She is equipped with triple expansion engine, with cylinders 12½, 19½ and 31½ in. diam. by 20 in. stroke, by New Burrill Johnson Iron Co., Yarmouth, N.S. The boilers were supplied by John Inglis Co., Toronto. She has accommodation for 20 first class and 25 second class passengers and a crew of 28. The accommodation on the upper deck consists of four staterooms and a smoking room, and on the lower deck a ladies' room and several staterooms. Forward on the main deck are the dining room and galley, and under the fore-castle is accommodation for second class passengers. She is classed for 12 years in Bureau Veritas, and in addition to her passenger accommodation has considerable cargo capacity.

H.M.C.S. *Patriot* and *Patrician*, and the *Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert*, at Yarrow's Limited, shipyard, Esquimalt, B.C.

The company is also building 4 small schooners for the Hudson's Bay Co.'s Mackenzie River trade, which will be taken north by the *Lady Kindersley*. Two of them are 43 ft. long overall, and two 35 ft. long overall.

B.C. Yacht & Boatbuilders Ltd., Victoria, B.C.—The first of the two 75 ft. motor patrol boats named *Birnie*, built by this company for the Marine Department's British Columbia coast patrol service, was handed over to the Department early in May, and left Victoria for Prince Rupert May 11. The second, which is named *Berens*, was expected to be put in service during May. The *Birnie* will be operated out of Prince Rupert and the *Berens* out of Victoria.

Canadian Government Merchant Marine.—For particulars of shipbuilding for Marine Department, see under "Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.," on another page.

Canadian Vickers Ltd., Montreal. — A sister ship of the s.s. *Idefjord*, the launching of which was announced in

coal or oil as fuel. The hull is exceptionally strong, and reinforced in the bow, for navigation in ice. The windlass and winches are of the Clarke-Chapman design, made by Canadian Vickers Ltd., steering gear of the Wilson-Pirie, direct acting type, operated by telemotor from the bridge, all made in Montreal. In addition to the usual equipment of derricks, the foremast has a powerful derrick, with capacity of 30 tons. Life saving equipment is in accordance with the requirements of the Norwegian Sea Control and the holds are equipped with fire extinguishing apparatus.

The *Cranes' Shipyards Ltd.* has been incorporated under the British Columbia Companies Act, with \$10,000 capital, and office at North Vancouver, to carry on business as shipbuilders, ship repairers, drydock owners and operators, and to own and operate ships of all kinds.

Eastern Canada Stevedores Ltd., Quebec, Que., launched a schooner named *St. Christophe*, 117 tons, at its plant at Ottawa Cove, on the St. Charles River, May 11. She will operate along the

Port Arthur Shipbuilding Co., Port Arthur, Ont., reduced its employees wages 17% from May 1.

The President, Jas. Whalen, has issued a statement to shareholders, in which he says:—"In view of the present situation in regard to ship construction, your directors have deemed it advisable to authorize the company to enter upon other work than shipbuilding, to which your plant is adaptable. Work has already been commenced upon a contract for 20 compressed air mine shovels for one company, and negotiations with other companies requiring this class of machine have advanced to a point where other contracts seem assured."

Sydney Foundry & Machine Works Sydney, N.S., is building a 1,200 ton marine railway. The cradle will be 200 ft. long and 50 ft. wide, and will be equipped to haul up a ship in 20 minutes, from the time she is laid on the keel blocks. The work is being done by Crandall Engineering Co., East Boston, Mass., all machinery and iron work being made by the Sydney Foundry & Machine

Works. It is expected that the marine railway will be in operation during July. The drydock, which the company also proposes to build, is still under consideration, and negotiations are proceeding with the Dominion Government for aid for its construction under the Drydock Subsidies Act.

Victoria (B.C.) Shipowners, Ltd. Victoria, B.C.—No decision has been announced as to any further progress on the four barquentines which are being built at the Choblog shipyards under special Dominion Government aid. The first of these, which was launched some time ago, and named S. F. Tolmie, is practically completed, the work on the other three has been suspended, and there are no indications as to when it will be resumed. Reports state that up to the present the S. F. Tolmie has cost \$94,000 more than the estimated price, and the cost of building the others is said to have already exceeded the estimates. Among the causes for this are mentioned the inefficiency of the yards and also of the staff in general.

Yarrows Ltd. Victoria, B.C., did the following repair work during April—U.S. Shipping Board's s.s. Wenatchee, 15,000 tons, minor repairs; Imperial Oil s.s. Talaralite, 2,631 tons, new propeller blades and minor repairs; C.P.R. s.s. Princess Maquina, 1,777 tons, cleaned, painted and general repairs; Canadian National Rys. car ferry Canora, 2,383 tons, cleaned, painted and repaired; Dominion Government fishery protection s.s. Armentieres, 357 tons, cleaned, painted and repaired; Consolidated Whaling Corporation's s.s. St. Lawrence, 111 tons, full bottom repair; Dominion Government fishery protection, s.s. Thievel, 357 tons, minor repairs; H.M.C.S. Aurora, general refit and engine overhaul; H.M.C.S. Patriot and Patrician, cleaned, painted, general refit and engine overhaul; Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, 3,379 tons, completely refitted and reconditioned after having been totally submerged in Swanson Bay for over two months. The accompanying illustration shows H.M.C.S. Patriot and Patrician, and the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert at this yard.

The s.s. Prince Rupert was completed and delivered to the Grand Trunk Pacific Coast Steamship Co. May 7, and she sailed from Esquimalt for Vancouver, May 9. She was wrecked at Swanson Bay, Sept. 28, 1920, and was hauled over to Yarrows Ltd. for overhaul and repair Jan. 10, the contract calling for completion in 115 working days. The actual working time taken is estimated at 92 days. About 700 men were engaged on the work.

A Victoria press dispatch of May 17 said H.M.C.S. Patriot, which grounded in Nanaimo harbor, May 10, had been damaged seriously enough to require about two weeks at a repair plant and that the departure of the Canadian naval ships for the Atlantic, which was fixed for May 27, had been postponed until early in June.

Vancouver Shipping Statistics.—During 3 months ended March 31, 2,455 coastwise ships of 1,620,000 gross tons, entered and left the port, leaving 172,000 and shipping 75,000 tons of cargo; 105 deep sea ships of 690,000 gross tons used the port during the same period, landing 69,000 tons, and shipping 119,000 tons of cargo.

Canadian Notices to Mariners.

The Marine Department has issued the following.

British Columbia.

The fixed white oil light, on the west side of Denman Island, Baynes Sound, 1 1/5 miles southward of Village Point, will be replaced about May 15, by an occulting white acetylene gas light shown from a lens lantern. The red and white sectors remain as at present. The light will be unwatched.

Vancouver Island.—The wreck of the floating drydock, which was lying for some time in Esquimalt harbor, has been removed, and now lies on the beach near Albert Head.

The fixed white light on Patey Rock, at the entrance to Saanich Inlet, on the east coast, will be replaced about July 1, by an occulting white acetylene gas light, shown from a lens lantern. It will be unwatched.

New Brunswick.

Country Harbor.—About May 1, a new light, occulting white acetylene gas, shown from a lens lantern, at an elevation of 42 ft., from a pole with small shed at base, will be established immediately north of the existing light, on the end of Shingle Point, at the northwest end of Harbor Island, and on its establishment, the existing light will be discontinued.

Miramichi Bay.—Buoys have been established in Vin harbor, as follows:—Sand Point, off south point of Vin Island, 3 1/4 cables 181 deg. 30 min. from Vin Island back range light; Gardners Point buoy, east side of sand spit off the point and 3 1/2 cables 101 deg. 30 min. from Vin Island back range light. The first is a black, and the second, a red, wooden spar buoy.

Nova Scotia.

Cape Breton Island.—About the opening of navigation a new front range light will be established on the south side of the entrance to Glace Bay harbor, consisting of a fixed red catoptric light, shown from a headlight lantern elevated 30 ft. on a pole with small shed at base. The existing back range light will be moved to a new position, 1,280 ft. 206 deg. 46 min. from the front light.

Halifax approach, Chebucto Head.—The flashing white light on the summit of the head, showing 4 flashes every 30 sec., will, without further notice, be replaced by a flashing white light showing 4 flashes every 20 sec., with intervals of 3 sec. between each of the 4 flashes, and 11 sec. interval after each 4 flashes. For half the time of the revolution, or 10 sec., the light will be totally eclipsed, and for the other half, a fixed light of 800 c.p. will be visible, through which the flashes of 20,000 c.p. will show.

North Canso.—The black and white striped whistle buoy in 23 fathoms, 3 miles, 33 deg. from North Canso light-house, will be discontinued without further notice.

Restigouche River.—The Public Works Department announces that the limiting depth in the ship channel below Campbellton is 14 ft.

Ontario.

Lake Ontario.—During 1920 the Public Works Department dredged Whitty harbor as follows:—from 370 ft. south of the outer end of the west pier, the center of the channel was dredged to 100 ft. wide to opposite the end of the

pier, and then northward 50 ft. wide for 543 ft.; an area 50 ft. wide, by 150 ft. long, was dredged in front of Blow's coal wharf, and an irregular area was dredged in front of Watson's coal wharf; all to a least depth of 14 ft. below zero of the gauge, which is 245 ft. above mean sea level at New York.

About May 14, the Point of the Woods range will be changed in position, as follows: Front range light, 205 ft. 39 deg. from present position, occulting red light at an elevation of 26 ft., structure consisting of a white diamond shaped daymark on concrete pier with tank-house at base; bank range light, 330 ft. 314 deg. 16 min. from front light, fixed red light at an elevation of 42 ft., structure consisting of concrete base surmounted by a white diamond shaped daymark on black skeleton tower, with white tankhouse at base. This range will mark the center line of the improved channel.

Lake Huron.—On the reopening of navigation, the revolving white light on the extremity of the low point at Point Clark will be changed to a flashing white light, showing a flash every 2 1/2 sec.

Lake Superior.—On the reopening of navigation, the fixed white light on the point of the west end of Pe Island, at the west entrance to Thunder Bay, will be replaced by an occulting white acetylene gas light shown from a 7th order lens, and the fog horn will be discontinued; the light will be unwatched.

Lake Superior.—The black spar buoy, heretofore maintained on the west side of the inner end of dredged cut, at the Richardson elevator wharf, Port Arthur harbor, Thunder Bay, will be discontinued without further notice.

Ottawa River.—The fixed white light on the north extreme of Ile Cadeux, Lake of Two Mountains, will be replaced, on the opening of navigation, by an occulting white gas light, shown from a lens lantern, and it will be unwatched.

Prince Edward Island.

Range lights at Darby Basin, Malpeque Bay. on the northwest coast, will have their positions changed without further notice as follows:—front light, on west side of basin half a mile 293 deg. 45 min. from present position; back light, 650 ft. 201 deg. 45 min. from front light.

Quebec.

Saguenay River.—About June 1 the fixed white catoptric light on Pointe Noire, near its east extremity, will be replaced by a fixed white dioptric light, shown from a 4th order lens. The light will be visible from all points of approach by water.

Richelieu River.—On the reopening of navigation, a new front range light will be established on the site of the former light, at the southwest end of Chambly Basin. It will consist of a mast, with small white shed at base, showing a fixed red catoptric light, from a headlight lantern.

St. Lawrence River.—The front range light above Cap Charles Calvaire, in the ship channel between Quebec and Montreal, has been moved 188 ft. back from its former site on line of range.

St. Lawrence River, Escumains.—Owing to the total destruction, by storms, of the government wharf on the west side of the entrance to the bay, the light and fog horn have been discontinued, and a red wooden spar buoy has been established, immediately south of the ruins.

River St. Lawrence.—The submarine bell off Metis Point, 1 1/3 miles, 335 degrees, from Little Metis lighthouse, will be discontinued without further notice.

The back range light at Portneuf-en-bas has been moved eastward of its old position, and 323 ft. 319 deg. 30 min. from the front light.

United States.

Detroit River.—The light on the west side of the south end of Fighting Island channel will be changed to a flashing red light, on the reopening of navigation.

The light at Manajuda light station, on the easterly edge of the island, will be changed to a flashing white light, showing a flash of 0.5 sec. duration every 2 secs.

The light at Grassy Island light station, on the easterly edge of the island, will be changed to a flashing white light, showing a flash of 0.5 sec. duration every 2 secs.

Canada Steamship Lines' Montreal-Gulf-Newfoundland Service.

Canada Steamship Lines will place its twin screw steamship *Manica* in service this summer, between Montreal, Quebec, and Gaspe, Que., Charlottetown, P.E.I., and St. John's, Nfld., making seven round trips of about a fortnight each, leaving Montreal June 11, and 28, July 15, Aug. 2 and 19, and Sept. 6 and 23. The *Manica's* principal dimensions, etc., are, length 246 ft., beam 48.5 ft., depth 35.3 ft., horse power effective, 3,480, displacement 6,000 tons. Her stateroom accommodation includes parlor rooms with baths en suite.

The route will be along the south shore of the St. Lawrence, round the Gaspe peninsula, and Perce Rock, and thence via Charlottetown to St. John's. The passenger rates will range as follows, according to accommodation, first class fares including berths and meals. To Gaspe, one way, \$30 to \$70; steerage, \$20; no round trip fares to Gaspe. To Charlottetown, one way, \$45 to \$85; round trip, \$75 to \$150; steerage, one way, \$30. To St. John's, one way, \$70 to \$100; round trip, \$125 to \$175; steerage, one way, \$40. There will be local rates between Gaspe and Charlottetown, Gaspe and St. John's and Charlottetown and St. John's. Children under 5, if occupying seats at table, will be charged 50c. a meal, but no charge for passage or berth; children 5 years and under 12, half fare; and over 12 full fare. All fares exclusive of war tax.

An Extraordinary Solicitation of Marine Business.

During the discussion of the Customs and Inland Revenue Department estimates, in the House of Commons, on May 7, Hon. R. Lemieux read a photographic copy of the following letter, which he said had been written on the Department's official letter paper, headed with the Royal coat of arms.

"Ottawa, Jan. 13, 1921.

"French Purchasing Commission, care of French Embassy, London, E.C., England.

"Dear Sirs,—I am informed that your Government will have quite a few French steamers taking grain from the port of Saint John, N.B., Canada, this winter. The firm of Nagle & Wigmore, of which I am a member, are very anxious to se-

sure this business. We are the largest firm of shipbrokers in Saint John and have done a very large amount of business along these lines. We have our own tow-boats, tend to all stevedoring and all matters in connection with the general brokerage business.

"As you are no doubt aware, I am Minister of Customs and Inland Revenue in the Canadian Government and I spoke to Sir George Foster, my colleague in the cabinet, who has just returned from England, being Canada's representative at the League of Nations' conference, which has just been concluded at Geneva, and he advised me to write to you.

"We are in a position to handle your business to your satisfaction and would refer you to the Bank of Nova Scotia as to our financial ability. We are agents for the Canada Steamships Lines Limited, the Compagnie Canadienne Transatlantique, Limited, the Fracanda line and the Acadian Shipping Company Limited.

"I would very much appreciate your giving us your business. Thanking you in anticipation, I remain, yours very truly,

"R. W. WIGMORE."

Shipping Notes from New York. — New York press dispatch, May 17.—Grain is still waiting ships for this month and June is open at 6s. 3d, top 6s. 4 1/2d, Montreal to United Kingdom, with Gulf of Mexico to United Kingdom at 7s. 6d. to 7s. 9d., and West Italy 8s. to 8s. 5d. There are a few enquiries in the Canadian trade and from North Atlantic ports to the West Indies. The action of a Canadian line in establishing a service between British Columbia and California has been followed by the Pacific Steamship Co.'s inauguration of a new schedule on the part of the similar units of its fleet operating between Seattle and California cities, so that some of the coastwise fleet will call at Vancouver to compete with the new Canadian service.

Charts have been published by the Naval Service Department, Hydrographic Survey, as follows: No. 417, Liscomb Island to Egg Island, N.S.; No. 4, Ile Marie to foot of Ile Bouchard, Que.; No. 20, St. Nicholas to Quebec bridge; No. 20, Quebec harbor.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or carriers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our column for or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Diamond State Fibre Co., Toronto, P. J. McFadden, Ontario representative, is convalescent, after being in Port Hope hospital, for several weeks, with pleurisy.

The Superheater Co., Montreal, advises that the two steel cargo steamships ordered by the Norwegian America Line, Christiania, Norway, from Canadian Vickers Ltd., and which were described in Canadian Railway and Marine World for May, pg. 276, are equipped with superheaters built at the company's Sherbrooke, Que., plant, which it says are the first marine superheaters of the fire tube type made in Canada, and probably the first marine superheaters made in Canada.

Canadian Railway and Marine World

July, 1921

The United States Railroad Labor Board Orders Reductions in Wages.

A decision given by the United States Railroad Labor Board in Chicago, June 1, orders reductions in wages of railway employes on June 1, ranging from 18% for unskilled maintenance of way employes to 7% for road passenger locomotive men, and averaging about 12%. It is estimated that these reductions, if applied to all employes of class 1 roads, will amount to approximately \$400,000,000 a year. The decision is as follows:

The U.S. Railroad Labor Board, acting under authority of the Transportation Act, 1920, and in furtherance of the purpose of said act, hereby renders a decision upon a series of controversies between the carriers and the representatives of certain employes of the carriers involving the question of what shall constitute just and reasonable wages. The various controversies were considered in conference between representatives designated and authorized by the parties, and not having been decided in such conference were referred to the board for hearing and decision. The carriers, parties hereto, each of which has a dispute with one or more of the organizations hereinafter named, are:

[Editor's Note.—This was followed by a complete list of railways which were parties to the application, and which included the following which are more or less connected with Canadian transportation:—Bangor & Aroostook, Boston & Maine, Central Vermont, Detroit Terminal, Duluth, South Shore & Atlantic, Grand Trunk Western Lines, Great Northern and controlled lines, Lehigh Valley, Maine Central, Michigan Central, Mineral Range, Minneapolis, St. Paul & Sault Ste. Marie, New York Central, Northern Pacific, Pere Marquette, Portland, Me., Terminal Co.]

The organizations parties hereto, each of which has a dispute with one or more of the above named carriers, are:—American Association of Railroad Ticket Agents, American Federation of Railroad Workers, American Train Dispatchers' Association, Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Railroad Signalmen of America, Brotherhood of Railroad Station Employes, Brotherhood of Railroad Trainmen, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, Brotherhood Railway Carmen of America, International Alliance of Amalgamated Sheet Metal Workers, International Association of Machinists, International Association of Railroad Supervisors of Mechanics, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America, International Brotherhood of Electrical Workers, International Brotherhood of Firemen and Oilers, International Longshoremen's Association, International Moulders' Union of North America, International Union of Steam and Operating Engineers, Knights of Labor, National Organization Masters,

Mates and Pilots of America, Order of Railroad Station Agents, Order of Railroad Telegraphers, Order of Railway Conductors, Railroad Yardmasters of America, Railway Employes' Department, A. F. of L., Switchmen's Union of North America, United Association of Railway Employes of North America, United Brotherhood of Carpenters and Joiners of America, United Brotherhood of Maintenance of Way Employes and Railway Shop Laborers.

Immediately after the organization of this board and on April 16, 1920, it received and took over for hearing a dispute that had been pending before what was known as the Bi-partisan Board, between a large number of carriers which had been under government control, including most, if not all, of those

sure have affected all industries and the entire public. We now find ourselves in a period of readjustment to which all interests sooner or later must conform.

Following the raise in wages granted by this board in decision no. 2, and to some extent based on that, the Interstate Commerce Commission granted an increase of rates to the carriers, which was put in force, but after this there came the inevitable pause in the rising tide of prices and business, followed by the like inevitable recession, and in some lines a disastrous fall in prices, and the resulting cutting down of production. This has affected all lines of industrial life all over the U.S. and produced conditions which have to be met and in whose burdens all have to share. Confronted by these conditions, the carriers before us, after conferences with the representatives of the different classes of their employes as to a reduction of wages, at which conference there was a failure to reach an agreement, have filed their several complaints and brought their disputes before this board for a decision as provided by law. The disputes were separately brought; the first being filed by the New York Central Rd. Co. on March 19, 1921, followed by numerous other carriers. Some of the carriers presented disputes applicable only to a few of the classes of their employes; others applicable to nearly all classes of employes.

The board, appreciating and knowing the general financial and industrial conditions of the country, considered the appeals of some of the carriers for immediate action, and believing that the applications already filed would soon be followed by numerous others, took cognizance of the fact that most of the evidence offered or to be offered in one case would be material and common to all, and that it would be impracticable to reach an early decision in the time at the disposal of the board if the cases were heard and considered separately. The board at that time being engaged in hearing other pressing matters, on April 6, 1921, passed a resolution reciting in substance these facts, and that it was desirable that the board hear at one time and decide in one decision so far as may be possible the question as to what may constitute just and reasonable wages for all the classes of employes of the carriers parties to decision no. 2, as to whose wages there might be a dispute, and ordered and directed that April 18 be set as a date for hearing, at which time the board would hear representatives of the parties to disputes where applications had been filed, and of other disputes filed at that time between carriers and employes of carriers parties to decision no. 2, if ready for presentation, and the board consolidated all the cases for the purpose of hearing and decision so far as practicable.

On the date set the carriers herein named had filed the applications for hearing of disputes with the classes of their employes herein named and set

A Heavy Load for Up Grade—From Providence, R.I. Journal.
This cartoon is equally applicable to the situation in Canada.

now before the board in these cases, and their employes, which dispute, among other things, involved the question of wages. After a full hearing and as careful consideration as the time and conditions would allow, the board in that case (dockets 1, 2 and 3) rendered its decision no. 2, awarding certain increases and fixing what it deemed just and reasonable wages at that time for all the classes of employes of all the carriers then before the board. The board did not then undertake to, and under the law could not, make that decision a permanent award or standard. That decision or award was accepted in good faith and acted on both by the carriers and their employes parties to that decision, and certain other carriers not formerly parties to that case voluntarily applied and put in force the standard of wages fixed by this board in its decision no. 2. That decision was rendered at a period of inflation, rising prices and high costs of living. Since then, changes, and in some respects very decided changes, have taken place in business, industrial and financial conditions in the U.S. and in a varying mea-

out. The time was limited for the oral hearings to five days for the carriers and five days for the representatives of the employees, but the board afterwards gave the employees further time to prepare their cases for hearing, and slightly extended the time. Both parties were also allowed to file certain documents in evidence bearing upon the matters in dispute. The hearings were completed on May 16, and the board has since had the cases before it under consideration. Pending the hearing, which commenced on April 18, and since, a considerable number of the carriers before the board in that hearing have filed with the board numerous other cases of disputes with other classes of their employees, and other carriers which had no cases pending before the board on April 18 have filed cases of disputes, and such cases are still being received.

The board has been impressed with the belief that a reduction of rates of pay on any road applying to some class or classes and not to others, and thus producing inequalities of treatment and a reduction of wages from the standards fixed by and in decision no. 2 on some roads, without a corresponding reduction on others operating in the same section and under substantially the same conditions, would possibly be productive of unrest, dissatisfaction and other unfortunate results. It therefore deemed it desirable to render its decision in as many cases and applying to all or as many classes as might come before it at one and the same time and make it effective as of and on the same date. It also deemed it desirable to fix and announce that date in advance, so that all parties could in the meantime adjust their affairs with that information before them. With all these things in view, after having considered evidence heard in the cases before it, the board on May 17 passed and made public a resolution to the effect that it would announce its decision in these cases on June 1, to become effective July 1; and it further decided and announced that it set June 6 as the date for hearing all other like disputes filed, docketed and ready for hearing at that time, it being the purpose of the board to make its decision of those disputes then heard effective as of July 1. In pursuance of this policy and these orders, it now announces its decision in these consolidated cases already heard.

In the hearing and consideration of these cases there has been available to the board all the evidence taken and now on file added in the hearings of the cases heretofore brought before the board, information gathered by the board and its forces under the directions of the statute, including reports of the Interstate Commerce Commission and various other governmental agencies, state and national, in addition to the very voluminous mass of evidence submitted at these hearings by the respective parties, as well as matters of general and universal public knowledge. As in decision no. 2, granting increases in wages, the board found it necessary to assume a known and recognized base, and adopted as such base the rates of wages in effect March 1, the date of the termination of Federal control; so in this decision the board assumes as its base the rates fixed and in effect under and by its decision no. 2. Except as modified by changed conditions, the preliminary statement set out in and as part of its decision no. 2 might well be

here repeated, but that it not deemed necessary. Practically the same methods of procedure there outlined were followed in these cases. The board has been governed by the same principles and the directions of the law as there outlined, and has endeavored to give due consideration to every element of the problem before it.

The decision of the board is the result of the action of the board, composed of nine members acting as a body, under the same parliamentary methods of procedure and its own rules. Each and every separate question was considered and voted upon—each and every rate for each class was voted upon and adopted by a majority vote of the board, and in every instance one or more of the public group, as the law requires, voted in the affirmative on any classification or rate adopted. In a problem so complex, and involving the interrelationship of the wages of so many different classes of employees, it is obvious that there could not be unanimous agreement among all the members of the board on all decreases fixed by this decision; but the several decreases herein after set forth represent, in each instance, the best judgment of the majority of the board. This statement is made in order that it may not be inferred that the decision, in all its details, states the precise decrease which any one of the members hereof might have stated if he had the sole power and responsibility for fixing such decrease.

The board, proceeding under the methods outlined, while not attempting to set out all the findings in detail, for the information of the public and those directly interested, may here briefly outline some of its findings which have been considered in reaching the results herein announced. It finds that the renditions of its decision now there has been a decrease in the cost of living. What that decrease has been it is impossible to state with mathematical accuracy, or even what the general average for the U.S. has been up to and on any given date. The machinery for procuring and stating with accuracy the data to fix this is by no means perfect. The decreases vary greatly according to the locality, and affect different people in different degrees. In some localities the general decrease has been greater than in others. In the cities the general decreases in some lines have been offset to some extent by high rents. In some of the items or products that enter into the costs of living the fall in prices has been great; in others, much less. The board also finds that the scale of wages for similar kinds of work in other countries has in general been decreased. The same conditions are also found as to this element. It is practically impossible to find any exact average line of decrease for the entire country. The decreases vary in different industries and in different localities, and in some instances with different industries, individuals or corporations. In some places and classes the decrease has been heavy; in others, not so great. There has been a decrease, and the tendency is at present downward. But the most unfortunate condition is that in many localities large numbers are out of employment on account of the prevailing depression, and hence without wages. On these elements and the others prescribed by statute the decrease has been heavy; and the general conditions existing and brought to its attention, as well as the

evidence offered as to particular localities and carriers.

In decision of this character it is not practical to fix rates applying with exact ratio to each individual employee and each separate locality, for the reason that necessity compels the board to accept certain standardizations of pay for railroad employees. But these standards are now somewhat different in different regions, and so the decreases will have relatively the same general effect. The board believes that among the elements shown, i.e., the decreased costs of living and the general decrease in the scale of wages in other industries, that the decreases herein fixed are justified and required. But the board is required by the Transportation Act to consider not one, but all of the seven elements especially mentioned in the act, and other relevant circumstances, and this it has endeavored to do in reaching the results herein announced. It has endeavored to consider as it should all the elements that enter into this complex problem. There are certain facts and conditions known to all and which can neither be disputed nor ignored. Whatever may be said as to the origin or contributing causes, there has been, and is, a marked, and to some extent distressing and disastrous, depression in business and industry affecting the entire country and some lines of production most seriously. As a result, heavy financial losses have been suffered and many hundreds of thousands thrown out of employment, and deprived of all wages, and this loss of purchasing power by them has in turn accelerated the general depression, by reducing the demand for the products they would otherwise have purchased. While it has been argued that the fall in prices has not reached to any large extent the consumer, it has without question most disastrously reached and affected the producers, especially some lines of manufacture and the agricultural classes. It should be recognized by all that the problem before us is chiefly an economic one, and we are all confronted by adverse and troublesome conditions which everyone must help to solve. It should not be looked upon as a struggle between capital and labor, or the managements and the employees.

Decision.

The Labor Board decides:

1. That the rates of wages heretofore established by the authority of the U.S. Railroad Labor Board shall be decreased on heretofore specified and that such decreases shall be effective as of July 1.
 2. That the scope of this decision is limited to the carriers named under article 1 herein, to such carriers as may be included hereafter by addenda, and to the specific classes of employees named or referred to under each particular carrier.
 3. That the reduction in wages hereby authorized shall be made in accordance with the following articles which prescribe the regulations, designate the employees affected, and establish the schedules of decreases.
- Article I.—Carriers and Employees Affected.—Each of the following carriers shall make deductions from the rates of wages heretofore established by the authority of the U.S. Railway Labor Board, for the specific classes of its employees named or referred to in this article, in amounts hereinafter specified for such classes in the schedules of de-

creases; apply the rates of wages established in sec. 3 (b) of article II, and secs. 1, 2, 3 and 4 of article X; and make effective the rates of wages fixed by differentials provided in sec. 4 of article IV.

The article and section numbers used in connection with a carrier refer to the corresponding article and section numbers in the schedules of decreases, and in determining the classes of employees affected on each carrier the following rules shall govern:

(a) When section numbers are used in connection with a carrier, without naming the classes, all classes of employees named in the corresponding section numbers of the schedules of decreases are affected.

(b) When section numbers are used in connection with a carrier and specific classes of employees are named, only the same classes of employees named in the corresponding section numbers of the schedules of decreases are affected.

(c) Where section numbers are omitted in connection with a carrier, the classes of employees named in the corresponding section number of the schedules of decreases are not affected.

[Editor's note. — Here follows a list of railways, giving the articles, and sections of the articles, of the decision, applying to individual railways.]

Article II.—Clerical and Station Forces.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedule of decreases per hour:

(NOTE.—For clerks without previous experience, hereafter entering the service of a carrier, rates of wages specified in sec. 3 (b), this article, are hereby established.)

Sec. 1. Storekeepers, assistant storekeepers, chief clerks, foremen, subforemen, and other clerical employees with less than 2 years experience.

Sec. 2. (a) Clerks with an experience of 2 or more years in railroad clerical work, or clerical work of a similar nature in other industries, or where their cumulative experience in such clerical work is not less than 2 years.

(b) Clerks with an experience of 1 year and less than 2 years in railroad clerical work, or clerical work of a similar nature in other industries, or where their cumulative experience in such clerical work is not less than 1 year.

Sec. 3. (a) Clerks whose experience as above defined is less than 1 year.

(b) Clerks without previous experience hereafter entering the service will be paid a monthly salary at the rate of \$67.50 a month for the first 6 months, and \$77.50 a month for the second 6 months.

Sec. 4. Train and engine crew callers, assistant station masters, train announcers, gatemen, and baggage and parcel room employees (other than clerks).

Sec. 5. Janitors, elevator and telephone switchboard operators, office, station and warehouse employees, and employees engaged in sorting, way bills and tickets, operating appliances or machines for perforating, addressing envelopes, numbering claims and other papers, gathering and distributing, adjusting, and other similar work.

Sec. 6. Office boys, messengers, chow boys and other employees under 18 years of age, filling similar positions, and station attendants.

Sec. 7. Station, platform, warehouse, transfer dock, pier, stowage, steam room, and team-truck freight handlers or truckers, and others similarly employed.

Sec. 8. The following differentials shall be maintained between truckers and the class named below:

(a) Sealers, sealers, and fruit and perishable inspectors, per hour, based on the truckers' rates as established under sec. 7.

(b) Stokers or stovedors, callers or loaders, locators and loaders, per hour above truckers' rates as established under sec. 7. The above shall not operate to decrease any existing higher differentials.

Sec. 9. All common laborers in and around stations, storehouses and warehouses, not otherwise provided for.

Article III.—Maintenance of Way and Structural and Unskilled Forces Specified.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

Sec. 1. Bridge, building, painter, construction, mason and concrete, water supply, and plumber foremen (except water supply and plumber foremen coming under the provisions of sec. 1 of article IV, this decision).

Sec. 2. Assistant bridge, building, painter, construction, mason and concrete, water supply, and plumber foremen, and for coal wharf, coal chute, and fence gang foremen, pile driver, ditching and hoisting engineers and bridge inspectors except assistant water supply and plumber foremen coming under the provisions of sec. 1 of article IV, this decision.

Sec. 3. Section, track and maintenance foremen, and assistant section, track and maintenance foremen.

Sec. 4. Mechanic in maintenance of way and bridge and building departments (except those that come under the provisions of the national agreement with the Federated Shop Trades).

Sec. 5. Mechanics' helpers in maintenance of way and bridge and building departments (except those that come under the provisions of the national agreement with the Federated Shop Trades).

Sec. 6. Track laborers, and all common laborers in maintenance of way department and in and around shops and roundhouses, not otherwise provided for herein.

Sec. 7. Pile drivers, ditching and hoisting foremen, pumper engineers and pumpers, crossing watchmen or flagmen, and lamp lighters and tenders.

Sec. 8. Laborers employed in and around shops and roundhouses, such as engine watchmen and wipers, fire builders, asphalt men, flue borers, coal chutes, and other employees coming under the provisions of sec. 3 of article VIII, this decision, coal chute men, etc.

Article IV.—Shop Employees.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

(NOTE.—For car cleaners, rates of wages fixed by a differential shown in sec. 4, this article, are hereby established.)

Sec. 1. Shop foremen, and shop supervisors.

Sec. 2. Machinists, boilermakers, blacksmiths, sheet metal workers, electrical workers, carmen, molders, wood workers, and other employees working those with less than four years experience, all crafts.

Sec. 3. Regular and helper apprentices and helpers of all classes.

Sec. 4. Car cleaners shall be paid a rate of 2c. per hour above the rate established in sec. 6 of article III, this decision, in and around shops and roundhouses at points where car cleaners are employed.

Article V.—Telegraphers, Telephone Operators and Agents.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

Sec. 1. Telegraphers, telephone operators (except switchboard operators), agents (except agents at small non-telegraph stations, as referred to in supplement 18 to general order 27, article 2, c), agent telegraphers, agent telephoners, towermen, lever men, tower and train directors, block operators, and other employees.

Sec. 2. Agents at small non-telegraph stations as referred to in supplement 18 to general order 27, article IV, sec. (c).

Article VI.—Engine Service Employees. For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per mile, per hour, or per day, as the case may be:

Sec. 1.—Passenger Service. Per mile. Per day. Cents. Dollars.

Engineers and motormen..... 48 48.48

Firemen (coal or oil)..... 48 48

Helpers (electric)..... 48 48

Sec. 2.—Freight Service. Per mile. Per day. Cents. Dollars.

Engineers (steam, electric, or other power)..... 64 60.64

Firemen (coal or oil)..... 64 64

Helpers (electric)..... 64 64

Sec. 3.—Yard Service. Per hour. Per day. Cents. Dollars.

Engineers..... 8 8

Firemen (coal or oil)..... 8

Helpers (electric)..... 8

Sec. 4.—Hostler Service. Per day. Dollars.

Outside hostlers..... 30.64

Inside hostlers..... 64

Helpers..... 64

Article VII.—Train Service Employees.

For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per mile, per day, or per month, as the case may be:

Sec. 1.—Passenger Service. Per mile Per day Per month Cents. Dollars. Dollars.

Conductors..... 4 \$0.60 \$18.00

Assistant conductors or ticket collectors..... 4 .60 18.00

Baggage men handling both express and dynamo..... 4 .60 18.00

Baggage men operating dynamo..... 4 .60 18.00

Baggage men handling express..... 4 .60 18.00

Baggage men..... 4 .60 18.00

Flagmen and brakemen..... 4 .60 18.00

Sec. 2.—Suburban Service (exclusive). Per mile Per day Per month Cents. Dollars. Dollars.

Conductors..... 4 \$0.60 \$18.00

Ticket collectors..... 4 .60 18.00

Guard performing duties of brakemen or flagmen..... 4 .60 18.00

Sec. 3.—Freight Service. Per mile Per day Per month Cents. Dollars. Dollars.

Conductors (through)..... 64 \$0.64

Flagmen and brakemen (through)..... 64 .64

Conductors (local or way freight)..... 64 .64

Flagmen and brakemen (local or way freight)..... 64 .64

Sec. 4.—Yard Service. Per day. Dollars.

Foremen..... 20.64

Helpers..... 64

Switchmen..... 64

Article VIII.—Stationary Engine (Steam) and Boiler Room Employees.

For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

Sec. 1. Stationary engineers (steam).....

Sec. 2. Stationary firemen and engine room operators.....

Sec. 3. Boiler room water tenders and coal passers.....

Article IX.—Signal Department Employees.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

Sec. 1. Signal foremen, assistant signal foremen, and signal inspectors.....

Sec. 2. Leading maintainers, gang foremen, and leading signalmen.....

Sec. 3. Signalmen, assistant signalmen, signal maintainers, and assistant signal maintainers.....

Sec. 4. Others.....

Article X.—Floating Equipment Employees.—For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, the following schedules of decreased rates of pay are established:

Sec. 1.—Ferries. Per month. Dollars.

Captains..... \$200

Engineers..... 190

Firemen and oilers (licensed)..... 140

Firemen and oilers (unlicensed)..... 140

Deckhands..... 125

Porters..... 100

Sec. 2.—Tugs and Steam Lighters. Per month. Dollars.

Captains..... \$200

Mates and first deckhands (licensed)..... 130

First deckhands (unlicensed)..... 130

Second deckhands..... 125

Boatmen and boat watchmen..... 125

Engineers..... 190

Firemen and oilers (licensed)..... 140

Firemen and oilers (unlicensed)..... 140

Bridge men..... 125

Sec. 3.—Lighters and Barges. Per month. Dollars.

Captains, steam hoist—single drum..... \$135

Engineers, steam hoist—single drum.	145
Captains, steam hoist—double drum.	140
Engineers, steam hoist—double drum.	150
Captains, derricks under 30-ton hoist	150
Engineers, derricks under 30-ton hoist.	150
Captains, derricks—30-ton hoist and over.	150
Engineers, derricks—30-ton hoist and over	150
Captains, hand winch lighters and covered barges	130

Sec. 4.—Lighters and Barges.	
Class.	Per month.
Captains, hand hoist barges—covered lighters	\$120
Captains, steam hoist—single drum.	125
Engineers, steam hoist—double drum.	130
Engineers, steam hoist—single drum.	135
Engineers, steam hoist—double drum.	140

Article XI—Other Supervisory Forces. For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

Sec. 1. Train dispatchers.	Sec.
Sec. 2. Yard masters and assistant yard masters.	Sec.

Article XII—Miscellaneous Employees. For the miscellaneous classes of supervisors and employees not specifically listed under any article, named in connection with a carrier affected by this decision, use the following rule for making decreases:

Sec. 1. For miscellaneous classes of supervisors and employees in the hereinbefore named departments properly before the Labor Board and named in connection with a carrier affected by this decision, deduct an amount equal to the

decreases made for the respective classes to which the miscellaneous classes herein referred to are analogous.

Sec. 2. The intent of this article is to extend this decision to certain miscellaneous classes of supervisors and employees submitted by the carriers, not specifically listed under any section in the last schedules of decreases and authorize decreases for such employees in the same amounts as provided in the schedules of decreases for analogous service.

Article XIII—General Application.—The general regulations governing the application of this decision are as follows:

Sec. 1. The provisions of this decision will not apply in cases where amounts less than \$30 a month are paid to individuals for special service which takes only a part of their time from outside employment or business.

Sec. 2. Decreases specified in this decision are to be deducted on the following basis:

- (a) For employees paid by the hour, deduct the hourly decrease from the hourly rate.
- (b) For employees paid by the day, deduct 8 times the hourly decrease from the daily rate.
- (c) For employees paid by the month, deduct 204 times the hourly decrease from the monthly rate.

Sec. 3. The decreases in wages and the rates herein established shall be incorporated into and become a part of existing agreements or schedules, or future negotiated agreements or schedules, and shall remain in effect until or unless changed in the manner provided by the Transportation Act, 1920.

Sec. 4. It is not intended in this decision to include in making decreases in wages and salaries of the carriers affected, except that class designated in the Transportation Act, 1920, as "subordinate officials," and who are included in the act as within the jurisdiction of this board.

The act provides that the term "subordinate officials" includes officials of carriers of such class or rank as the Interstate Commerce Commission shall designate by regulation duly formulated and issued. Hence, wherever in this decision words are used, such as "foremen," "supervisors," etc., which may apply to officials, such words are intended to apply to only such classes of subordinate officials as are now or may hereafter be defined and classified by the Interstate Commerce Commission as "subordinate officials" within the meaning of the Transportation Act, 1920.

Article XIV—Interpretation of this Decision.—Should a dispute arise between the management and the employees of any of the carriers as to the meaning or intent of this decision, which cannot be decided in conference between the parties directly interested, such dispute shall be referred to the U.S. Railroad Labor Board in the manner provided by the Transportation Act, 1920.

Sec. 1. All such disputes shall be presented in a concrete and joint signed statement setting forth: (a) The article of this decision involved; (b) The facts in the case; (c) The position of the employees; (d) The position of the management thereon. Where supporting documentary evidence is used, it shall be attached to the application for decision in the form of exhibits.

Sec. 2. Such presentations shall be transmitted to the Secretary of the U.S. Railroad Labor Board, who shall place same before the Labor Board for final disposition.

House of Commons Committee on Canadian National Railways and Shipping.

Canadian Railway and Marine World for June, contains a summary of the committee's proceedings up to May 12. The next sitting was on May 17, when G. W. Hensley, of Pickford & Black, Ltd., Halifax, N.S., was examined. He stated that the firm, organized in 1876, originated the first regular Canada-West Indies steamship service, but that in 1913 the Royal Mail Steam Packet Co. had taken over the chief part of its service. At present the company which succeeded the original firm operates only a Jamaican service. He considered that the Dominion Government should not unduly interfere with private enterprise; that it had no right to operate ships at all, and that governmental operation of ships was most unfair to men with their own capital invested in the shipping business. The Government should keep out of the business and acquiesce quietly by private enterprise. When the fact of the C.P.R. operating steamships was mentioned, he pointed out that the C.P.R. is a privately owned concern and has a right to operate ships. The fact of the C.P.R. ships being privately owned and the Canadian Government Merchant Marine boats being Government owned makes all the difference.

T. M. M. Tweedie, M.P. for Calgary West, Alta., pointed out that it is desirable that the Canadian National Rys. and the C.G.M.M. ships co-operate, but Mr. Hensley stated that the railways could obtain just as efficient co-operation with privately owned ships. Mr. Tweedie asked questions to show that the C.G.M. M. ships are developing foreign trade and proving great assets to Canada, but Mr. Hensley maintained that this trade could be developed just as well by privately owned steamship lines, and that the Government has no business to compete with private corporations. J. A. Stewart, M.P. for Lanark, Ont., asked why Pickford & Black surrendered the

West Indian trade to the Royal Mail Co., but the witness declined to answer. H. H. Stevens, M.P. for Vancouver Center, B.C., claimed that the whole examination of Mr. Hensley was entirely foreign to the order of reference, and out of order. The chairman agreed with this objection to an extent, but stated that much of the evidence before the committee from start to finish had been along the lines of this evidence, and maintained that the procedure followed should be adhered to. Replying to further questions by Mr. Stewart, Mr. Hensley explained the present state of the shipping business, and depreciation in the value of ships, and advised writing down the Government ships to their present market value. He thought the Government should try to sell, or charter, as many as possible, and lay the rest up for the future. The main question was concerned with the advantage which would accrue to Canada if all importations were made direct, instead of importing a large proportion of her goods via New York. Mr. Hensley pointed out the impossibility of importing fruit directly to Canada in winter months. Wm. Duff, M.P. for Lunenburg, N.S., asked if the growth of trade between Canada and the West Indies had not been very slow, and Mr. Hensley said that such was the case until the Canada-West Indies trade agreement had been put into force, when the trade had begun to develop more rapidly.

R. A. Corbett, of G. C. Campbell & Co., Halifax, was the next witness, and was first questioned by Hon. A. K. Maclean, M.P. for Halifax, N.S., who said he is agent for, and part owner of, the Red Cross Steamship Line, now operating one ship between Halifax, New York, and St. John's, Nfld. He considered that the Canadian National Rys. lose a lot of traffic which goes by C.G.M. ships from Montreal to Newfound-

land, but which would otherwise go by rail as far east as Halifax, and thence by ship. J. A. Stewart, M.P. for Lanark, pointed out that Canada Steamship Lines Ltd. also has a service from Montreal to Newfoundland, and asked Mr. Corbett whether, in view of this, it would make any difference to the Canadian National Rys. if the C.G.M.M. boats were taken off the Montreal-Newfoundland route. Mr. Corbett replied that, in his opinion the Canada Steamship Line would not have put this service on if the C.G.M. M. had not started one. He maintained that the Government should not operate ships in competition with a private concern which has invested its capital, and is prepared to look after the routes it has developed, and he suggested that the Government try to charter its boats to various companies. Through much questioning Mr. Corbett eventually admitted the fact that the greater part of the Red Cross Line's capital is held outside of Canada, and then asked him if he did not think the Canadian Government ships were justified in entering into competition with the Red Cross Line. Mr. Corbett, however, stoutly maintained that they were not.

F. K. Warren, ship broker, Halifax, N.S., was the next witness, and said, in answer to Mr. Maclean, that the Government policy of putting ships on the West Indies trade routes was wrong. He considered it very wrong that he should be forced to go into competition with himself, and characterized the whole procedure as being absolutely rotten. In his opinion, there are 50% too many ships on the Canadian routes, and that he and he advocated the Dominion Government adopting the U.S. Shipping Board's plan of handling its ships. He maintained the position that the Government was absolutely wrong in competing against private capital, and called attention to the fact that, if the Government builds

no more ships (his understanding being that no more are to be built), when the present ships are worn out, the trade routes developed will be without service, on account of the private owners having been forced out of business before that time.

F. B. Teakle, Manager, Canadian Government Merchant Marine, was recalled, and, in reply to questions by Wm. Duff, gave information concerning the insurance of the C.G.M.M. fleet.

The committee met again on May 18, when D. B. Hanna, President, Canadian National Rys., was the first witness. He was questioned first by Wm. Duff, who asked about the experience of the various directors associated with Mr. Hanna, and also about the methods adopted in insuring the C.G.M.M. ships. Mr. Hanna stated that the insurance is placed on competitive bids, that middlemen are dispensed with in insurance transactions, and that the directors are seriously contemplating carrying their own insurance. Several questions were asked Mr. Hanna concerning the choice of export ports, as between Halifax and Montreal, and the terms of the Canada-West Indies trade agreement were reviewed. The fact that the Royal Mail Steam Packet Co. is heavily subsidized by the Government was brought out, whereas the C.G.M.M. receives no subsidy, and, according to Mr. Hanna, does not intend to apply for any if the ends can be made to meet without it. Mr. Hanna added that the Canadian National Rys. will be made valuable to the Canadian people in the same proportion as they make use of the railways and the ships comprising the system.

A. J. Mitchell, Vice President, Finance and Accounts, Canadian National Rys., was examined concerning the C.G.M.M.'s financial operations. Mr. Duff taking exception to the financial statement presented in the House of Commons, and questioning Mr. Mitchell at length in an effort to prove that the proper deductions for depreciation and interest were not made. Many technicalities of accounting and of the shipping business, involving records of voyages begun in one year and finished in the succeeding year, were brought up. Mr. Mitchell stated that no taxes were paid on the ships in 1919 and 1920, and also that \$500,000 was paid the Government as interest on account of the ships. However, as the entries in the public accounts credited the C.G.M.M. with a payment on interest account of only \$415,358.36, Mr. Duff asked what became of the remainder of the \$500,000, so a Finance Department official was called in, to explain the matter. While he was being secured Mr. Mitchell explained the basis on which depreciation of the ships was reckoned.

J. T. McFarlane, accountant in the Finance Department, stated that the sum of \$415,358.36 represented the interest due for 1919, and was properly credited to the fleet, and the remainder of \$84,641.64 was put into a suspense account to apply on the interest which would be due for 1920, it thus being necessary to split the amount of \$500,000 for bookkeeping purposes.

On Mr. Mitchell being recalled, he was asked by F. S. Cahill, M.P. for Pontine, Que., why, in the statement of operating returns, depreciation was deducted before interest charges. Mr. Cahill persisted in regarding the C.G.M.M. capitalization as "bonded" indebtedness, and claimed that fixed charges would have to be met before anything could be set

aside for depreciation, but Mr. Mitchell contended that a depreciation reserve must be created, and contributed to, before a return on capital stock could be declared, and defended the fairness of the financial statement.

On May 25, E. N. Bender, General Purchasing Agent, C.P.R., explained the C.P.R. purchasing organization, pointing out that its Purchasing Department and Stores Department are separate, while on the Canadian National Rys. the two departments are combined. Stationery, coal, and ties are purchased by officials acting independently of him, and, like him, reporting to the Vice President in charge of operation. He stated that the C.P.R. does not ask for public tenders in its purchases, but calls for prices from firms which are in a position to fill the orders, the preference being given to Canadian firms where prices are equal. Requisitions from storekeepers do not go to his department, but go through the General Storekeeper to the Vice President in charge of operation, he dealing directly with the latter. He did not care to answer questions concerning the purchase of ties, that being outside of his department. Rails are bought in Canada, by negotiation with the two local manufacturing companies. No buying from subsidiary companies of the C.P.R. is done. Ask as to why the C.P.R. does not advertise for tenders, he stated that such a practice would tend to raise prices. No report goes from his department to the shareholders' annual meetings, and no prices or other details are furnished to anyone, except the proper officer, either before or after the completion of purchases. In reply to questions by Hon. T. A. Crerar, M.P. for Marquette, Man., Mr. Bender outlined the operations of the Commissary Department. He explained that, in purchasing, prices are asked from all firms considered to be in a position to satisfactorily fill the order to be given. He emphasized that shareholders' meetings were never advised in connection with purchases, and expressed the opinion that the only result of making details public would be increased costs for all materials.

T. Britt, General Fuel Agent, C.P.R., stated that in buying coal, tenders are never advertised for. All coal is, however, bought on a competitive basis, by negotiation, with such things as price, quality, delivery, haul, responsibility, and previous satisfactory dealings taken into consideration. He emphasized the harm that would come from publicity in connection with coal, and stated that a railway company might be given a preferential price, on account of its financial standing, or for some other reason, and it would not be fair to tell the price. The mere fact of publicity being given to prices would operate against the company the next time it set out to buy coal. Mr. Britt added that he reported to the Vice President in charge of operation, and had never been before a meeting of shareholders or directors to give details concerning his department. He then answered questions concerning coal prices and deliveries, these referring to his previous appearance before the House of Commons fuel committee.

Mr. Bender was recalled, and stated that he had never been called before a meeting of shareholders, or directors, to give details in connection with his department, and that he would consider such procedure highly improper.

On May 26, A. J. Mitchell was exam-

ined further in connection with financial matters, particularly insurance. D. B. Hanna was also further examined, being questioned concerning the attendance of directors at meetings during 1920. H. C. Hocken, M.P. for West Toronto, asked what proportion of the mail between eastern and western Canada is handled by the Canadian National Rys., and was informed that it is all handled by the C.P.R. Overseas mail arriving on C.P.R. boats is handled to destination on C.P.R. trains, and mail arriving on other companies' boats is intended to be handed over to the C.N.R. Mr. Hanna stated that for every dollar obtained from the Post Office Department by the Canadian National Rys., at least \$3 and probably \$4 is obtained by the C.P.R. He also stated that the Canadian National Rys. are equipped to handle a lot more of the Government telegraph business than they are getting.

Hon. J. D. Reid, Minister of Railways, stated that it had been submitted to him that it would not be fair to take mail from C.P.R. ships at Canadian ports and handle it to its destination on Canadian National trains. Mr. Hanna explained that the mail traffic was formerly unprofitable, but that at the new rates it pays well.

J. D. Chaplin, M.P. for Lincoln, Ont., asked Mr. Hanna whether there was any truth in statements to the effect that the Canadian National Rys. were being "milked" by influenced purchases, etc., to which Mr. Hanna replied: "There never was a more outrageous untruth uttered." He added that it would not be possible for such a condition to exist without his knowledge. He believed that a reduction of rates would not have the effect of moving more traffic. Speaking of directors, he said that in a new administration it would be better for everybody who had anything to do with the Canadian National Rys. to eliminate themselves from everything else. He is confident that the Canadian National Rys. is obtaining equipment at as reasonable a price as any other railway. The question of rails was brought up, and Mr. Hanna explained the necessity for new rails and the prices paid.

A. McGregor, M.P. for Pictou, N.S., stated that a division superintendent on the Canadian National Rys. has no authority. He has to refer to a general superintendent, who in turn refers the matter to headquarters. Mr. McGregor cited the loss of a suit case, worth \$50, as an example, his ideas concerning railway organization apparently leading him to believe that a division superintendent is supposed to adjust loss and damage claims, and at a minister's notice. He flatly stated: "I have no hesitation in saying the system is overmanned by red tape and duplication." Mr. Hanna immediately took issue with him, and stated that that kind of criticism always came from east of Montreal. In concluding, Mr. Hanna presented an optimistic statement dealing with the Canadian National system, pointing out the conditions which will combine to make the property financially successful, and stating that he believed it would be in a position to earn its operating expenses within two years, or a little more, if wages could be adjusted properly.

"And the mountain labored and brought forth a mouse."

At the committee's sitting on May 25 the following were appointed a sub-committee to draft a report and submit it

to the committee for approval:—Hon. J. D. Reid, Hon. S. C. Mewburn, Hon. A. K. Maclean, Hon. S. T. A. Crerar; G. W. Allan, South Winnipeg; J. A. Stewart, Lanark; and T. M. Tweedie, West Calgary. Their report was submitted to the committee on May 27 and was adopted, without amendment, as follows:—

"Your committee has held 22 meetings, and has examined under oath the chief executive and operating officers in control of the Canadian National Railways and Shipping, as well as one of the members of the board who is not an officer, two of the officers of the Canadian Pacific Railway in charge of purchasing and three representatives of private shipping interests. The executive and operating officials have given to your committee a very considerable volume of valuable and useful information with reference to the form of organization, the financial conditions, the equipment, the operation, the present business and the future possibilities of both the railway and shipping properties of the Government."

"The five questions submitted to your committee are:—(1) What information as to the Canadian National Rys. and Shipping, as conducted by the board of directors and management should, in the public interest, be brought down in Parliament on question, motion for production of papers, or otherwise. (2) When, by what method, and under what conditions, if any, should such information be given, regard being had for the necessity of securing to Parliament, and the public, all facts requisite for the determination of policy, including finance, and to the board of directors the best possible conditions for efficiency of management. (3) What system of auditing should be adopted, and what extent of detail should be given in the annual report. (4) What, if any, improvement could be made in the general scheme of management. (5) Whether and for what purpose the said committee should be continued, and that for the above purposes and for such other purposes as the committee deem in the public interests there be referred to said committee the annual report of the board of directors and that the said committee have power to examine witnesses under oath, to send for papers, persons, and records, and to report from time to time."

"The first four of these questions involve principles of far reaching importance and which will be accentuated by the acquisition of the Grand Trunk Ry. system. Having regard to the extent and nature of the matters involved in the reference, and the numerous problems incidental to the ownership and operations of a railway and shipping system such as the Government possesses, any decision by your committee which would be of any value would of necessity require investigation into the methods pursued by other corporations carrying on similar activities. Owing to the fact that the committee started upon its labors late in the session, and that the number of other special committees working, interfered somewhat with its sittings, there has not been adequate time to do this, and, if the committee were to report its conclusions, now, its judgment would for the most part have to rest upon the ex parte evidence of the operating officers of our own system. In the circumstances your committee is of the opinion that it should deal with the questions submitted to it in the reverse order and answer the last first. Questions

number five reads as follows: (See above.) Your committee recommends that this committee be re-appointed at an early period of the next session of Parliament, with a view to enabling it to carrying to completion the enquiry now begun, so that a report might be made early next session, particularly upon the specific submission made to the committee. Pending further investigation and evidence and much more careful consideration of the mass of information brought out before the committee, the committee does not feel disposed at this time to make definite reply to questions 1 to 4 inclusive. Your committee begs to submit herewith for the information of the House a copy of its proceedings and the evidence taken by it and also certain papers and records submitted to the committee but not contained in its proceedings."

J. M. R. Fairbairn Honored by Toronto University.

John Morrice Roger Fairbairn, Chief Engineer, C.P.R., Montreal, was given

J. M. R. Fairbairn,
Chief Engineer, Canadian Pacific Railway.

the degree of doctor of science (honoris causa), at a special convocation of Toronto University, on June 9. In presenting Mr. Fairbairn to the Chancellor, Sir William Meredith, the President of the University, Sir Robert Falconer, said:—"Mr. Fairbairn graduated from the School of Practical Science in 1893. For 20 years he has been connected with the Canadian Pacific Ry., of which he has been Chief Engineer since 1918. In the course of his career he has been concerned with the construction of the Lethbridge viaduct, one of the largest in the world; the replacement and rebuilding of the Lachine bridge; and the application of the principles of reinforced concrete to the many structures of this premier railway of America. The position he holds among his fellow engineers is shown by his being President

of the Engineering Institute of Canada. His standing is due to his own indefatigable efforts and his sterling character. It is a matter of much satisfaction to us in the University, that both the President and Chief Engineer of what is perhaps the greatest railway system of the world are our own graduates."

Mr. Fairbairn was born at Peterborough, Ont., June 30, 1873, and graduated from the School of Practical Science, Toronto, in 1893, and until Aug. 1901, was engaged in survey and construction work, since when he has been, to Nov. 1902, Assistant Engineer, Maintenance Department, Eastern Lines, C.P.R.; Nov. 1902 to Aug. 1904, Assistant Engineer, District 4, C.P.R., Ottawa; Aug. 1904 to Aug. 1905, Assistant Engineer, Chief Engineer's office, C.P.R., Montreal; Aug. 1905 to Mar. 1906, acting Division Engineer, Eastern Division, C.P.R., Montreal; Mar. 1906 to Nov. 1907, Division Engineer, Ontario Division, C.P.R., Toronto; Nov. 1907 to Oct. 1908, Division Engineer, Eastern Division, C.P.R., Montreal; Oct. 1908 to Oct. 1910, Principal Assistant Engineer, Eastern Lines, C.P.R., Montreal; Oct. 1910 to Feb. 1911, Engineer of Maintenance of Way, Eastern Lines, C.P.R., Montreal; Feb. to Sept. 1911, acting Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Sept. 1911 to July 1, 1918, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; and since July 1, 1918, Chief Engineer, C.P.R., Montreal.

Jamaica's Requirements of Railway Supplies.

Major H. A. Chisholm, M.C., Trade Commissioner, Havana, Cuba, has reported to the Trade and Commerce Department that Canadian manufacturers of and dealers in railway and construction materials have a good opportunity in Jamaica. If Canadian manufacturers in these times would keep in close touch with the Jamaica Government Rys. and the Jamaica Department of Public Works, many more purchases would be made from Canadian sources. There is a distinct tendency to favor British manufacturers, and in view of the dislocation of many industries in the United Kingdom during the last two or three years, Canadian firms have received numbers of orders from the two departments of the Jamaica Government mentioned above. Provided more was known in the island as to what Canada manufactures, increased business could be done. Efforts, however, must be made on the part of Canadian manufacturers to meet local requirements.

Catalogues and correspondence in regard to requirements of Jamaican Government Rys. must be sent to Allan Farquharson, Superintendent of Stores, Jamaican Government Rys., Kingston, Jamaica, B.W.I. This department requires from time to time: tool handles of all descriptions; railway track tools; shovels, road picks, tamping picks; belts, nuts, rivets, wood screws, wire nails; window glass for passenger cars, $\frac{1}{2}$ x 20 $\frac{1}{2}$ in. and 20 $\frac{1}{2}$ x 24 $\frac{1}{2}$ in.; galvanized telegraphic line wire No. 8 B.W.G.; railway torpedoes; electric welding wire; railway lanterns; colored waste; rubber sheeting; paints, varnishes, oils, grease and genuine linseed oil; files and drills; office stationery and forms. Goods must be of Canadian manufacture; quotations must be in Canada funds c.i.f. Kingston, 30 days or cash against documents.

Railway Operating Revenues, Expenses and Statistics for January.

The Dominion Bureau of Statistics' Transportation Branch has commenced issuing monthly reports of operating revenues, expenses and statistics, of the large Canadian Railways. The full report for January includes all railways having an annual operating revenue of \$500,000 and over, except the Michigan Central, St. Lawrence and Adirondack, Vancouver, Victoria and Esquimalt, Wash-

The Michigan Central was unable to furnish some of the data for 1920 and the reports of the other roads were not received in time to be included. The roads reporting, and which are included in the

primary table below, operated over 90 per cent. of the total mileage in Canada, and the five large systems for which separate statements are given operated about 85 percent of the total mileage.

Following are the Bureau's comments on the statistics:

"The January figures show a decrease in revenue freight carried one mile of about 7%, and in passengers carried one mile of about 14%. The decrease in passenger traffic was principally on the transcontinental lines; not only were fewer people travelling, but the average journey was shorter by about 9 miles. The increase in freight and passenger rates granted in Sept. 1920 more than offset this decrease, and gave an increase in operating revenues of \$4,224,603, or about 14%.

"The pay roll increased \$2,581,445 or 13% due principally to the award granted to United States roads by the Railway Labor Board in July 1920. Although the Canadian roads showed an increase of \$4,226,772 or 13% in operating expenses, a total deficit of \$2,709,465, the ratio of operating expenses to operating revenues was slightly better than in 1920, viz: 108% against 109%. Although freight carried decreased, the car mileage increased, especially empty car mileage. The passenger car mileage also showed an increase.

"Of the five large systems, the Canadian Pacific was the only one to earn its operating expenses for January. Its operating expenses were 95.5% of its revenues, against 95.2%. The other four systems had operating ratios ranging from 111 to 128.8%, though the Canadian Northern, Grand Trunk and Grand Trunk Pacific showed improvement over 1920.

"The Canadian Pacific freight car loading was heavier, viz, 28.23 tons a car, and the loaded freight car mileage was about 74% of the total. On the Canadian Government lines, the latter ratio was 70%, and on the other three systems it was about 60%.

In the accompanying table the column headed "Canadian Government Rys." includes the Intercolonial, Prince Edward Island, National Transcontinental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column "Canadian Northern Ry." includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column "Canadian Pacific Ry." includes also the Montreal & Atlantic Ry. and the Esquimalt & Nanaimo Ry. The column "Grand Trunk Ry." includes its Canadian lines only.

E. Hammond, station agent, G.T.R., Angus, Ont., in remitting renewal subscription to Canadian Railway and Marine World, writes:—"It is the best \$2 worth I get during the year. I always find something interesting in the paper."

French railways have been suffering large deficits since 1913, the deficit growing larger each year. In 1913 it was \$15,188,900, and in 1919 it was \$260,878,000 (francs to dollars at par). As freight rates have been increased 140%, no relief in additional increases in rates can be looked for, but the Minister of Public Works hopes to bring about some relief by reducing costs of operation.

On account of the miners' strike in England, train mileage has been reduced almost 50%, the greatest reduction being in the long distance runs. In addition the average number of cars per train has been decreased, and a great effort to save coal is being made.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, The Holden Co., Ltd., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., now Director of Traffic, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

C. W. Curran, Paymaster, Eastern Lines, Canadian Northern Ry., Toronto, born there, July 3, 1877.

H. Darling, Locomotive Foreman, Grand Trunk Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

A. H. Eager, Mechanical Superintendent, Western Lines, Canadian National Rys., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. E. Hartshorn, Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys., Montreal, born at West Stewartstown, N.H., July 21, 1877.

S. J. Hungerford, Vice President, Operation and Maintenance, Canadian National Rys., Toronto, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonville, Que., July 27, 1879.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 1878.

T. King, Superintendent, Detroit Division, Western Lines, G.T.R., Durand, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

G. A. McNicholl, Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian National Rys., Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

M. H. MacLeod, Vice President, Con-

struction, Canadian National Rys., Toronto, born in Skye, Inverness-shire, Scotland, July 13, 1857.

J. M. Macrae, Assistant General Freight Agent, Canadian National Rys. and Grand Trunk Pacific Ry., Winnipeg, born at Stornoway, Scotland, July 31, 1884.

W. G. Manders, Assistant Freight Traffic Manager, Canadian National Rys., Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

Neil Marple, General Foreman, Michigan Central Rd., St. Thomas, Ont., born in McKillop Twp., Ont., July 1, 1860.

J. E. Morazin, General Superintendent, Quebec District, Canadian National Rys., Quebec, born at Wheatland, Que., July 31, 1875.

P. C. Perry, Assistant Resident Engineer, Grand Trunk Pacific Ry., Regina, Sask., born at Fort William, Ont., July 27, 1889.

R. E. Perry, Assistant General Freight Agent, Canadian National Rys., Montreal, born at Drayton, Ont., July 5, 1876.

Gerard Ruel, General Counsel, Canadian National Rys., Toronto, born at St. John, N.B., July 5, 1866.

George Stephen, Freight Traffic Manager, Canadian National Rys., Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Toronto, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President and Treasurer, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born there, July 22, 1891.

H. B. Walkem, ex-Assistant Engineer, C.P.R., Vancouver, now at Port Haney, B.C., born at Montreal, July 31, 1858.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

N. B. Walton, Assistant General Superintendent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Palmerston, Ont., July 27, 1884.

E. H. Webster, Commercial Agent, G.T.R., Moncton, N.B., born at Pictou, N.S., July 2, 1885.

In July, August and Sept. 1920, 24 passengers, 126 employees and 26 other persons were killed in train accidents in the U.S., and 1,246 passengers, 840 employees and 67 other persons were injured.

India is said to be in great need of additional railway equipment.

Revenue Freight Carried Throughout Canada.

The Dominion Bureau of Statistics has issued a statement of revenue freight carried by railways of Canada

during Nov. 1920, the summary statement for provinces being as follows in tons of 2,000 lbs.:

	Originating at billing stations.	Received from foreign connection	Total revenue freight carried.	Terminating at receiving stations.	Delivered to foreign connections rail and water.
P. E. Island	19,445	19,445	12,214
Nova Scotia	526,449	2,182	528,631	464,881	24,115
New Brunswick	156,976	8,160	195,136	161,298	39,324
Quebec	929,375	9,987	1,616,761	1,072,826	767,611
Ontario	1,961,288	2,195,592	4,156,980	3,671,778	1,190,587
Manitoba	551,428	22,711	574,139	563,231	31,616
Saskatchewan	825,438	44,801	870,239	54,539	3,884
Alberta	1,087,056	4,977	1,091,133	384,013	41,641
Br. Columbia	342,005	29,368	371,373	275,778
Total	6,459,455	2,994,377	9,453,832	6,907,512	2,093,227

Railway Mechanical Methods and Devices.

A Boring Mill Job.

The accompanying illustration shows the cylinder casting of a turntable tractor, set up in the boring mill. The casting contains twin cylinders, A.A., and corresponding crosshead guides, B.B. In the operation being carried on, as shown, one cylinder and its guides are being bored at the same time. Double end tools

debited to him, and F. C. Bowra, Machine Shop Foreman, for information concerning it.

Straightening Frame for Steel Freight Equipment.

The accompanying illustrations show a structural steel framework which is in

shows the screw jacks and blocks, the blocks moving vertically in the vertical members of the frame, on loosening the nuts, as seen above and below the screw jacks. In addition, there are large rings, secured to iron holding bars sunk into the concrete foundation, for use in straightening vertical bends. The procedure is to chain the work to the rings in the foundation, and straighten the bent part by the use of jacks set on the concrete.

The frame, used in conjunction with a heating torch operating on fuel oil, and which is used to heat the work in various cases, so as to facilitate the bending, does a very satisfactory job on steel cars, and saves a great deal of labor in the way of cutting rivets and rivetting up, removing and re-assembling parts, etc., and amply demonstrates its economy and usefulness in car repairs. We are indebted for this information to J. Bannon, General Car Foreman, West Toronto shops, C.P.R.

Waste Reclaiming Plant.

At one time, when waste used in the manufacture of dope for journal boxes had become unfit for further use, the box was repacked and the old waste burned. Now, however, this waste is put through a process by which it is cleaned of the babbitt, sand and other impurities which get into it, and made fit once more for journal box lubrication. The following description, dealing with the Canadian National Rys. waste reclaiming plant at the Leaside Shops, Toronto, describes the manner in which the waste is reclaimed.

When the old waste is brought into the reclaiming plant, it is placed on grating, picked over, and separated into two portions, according to quality, the better grade being used subsequently for passenger car journal lubrication, and the other for freight cars. The short

Cylinder Casting in Boring Mill.

are attached at the top and bottom ends of boring bar, one for the cylinder and one for the guides, the tool used in machining the guides being shown in the illustration.

This arrangement, providing for sim-

use at the car department, West Toronto shops, C.P.R., and which is employed in straightening bent end and side sills, sprung sides and ends, bent corner posts, grab irons and ladders, bulged corners, etc., of steel freight cars. The frame is

Straightening frame for steel freight equipment.

Fig. 1. General view of jacking frame. Fig. 2. Vertical members, screw jacks and height adjusting blocks.

ultaneous machining of both cylinder and guides, ensures that the center line of the cylinder and guides will be in one straight line when the operation is finished, and that the cylinder walls and guide surfaces will be parallel and true in relation to each other. The set-up was devised by V. R. Cowtan, machinist in Toronto shops, G.T.R., and we are in-

necessarily of substantial construction and well braced, and is erected on a solid concrete foundation. The top bracing is provided by six transverse I beams, together with the auxiliary tie rods, as shown in fig. 1, and longitudinal channels at the top add to the rigidity. The section of the vertical members is as shown in fig. 2, which also

ends, waste filled with babbitt, etc., go through the grating into a receptacle provided to receive them. The old waste is then placed in a tank, shown in the accompanying illustration. This is so constructed that the interior tank is surrounded by a jacket on the bottom and sides. The tank is of wood, the lining and jacket material being sheet iron,

Two pipes open into this jacket, or outer tank, one of which conveys cold water, forced in by a pump, and the other conveys live steam. The water level is

the second, and oil in condition to be used for a repetition of the operation is drawn from the third.

Waste which is not fit for further use

Removing Bolts from Steel Tire Retaining Rings.

A very fast and reliable method is employed in taking out the bolts passing through the retaining rings in steel tired wheels at the car department, West Toronto shops, C.P.R., in charge of J. Bannon, General Car Foreman. When the bolts are put through the ring, in putting on the tire, the ends are riveted over, and, under ordinary conditions, it would be necessary to chisel away the burred over part of the bolt, split the nut, or shear the bolt, to take the nut off and get the bolt out. However, with the aid of the device shown in the accompanying illustration, the bolts are quickly removed, and both bolt and nut remain undamaged in any way.

The device is supported so that it can be adjusted to position, both horizontally and vertically, throughout a wide range. Supported to the left of the horizontal round iron cross beam, as shown in the illustration, is the air motor, which drives the cutting tool. The motor is enclosed in a frame, the upper surface of the frame being in contact with, and free to move lengthwise in relation to, the supporting bar (indicated by the arrow) which is rigid with the horizontal cross beam. By suitably arranged horizontal and circular gearing, the frame enclosing the air motor and chuck can be moved to the right or left by handle A. The air hose connection is at B.

In operation, the cross beam is swung over the wheel, moved to the left, till the holder C, on arm D, fits over the

A Waste Reclaiming Plant.

shown by the water glass seen in the illustration. A pipe, conveying compressed air, opens into the interior tank, connecting to a series of pipes at the bottom of the tank, each of which has openings along its upper surface. On top of this layer of pipes is a $\frac{1}{4}$ in. mesh screen, to keep the waste from coming into direct contact with the air pipes.

The interior tank contains oil, to which a certain amount must be added every time the reclaiming operation is performed. When the picked over old waste is put in, the cover is put down and secured, and the air pressure applied. This agitates the mass of oil and waste, while the live steam entering the water in the outer jacket keeps it hot. This agitation goes on for from two to five hours, when the air and steam are shut off, the waste taken from the tank, and placed in the cylindrical compressor above the tank, where it is subjected to a pressure of 80 lb. a sq. in., the oil draining back into the tank.

Following this operation, the waste is again put on a grating and picked over, to loosen it; it is then soaked in oil for five hours, after which it goes to the next tank and drains for six hours; then it is stored in tanks, all ready for use in the journal boxes. The drainage tanks for this last operation are so arranged that the oil can be easily drawn off and any sediment removed, and the oil can be used over and over again with a very small addition each time.

In connection with the oil used in the first operation, where the waste was subjected to the agitating action of the air jets, there are tanks, divided into three compartments, in which the oil is afterwards placed. Oil from the first compartment overflows into the second, and from the second into the third. Practically all of the sediment is drawn out of the first compartment, a little out of

Device for removing bolts, with burred or rivetted ends, from steel tire retaining rings.

in journal boxes is burned in an incinerator and the babbitt reclaimed. At the C.N.R. Lease shops, the reclaiming plant handles the packing from approximately 4,000 journal boxes a month.

head of the bolt. The tool in the chuck is brought to bear against the riveted end of the bolt, through the operation of the handle A, air is supplied to the motor, and the cutting tool quickly removes

the burred end of the bolt, without hurting the thread or the nut. By pulling the machine a few inches back from the work by means of handle A, replacing the cutting tool in the chuck, with another tool of the nature of a box wrench, and again advancing the machine to fit this tool over the nut, the nut is quickly

run off the bolt. The motor is reversible, so that a nut may be run on just as quickly.

When one considers the amount of work and length of time it would take to remove bolts in the condition indicated, without the aid of a device as this, its value is at once evident.

The Death of James Hardwell.

James Hardwell, Chief Traffic Officer, Board of Railway Commissioners for Canada, who died at the Radium Institute, Brooklyn, N.Y., June 20, had not been well since Nov. 1920, but though obliged to sleep in a sitting position, remained at work, and went to his office daily, until Feb. 15, when he was compelled to obtain leave of absence. On March 18 he went to the Montreal General Hospital for examination by specialists and on being advised that the only hope was in radium treatment, he went to the Radium Institute at Brooklyn early in April for a month, during which he underwent four treatments. He then had a month's rest at Atlantic City, returning to the Radium Institute on May 31 for three more treatments. But complications set in, and on June 15 he suffered a number of convulsions, due to uremic poisoning, and remained unconscious until he died. The body was taken to his house at Ottawa, where a service was held June 23. It was then taken to Toronto, being accompanied, on the Board of Railway Commissioners' official car, by the following representatives of the Board:—S. J. McLean, LL.D., Assistant Chief Commissioner; A. D. Cartwright, Secretary; R. Richardson, Assistant Secretary; G. A. Mountain, Chief Engineer; A. G. Blair, Solicitor; and G. A. Brown, chief clerk, Traffic Department. Another service was held at a burial company's chapel in Toronto on June 24, Rev. Canon Cody officiating, in the presence of a considerable number of transportation officials, in addition to the Board's representatives and other friends. There were a great many floral offerings from transportation associations and individuals. The pall bearers were: S. J. McLean, LL.D., Assistant Chief Railway Commissioner; A. G. Blair, Solicitor, Board of Railway Commissioners; C. A. Hayes, Vice President, Traffic, Canadian National Rys.; G. T. Bell, Passenger Traffic Manager, G.T.R.; W. H. Burr, Traffic Manager, Dominion Express Co.; and Acton Burrows, Proprietor, Canadian Railway and Marine World.

Mr. Hardwell was born at Plymouth, Eng., July 8, 1851, and entered transportation service in Canada in 1874, since when he had been, to 1880, clerk of local freight office, G.T.R., Toronto; 1880 to 1884, clerk in Division Freight Agent's office, G.T.R., Toronto; May 1884 to Dec. 31, 1897, chief clerk, District Freight Agent's office, C.P.R., Toronto; Jan. 1, 1898 to June 18, 1904, Division Freight Agent, and afterwards Assistant General Freight Agent, Intercolonial Ry., Montreal. On the formation of the Board of Railway Commissioners he was appointed Traffic Officer, his appointment being dated June 22, 1904, and his duties being then defined as, to advise the commissioners on all traffic matters as between railways, and as between railways and the public, to examine, file and record all freight and passenger tariffs, and

to advise the Board as to the approval or disapproval of the same. Later he was appointed Chief Traffic Officer. He leaves a widow and one son, Oswald R., of East Orange, N.J., a brother in Toronto, and three unmarried sisters in England.

By Mr. Hardwell's death, Canada has lost a great public servant, an able official, an indefatigable worker, and a most lovable personality. Probably few outside of the Board of Railway Commissioners and its officials, some of the rail-

James Hardwell.
Chief Traffic Officer, Board of Railway Commissioners.

way companies' traffic officials, and the writer of this article, have any idea of the vast amount of work he performed in examining tariffs, in analyzing evidence submitted at tariff hearings, and in many other ways. Endowed with a high sense of public duty, and a thoroughly judicial mind, he performed his duties with the utmost fidelity and impartiality, and was held in high respect, by both the transportation officials and the public with whom he had to deal.

Hon. F. B. Carvell, K.C., Chairman of the Board of Railway Commissioners, in a letter of sympathy to Mrs. Hardwell, said:—"I do not have to tell you how much this Board will miss him, and how much he will be missed by the whole railway fraternity in Canada. It is some consolation to have left a name such as Mr. Hardwell has left among those with whom he has worked all his lifetime."

S. J. Maclean, LL.D., Assistant Chief

Commissioner, wrote:—"The severance of the official tie which bound Mr. Hardwell and myself is not, after nearly thirteen years of constant association, to be passed over in easy words. In almost daily contact, in every discussion, in every phase of his work, his ability, insight, logical process and exactness of expression were constantly in evidence. He possessed in an eminent degree the temperament of an arbitrator. This was of constant value in the varied informal activities of the work of the Traffic Department. This temperament was recognized and appreciated by all who knew him. Leaving aside my own appreciation of its value, I may say it has been commented upon to me by the traffic representatives of the industries, and boards of trade, and the railways. He was ever the informed gentleman, thoughtful and charitable in his judgments of others, characterized throughout by the antique honesty of thought and attitude, which we are prone to associate with an older day. The inscrutable ways of Providence have removed the Dean of the traffic profession of Canada. There remains for those who continue, the memory and inspiration of a high minded, honest, active and fruitful life."

Freight and Passenger Traffic Notes.

An application by residents of Dodsland, Sask., and vicinity, for an order for the C.P.R. to stop its trains there, has been dismissed by the Board of Railway Commissioners.

The C.P.R. has been ordered by the Board of Railway Commissioners to keep its station at Strathfordville, Ont., open, and, when necessary, heated and lighted, for 30 minutes prior to arrival of trains 659 and 662.

The C.P.R. has been ordered by the Board of Railway Commissioners to keep a station agent at Dalhousie Mills, Que., and to have the station open until 7 p. m. on Tuesdays, Wednesdays, Thursdays and Fridays.

The C.P.R. has been ordered, by the Board of Railway Commissioners, to restore the train service between Calgary and MacLeod, Alta., which was discontinued in Jan. 1920, and the Board's order 30,001, authorizing the withdrawal of trains 540 and 541, has been rescinded.

The Ontario Fruit Growers Association, Niagara Peninsula Fruit Growers Association, and Niagara Peninsula Growers Limited, have applied to the Board of Railway Commissioners, for an order directing express companies to restore the previous arrangement for unlimited unloading of car load fruit and vegetables from stations in Ontario to the Maritime Provinces and Western Canada.

The Eastern Canada Live Stock Union et al, applied to the Board of Railway Commissioners recently for an order and direction that freight rates on live stock prevailing and allowed under the present tariff of freight rates in force in Canada on live stock, including horses, cattle, sheep, and hogs, be reduced from the present amounts thereof by an amount equal to 50% of the present existing rates and for an order amending the existing tariffs in force in Canada in respect to the carriage of live stock as aforesaid.

Locomotive Booster Tests on Timiskaming & Northern Ontario Railway.

Locomotive booster tests on the T. & N.O. Ry. were described in a general way in Canadian Railway and Marine World for June. Since then, the results of the tests have been checked over and charts prepared, and the most important tests can now be dealt with more fully and the results shown graphically. A complete illustrated description of the booster's mechanical features was published in Canadian Railway and Marine

the latest specialties and refinements applied to locomotives.

The tests were conducted with Canadian National Ry's. dynamometer car 84, the use of which was extended to the T. & N.O.R. for the occasion. The first test was made on May 9, with mikado locomotive 150, which was given a train out of North Bay consisting of 21 loaded freight cars, the dynamometer car, T. & N.O.R. official cars Temagami and

stalled without slipping, the drawbar pull showing as 45,000 lb. The train was then backed down the hill, and on the second test the speed was 9 miles an hour when the booster was cut in 660 ft. south of mile 11. The drawbar pull increased rapidly from 33,000 lb., at which figure it was when the booster was cut in, to 50,000 lb., but 528 ft. north of mile 11, after the speed had fallen to 3 miles an hour and then picked up to 4 miles an hour, the locomotive slipped and stalled. On back down and setting off one load, leaving a train of 1,424 adjusted tons, an excess of 224 tons over normal rating, the grade was got over without difficulty.

The train then proceeded to the grade between miles 15 and 18, the result of the booster being cut in on the 1.25% portion of the grade being shown in fig. 1 (right). The speed of the train when the booster was cut in on the hard pull on a 6 degree curve, was about 9 miles an hour, and drawbar pull showed 38,000 lb. As the speed decreased to 5 miles an hour, the drawbar pull went up to 47,000 lb. When the train had gained the 1% portion of the grade, and speed had been picked up to 8 miles an hour, the booster was cut out. In order to get this excess tonnage over these grades, aggregating three miles in length, it was necessary to operate the booster for less than half a mile. The train was then taken through to Englehart, 138 miles north of North Bay, the booster being used on the stiff pulls, with a degree of success equal to that displayed in its performance in the test between miles 15 and 18.

On May 10, the same locomotive was started from Englehart south with a train of 32 loaded cars, 4 empties, the dynamometer car, T. & N.O. Ry. official car Temagami, and caboose. The actual tonnage was 1,800, contents 957, tare 843, and the adjusted tonnage, T. & N.O. R. rating, 1,995. Fig. 2 shows the re-

Fig. 1. Booster Test, with Mikado Locomotive 150, showing speed and drawbar pull.

Left side, from mile 9.2 to mile 11.1, on 1.25% grade. Dotted line, with booster cut in; full line, without booster cut in. Right side, between miles 15 and 18, showing effect of cutting in booster.

World for Dec. 1920, pg. 661. As stated previously, boosters have been applied on one mikado and four Pacific type locomotives on the T. & N.O. Ry. The mikado to which the booster is applied was described and illustrated in Canadian Railway and Marine World for May, pg. 252. This locomotive has a tractive power of 45,500 lb. without booster, weight on drivers 197,000 lb., cylinders 25 x 30 in., and is thoroughly modern in design. Details and an illustration of

Whitney, and a caboose. The actual tonnage of this train was 1,401 tons, 756 contents and 645 tare, the adjusted tonnage with the T. & N.O.R. allowance being 1,501. Fig. 1, given herewith, shows the performance of the locomotive with this train between miles 9.2 and 11.1, north from North Bay. It was decided to see first what the locomotive could do with this train on the 1.25% grade at mile 11 without the booster cut in. The tonnage for this grade, with this

Fig. 2. Booster Test, with Mikado Locomotive 150, from New Liskeard to Cobalt.

Showing conditions of throttle opening, reverse lever position, steam pressure, speed, drawbar pull, grade and curve at all times.

the Pacific type locomotives equipped with the booster were given in Canadian Railway and Marine World for June, pg. 309. The tractive power of these Pacific is 36,600 lb. without booster; weight on drivers 155,000 lbs., cylinders 23 x 28 in. They are thoroughly modern in all details of design and construction, and are notable as embodying practically all

power, is ordinarily 1,200 adjusted tons, so that the excess loading was 301 adjusted tons. The speed of the train when it reached the foot of the 0.75% grade was 26 miles an hour. The full lines in the left hand chart show the variations in speed and drawbar pull until the train finally stalled on the 1.25% grade, 528 ft. south of mile 11. The locomotive

results of the tests with this train on the grades from New Liskeard, mile 112.8, to Cobalt, mile 102.7. These grades vary from 0.13% to 1%, and the normal rating for a locomotive of this class is 1,560 adjusted tons, so that the excess loading was 335 adjusted tons. The booster was first cut in 100 ft. south of mile 106, when the speed was slightly under 10

miles an hour and the drawbar pull was 36,000 lb. The drawbar pull quickly increased to 43,000 lb. and speed was maintained at an average of 8 miles an hour on the 0.8%, 1% and 0.75% portions of the grade until the booster was cut out, 0.42 mile south of mile 105. When the booster was cut out, the drawbar pull dropped from 40,000 lb. to an average of 36,000; when the booster was again cut in, 0.42 mile south of mile 104, on the 1% portion of the grade, the

hour, the drawbar pull being 38,000 lb. As the train topped the summit, the speed had decreased to 3 miles an hour and the drawbar pull increased to 52,000 lb. The train then proceeded to North Bay.

Fig. 4 (left) shows tractive effort and speed obtained with Pacific type locomotive 157 in a lift and acceleration test, handling a passenger train of 13 cars, same date. As noted, the tractive power of the locomotive without booster operat-

2 minutes, the drawbar pull exerted was 28,000 lb., at a speed of 12 miles an hour, and in 170 seconds, or less than 3 minutes, a speed of 15½ miles an hour had been attained, the drawbar pull being 26,000 lb. The manner in which the locomotive handled the train on this lift, which took place over frogs and switches, on a 1% grade, and uncompensated 10 degree curve, and the rapid acceleration shown under these conditions, were highly gratifying, and demonstrated the ability of the booster in getting trains to road speed quickly, in leaving terminals, or after station stops.

Fig. 4 (right) shows the result of a test designed to determine the acceleration obtainable on level track. The same train, of 942.7 tons, was handled north out of Tomiko, mile 27.3 from North Bay, the drawbar pull when lifting the train registering as 38,000 lb. This remained practically constant for 10 seconds, as a speed of 3½ miles an hour was being attained; in 30 seconds it registered as 29,000 lb., the speed being 8.5 miles an hour. At the end of one minute, the drawbar pull showed as 23,000 lb., and speed had increased to 15.5 miles an hour.

The tests with mikado locomotive 150 amply demonstrated the correctness of the proposition that a largely increased tonnage can be handled over a division without difficulty, if it can be successfully got over the few hard pulls of the division, and they demonstrated the ability of the booster in aiding the locomotive to get it over the hard pulls. The T. & N.O.R. has a profile marked by several short, steep grades, which have acted to limit the tonnage handled in the past. By enabling a locomotive to take a tonnage, increased by 20%, over these grades, the value of the booster applied to the freight hauling units of such a railway is at once evident. In addition, many of the stations and water stops are on grades, so that time saved over the division by the high acceleration of passenger trains obtained by the use of the booster in leaving stations, in addition to that saved on the hills, would be large. The T. & N.O.R. officers have expressed complete satisfaction with the performance of the device and the efficiency shown by it in doing the work for which it was designed.

Canadian Railway and Marine World is indebted to S. B. Clement, Chief Engi-

Fig. 3. Booster Test, with Mikado Locomotive 150, from mile 26 to mile 22. Showing performance with booster cut in, on 1% grades, and conditions of throttle opening, reverse lever position, steam pressure, speed, drawbar pull, grade, and curve at all times.

drawbar pull increased from 37,000 to 42,000 lb., speed remaining constant for 0.6 mile at 10 miles an hour, but dropping to 9 miles an hour on the 6 degree 12 minute curve, while drawbar pull increased to 43,000 lb. at this speed. The train was thus handled into Cobalt without difficulty, by making the booster operative twice for short intervals on the hardest pulls. It will be noted that the line representing steam pressure in fig. 2 is straight. The reason for this is that mikado locomotive 150, in common with the others of its class used by the T. & N.O.R., and Pacific type locomotive 157, proved to be an exceptionally free steamer, so that no deviation of any importance from the 180 lb. boiler pressure was experienced.

Southbound, out of Cobalt, another load was switched into the train, making the actual tonnage 1,848, and adjusted tonnage 2,048 tons. Fig. 3 shows the results with this train, between miles 26 and 22. The booster was cut in 0.22 mile south of mile 25, on the 1% grade, when the speed was 9 miles an hour and drawbar pull 39,000 lb. As the speed gradually came down to 4 miles an hour, while the train approached the summit, the drawbar pull gradually increased until it reached a maximum of 51,000 lb. The booster was cut in again 0.32 mile south of mile 23, on a 1% grade, but not until the speed had decreased to 7 miles an

ing, is 36,600 lb. As shown by fig. 4 942.7 tons, northbound out of the T. & N.O.R. North Bay terminal. This locomotive was tried on May 11, and handled Canadian National Rys. transcontinental passenger train 1 from North Bay to

Fig. 4. Booster Test, with Pacific Locomotive 157. Left side, lift of passenger train of 942 tons out of North Bay yard, over frogs and switches, on 1% grade, and 10 degree curve, uncompensated. Right side, acceleration, with aid of booster, in starting train out of Tomiko station on level track.

Englehart, bringing back train 2 on the (left), the drawbar pull exerted with the booster cut in, on lifting the train, was 45,000 lb. In 60 seconds, the drawbar pull was 37,000 lb., and a speed of 5 miles an hour had been attained; in

near, Timiskaming & Northern Ontario Ry., for the charts reproduced in the accompanying illustrations, which were prepared by Frank Williams, Mechanical Designer, Canadian Government Railways, Moncton, N.B.

Grand Trunk Railway Arbitration Proceedings.

Under the authority of the act passed at the Dominion Parliament's last session, as published in full in Canadian Railway and Marine World for May, pg. 248, which provided that on the substitution, as directors of the G.T.R., of persons selected by the Dominion Government, in place of the directors elected by the company's shareholders, the arbitration to determine the value of certain capital stocks to be acquired by the Government should proceed, the proceedings were resumed at Montreal June 1, before Sir Walter Cassels, President Exchequer Court, as chairman, and Sir Thomas White, representing the Dominion Government, W. H. Taft, representing the G.T.R., having been detained in the United States by private affairs.

At the opening E. Lafleur, K.C., for the G.T.R., read a statement concerning transactions in, and value of, various classes of G.T.R. stock on the London stock exchange between 1909 and 1913. H. A. Lovett, K.C., for the Government, protested against the presentation of these statistics, on the ground of irrelevancy, but as a similar protest on his part had been made, and overruled, at the time authority to obtain the figures was given, the statement was admitted.

Mr. Taft was present on June 2, when G. E. Rowbo, of Price, Waterhouse & Co., accountants, and J. B. MacLaren, Auditor of Disbursements, G.T.R., were witnesses for the G.T.R. and were cross examined by Pierce Butler, of the Government counsel. A. W. Atwater, K.C., for the G.T.R., filed statements covering the operations of the railway from 1912 to 1916, comparing the G.T.R. with various eastern U.S. railways. These statements were strongly criticized by Pierce Butler, who stated that they did not adequately set forth the situation concerning G.T.R. finances.

On June 3, the cross examination of J. B. MacLaren was continued by Pierce Butler, who took exception to the financial statements of the G.T.R. subsidiaries, claiming that as they had been compelled to borrow from the parent company to enable them to pay their interest, the amounts borrowed should not be shown as G.T.R. assets. A large part of the sitting was taken up with a discussion of maintenance on the G.T.R.'s United States properties while under control of the U.S. Railroad Administration, Mr. MacLaren stating that the company has a claim against the Administration for \$1,500,000, for deferred maintenance of way.

On June 6, J. B. MacLaren presented statistics dealing with expenditures for engineering work, and Major F. L. C. Bond, Chief Engineer, G.T.R., testified concerning rail and ballast costs, and expense of grade revision and bridge maintenance.

On June 7, J. B. Berry, engineering expert for the G.T.R., gave evidence and filed statements called for by Government counsel, and C. E. Needham, Asst. Superintendent of Motive Power, G.T.R., was cross examined by Pierce Butler in connection with car maintenance and maintenance costs. This concluded the presentation of the G.T.R. case.

The presentation of the Government's case was commenced on the same date. The first evidence was given by Lt. Col. C. N. Monsarrat, formerly Consulting Engineer, Railway and Canals Department,

and now Consulting Bridge Engineer, Canadian National Ry., who stated that the majority of bridges on the G.T.R. are in poor physical condition and will require large expenditures for repairs in the near future. He described the Central Vermont bridges as being in particularly poor condition, and totally unfit for the operation of heavy power at high speed. The manner in which his evidence contradicted that of J. B. Berry, who, on behalf of the G.T.R., had characterized the property as being in first class physical condition, is notable. On June 8, Lt. Col. Monsarrat was cross-examined by F. H. Phippen, K.C., for the G.T.R., in connection with his report concerning bridges, but he maintained that if his report had erred at all, it had been on the side of leniency. The presentation of the Government's case was somewhat interrupted by J. B. MacLaren being called upon to give further details concerning the amounts owed the G.T.R.'s lines in the U.S. by the U.S. Railroad Administration on deferred maintenance account, and by the cross examination by Pierce Butler of M. S. Blacklock, Engineer of Maintenance of Way, G.T.R., concerning maintenance costs.

On June 9, F. W. Cooper, formerly an engineer in C.P.R. service, testified concerning the G.T.R. tracks and roadway, stating that the track is by no means in first class condition, particularly on branch lines, and that a lot of work will be necessary to get it into good shape.

On June 10, the sitting was partly devoted to further cross examination of Lt. Col. Monsarrat by F. H. Phippen, K.C., concerning the former's analysis of G.T.R. bridge conditions; the remainder of the time was taken up with the evidence of E. A. Forward for the Government. He criticized the condition of G.T.R. freight wharves, docks and sheds at Levis, Three Rivers, Depot Harbor, Sarnia, Point Edward, Windsor and other points, and expressed the opinion that large sums will have to be expended on them in the near future. His evidence also strikingly conflicted with that of J. B. Berry, the G.T.R. engineering expert.

On June 13, there was a discussion concerning pensions of G.T.R. employees who had participated in the strike of 1910. F. H. Chrysler, K.C., for the Government, claimed that the total amount of all pension claims should be set down as a liability against the G.T.R. It was pointed out that G.T.R. officials had issued notice to the effect that any man joining the strike would forfeit his pension claim. Finally, after lengthy debate it was decided not to admit this matter as evidence. E. A. Forward then gave further evidence concerning the inadequacy and poor condition of the G.T.R. Portland terminals. G. O. Somers, an ex U.S. traffic official, also appeared on the Government's behalf, and presented a long statement to show that the G.T.R. location and terminals are not of the best, that its traffic is not well balanced, and that it is open to competition at practically every point. Mr. Somers continued his testimony on June 14 and strongly criticized the G.T.R. service between Buffalo and Detroit, pointing out that the G.T.R. route between Buffalo and Chicago is longer than that of competing lines. He said that between Port Huron and Chicago, the G.T.R. taps but

few traffic producing industries, while even at Chicago, the G.T.R. terminals are not as well located as those of competing lines. He considered the Chicago belt line, which had been highly praised by various G.T.R. witnesses, as of little advantage, as it had to be shared with other railways.

J. G. Sullivan, consulting engineer, Winnipeg, formerly Chief Engineer, C.P.R., was the next witness. While he considered the Grand Trunk Pacific portion of the G.T.R. property in good shape, he pointed out that when the road was built a large number of wooden trestles were put in, which will soon be due for replacement, either by permanent structures, or by fills. For these and other necessary betterments on the main and branch lines he estimated that \$19,704,000 will have to be spent before 1925. He expressed the opinion that the G.T.R. was "built a hundred years too soon."

On June 15, A. C. Going, Engineer of Construction, G.T.R., was examined by W. N. Tilley, K.C., for the Government, concerning grade separation in various cities. He calculated that the G.T.R.'s share of the cost of a new Bonaventure station in Montreal, together with the elevation of the tracks through the city, would come to \$15,000,000. For the grade separation work in Toronto he estimated the city's share would be \$5,000,000, and the G.T.R. would be called on to pay half the balance, or \$11,800,000. The G.T.R. is also under obligation to participate in some grade revision work at Detroit, at a cost of \$3,250,000, and the G.T.R.'s share of the cost of the improvements at Chicago will amount to about \$4,750,000. He did not think that any of this work would start within the next three years. A. W. Atwater, K.C., for the G.T.R., put G. O. Somers through a very severe cross examination in connection with the latter's criticism, at previous sittings, of the G.T.R. property, the result being that his opinions, or at least his expressions of opinion, had moderated to quite an extent when the railway counsel was through with him. He had emphasized the competition imposed on the G.T.R. by motor traffic, but on examination admitted that he had no exact knowledge concerning this; while concerning competition by water, he admitted that the same kind of competition affected the C.P.R. and in fact all railways having port terminals. J. J. Robey, formerly manager of the coal mines now owned by the G.T.R. in Ohio, was called as a Government witness, and attempted to show that these coal properties are of limited reserve capacity, with a restricted market, and in trouble from high wage and freight rates. He was examined by E. Lafleur, K.C., for the G.T.R., and admitted that he had not seen the mine or its equipment since 1916.

The sitting of June 16 was devoted mainly to the cross examination of J. P. Newell, a consulting engineer appearing for the Government, by F. H. Phippen, K.C., for the G.T.R., concerning operating figures. Track elevation plans, which had been the subject of debate the previous day, were further discussed.

On June 17, Pierce Butler, K.C., for the Government, had Mr. Newell present statistics to show the unfavorable operating and traffic conditions of the G.T.R. Following this, a letter from Sir Alfred

Smithers, Chairman of the G.T.R. board, to Sir Robert Borden, written in connection with the handing over of the Grand Trunk Pacific, was read into the records. J. B. MacLaren, Auditor of Disbursements, G.T.R., submitted records of G. T. R. earnings in 1920, and showed how, had the 1921 rates applied to the business handled in 1920, the G.T.R.'s financial conditions would be very different from what it is. The admissibility of the Drayton-Acworth report as evidence was discussed at length, and it was finally decided to admit it.

On June 20, D. E. Brown, an accountant, testified for the Government, being examined by W. N. Tilley, K.C., who produced a number of tabulated statements and exhibits as to interest on bonds and debentures which must be paid by the G.T.R. before there could be any money for dividends on G.T.R. preferred or common stock. His evidence was continued on June 21, when he presented further figures to show the bad state of G.T.R. finances, including one comparing the freight charges per mile on the G.T.R. with those on the C.P.R. and 180,000 miles of railway in the U.S. According to his calculations, the fixed charges on the G.T.R. are greater than those on the C.P.R. or on the U.S. railways examined. J. B. MacLaren was recalled, and made further statements in connection with finances. A. S. Going was also recalled and examined by both Messrs. Phippen and Tilley in connection with track elevation on different cities.

On June 21, Geo. Mitchell, Superintendent of Bridges and Building, Ontario Lines, G.T.R., was examined by Mr. Phippen in connection with Lt. Col. Monsarrat's evidence re G.T.R. bridges. Mr. Mitchell denied the charges of poor conditions which Lt. Col. Monsarrat had made, and stated that the bridges were perfectly safe, and in condition to render heavy more cars of service. He added that about the only thing wrong with most of the bridges Lt. Col. Monsarrat had criticized was that they were due for repainting. On June 22 Mr. Mitchell continued his evidence in rebuttal of that given by Lt. Col. Monsarrat as to the condition of G.T.R. bridges in Ontario. H. E. Schwartz, Superintendent of Bridges and Buildings, G.T.R., Quebec Lines, was also called by Mr. Phippen, and largely continued criticisms made by Lt. Col. Monsarrat concerning bridges on the G.T.R. in Quebec Province. J. B. Gant, Bridge Inspector, G.T.R., Western Lines, gave evidence of a similar nature.

On June 23, D. E. Brown, accounting expert for the Government, was cross examined at length by A. W. Atwater, K.C., for the G.T.R., concerning financial matters. R. Armour, Masonry Engineer, G.T.R., testified and pointed out in detail how Lt. Col. Monsarrat had been unduly severe in his criticism of the bridges on the G.T.R. system. Major F. L. C. Bond, Chief Engineer, G.T.R., was also called to testify in rebuttal, and was examined by F. H. Phippen, K.C., for the Grand Trunk, as to the Victoria bridge at Montreal. He said that Lt. Col. Monsarrat's condemnation had been greatly overdrawn, and that the same applied to all the criticisms which the Government engineer had described. C. E. Donaldson, Bridge and Building Master, Central Vermont Ry., presented similar evidence, claiming that minor repairs, applied in the course of usual maintenance work, are sufficient for the bridges under his jurisdiction.

The examination of D. E. Brown was

concluded on June 24.

At the time of writing (June 24) the taking of evidence is practically completed, although it is possible that the G.T. R. may ask to be allowed to introduce some additional rebuttal evidence. June 24 was the 63rd day of the proceedings. There are said to be over 7,000 pages of evidence and over 500 exhibits. The arrangements in connection with the presentation of arguments by counsel remain to be decided.

Dismissals of Canadian National Railway Conductors and Brakemen.

The following questions were asked in the House of Commons recently by M. S. Delisle, Portneuf, Que., and answered by the Minister of Railways:—

Q. "How many conductors and brakemen, employed on the Government Rys., from Quebec to O'Brien, were discharged during 1920 and what are their names?" A. "The conductors, 6 brakemen and baggageman. Names of conductors: J. E. Albert, J. E. Benoit, J. E. Cleophas Cote, L. P. Cloutier, L. A. Dupont, L. J. Jess, F. R. Plouffe. Names of brakemen: J. Albert, J. Brochu, R. Fournier, R. Gagnon, V. R. Mulligan, F. L. St. Pierre. Name of baggageman: R. Picher."

Q. "What was the reason for their dismissal? Were they granted a legal and impartial inquiry, as required by sec. 36 of rules entitled Code of Pay and Rules, under the signature of F. P. Brady in behalf of the C.N.R.; M. G. Wilson in behalf of the Brotherhood of Railroad Trainmen, and M. Kelleher in behalf of the Order of Railroad Conductors?" A. "Conductors J. E. Benoit, J. E. C. Cote, L. P. Cloutier and L. J. Jess were dismissed on account of irregularities in handling of cash fares. Conductor J. E. Albert was dismissed on account of conviction for theft of railway property. Conductor L. O. Dupont was dismissed on account of insubordination. Conductor F. R. Plouffe was dismissed for violation of special rule E of timetable 2, resulting in rear end collision. Brakeman J. Albert was dismissed on account of conviction for theft of goods in possession of the railway. Brakeman J. Brochu was dismissed on account of unauthorized solicited estimates and merit marks. Brakemen R. Gagnon and F. L. St. Pierre and baggageman R. Picher were dismissed for violation of rule G (intoxication). All of these employees were granted full and proper investigation as required by rules of schedules with brotherhoods covering such cases. Brakeman R. Fournier was dropped from pay roll on account of not having returned for duty within a year's time, as required by railway regulations. Brakeman V. R. Mulligan was dropped from pay roll on account of leaving service and taking up employment elsewhere."

Q. "What are the names of the spotters who made the case? What was their occupation before they took up that work for the Government? Were affidavits taken? If so, before whom were said affidavits sworn to?" A. "The management takes the ground that it is not in the public interest to give names or occupations of persons who gave first information as to irregularities in handling cash fares."

Q. "Is it the intention of the Government to reinstate such employees?" A. "One case is still under consideration,

but the management states it has no intention of changing the discipline administered in connection with the balance."

Gaspé Peninsula Railway Service.

C. Maril, Bonaventure, Que., asked the following questions in the House of Commons recently, which were answered by the Minister of Railways.

"Has the attention of the Government been called to the following recommendation made by the Quebec Board of Trade to the Board of Railway Commissioners on Feb. 3:—'We would also ask your commission to lend its influence in favor of the effort now being made by the Quebec Board of Trade, to remedy the painful situation in which the large population of the Gaspé peninsula, nearly 80,000, now find themselves, owing to defective railway service, and the absence of cold storage and refrigerator car service, needed to give their fisheries, which for two centuries have been the most important in the world, an opportunity to furnish the cheap food of fresh fish to Canadian cities, and at the same time the fisherman of Gaspé coast a fair price for his catch. He now gets one-fifth of the price earned by the fishermen at Prince Rupert, who has these facilities. Our suggestion is that the Dominion Government should take over the 200 miles of railway from Matapédia to Gaspé, which runs for its entire length within sight of the fishing boats, and make it part of the Government Railway System.' A. "Yes."

Q. "If so, is it the Government's intention to take any action?" A. "The Government is not at present in a position to take over these railways."

Q. "Has the Minister of Railways and Canals received any report from the Board of Railway Commissioners on the service given by the Quebec Oriental Ry. and the Atlantic, Quebec & Western Ry.? If so, was any action taken on such reports? If no action has been taken, is any contemplated in the public interest?" A. "The Chairman of the Board of Railway Commissioners has unofficially made certain recommendations to the Minister of Railways, which have been taken into consideration. The Government is, however, unable to hold out any immediate hope that these railways will be taken over and included in the Canadian National Rys. System."

Q. "Has the Government taken any action during the past year to improve the railway service in Bonaventure and Gaspé Counties and if so, what? Has any proposal been received from, or made to, the proprietors of the Atlantic, Quebec & Western, and the Quebec Oriental Railways, having for its object the linking up of those lines with the Canadian National Rys. System, by purchase, lease or otherwise? If so, what were these proposals and what action has been taken?" A. "There has been no complaint as to the service provided by the Canadian National Rys. through Bonaventure County. Proposals have been made from time to time looking to the lease or purchase by the Government of the lines in question. No action has been taken."

The Dominion Government is reported to be erecting four radiotelegraph receiving stations between Peace River Crossing, Alta. and the Arctic Ocean.

Mainly About Railway People Throughout Canada.

R. B. Angus, director, C.P.R., who celebrated his 90th birthday May 28, was the recipient of a congratulatory resolution from the Montreal Board of Trade's council.

O. Aubin, Roadmaster, Algoma Eastern Ry., while travelling over the track on a motor car June 17, near Sudbury, Ont., collided with a handcar carrying a number of Italians and was badly cut up in the collision. He was removed to the hospital at Sudbury, where he was reported to be progressing as favorably as could be expected.

E. W. Beatty, K.C., President, C.P.R., and Grant Hall, Vice President, made an inspection of the company's lines in New Brunswick and Nova Scotia, early in June, going as far as Halifax. Mr. Beatty has been elected Honorary President, Navy League of Canada.

George Caruthers Briggs, who has been appointed Architect, Western Lines, Canadian National Ry., Winnipeg, was born at Cockermouth, Eng., Apr. 23, 1886, and served articles to an architect and surveyor at Workington, Eng., from Mar. 1898 to Mar. 1903. He came to Canada in May 1903, and until Oct. 1906, was engaged in architectural work in Toronto, since when he has been, to Sept. 1912, in drafting office, Engineering Department, Mackenzie, Mann & Co., Toronto; Sept. 1912 to Sept. 1914, Architect, Buildings Department, same company; Sept. 1914 to Feb. 1916, Inspector of Buildings, same company; Feb. 1916 to Jan. 1920, Supervisor of Buildings, Eastern Lines, Canadian Northern Ry., Toronto; Jan. 1920 to June 1921, Architect, Eastern Lines, Canadian National Ry., Toronto.

Sir George McLaren Brown, European General Manager, C.P.R., accompanied Rt. Hon. J. W. Lowther, ex Speaker of the British House of Commons, from London to Liverpool, Eng., to see him off on his Canadian tour, which took place in June.

Charles Edward Buckley, who has been appointed Local Treasurer, Canadian National Ry., Vancouver, B.C., was born at Paris, Ont., Apr. 25, 1888, and entered transportation service June 5, 1895, since when he has been, to March 1911, clerk, Mackenzie, Mann & Co., Toronto; March 1910 to March 1911, cashier, same company, Toronto; March 1911 to Feb. 1916, accountant, Construction Department, Canadian Northern Pacific Ry., Vancouver, B.C.; Feb. 1916 to June 1919, secretary to Vice President, Canadian Northern Ry., and for the latter portion of that time, Canadian National Ry., Toronto; June 1919 to Apr. 30, 1921, accountant, Construction Department, Canadian National Ry., Vancouver, B.C.

W. W. Butler, President, Canadian Car & Foundry Co., and Mrs. Butler, who have been in Europe for several weeks, made a motor trip through the war area recently. They are expected back in Montreal early in August.

A. B. Calder, of the executive staff, C.P.R., who returned to Montreal recently, after a trip to Europe, was, prior to leaving England, entertained at dinner at the Hotel Cecil by a number of friends of the Empire Press Union, and presented with a set of golf clubs, made specially for him, by the famous golf professional, James Braid. Sir Emsley Carr presided.

Thos. Cantley, Chairman of the Nova Scotia Steel & Coal Co.'s board of directors, and one of the Canadian National Ry's. directors, is in Europe.

G. S. Cooke, whose appointment as Assistant Superintendent, Dauphin Division, Prairie District, Canadian National Ry., Dauphin, Man., was announced in our last issue, was born at Montreal, Oct. 27, 1875, and entered railway service Apr. 1, 1890, since when he has been, to Oct. 1, 1896, clerk in stationery department, G.T.R., Montreal; Oct. 1, 1896 to Feb. 15, 1900, clerk in Superintendent and Trainmaster's office,

Geo. C. Briggs,
Architect, Western Lines, Canadian National
Railways.

G.T.R., Montreal; Feb. 15, 1900 to Oct. 16, 1901, chief clerk to Trainmaster, G.T.R., Battle Creek, Mich.; Oct. 20, 1901 to Mar. 1, 1905, chief clerk to Superintendent, St. Louis, Iron Mountain and Southern Ry., Mer Rouge, La.; Van Buren, Ark., and Aurora, Mo.; Mar. 1905 to Jan. 1906, chief clerk to Superintendent, Chicago, Cincinnati & Louisville Rd.; Jan. to Aug. 1906, chief clerk to General Superintendent, same road; Aug. 1906 to Aug. 1907, Trainmaster, same road, Peru, Ind.; Sept. 1, 1907 to Oct. 15, 1908, chief clerk, Engineering Department, Grand Trunk Pacific Ry.; Oct. 15, 1908 to June 1, 1911, Trainmaster, G.T.P.R., Melville, Sask.; June 1, 1911 to 1921, Superintendent, Winnipeg to Watrous, Sask., Grand Trunk Pacific Ry.

Stockwell Day and Mrs. Day, formerly Miss Madeline Hall, daughter of Grant Hall, Vice President, C.P.R., who went to Honolulu for their wedding trip, and spent the winter there, were expected to leave there on June 23 for Vancouver, and, after spending a short time in Victoria and Banff, to go to Kenora, Ont., for the balance of the summer, returning to Montreal early in September.

W. F. Egg, formerly City Passenger Agent, C.P.R., Montreal, who retired

from the service some years ago, has changed his name and that of his family, to Egerton.

Alexander Fraser, a former travelling auditor and paymaster, G.T.R., died at Weston, Ont., June 11, aged 86. He was born in Inverness-shire, Scotland, and came to Canada as a boy. He entered G.T.R. service in 1854, as a clerk at Longueuil, Que., and was appointed freight agent, Montreal wharf, in 1859. On the opening of the Victoria Bridge, he was appointed agent at Point St. Charles, Que., and in 1864, District Agent, Point Levi and Quebec. He was appointed travelling auditor in 1873, and in 1891 was given the additional duties of paymaster, which positions he held until his retirement on superannuation in May 1908.

Miss Mary Garland Hanna, elder daughter of D. B. Hanna, President, Canadian National Ry., was married at Toronto, June 25, to Irving C. Hall, chief clerk in office of Vice President, Finance and Accounts, C.N.R., Toronto.

Mrs. C. M. Hays, widow of C. M. Hays, formerly President, G.T.R., and her daughter, Mrs. Thornton Davidson, are spending the summer at Cushings Island, Me.

Clarence E. Jefferson, who has been appointed acting General Freight Agent, C.P.R., Montreal, was born at Boston, Mass., Sept. 6, 1889, and entered railway service Sept. 10, 1906, since when he has been, to Nov. 1911, consecutively, office boy, billing clerk, tracing clerk, and tariff and percentage clerk, Canadian Pacific Despatch, Boston, Mass.; Nov. 1911 to March 1913, tariff clerk, Boston and Maine Rd., Maine Central Rd. and New York, New Haven & Hartford Rd., Boston, Mass.; March 1913 to Dec. 1915, percentage clerk, C.P.R., Montreal; Dec. 1915 to June 1921, Assistant General Freight Agent, C.P.R., Montreal.

Alan H. Jones, who has been appointed Assistant Engineer to Engineer of Standards, Canadian National Ry., Toronto, was born at Liverpool, Eng., Feb. 16, 1884, and has been, from April 1902, to Aug. 1904, draftsman, Jewett Car Co., Newark, Ohio; Aug. 1904 to Jan. 1905, draftsman, Brooklyn Rapid Transit Co., New York; Feb. 1905 to Feb. 1908, draftsman on grade separation work, New York Central Rd., New York; Mar. to June, 1908, Assistant Engineer, Third Avenue Ry., New York; June 1908 to Jan. 1911, engineering, surveying and mapping, Delaware & Hudson Co., Scranton, Pa., and Montreal; Jan. 1911 to April 1912, Assistant Engineer, Windsor St. Station, C.P.R., Montreal; April 1912 to Jan. 1915, instrument man on construction, Campbellford, Lake Ontario & Western Ry. (C.P.R.); Jan. to Nov. 1915, draftsman, Canadian Government Ry., Moncton, N.B.; Nov. 1915 to Jan. 1917, Resident Engineer, District 4, Intercolonial Division, Canadian Government Ry., New Glasgow, N.S.; Jan. 1917 to May 20, 1921, Assistant Engineer, Canadian Government Ry., Moncton, N.B.

L. K. Jones, I.S.O., formerly Assistant Deputy Minister of Railways and Canals, Ottawa, has been voted \$500 by the Dominion Parliament, in lieu of leave of absence.

Robert Larmour, who died at Brantford, Ont., June 13, was born at Iroquois,

Ont., Sept. 22, 1840, and entered G.T.R. service in 1854. He was for some years an operator at various points on the system, and during the visit of the Prince of Wales (King Edward VII.) to Canada in the 60's, he accompanied the train during the tour. He was at one time a dispatcher at Montreal, and later became Superintendent, Buffalo and Goderich Division, Brantford. In 1873 he was appointed Superintendent, Western Division, Stratford, Ont.; and in 1886, Superintendent, Southern Division, London, Ont., returning to Stratford in 1897. In 1905 he established a school of telegraphy in Stratford, and conducted it for several years, until failing health necessitated his retirement from active business. He took part against the Fenian raids in 1866, being in charge at Fort Erie, and after some military work at Brantford, Ont., was retired with the rank of major. R. E. Larmour, acting Assistant Freight Traffic Manager, C.P.R., Montreal, is a son.

F. H. McGuigan, formerly Vice President, G.T.R., now of Toronto, is a member of two boards of conciliation appointed by the Minister of Labor recently, to settle disputes between the Toronto & York Radial Ry. and the Toronto Hydro Electric Commission and their employees.

R. E. Larmour, who has been appointed acting Assistant Freight Traffic Manager, C.P.R., Montreal, was born at Brantford, Ont., Sept. 26, 1868, and entered railway service Aug. 1884, at Stratford, Ont., as office boy in the office of his father, who was then Division Superintendent, G.T.R., remaining there until 1886; since when his record has been: 1886 to 1888, clerk in the office of General Manager, Great Eastern & Fast Freight Line, Detroit, Mich.; 1888 to 1890, Accountant to General Superintendent, Chicago and Grand Trunk Rd., Detroit, Mich.; 1890 to 1892, Local Freight Department, G.T.R., Detroit, Mich.; 1892 to 1898, transfer clerk, through freight from Wabash Rd. to G.T.R., at Windsor, Ont. He entered C.P.R. service in 1898, and has been to Nov. 1899, chief clerk Freight Department, Fort William, Ont.; Nov. 1899 to May 1900, acting agent, Fort William; May 1900 to Aug. 1900, chief clerk, Superintendent's Office, Fort William; Aug. 1900 to Feb. 1903, agent, Port Arthur, Ont.; Feb. 1903 to Feb. 1905, Freight Claims Agent, Pacific Division, Vancouver, B.C.; Feb. 1905 to Feb. 1906, Freight Claims Agent, Central and Western Divisions, Winnipeg; Feb. to Aug. 1906, Freight Agent, Winnipeg; Aug. 1906 to June 1908, Freight Agent, Fort William, Ont.; June to July 1908, General Agent, Fort William, Ont.; July 1908 to June 1909, General Freight Agent, Kootenay and Boundary District, Nelson, B.C.; June 1909 to Apr. 1911, General Freight Agent, Central Division, Winnipeg; Apr. to June 1911, Division Freight Agent, Manitoba Division, Winnipeg; June 1911 to July 1914, Division Freight Agent, British Columbia Division, Vancouver, B.C.; July 1914 to Sept. 30, 1915, Assistant General Freight Agent, Vancouver, B.C.; Sept. 30, 1915, to March 15, 1919, General Agent, Freight Department, New York, N.Y.; March 15, 1919, to June 6, 1921, General Freight Agent, Montreal.

Col. the Hon. Angus Macdonell, of Stewart & Macdonell, railway and harbor contractors, Vancouver, B.C., has returned to London, Eng., after spending

some time at the Gold Coast, where his firm has a large contract for harbor and railway construction.

Mrs. W. R. MacInnes, wife of the Vice President in charge of traffic, C.P.R., returned to Montreal, June 10, from Turpe.

Mrs. C. E. McPherson, wife of the Assistant Passenger Traffic Manager, Western Division, C.P.R., underwent an operation in Winnipeg General Hospital, June 6.

Stuart MacTier, son of A. D. MacTier, Vice President, Eastern Lines, C.P.R., was married at Winnipeg, June 28, to Miss Dorothy Martin.

Mrs. Marpole, widow of Richard Marpole, who was Executive Agent, C.P.R., at Vancouver, has rented her farm at Crofton, B.C., and is living with her parents, Colonel and Mrs. Holmes, at Victoria, B.C.

Col. John T. McLaren, who has been appointed a Commissioner, Timiskaming & Northern Ontario Ry., was born at Goderich, Ont., in 1865, and went to Hamilton, Ont., in 1879, where he entered the grocery trade and became manager of the Hamilton Coffee & Spice Co., now MacLarens Ltd. He was an alderman of the city in 1907 and 1908, and re-elected in 1910. He takes an active interest in military affairs, and was one of the organizers of the 91st Regiment (Canadian Highlanders), and commanded the 19th Overseas Battalion during the earlier portion of the war. He returned from Belgium in 1916 to take charge of a training brigade in Canada. During the war he was mentioned in dispatches for distinguished services. He subsequently became Lieut.-Col. 91st Regiment, and Assistant Adjutant General in charge of Ontario Military District No. 2, Toronto, and is officer commanding the 4th Infantry Brigade, Hamilton, Ont.

Lieut.-Col. L. T. Martin, D.S.O., who has been appointed a Commissioner, Timiskaming & Northern Ontario Ry., was born at Arnprior, Ont., in 1884. He was engaged as an engineer on the T. & N. O. Ry. from 1903 to 1905, and in 1905 was Resident Engineer at Matheson, Ont. From 1906 to 1912 he was on National Transcontinental Ry. construction in Quebec, and between 1912 and 1914 he completed a contract on the N.T.R. east of Cochrane, Ont., and operated freight and passenger service for that section during construction. In 1914 he was appointed Manager, Great Lakes Dredging & Contracting Co., and carried out contracts at Port Arthur, Fort William, Ojibway and on the Welland Canal. He enlisted for overseas service in 1915 and raised and commanded the 7th Battalion Canadian Railway Troops. He was mentioned in dispatches for distinguished service in Jan. 1918, when he was awarded the Distinguished Service Order.

H. Melanson, Passenger Traffic Manager, Canadian National Ry.s., presided at a dinner to the Quebec Passenger Club at Toronto recently.

Peter Nicholson, who died at St. Catharines, Ont., at the end of May, aged 87, was engaged, during the American civil war, in the construction of railways in Ohio, Pennsylvania and New York, and came to Canada in 1875, carrying out several contracts on the Welland canal.

Lord Mount Stephen, who was the first President of the C.P.R., and who has lived in England for many years, was 92 years of age on June 6.

Stephen Reed Payne, Manager, Ottawa Division, New York Central Rd., Ottawa, Ont., died there, May 31, after a short illness. He was born near Youngstown, Ohio, Dec. 21, 1865, and entered railway service Nov. 2, 1882, since when he had been, to Aug. 25, 1889, telegraph operator, Lake Shore & Michigan Southern Ry.; Aug. 25, 1889, to Jan. 15, 1898, dispatcher, same road; Jan. 15, 1898, to Apr. 1, 1900, Trainmaster, same road; May 13, 1900, to Jan. 1903, Trainmaster, and Assistant Division Superintendent, Norfolk & Western Ry., Bluefield, West Virginia; Jan. 1903, to 1907, Trainmaster, New York Central Lines, Utica, N.Y.; 1907 to 1908, Assistant Superintendent, Western Division, New York Central Lines, Syracuse, N.Y.; 1908 to Oct. 1913, Superintendent, Buffalo Division, same road, and General Superintendent, Western Division, same road, Syracuse, N.Y.; Oct. 1913, to June, 1914, Assistant to General Manager, same road, Rochester, N.Y.; and from June, 1914, Manager, Ottawa Division, New York Central Rd., Ottawa. The funeral took place at Youngstown, Ohio, June 3.

Aubrey G. Robb, for over 20 years Superintendent and Chief Engineer, Robb Engineering Works, Amherst, N.S., died from blood poisoning June 20. He was an ex-mayor of Amherst, and was for several years Secretary of the Canadian Manufacturers Association's Maritime branch.

John Schofield, who has been appointed Architect, Eastern Lines, Canadian National Ry.s., Toronto, was born at Monaghan, Ireland, March 15, 1883. He was a pupil of J. H. M. Wilson, architect and engineer, Monaghan, from 1896 to 1900, and from 1900 to 1904 served as a designer with Kennah & Sons, engineers and builders, Dublin, Ireland. He entered railway service March 30, 1904, since when he has been, to 1909, designer, C.P.R., Winnipeg; 1907 to 1909, designer, Canadian Northern Ry., Winnipeg; 1909 to 1911, assistant architect, same company, Winnipeg; 1911 to 1920, architect, Western Lines, same company, Winnipeg; 1920 to June 1921, Architect, Western Lines, Canadian National Ry.s., and Grand Trunk Pacific Ry., Winnipeg. He is a member of the council of the Manitoba Association of Architects, a member of the committee on shops, and a member of locomotive terminals committee, American Railway Engineering Association. On his departure from Winnipeg he was presented with a travelling bag, arm chair and floor lamp by his staff and a number of Western Lines officials, and also with an engraved gold medal by the Presbyterian Athletic and Literary Associations, of both of which he was President.

Lady Shaughnessy, and several of her family, have gone to St. Andrews, N.B., for the summer, where Lord Shaughnessy will join them a little later.

William John Sheppard, whose appointment as Car Foreman, C.P.R., Nelson, B.C., was announced in our last issue, was born at Kennah, Scotland, Sept. 28, 1882, and entered C.P.R. service in Sept. 1906, since when he has been, to 1907, car repairer, Vancouver, B.C.; 1907 to 1911, car inspector, Kamloops, B.C.; 1911 to May 1921, Car Foreman, Revelstoke, B.C.

Miss G. C. Shrimpton, daughter of the late F. E. Shrimpton, formerly General Auditor, C.P.R., was married in Montreal, on June 24, to K. A. Wallick.

A. F. Stewart, Chief Engineer, East-

ern Lines, Canadian Government Rys., Moncton, N.B., was taken ill on the train at Campbellton, N.B., May 30, and was conveyed to the Royal Victoria Hospital, Montreal, where he was operated on for appendicitis.

Warren S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers, has had his salary increased from \$14,500 to \$25,000 a year.

H. Dean Suckling, son of H. E. Suckling, Treasurer, C.P.R., Montreal, was

married at Port Hope, Ont., June 18, to Miss R. M. Bolton.

Lady and Miss Van Horne have given \$1,000 to J. F. Dreyer, who has been the family coachman for 30 years.

The House of Commons Committee's Failure to Grapple with the Canadian National Railways Questions.

The special committee on Canadian National Rys. and Shipping appointed at the House of Commons recent session, the proceedings of which have been summarized in Canadian Railway and Marine World, was presented with an opportunity of rendering a real service to the country, which is paying for such service. It was clothed with authority to find a solution for an important problem, one which must be solved absolutely before Canada's venture in railway nationalization can be thoroughly successful. It is not the problem of management to which we have reference; although that is a large and difficult one, as a solution of it is being afforded by the men entrusted with the task. The problem to which we refer goes deeper than that; it is one of relationship as between management, on the one hand, and, on the other hand, the Canadian people, Parliament and Government. The problem of management is an economic one, purely; the one which this committee was to solve, and which it has not solved, or partially solved, notwithstanding the 499 pages of printed evidence taken in its proceedings, is rather of a political nature. Until a definite, clean-cut solution is provided for this political problem, the railway management will always be liable to embarrassment in its work, and there will always be the temptation, on the part of those in possession of political power, to inject political influence into the purely economic matter of railway administration. However, as in all spheres of human endeavor, results are governed largely by the expectations concerning them, and disappointment is tempered through being prepared for it; those who have devoted much thought to our railway problems will not be unduly cast down in spirit by the result, or lack of result, of this committee's proceedings. Born of the bitter, partisan debate and argument of politicians; representative of compromise between two ideas of government control of railways which are as unlike as black and white, and having on its membership few, if any, informed students of railway regulation and economics, no surprise whatever should be occasioned by the nature of its activities, the trend of its examination and enquiry, and the net result of the whole procedure.

The circumstances surrounding the appointment of the committee were fully dealt with in Canadian Railway and Marine World for May, pp. 245, wherein it was shown that the controlling thought of the Opposition was to the effect that members of parliament are entitled to information concerning any detail of Canadian National Rys. management which they may care to ask about. During the last session of parliament, questions were asked concerning the dismissal of conductors and brakemen; the insurance on an hotel; the cancellation of a local train; the supposed damaging of locomotives by frost, and so on ad infinitum. One member wanted to know "how much per bushel it costs the Gov-

ernment railways for the transportation of wheat from Winnipeg to Quebec." The same man demanded information about "the capacity of a locomotive on the National Transcontinental Ry. between Winnipeg and Quebec," and another member desired the names of all parties tendering for the supply of ice to the Canadian National Rys. at Mulgrave, N.S., together with the amounts of the tenders. These questions were in line with others asked at every session of Parliament since the Canadian Northern lines were taken over by the Government and in connection with which decided action should have been taken by the Government at the time. In our opinion the Minister of Railways should, in the first instance, have refused to answer such questions and should have taken the ground that the Canadian people, as the owners of the Canadian National Rys., are entitled to just as much information as the Canadian Pacific or any other privately owned railway gives to its shareholders, and no more. Instead of doing so the Minister acceded, answered many questions that never should have been answered, parried with others, and finally referred to a committee a question which he and the other members of the Government should have had the courage to decide and to stand or fall by in the House of Commons.

The Opposition leader, Hon. W. L. Mackenzie King, stated repeatedly that Parliament is entitled to complete information concerning the expenditure of every cent of the public funds, and on that statement he based his demands for information concerning all phases of Canadian National Rys. operation. An utter lack of confidence in the way in which the Government is conducting the Canadian National enterprise was, in all the debates, displayed by the Opposition leader and his followers. In the debate of March 22, Prime Minister Meighen, set forth the principles upon which the Government should proceed, stating the reasons why the railways cannot be operated as a direct Government department undertaking. We have no hesitation in supporting his views, exemplified by his statement to the effect that it is out of all reason that the Canadian National Rys. management should be compelled to give an account of every move made in the day-to-day operation of the property. That any member of Parliament should be allowed to enquire into any detail of management or operation, and to demand a full explanation concerning it, is wholly undesirable. Success would be impossible if the management were forced to divulge information concerning purchases, disciplining of employees, local earnings, prices for materials and services, etc. Such information cannot be made public without disastrous results. The only information a member of Parliament should be entitled to, in connection with the actual operation and administration of the property, should, as before stated, be that afforded a shareholder in a private-

ly owned railway corporation.

It may be said that if information is not freely given, it will be suspected by the public that the National railways constitute nothing more nor less than a great instrument of political patronage. The Opposition members certainly endeavored to create that suspicion, and in the debates of April 5 and 8, prior to the formation of the committee, they argued strenuously that the committee should be given power to enquire into any detail whatever of Canadian National Rys. operation. Our contention is that if this committee had satisfactorily answered the five questions submitted to it, it would, among other things, have gone a long way toward removing any suspicion and lack of confidence, and it would have gone far toward providing a solution for the great underlying problem of the Canadian National Rys., by submitting recommendations for the establishment of a permanent and well defined relationship as between railway management and the people, as represented by Parliament and the Government. The committee had the opportunity of initiating the establishment of such a relationship that the administration of the Canadian National Rys. would be so far removed from politics that political aspiration and influence could never affect it; and such that there would be no occasion for questions dealing with details of operation to be asked in Parliament. But the committee has accomplished none of these things, so far as the shaping of policy in connection with Governmental control of railways is concerned, the result of its activities is most disappointing.

This is a matter for regret. It would seem that until these questions are satisfactorily answered, and a scheme of control, which cannot allow any variation on the part of those invested with political power, is put into effect, the Canadian National venture cannot ever be wholly dissociated from politics. That a management which is bending every effort to make the venture successful should be embarrassed by the necessity of supplying information to any politician who wants it is nothing short of outrageous. The sooner that all concerned understand that political interference in economic matters inevitably breeds disaster, the better. When the Parliamentary representatives of the people of this country grasp the idea that, while it is their function to lay down broad policy, it is the function of the management to operate the railway, a long step forward will have been taken; when they thoroughly appreciate the fact that the management cannot function efficiently unless free from all political and sectional interference, a healthy state of affairs will be on the point of being brought about.

Shortly summarizing the committee's activities, it may be said that about the only real information obtained by it was that supplied by Canadian National Rys. officials, who, in addition to setting forth

details of organization and of finance, clearly informed the members of the committee as to what information concerning the railways should not be given to parliament, and thus to the public and to competitors. Beyond this, the procedure, largely irrelevant, as for instance the evidence of three shipping witnesses from Halifax, who seized the opportunity to attack the whole Canadian Government Merchant Marine enterprise, enabled certain members to endeavor to increase their standing with their local constituents, gave others the opportunity of criticizing the Canadian National management concerning matters of which the critics evidently knew nothing, and make a lot of political capital. Constructive thought, looking toward a solution of the underlying problem, was conspicuous by its absence. Beyond the possibility of committee members having been furnished with just enough knowledge of the principles of railway operation to make them interfering and dangerous, the country can console itself with the thought that no great harm has been done.

However, the committee's proceedings have had one result that is worthy of note. They have acquainted parliamentarians with the fact that all railway executives, both in Canada and the U.S., are, and have been for years, confronted with a railway situation demanding the maximum of brains, courage and application, a situation which, in the case of the Canadian National Rys., is greatly intensified by the problems of organization, and by adverse conditions in every direction. It has been demonstrated to the parliamentarians that these executives are bending every effort to make the Canadian National Ry. venture a successful one, and that they are imbued with a spirit of optimism and faith in their ability to do so. It is to be hoped that they now have an adequate appreciation of what will happen if serious attempts are made to unduly interfere with management, and inject politics into the operation of these railways.

Locomotive Boiler Explosions.—The Board of Railway Commissioners has issued the following circular:—Some time ago there was an explosion in a locomotive boiler, and, upon the arrival of the Board's Inspector, it was found that the water class mountings, all gauge cock, and left top check, had been taken off the boiler and forwarded to the company's offices. When such accidents occur in future, the Board desires it to be distinctly understood that the apprentices in connection with the water supply of the locomotive boiler must not be removed from the boiler, and in no way interfered with, until after the Board's Inspector has completed his inspection. In this connection reference is made to the Board's general order No. 78, clause 59, requiring the railway company concerned to send to the Board's Chief Operating Officer, at Ottawa, a telegraphic report of such occurrences, and stating where the locomotive may be inspected.

The Canadian Ticket Agents Association's annual meeting and outing, which was to open at Ottawa on Sept. 20, has been postponed to Oct. 11 in consequence of the race meeting being fixed for the week chosen originally.

The Imperial Government Railways of Japan operated in 1919 9,503 miles of track, the net earnings being \$23,632,908.

Divisional Points on Canadian National Railways.

T. Vien, Lotbiniere, Que., asked in the House of Commons recently:—How many divisional points are there on the government railways, and what are their names? In each of the said divisional points during 1919 and 1920, what were the gross receipts, operating costs, and surplus or deficit?

The Minister of Railways replied:—“There are 110 divisional points on the Canadian National and Grand Trunk Pacific Railways, as follows:—Yarmouth, Bridgewater, Middleton, Halifax, Truro, Stellarton, Mulgrave, Point Tupper, Sydney, Pictou, Oxford Jet, Cape Tormentine, Charlottetown, Souris, Tignish, Point du Chene, Moncton, St. John, Fredericton, Centreville, Newcastle, Loggieville, Bathurst, Campbellton, Mont Joli, Riviere du Loup, Levis, Ste. Rosalie Jet, Chicoutimi, Rivier-a-Pierre, Quebec (Limoilou), Joliette, Montreal, Bridge, Chaudiere Jet, Monk, Edmundston, Napadogan, Fitzpatrick, Parent, Doucet, O'Brien, Cochrane, Hearst, Grant, Armstrong, Sioux Lookout, Redditt, Winnipeg (Transcona), Ottawa, Brent, Trenton, Bancroft, Brockville, Westport, Pictou, Toronto, Parry Sound, Capreol, Foleyet, Hornepayne, Jellicoe, Port Arthur, Fort William, Atikokan, Rainy River, Fort Frances, Winnipeg (St. Rouge), Dauphin, Kamsack, Humboldt, North Battleford, Vermilion, Edmonton, Edson, Jasper, Lucerne, Blue River, Kamloops Jet, Boston Bar, Port Mann, Vancouver, Victoria, Swan River, Hudson Bay Jet, Pas, Prince Albert, Brandon, Kipling, Regina, Saskatoon, Kindersley, Hanna, Calgary, Neepawa, Rivers, Melville, Nanton, Biggar, Wainwright, Norange, Riverhurst, Radville, Big Valley, McBride, Prince George, Endako, Smithers, Pacific, Prince Rupert.

“Railway accounting does not provide for earnings being shown for each divisional point.”

Railway Finance, Meetings, Etc.

Canadian Niagara Bridge Co.—The following directors were elected at the annual meeting held at Hamilton, Ont., May 31: A. H. Smith, President; A. H. Harris, Vice President; I. A. Place, Vice President, New York Central Rd.; Lord Shaughnessy, Chairman; E. W. Beatty, President; Grant Hall, Vice President, C.N.R.; J. N. A. Bealey, President, Toronto, Hamilton & Buffalo Ry.

Minneapolis, St. Paul & Sault Ste. Marie Ry. The report for 1920 shows a net income after taxes and fixed charges, of \$3,412,570, equal to \$9.02 a share on the \$37,810,200 combined preferred and common stock, compared with a surplus of \$5,644,614, or \$14.93 a share for 1919.

Toronto, Hamilton & Buffalo Ry.—The following directors were elected at the annual meeting at Hamilton, May 31: A. H. Smith, A. H. Harris, W. L. Scott, Lord Shaughnessy, E. W. Beatty, Grant Hall, E. D. Branner, W. P. Torrance, W. K. Vanderbilt, D. W. Saunders and J. N. Bealey.

The U.S. Senate has confirmed the appointments of E. I. Lewis, Chairman of the Public Service Commission of Indiana, and J. B. Campbell, attorney, Spokane, Wash., as members of the Interstate Commerce Commission.

Co-ordination of Canadian National and Grand Trunk Railway Service.

The G.T.R. is operating its trains 9, 10, 29 and 30 over the C.N.R., from Colbright Jet, 19.19 miles east of Coburg, to Nanawake, 45.3 miles.

The C.N.R. operates its trains 5 and 6 between Toronto and Nanawake over the G.T.R. 135.1 miles. C.N.R. train 7, from Ottawa for Toronto, and train 8, from Toronto for Ottawa, run over the C.N.R. between Ottawa to Colbright Jet, and over the G.T.R. double track between Colbright Jet and Toronto. C.N.R. trains 69 and 70, Tweed to Kingston, run over the G.T.R. from Nanawake to Kingston, 25 miles. C.N.R. fast freight trains 207 and 208 run over the G.T.R. from Belleville to Nanawake, 21.74 miles, thence over C.N.R. to Ottawa. The C.N.R. Continental Limited, Montreal to Vancouver, trains 1 and 2 run over the G.T.R. between Montreal and Ottawa, 116 miles.

Between Montreal and Toronto all passenger stations and freight houses are used in common. Passenger tickets are good on either railway and all freight is moved by the shortest mileage in the co-ordinated interests.

Further Aid Voted for Railways.

The Railways Department's further supplementary estimates for the year ended March 31, 1921, contained the following items:—

To increase amount of loan authorized by vote 478, Appropriation Act no. 4, 1920. Additional amount required, \$1,520,000. (Vote 478 was for a loan not exceeding \$25,000,000 to be made to the Grand Trunk Ry. Co. of Canada to meet deficits.)

Grand Trunk Ry. to provide for payment of expenses in connection with the acquisition of the G.T. and associated railway system, additional amount required, \$200,000. Quebec bridge, to pay balances of accounts, \$246,555.50.

Reid Newfoundland Ry.'s Difficulties.

St. John's, Nfld., press dispatch, June 26:—Unless negotiations between the Newfoundland Government and the Reid Newfoundland Ry. officials result in an agreement, operation of the system will cease at midnight on June 30. The system, comprising all the railway lines in the colony, has a trackage of nearly one thousand miles. During the war the railway was taken over by the Government. Recently it was returned to its owners, who assert that expenses so greatly exceeded income that it will be impossible to continue operation without Government aid. The Government had proposed to the railway officials the appointment of a commission to study the whole problem, and is negotiating with them in the hope of bringing about temporary operation by the company until the commission is able to make it report. Under the plan the commission would be headed by Sir George Bury, who arrived here on Friday last.

Mail Service Estimates.—The further supplementary estimates for the year ended March 31, 1921, submitted at the Dominion Parliament's recent session, contain the following item:—Mail service by railway, further amount required, \$365,000. The further supplementary estimates for the year ending March 31, 1922, contain the following item:—Mail service by railway, further amount required, \$4,380,000. Particulars of the items in the main estimates were given in Canadian Railway and Marine World for April.

The Railway Wages Question in Canada and the United States.

The U.S. Railroad Labor Board's decision, given on June 1, is published practically in full in an earlier part of this issue. This decision dealt with applications for wage reductions made by U.S. railways prior to April 18, and in so far as the majority of the railways are concerned, applied only to unskilled labor and certain classes of shomen and clerical labor. On a few roads, however, the decision affected all classes of employees. Applications to the Labor Board for wage reductions for all classes of employees were made by practically all U.S. railways after April 18, the employees being notified previously in accordance with the Transportation Act's terms. The hearings on these applications commenced on June 6.

At the hearings, railway companies' representatives attacked the Board's decision given on June 1, stating that the reduction in wages ordered was not as great as it should have been. J. W. Higgins, Executive Secretary of the Association of Western Railways, representing the carriers of the western portion of the U.S., stated that the railways he spoke for demanded the removal of all wage increases granted by decision 2 of July, 1920. He argued that the reasons for the increases allowed at that time had all disappeared, as shown by the decreases in the cost of living and the lowering of wages in other industries. J. O'Neill, General Manager, Chicago, St. Paul, Minneapolis & Omaha; F. H. Alfred, President, Pere Marquette, and J. L. Coleman, General Attorney, Atchison, Topeka & Santa Fe, demanded the restoration of the rates of pay in effect before the Board's award of July, 1920.

J. G. Walber, representing the eastern railways, argued against the standardization of employees' wages and the payment of time and a half for overtime in freight and yard service. He pointed out that the Transportation Act recognizes differences in living costs and commercial conditions in different parts of the country, by the establishment of different rate regions, and claimed that the largest areas in which wages should be standardized should be those with these rate divisions. He filed exhibits to show that the cost of living, in May, 1921, was 41% lower than when wage award no. 2 was made effective, and stated that the removal of all the increases given by that award would still leave the employees at an advantage in wage levels.

The employees were represented at the hearings by B. M. Jewell, President, Railway Employees' Department, American Federation of Labor; L. E. Shepard, representing the Order of Railway Conductors; W. G. Lee, representing the Brotherhood of Railroad Trainmen; H. P. Daugherty, representing the Brotherhood of Locomotive Engineers, and W. S. Carter, representing the Brotherhood of Locomotive Firemen and Engine-men. All stated they were principally resting their cases upon the testimony presented on behalf of the employees at the preliminary hearings, in addition to which Mr. Lee argued that it would be difficult for the Board to alter its views within a few days of the decision of June 1, without admitting error in that decision. Mr. Carter filed additional testimony concerning the irregularity in employ-

ment experienced by locomotive men and firemen, the efficiency consistently shown by these men in their work, and the hazards of their employment.

The hearings terminated on June 9. The Board, before going into executive session to consider the testimony presented, announced that its decision would be given before July 1, so that the reductions decided on would become effective on that date. The Board gave no indication, however, as to whether it would give a new decision involving reductions differing from those contained in its decision of June 1, published elsewhere in this issue, or whether it would take action on the later applications of the railways concerned, by simply making the decision of June 1 applicable to all classes of employees on all U.S. railways.

An interpretation of the labor clauses of the Transportation Act (see Canadian Railway and Marine World for May, pg. 257) worthy of note concerned the Pullman Co.'s attempt to reduce its employees' wages without giving them legal notice of its intention to do so. After argument before the Labor Board concerning this, by B. M. Jewell, President, Railway Employees' Department, American Federation of Labor, and G. S. Fernald, counsel for the Pullman Co., the Board decided that the company must notify its employees of its intention, and meet with the employees' representatives in an attempt to arrange a new schedule, and that the case could not be legally before the Board until this was done.

Julius Kruttschnitt, Chairman of the Board, Southern Pacific Co., in testifying recently before the senate committee investigating railway conditions in the U.S., presented official statistics of the total railway wages on U.S. railways as follows:—

	Total wages.	Increases.
1916	\$1,468,576,394	
1917	1,739,182,142	\$270,906,748
1918	2,613,813,351	\$874,331,209
1919	2,845,128,432	229,315,081
1920	3,698,216,351	\$855,087,919
Total increases		\$2,229,639,957

The reductions contained in the Labor Board's decision of June 1 would, it is estimated, make a reduction about \$400,000,000 a year in the pay rolls.

As stated in Canadian Railway and Marine World for June, the various Canadian employees' organizations were notified by the Railway Association of Canada and the respective railways of the railways' desire to effect changes in the existing wage agreements. On June 17, Grant Hall, Vice President, C.P.R., began conferences in Montreal with representatives of that company's employees belonging to the different international labor organizations, and discussed labor matters generally with them. W.D. Robb, Vice President, G.T.R., met representatives of the G.T.R. employees for the same purpose, and similar matters were taken up with Canadian National Rys. employees by S. J. Hungerford, Vice President, Operation and Maintenance. The labor delegates were acquainted with the financial condition of the railways and shown the necessity for wage reductions similar to that being brought about on the U.S. railways. No definite changes in working conditions, or in

rates of pay, were agreed on, however, the labor representatives stating that they would not be able to come to any decision concerning their future action until after a meeting of chairmen of labor organizations on July 1, when representatives of all the international organizations will meet in Chicago to take action concerning the wage reductions ordered by the U.S. Labor Board. It is therefore evident that the situation in Canada is inextricably connected with that in the U.S., and that the future course of events in both countries will depend largely on the final decision of the U.S. Railroad Labor Board following the hearings terminated June 9, and the attitude of the labor leaders and the members of their organizations in connection with it.

Since the foregoing was written a Chicago press dispatch has been received as follows:—"Immediate following the announcement of the U.S. Railroad Labor Board's wage cut on June 1, roads from every section of the country sent in their applications for authority to make similar cuts. Many of the roads which asked reductions for only a part of their employees, came back with applications to cover all employees. The 12% reduction was generally unsatisfactory to carriers, who wanted the entire 1920 wage award wiped out, but the board was determined not to change its award as announced June 1.

"Wage reduction orders, effective July 1, were today extended by the Board to practically every large railway in the country. 210 systems are affected by today's order, and the reductions now ordered represent a saving of approximately \$400,000,000 annually for the roads. No change from the average 12% reduction granted 104 carriers on June 1, was made by today's decision. About one-half of the roads included in today's order were parties to the original decision, the duplication resulting from the fact that many roads did not include all classes of employees in their first petition. All classes of employees have now been named. Rates of reduction for several minor classes of employees were added to the order today. Chefs and other restaurant workers, dining car employees, laundry workers and porters were included in added sections of the decision. Reductions of 60% of the increases granted such employees since Feb. 29, 1920, just before the roads were returned to private control, were directed for these employees."

British Empire Steel Corporation's Railways. The statement submitted to the stock exchanges recently in connection with the list of this corporation's stock, contained the following: "A most important element in the successful prosecution of the business of mining and distributing coal is transportation. From the earliest days this has been recognized. One of the very first railways in Canada was operated in connection with the Pictou coal mines. The Cumberland Ry. and Coal Co.'s line and the Sydney & Louisbourg Ry. with over 170 miles of track, have been developed to a high state of efficiency, and with their terminals at Parrsborough, Sydney and Louisbourg represents a very large amount of capital."

Traffic Orders by Board of Railway Commissioners.

Wharfage and Port Warden Fees On Cheese at Port of Montreal.

31,043. May 28.—The application of Montreal Board of Trade for disallowance of proposed cancellation of arrangements for absorption of wharfage and port warden fees on cheese shipped locally to Montreal and afterward exported, unless export rate has been paid: Upon reading what has been filed in support of the application, and upon consideration of orders 7343 and 8337, the Board orders that the portion of item 10-A in Supplement 4 to C.P.R. Tariff C.R.C. no. E-3839, which reads as follows: "This arrangement will only apply when charges have been collected under the export rate"; also that portion of item 84-A in G.T.R. Supplement 18 to Tariff C.R.C. no. E-4219, which reads as follows: "This arrangement will only apply when charges have been collected under export rates," be suspended, pending hearing on a date to be fixed by the Board.

Demurrage Charges During Influenza Epidemic.

31,047. May 20.—Re complaint of Canada Starch Company, of Cardinal, Ont., regarding claim against G.T.R. for demurrage charges assessed during the influenza epidemic in 1918: Upon reading the submissions filed in support of the complaint, the Board orders that the same be dismissed.

Classification of Sausage Casings.

31,057. May 30.—Re application of Oppenheimer Casing Co. of Canada, Toronto, regarding the classification of sausage casings shipped by express: Upon hearing the application at Toronto, May 27, the Express Traffic Association of Canada and the Dominion Express Co. being represented, no one appearing for the applicant company, the Board orders that the application be refused.

Regulations Governing Unrouted Shipments.

31,065. June 7.—Re application of N. W. Hawkes, Chairman, New England Freight Association, Boston, Mass., on behalf of various railway companies, for permission to withdraw certain schedules naming regulations governing unrouted shipments, upon one day notice, after filing thereof with the Board: Upon it appearing that the Interstate Commerce Commission has, by its special permission 53,196, dated May 31, ordered the withdrawal of the said schedules; and it being advisable that there should be uniform action on the part of this Board, it is ordered that the following schedules may be cancelled upon one day notice to the Board, viz.:

Barnes & Arostook Rd.	C.R.C. 392
Boston & Albany Rd.	C.R.C. 624
Boston & Maine Rd.	C.R.C. 2974
Central Vermont Ry.	C.R.C. 1583
Grand Trunk Ry.	C.R.C. E-4479
Maine Central Rd.	C.R.C. C-2924
New York, New Haven & Hartford Rd.	C.R.C. F-232
Rutland Rd.	C.R.C. 1106

Express Classification of Ice Cream.

31,100. June 6.—Re application of National Dairy Council of Canada, on behalf of Canadian Association of Ice Cream Manufacturers, under order in council 1509, July 5, 1920, for a reconsideration of the Board's order 28,883, Oct. 9, 1919, refusing the Association's application for a reduction in the ex-

press classification of ice cream from the first to the second class: Upon hearing the application at Ottawa, Nov. 3, 1920, in the presence of counsel for the National Dairy Council of Canada and the Express Traffic Association of Canada, and what was alleged, the Board orders that the application be refused.

The judgment was given by Chief Commissioner Carvell, as follows: This case was heard at Ottawa on Oct. 27, 1920, and, in substance, is an application of manufacturers of ice cream that that commodity should be placed in the second class for express purposes, and not in the first, the contention being that, as ice cream is a food, it should be placed on the same footing for express charges as most other food products. Practically the sole object of the applicant at hearing seemed to be to establish the fact that ice cream is a food. I felt then, and now feel, that it was unnecessary to have gone to all the trouble, because every person knowing the component parts of ice cream must admit that it possesses food value of a very high order. On the other hand, I cannot get away from the idea that ice cream is essentially a luxury. It was argued very strenuously, and no doubt is true, that in hospitals it is used to some extent as a food, that is, in many cases, with delicate children, they may be induced to partake of milk and cream in the form of ice cream which they would refuse in their ordinary condition, but these instances must be very rare, and, in my opinion, are not such as to place it in the category of an ordinary food product. From a somewhat intimate knowledge of the manner in which this product is consumed in the country, I consider it a luxury just the same as soda water or candy. Ice cream is shipped in bulk, usually in 5-gall. cans. It goes to hotels, restaurants, ice cream parlors, etc., and is served out in very small quantities, at a tremendously increased rate over the original cost of the article, and a reduction in the express rate, in my opinion, would in no case inure to the benefit of the ultimate consumer, but would simply be an added profit to the manufacturer and the middleman. For these reasons, I think the application should be dismissed.

Assistant Chief Commissioner McLean and Commissioner Rutherford concurred.

Express Cartage of Ice Cream and Returned Empties.

31,114. June 9.—Re application of National Dairy Council of Canada for an order directing that a reduction be made of 10c. on ice cream and 5c. on returned empties shipped by express, respectively, from and to points where a wagon service is provided by express companies, whenever the service is not furnished as required, thus necessitating cartage by the shipper and receiver respectively: Upon hearing the application at Ottawa, Nov. 3, 1920, in the presence of counsel for the National Dairy Council of Canada and the Express Traffic Association of Canada, and what was alleged, the Board orders that the application be refused.

Lake Erie & Northern Ry. Freight and Passenger Tariffs.

31,115. June 10.—Re application of Lake Erie & Northern Ry., under secs.

330 and 334 of the Railway Act, 1919, for approval of Supplement 1 to Standard Freight Tariff C.R.C. 165 and Supplement 1 to its Standard Passenger Tariff C.R.C. 23: Upon reading the submissions filed in support of the application and on behalf of the parties interested, the Board orders as follows:—That the company be authorized to publish and file a standard freight tariff showing an increase in freight rates on the basis of those authorized under the provisions of general order 308, Sept. 9, 1920; that the application for increased passenger fares be refused.

31,117. June 16.—Re application of Lake Erie & Northern Ry., under sec. 330 of the Railway Act, 1919, for approval of its Supplement 1 to Standard Mileage Freight Tariff C.R.C. 165: Upon it appearing that the said tariff is on the basis of the rates authorized under order 31,115, June 10; and upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said supplement be approved.

Grand River Ry. Freight and Passenger Tariffs.

31,116. June 10.—Re application of Grand River Ry., under secs. 330 and 334 of the Railway Act, 1919, for approval of Supplement 1 to Standard Freight Tariff C.R.C. 57 and Supplement 1 to Standard Passenger Tariff C.R.C. 14: Upon reading what is filed in support of the application and on behalf of the parties interested, the Board orders as follows: That the company be authorized to publish and file a standard freight tariff showing an increase in freight rates on the same basis as those authorized under general order 308, Sept. 9, 1920; that the application for increased passenger fares be refused.

31,118. June 16.—Re application of Grand River Ry., under sec. 330 of the Railway Act, 1919, for approval of its Standard Mileage Freight Tariff, C.R.C. 57: Upon it appearing that the tariff is on the basis of the rates authorized under order 31,116, June 10, and upon the report and recommendation of the Board's Chief Traffic Officer, the Board orders that the said tariff be approved.

Coal Rates From Alberta.

31,124. June 13.—Re complaint of Canada West Coal Company, of Taber, Alta., and the International Coal & Coke Co., of Coleman, Alta., against the rates on coal from Lethbridge and Crownsnest districts to Winnipeg and intermediate points, as compared with rates prevailing from Drumheller and Rocky Mountain districts to Winnipeg and intermediate points: Upon hearing the complaint at Winnipeg, April 27, 1921, the presence of counsel for the applicant companies, and what was alleged; and upon reading the written submissions filed on behalf of the Canadian National and the Canadian Pacific Rys., the Board orders that the complaint be dismissed.

Chatham, Wallaceburg & Lake Erie Passenger Tariff.

31,128. June 14.—Re application of Chatham, Wallaceburg & Lake Erie Ry., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff C.R.C. 45: Upon reading what is filed in support of the application, the Board orders that the said tariff be approved.

31,138. June 18.—Re application of the Delaware, Lackawanna & Western Rd. for permission to file, on one day notice, effective July 1, a supplement to its tariff of exceptions to official classification, C.R.C. 1645. Upon it appearing that a similar application has been made to the Interstate Commerce Commission, and uniformity of action being advisable, the Board orders that the company be permitted to publish in Supplement 2 to its Tariff of Exceptions to effect July 1, upon one day notice, official Classification C.R.C. 1645, correction in items 5-A and 5-B, as now appearing in Supplement 1 to the said tariff C.R.C. 1645, provided that similar authority be granted by the Interstate Commerce Commission.

Reduction of Standard Passenger Fares.

Chief Commissioner Carvell's judgment of Sept. 6, 1920, as published in Canadian Railway and Marine World for Oct. 1920, pg. 531, contained the following:—"Until Dec. 31, 1920, I would give a general increase of 40% in eastern freight rates, and 35% in western freight rates, with 20% both east and west in passenger fares, which, however, should not exceed 4c. a mile, 50% in sleeping and parlor car rates and 20% on excess baggage. Commencing Jan. 1, 1921, and until there is another revision of rates, I would reduce these percentages on freight to 35% in eastern territory and to 30% in western territory, with 10% reduction in passenger fares up to July 1, 1921, when passenger rates should come back to the basis in effect prior to the coming into force of this judgment; but continuing the full increases in parlor and sleeping car rates and excess baggage. It will, of course, be understood that the percentages of increases in the rates east and west of Port Arthur herein granted will, in the case of through rates between the east and the west, excepting transcontinental commodity rates, apply to the east and west factors thereof respectively." These recommendations were put into effect by general order 308, dated Sept. 9, 1920.

The board passed general order 342, June 9, 1921, as follows: Re application of railway companies subject to board's jurisdiction for approval of reduced standard passenger fares, to become effective July 1, 1921: Whereas supplements to standard passenger tariffs have been filed by the undermentioned railways, to become effective July 1, 1921, on the reduced basis prescribed by the board's judgment of Sept. 6, 1920, and general order 308, dated Sept. 9, 1920:

The board orders that the following supplements to standard passenger tariffs be approved; the said supplements to be published in at least two consecutive weekly issues of The Canada Gazette, preceded by the following notice:—"The undermentioned supplements to standard passenger tariffs, effective July 1, 1921, having been filed for the approval of the Board of Railway Commissioners for Canada, and having been found by the board to be in accordance with its judgment, dated Sept. 6, 1920, and its general order 308, dated Sept. 9, 1920, and having been approved by its general order 342, dated June 9, 1921, the same are hereby published:—

Boston & Maine Rd., supplement 3 to C.R.C. no. 305.

Canadian National Ry., supplement 4 to Canadian Northern C.R.C. no. W-192.

Canadian National Ry., supplement 3 to Canadian Northern C.R.C. no. E-164.

Canadian National Ry., supplement 3 to Halifax & South Western C.R.C. no. P-77.

Canadian Pacific Ry., supplement 3 C.R.C. no. E-2187.

Canadian Vermont Ry., supplement 4 C.R.C. no. 502.

Dominion Atlantic Ry., Supplement 4 C.R.C. no. 404.

Edmonton & Grand Lake Coal & Ry., supplement 3 C.R.C. no. 4.

Glengarry & Stormont Ry., supplement 4 C.R.C. no. 600.

Grand Trunk Pacific Ry., supplement 4 C.R.C. no. 660.

Grand Trunk Ry., supplement 4 C.R.C. no. E-269.

Great Northern Ry., supplement 4 C.R.C. no. 1161.

Frederic Central Rd., supplement 4 C.R.C. no. 214.

Michigan Central Rd., supplement 4 C.R.C. no. 241.

Naperville Jct. Ry., Supplement 4 C.R.C. no. 92.

New Brunswick Coal & Ry., supplement 3 C.R.C. no. 4.

New York Central Rd., supplement 5 C.R.C. no. 191.

Northwestern Pacific Ry. (Midland Ry. Co. of Manitoba), supplement 3 C.R.C. no. 317.

Pere Marquette Ry., standard passenger tariff 6 R.C. no. 609.

Quebec Central Ry., supplement 3 C.R.C. no. 174.

Toronto, Hamilton & Buffalo Ry., supplement 3 R.C. no. 1209.

Wabash Ry., supplement 3 C.R.C. no. 996.

Up to Dec. 31, 1920, the rates were 4c. a mile. On Jan. 1 they were reduced to 3.75c., a mile, and on July 1 they were further reduced to 3.45c. a mile. These reductions do not apply in territory west of the Rocky Mountains, where the standard rate was 4c. a mile prior to the advance made on Sept. 13, 1920. The reduction on July 1 was to the basis that was in effect prior to Sept. 13, 1920.

Higher Freight Rate Caused by Error in Routing.

The Grasselli Chemical Co., Cleveland, Ohio, complained to the Board of Railway Commissioners recently, that it shipped ore from Hamilton, Ont., to its Grasselli, New Jersey, works; that the bill of lading given by its representative in Canada to the freight agent, designated the Pennsylvania Lines as the carrier, and designated the freight rate as approximately \$2.25; that at that time the freight rate over the G.T.R. from Hamilton was approximately \$2.25, and that over the Pennsylvania Lines was approximately \$3.25; and that it had been in the habit of shipping ore via the G.T.R., but through error the Pennsylvania Lines were designated. The company further alleged that the shipment referred to was made in 1913; that in 1918 it received from the Central Ry. of New Jersey freight due bills covering the difference between the \$2.25 it paid on the shipment and the published tariff rate of \$3.25, that it paid these two bills and filed a claim with the Central Rd. for the amount thereof; that in due time it received payment of the claim, but recently had received notice from the Central Rd. that the claim had been paid in error, and requesting a refund of the amount.

The Board's ruling was conveyed by a letter from its Secretary to the Grasselli Chemical Co. on May 9, 1921, as follows: "The Steel Co. of Canada wrote the Board on Oct. 30, 1918, as follows: 'Some time ago we shipped a car of pig-iron from Hamilton, consigned to Woodstock, N.B., on a C.P.R. bill of lading, and in error our shipper showed in the space provided on the bill of lading for routing 'C.P.R. via Ste. Rosalie.' As you are aware, specific commodity rates are in effect on pig-iron from Hamilton to various con-

suming points, including Woodstock, N.B., but this rate from Hamilton to Woodstock, N.B., applies only via C.P.R. direct. At the time this car was shipped, the C.P.R. biller at Hamilton billed the car at the specific commodity rate, applicable only via C.P.R. direct, but followed the routing instructions shown on the bill of lading, 'C.P.R. via Ste. Rosalie,' with the result that the car travelled via that route and arrived at the destination over St. J. & Q. Rd., with excess freight of \$21.26, which was collected from consignee. We have taken the position that the C.P.R. biller at Hamilton had no right to send this car forward via route having no through rate in effect, without notifying us that such action was being taken, and, while we admit that the routing shown on the bill of lading was placed there in error by our shipper, at the same time we feel the railway company should have ascertained if it was our intention that the car go forward via that route before such action was taken. This seems to be the common sense view of the matter, but there may be some authorities on the subject with which we are not familiar."

"The following answer was sent to the Steel Co. of Canada: 'The Board recognizes that the shipper has the right of routing, and it would appear that the higher rate resulting from an erroneous routing given by the shipper is one for the results of which the shipper is alone responsible. The only added feature that your letter covers is the statement that the C.P.R. biller billed the car at the specific commodity rate applicable via C.P.R. direct, which, however, did not apply via the routing as given by your shipper, with the result that the combination rate applied. The obligation of the railway, under the Railway Act, is to charge the tariff rate, that is the tariff rate for the route as given in the case you cite. The Board, therefore, would have no power to vary the rate by the routing as given and make applicable on a past transaction the rate applicable by another route. I am directed to say that this appears to be on all fours with what is presented in the application."

Quebec Transportation Club.—The following were elected at the annual meeting in Quebec, June 7:—Hon. President, W. A. Kingsland, Assistant General Manager, Canadian National Ry., Montreal; 1st Hon. Vice President, W. J. Lynch, General Manager, Quebec, Light & Power Co.; 2nd Hon. Vice President, E. J. Hebert, 1st Assistant General Passenger Agent, Eastern Lines, C.P.R., Montreal; President, J. S. Thom, President, Quebec & Levis Ferry Co.; 1st Vice President, J. A. Everell, Superintendent, Quebec Ry., Light & Power Co.; 2nd Vice President, S. J. Nestor, City Passenger Agent, Canadian National Ry., Quebec; Secretary-Treasurer, F. E. Thompson, Traffic Manager, Quebec Harbor Commission; Executive Committee: C. A. Langevin, City Passenger Agent, C.P.R.; J. A. Cote, Car Accountant, Quebec Ry., Light & Power Co.; M. P. Conolly, General Agent, Canada Steamship Lines; W. J. Thompson, Manager, Quebec & Levis Ferry Co.; C. Senay, C.P.R.

Senator Cummins is reported to have stated, during a recent session of the U.S. Senate Committee enquiring into railway matters, that Federal control of railways, which existed for 26 months, cost the country \$1,800,000,000.

An Unjustifiable Strike by Printers, Etc.

Although the agreements between the employing printers of Toronto, including the job printers, and national newspaper and periodical publishers, and their compositors, pressmen and bookbinders, were entered into to continue until May 30, 1921, the rate of wages being \$32 a week of 48 hours, the employers, a little over a year ago, recognizing that costs of living were advancing, consented to vary the agreements, and granted a bonus of 10%, making the weekly wages \$35.20. Early in May of this year the Typographical Union's Toronto members, acting on orders from its headquarters in Indianapolis, demanded a reduction of hours from 48 to 44, and an increase of pay from \$35.20 to \$44, which would have entailed an increase of over 33% in the hourly rate. The pressmen's and binders unions made similar demands.

The employers' feeling that the demands were absolutely unreasonable, in view of the marked reductions in the cost of living, the general deflation going on, and the reductions being made in wages generally, decided they would not be justified in granting terms which would require greatly increased prices for job printing, subscriptions and advertising, and refused the demands, and the union men went on strike on June 1 and are still out.

There is absolutely no doubt that the majority of the public are emphatically against the unions' demands and will submit willingly to any little inconveniences which they may experience, in delays in getting job printing done, or in irregularity in the issue of publications, rather than see the demands acceded to. These are not times for reduction of hours of labor, or for increases in pay, and the unreasonable demands of the unions, which are under foreign control, must be fought to a finish.

Canadian Railway and Marine World, being produced in an open shop, has not been affected by the strike, but many of its contemporaries have been, and in several cases have had to be got out by considerably depleted staffs or to be printed outside of Toronto. For them we bespeak every consideration and assistance.

Postponement of the June Mechanical Meetings.

As announced previously in Canadian Railway and Marine World, the American Railway Association's Mechanical Division, which embraces the former American Railway Master Mechanics Association, and the Master Car Builders Association, decided, in consequence of the financial stress and serious business condition in the United States, not to hold the annual convention which had been arranged for Atlantic City in June. Instead of the convention, a two days meeting was decided on, to be held at Chicago on June 15 and 16, the usual manufacturers' exhibits to be omitted. On June 9 it was announced that the meetings had been postponed to June 29 and 30 and on June 21 it was further announced that on account of mechanical men being engaged in formulating new working conditions for submission to the U.S. Labor Board, and consequently being unable to attend, the meetings had been

again postponed, that in view of the unsettled conditions for the next few weeks no date had been set for the meetings to be held, but that just as soon as conditions warranted, the general committee would fix dates, giving members 15 days advance notice.

The second and entirely unexpected postponement of these meetings has put Canadian Railway and Marine World to considerable inconvenience and expense. As usual, the reports of the various standing committees were supplied to us in advance, on the understanding that they would not be published until after their presentation at the meetings. We had them put in type, and a number of them were actually printed in the forms for this issue, when notice of the second postponement was received, the result being that we had to destroy the printed pages, and to keep the type standing for use in some subsequent issue.

The Grand Trunk Railway's New Directorate.

The nominations, by the Dominion Government, of persons to become directors of the Grand Trunk Ry. Co. of Canada, in place of the directors elected by the shareholders, were announced in Canadian Railway and Marine World for June, viz., Sir Joseph Flavelle, Bart., Toronto; J. N. Dupuis, of Dupuis Freres, dry goods merchants, Montreal; H. G. Kelley, theretofore President, G.T.R.; A. J. Mitchell, Vice President, Finance and Accounts, Canadian National Ry.s., and E. L. Newcombe, K.C., Deputy Minister of Justice, Ottawa. These nominees were elected at meetings of the G.T.R. directors, in London, Eng., the latter retiring.

The first meeting of the new board of directors was held in the G.T.R. offices in Montreal on May 28, when notifications of the resignations of the members of the previous board, and of the appointment of the members of the new board were submitted. Sir Joseph Flavelle was elected Chairman of the Board, and H. G. Kelley was elected President of the company.

An official statement issued after the meeting said:—"General questions relating to organization and consolidation of facilities were discussed. The World's regular meetings of the board was determined and provision was made for extra meetings at the call of the Chairman. It is expected that the unification of the Canadian National and the Grand Trunk Railways will now proceed rapidly, with resulting satisfactory economies and efficiency in operating results."

We have since been advised that the second Monday of each month was selected for the directors' regular meetings. The committee of management, which was appointed some time ago, to co-ordinate the G.T.R. service with the Canadian National Ry.s., and which consisted of H. G. Kelley, President, G.T.R., as Chairman; C. A. Hayes, Vice President, Traffic, and S. J. Hungerford, Vice President, Operation and Maintenance, Canadian National Ry.s., representing the Dominion Government, and W. D. Robb, Vice President, Transportation, Construction and Maintenance, and Frank Scott, Vice President and Treasurer, G.T.R., representing that company, ceased to function on the appointment of the new board, as provided for in the act passed at the Dominion Parliament's recent session.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—Canadian Railway and Marine World for June stated that DR. W. L. McDUGGALL, President, Century Coal Co., and Ogdenburg Coal & Towing Co., was reported to have been appointed Director of Operation, Canada Steamship Lines, to succeed H. W. Cowan, resigned. We are advised that the report referred to, which appeared in Montreal and other daily papers, was incorrect, and that Dr. McDougall was elected a director of Canada Steamship Lines at the recent annual meeting, but does not hold any other position in the company.

T. R. ENDERBY, Operating Manager, has been given charge of the work formerly under Mr. Cowan's control, and we are advised that it is not the management's intention to fill the position of Director of Operation.

C. C. BONTER, heretofore General Baggage Agent, has been appointed Assistant to President, and Assistant Treasurer. Office, Montreal.

Canadian National Rys.—**G. C. BRIGGS**, heretofore Architect, Eastern Lines, Toronto, has been appointed Architect, Western Lines, vice John Schofield, transferred to Toronto. Office, Winnipeg.

J. T. B. FOOTE, heretofore Assistant Manager, Fort Garry Hotel, Winnipeg, has been appointed Manager, Prince Edward Hotel, Brandon, Man., vice J. Van Wyck, appointed Manager, Minaki Inn.

A. H. JONES, heretofore Assistant Engineer, Canadian Government Rys., Moncton, N.B., has been appointed Assistant Engineer to Engineer of Standards, Canadian National Rys., Toronto.

D. B. NIBLOCK has been appointed Special Ticket Auditor in charge of ticket collectors, Canadian Northern Ry. System and Grand Trunk Pacific Ry. Office, Toronto.

C. S. G. ROGERS has been appointed Assistant Bridge Engineer, Eastern Lines, Moncton, N.B., vice R. O. Stewart, transferred to Engineer of Standards' staff at Toronto.

JOHN SCHOFIELD, heretofore Architect, Western Lines, Winnipeg, has been appointed Architect, Eastern Lines, vice G. C. Briggs, transferred to Winnipeg. Office, Toronto.

J. VAN WYCK, heretofore Manager, Prince Edward Hotel, Brandon, Man., has been appointed Manager, Minaki Inn, Minaki, Ont.

Canadian Pacific Ry.—**F. DALY**, heretofore Travelling Passenger Agent, Victoria, B.C., has been appointed City Ticket Agent, Vancouver, B.C.

S. C. BURKETT, heretofore chief clerk to Assistant Freight Traffic Manager, Montreal, has been appointed acting Assistant General Freight Agent, vice C. E. Jefferson, promoted. Office, Montreal.

C. E. JEFFERSON, heretofore acting Assistant General Freight Agent, has been appointed acting General Freight Agent. Office, Montreal.

D. R. KENNEDY, heretofore Assistant District Passenger Agent, Montreal, has been appointed General Agent, Passenger Department, Buffalo, N.Y., vice G. O. Walton, resigned.

R. E. LARMOUR, heretofore General Freight Agent, Montreal, has been appointed acting Assistant Freight Traffic Manager, during the absence for an indefinite period, through illness, of H. E. Macdonell. Office, Montreal.

ROY McMORRAN has been appointed Travelling Passenger Agent, Vancouver, B.C., vice F. H. Daly, promoted.

A. L. PRESTON, heretofore Assistant General Freight Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry., St. Paul, Minn., has been appointed General Agent, Freight Department, C.P.R., M. St. P. & S.S.M.R., Duluth, South Shore & Atlantic Ry., and Spokane International Ry., New York, N.Y., vice M. S. Throne, deceased.

M. J. ROHNE, heretofore Roadmaster, Expanse Subdivision, Moose Jaw Division, Saskatchewan District, Assiniboia, Sask., has been appointed Roadmaster, Kerrobert Subdivision, Moose

John Schofield,
Architect, Eastern Lines, Canadian National
Railways.

Jaw Division, Saskatchewan District, Kerrobert, Sask., vice L. Herbert, transferred.

P. TAPSEY has been appointed Roadmaster, Expanse Subdivision, Moose Jaw Division, Saskatchewan District, Assiniboia, Sask., with territory from Assiniboia to Aneroid, Sask., vice M. J. Rohne, transferred.

Duluth, South Shore & Atlantic Ry.—See Canadian Pacific Ry.

London & Port Stanley Ry.—**G. E. LENHART**, Master Mechanic, has been appointed acting Superintendent in charge of Transportation and Mechanical Departments. Office, London, Ont.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—See Canadian Pacific Ry.

Ottawa & New York Railway—**Ottawa Division**, New York Central Rd.—**G. D. DAGER**, Superintendent, Adirondack Division, New York Central Rd., Utica, N.

Y., who has had his jurisdiction extended over the Ottawa & New York Ry. and the Ottawa Division of the New York Central Rd., in consequence of the death of S. R. Reid, advises that no changes will be made at Ottawa, and that while, as Superintendent, he is located at Utica, the office maintained heretofore at Ottawa will remain there, with the same other local officials as heretofore.

Pennsylvania Ry.—**T. L. COOK** has been appointed Canadian Freight Agent, Toronto.

H. E. HALL has been appointed Canadian Passenger Agent, Toronto.

Spokane International Ry.—See Canadian Pacific Ry.

Timiskaming & Northern Ontario Ry. **Col. J. I. McLEARN** and **LIEUT.-COL. L. T. MARTIN, D.S.O.**, have been appointed commissioners, vice J. L. Englehart, deceased, and Dr. R. E. Preston, ex M.L.A., resigned.

Cancellation of Trains on Canadian National Railways.

The following discussion took place in the House of Commons recently:—

G. Parent, Quebec West:—May I ask the Minister of Railways if his department has anything to do with the cancellation of certain trains on the Canadian National Rys.?

Hon. J. D. Reid, Minister of Railways: The Railways Department has nothing whatever to do with the cancellation of trains, or in fact with anything connected with the operation of the road.

Mr. Parent:—I want to find out from the Minister, because on Feb. 28 he answered that the Government had something to do with the cancellation of trains and was in possession—

The Speaker:—On the orders of the day there can be no cross-questioning of ministers; any answer received must be accepted.

Jacques Bureau, Three Rivers:—Are the Canadian National Rys. operated under the Canadian National Railways Act, passed by this Parliament some years ago?

Mr. Reid:—No, that act has not yet been brought into force.

E. H. Fitzhugh vs. Central Vermont Railway, et al.—In regard to this suit, parties some of which were given in Canadian Railway and Marine World for June, p. 314, we are officially advised that no evidence was submitted at the hearing fixed for Concord, N.H., on May 17, and that the hearing was postponed to Sept. 6.

C.P.R. Annual Inspection.—**E. W. Beatty, K.C.**, President, C.P.R., and Grant Hall, Vice President, have completed a trip of inspection over most of the company's eastern lines. The inspection will be extended to Vancouver, where the President is expected early in July.

Railway Lands Patented.—Letters patent were issued during May for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	26.84
Canadian Pacific Ry.	8.63
Manitoba Southwestern Colonization Ry.	154.63
Total	185.10

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners. The summaries of orders who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 340. May 19.—Extending from June 1 to June 15 time in which all railway companies may withdraw Special Instruction 1 from their respective working timetables. This order was given in full in our last issue.

General order 341. May 21.—Requiring all railway companies subject to Board's jurisdiction interested in coal movement in the three Prairie Provinces to reduce rates on coal from mines in Alberta and Saskatchewan to points in Alberta, Saskatchewan and Manitoba, by 10%. This order was given in full in our last issue.

General order 342. June 9.—Approving supplements to Standard Passenger tariffs of a number of railway companies to become effective July 1, on reduced basis prescribed by the Board's judgment of Sept. 6, 1920, and general order 308, Sept. 9, 1920. This order is given in full under "Traffic Orders" by Board of Railway Commissioners, on another page of this issue.

31,054. May 17.—Relieving Canadian National Ry. and C.P.R. from maintaining a night sign-man and authorizing them to close tower on Sundays at crossing of C.P.R. Pheasant Hill Branch, Saskatoon, Sask.

31,033. May 16.—Ordering Grand Trunk Pacific Ry. to appoint station agent at Jarow, Alta. May 17.—Extending to Aug. 31, time in which Canadian National Ry. shall complete alterations to interlocking plant at connection between its St. Maurice and Montreal Divisions at Albany Jct., mileage 5.8 St. Lawrence Subdivision.

31,035. May 16.—Rescinding order 30,903, Apr. 29, relieving C.P.R. from station agent for M. & L. Samuel Benjamin & Co., Toronto.

31,036. May 18.—Ordering G.T.R. to install two automatic bell and wigwag signals, within 60 days, at Hargreth St., Newbury, Ont.

31,037. May 18.—Authorizing Canadian National Ry. to make highway crossing between east and west 2nd meridians, Sask., and to close farm crossing in n.e. ¼ Sec. 4.

31,038. May 18.—Ordering Canadian National Ry. to build spur for Scottish Manitoba Co., Winnipeg.

31,039. May 20.—Approving agreement between Bell Telephone Co. and Mayo & Blanche Rural Telephone Co.

31,040. May 20.—Authorizing Canadian National Ry. to open for traffic its connection with Timiskaming & Northern Ontario Ry., at North Bay, Ont.

31,041. May 25.—Extending to Aug. 1 time within which C.P.R. may install gates at crossing of Waterloo and Fall Mill Sta., London, Ont. 31,042. May 25.—Authorizing Hamilton Central R.R. to remove the interlocking at Niagara Jct., Ont.

31,043. May 28.—Suspending portion of item 10 of Supp. 4 to C.P.R. tariff of May 19, 1920, 3839, and portion of item 4-A in G.T.R. Supp. 18, to tariff C.R.C. no. E-4219, pending hearing before Board by Dec. 1, 1921.

31,044. May 28.—Authorizing C.P.R. to build siding and spur for Imperial Oil, Ltd., Brandon, Man.

31,045. May 28.—Authorizing Great Northern Ry. to issue annual pass between Brandon and Bannerman, Man., in favor of W. Little, Dominion Railway Agent, Brandon, Man.

31,046. May 20.—Declaring that Canadian National Ry., crossing near Cardinal, Man., is protected by Board's satisfaction.

31,047. May 20.—Dismissing complaint of Canada Starch Co., Cardinal, Ont., re claim against G.T.R. for demurrage charges assessed during influenza epidemic in 1918.

31,048. May 30.—Approving Vancouver, Victoria & Eastern Ry. & Navigation Co.'s plan showing location and scheme for drainage and dyking of lands in Sumas District, B.C.

31,049. May 25.—Declaring that Canadian National Ry., crossing at Rockland, Ont., is protected to Board's satisfaction.

31,050. May 30.—Approving agreement of Bell Telephone Co. and Pembroke & Mud Lake Telephone Co., Pembroke, Ontario, Ont.

31,051. May 30.—Refusing application of Toronto & York Radial Ry. for reconsideration of its application for equipment of cars for use in connection at crossing of Kingston Road, near West Hill, Ont.

31,052. May 30.—Approving agreement between Bell Telephone Co. and St. Mary's Telephone System, Shefford County, Que., and rescinding order 30,903, Apr. 29, 1920.

31,053. May 30.—Authorizing C.P.R. to build

spur for Fraser Valley Farmers Fed Association, Mission, B.C.

31,054. May 20.—Authorizing Sandwich West Tp., Ont., to extend Curry Ave. over Essex Terminal Ry.

31,055. May 28.—Authorizing Grand Trunk Pacific Ry. to build spur for Swift Canadian Co., Edmonton, Alberta.

31,056. May 30.—Authorizing London & Port Stanley Ry. to build two tracks across Bridge St., London, Ont.

31,057. May 30.—Dismissing application of Oppenheimer Casino Co. of Canada, Toronto, regarding classification of sausage casings shipped by express.

31,058. May 30.—Amending order 28,631 appointing cost of protection at crossing of G.T.R. Union Stock Yard Branch and Toronto Suburban Ry. at Keele St., Toronto.

31,059. 31,060. June 2.—Authorizing New Brunswick Public Works Department to divert highway on C.P.R. between Ketepet and Acamace, and between Nerepis and Blagdon.

31,061. June 1.—Extending to Aug. 1, 1922, time within which C.P.R. may complete two spurs for Northern Aluminum Co., Toronto, authorized by order 30,636.

31,062. June 1.—Authorizing Ottawa Electric Ry. to disconnect derail switches from interlocking plant at crossing of G.T.R. at junction of Albert and Bristol Sts., Ottawa.

31,063. June 1.—Dismissing application of Canadian National Ry. to remove station agent at Strathcona, Ont.

31,064. June 1.—Authorizing Canadian National Ry. to make highway crossing in station yards at Lucky Lake, Sask., at expense of Saskatchewan Public Works Department.

31,065. June 7.—Authorizing New England Freight Association to cancel on one day notice certain schedules naming regulations governing use of cars.

31,066. May 25.—Authorizing Canadian National Ry. to build spur for Hunter Lumber Co., Port of Imperial Oil spur, near Saskatoon, Sask.

31,067. May 25.—Authorizing Canadian National Ry. to extend highway across its tracks at Redwater, Alta.

31,068. May 30.—Authorizing C.P.R. to remove station agent at Versailles, Que., caretaker to be appointed by order 30,979.

31,069. 31,070. June 2.—Authorizing Bell Telephone Co. agreements with Gloucester Township Council, Gloucester and Kentville, and Allenford Rural Telephone Co., Bruce and Grey Counties, Ont., and rescinding order 27,135.

31,071. June 1.—Relieving Michigan Central Ry. and Canadian National Ry. from maintaining night watchman to operate crossing of Pere Marquette Ry. at Courtwright Jct., Ont.

31,072. June 1.—Authorizing C.P.R. to operate over Harris Abattoir Co.'s spur, Toronto.

31,073. June 2.—Ordering C.P.R., J. Booth and J. Smith, to clean out ditch at Bar River, Ont.

31,074. June 2.—Authorizing use of subway under G.T.R. at St. Paul's Ave., Brantford, Ont.

31,075. June 1.—Extending to May 31, 1922, time within which C.P.R. may build spur for Rock Creek Lumber Co., in Lot 4588, Group 1, Essex, Ont.

31,076. May 25.—Authorizing G.T.R. to connect with Canadian National Ry. on Lot 13, Con. 1, Pembroke Tp., Renfrew County, Ont.

31,077. June 1.—Extending to Aug. 1, 1922, time within which Canadian National Ry. may build spur for municipal power plant, Prince Albert, Sask.

31,078. June 2.—Declaring that G.T.R., crossing at Woodbine Ave., Toronto, is protected to Board's satisfaction.

31,079. June 4.—Ordering Toronto, Hamilton & Buffalo Ry. to build foot bridge over its tracks at Sherman Ave., Hamilton, Ont.

31,080. June 2.—Extending to Aug. 31, time within which C.P.R. may complete two spurs for Union Brass & Iron Reelstock Co., Outremont, Que., authorized under order 29,689, June 2, 1920.

31,081. June 4.—Ordering C.P.R. to make level approaches on south side of crossing between Secs. 14 and 15, Range 2, and on north side of crossing between Secs. 14 and 15, Range 3, west 4th meridian, Fashley Northeastern Branch, amending order 30,933.

31,082. June 1.—Authorizing C.P.R. to appoint station agent at McTavish, Man.

31,083. 31,085. June 8.—Authorizing St. Thomas Municipal Ry., pending further order, to operate one-man cars over London & Port Stanley Ry., on Wellington, Elm and Talbot Sts., St. Thomas, Ont.

31,086. June 8.—Approving location of Canadian Northern Ry., Acadia Valley Branch, mile 23.03 to 43.36, Alberta, and authorizing crossing of highways.

31,087. June 6.—Extending to June 30, time within which Canadian Northern Ry. may make crossing and diversion in n.w. ¼ Sec. 30, Tp. 11, Range 29, west 2nd meridian, Sask.

31,088. June 6.—Approving G.T.R. layout of bell, etc., at the crossing 335 ft. east of Caledonia Station, Ont., first track north of the station to be bordered with a cutout opposite station.

31,089. June 4.—Declaring that G.T.R., crossing over public road, 1 ½ miles east of Hudson, Ont., is protected to Board's satisfaction.

31,090. June 6.—Amending order 30,892, Apr. 11, 1921, in which Board's order was made at mile 6, Lunenburg Subdivision, Halifax and South Western Ry.

31,091. June 6.—Authorizing Saskatchewan Highway Department to make highway crossing over C.P.R. on surveyed road running east and west through Sec. 6, Tp. 40, Range 19, west 3rd meridian, Sask.

31,092. June 4.—Extending to Nov. 29, time within which C.P.R. may build spur for Milverton Furniture Co., Milverton, Ont., authorized by order 30,979.

31,093. June 14.—Dismissing C.P.R. application to divert road along west boundary of Sec. 14, Range 2, west 12th meridian, Man.

31,094. June 4.—Declaring that C.P.R., crossing in main yard, Saskatoon, Sask., is protected to Board's satisfaction.

31,095. June 4.—Declaring that Canadian National Ry., crossing, 4.2 miles north of Ericsdale, Man., is protected to Board's satisfaction.

31,096 to 31,099. June 2, 7.—Approving Bell Telephone Co. agreements with Johnson Municipal Telephone System, Redwood and Kinross, Telephone Co., Bruce County, Ont.; Sandwich South Tp., Ont., rescinding orders 26,607, Apr. 10, 1917, and 11,827, Sept. 29, 1910; and Waterloo Municipal Telephone System, Waterloo County, Ont., rescinding orders 21,430 and 22,482.

31,100. June 8.—Dismissing National Dairy Council's application for rescinding of order 28,883, Oct. 9, 1919, for reduction in express classification of ice cream from first to second class.

31,101. June 9.—Relieving Grand Trunk Ry. from speed limitation of 10 miles an hour when watchman is on duty at crossing at Beaconsfield, Que.

31,102. June 8.—Authorizing St. Thomas Municipal Ry. to operate one-man p.a.m.e. cars between St. Pierre Marquette Ry. on Wilson Ave., St. Thomas, Ont.

31,103. June 7.—Amending order 18,242, Nov. 1912, re crossing of Brandon Municipal Ry. and Canadian National Ry. at crossing of St. James St., Brandon, Man., so that gate protection be suspended, and that empty cars to and from car barns be flagged at crossing.

31,104. June 8.—Ordering C.P.R. to appoint station agent at Osborne, Man., by Sept. 15, caretaker to be appointed in the meantime.

31,105. June 6.—Rescinding order 15,658, Dec. 6, 1911, authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Calvary Collieries, Ltd., in 29, Tp. 38, Range 25, west 4th meridian, Alta.

31,106. June 2.—Ordering G.T.R. to protect Esplanade Hotel, Hamilton, Ont., by flagman between 9 a.m. and 7 p.m. daily.

31,107. June 6.—Ordering C.P.R. to install automatic bell with wigwag signal at crossing near North Station, Toronto.

31,108. June 9.—Authorizing Canadian Northern Ry. to cross and divert highway at corner of John St. and York St., New York, Ont.

31,109. June 10.—Ordering that tolls to be charged by Bell Telephone Co. for service in village of Rockcliffe shall be same as for new charges within distance limit of maximum line distance from Queen exchange to boundaries of Hull, Que., as they existed at Apr. 4, 1912.

31,110. June 10.—Authorizing Saskatchewan Highway Department to make highway across C.P.R. station grounds at Ravenscrag, Sask.

31,111. June 10.—Authorizing St. Lawrence Jct. Ry. crossing over first highway north of Lacolle, Que., is protected to Board's satisfaction.

31,112. June 10.—Authorizing Canadian National Ry. to build Ry. crossing over Grand River, n.e. ¼, Hanna-Medine Hill Branch, Alta.

31,113. June 10.—Approving agreement between Bell Telephone Co. and Hill Rural Telephone Co., Middlesex County, Ont.

31,114. June 9.—Dismissing application of National Railway Council, re application for reduction of 10c on ice cream and 5c on returned empties by express, from and to points where wagon service is provided by express companies, whenever such service is furnished as required, thus necessitating cartage by shippers and receivers respectively.

31,115. 31,116. June 10.—Authorizing Lake Erie & Northern Ry. and Grand River Ry. to publish standard freight tariffs showing increase in freight rates on basis of those authorized by pre-

eral order 308, Sept. 9, 1920; and dismissing application for increased passenger rates.

31.117, 31.118, June 16.—Approving Lake Erie & Northern Ry. standard freight tariff supp. 1 to C.R.C. 165, and Grand River Ry. standard mileage freight tariff C.R.C. 57.

31.119, June 16.—Ordering G.T.R. within 15 days to restore farm crossing on property of Ed. Phaneuf, St. Hyacinthe Parish, Que.

31.120, June 16.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Tallman Brass & Metal Ltd., Hamilton, Ont.

31.121, June 16.—Approving location and details of Canadian National Rys. station at Prince Rupert, B.C.

31.122, June 16.—Extending to June 30, time within which C.P.R. 39, Range 24, west 4th meridian, Alta., as required by order 30.761, March 11.

31.123, June 16.—Authorizing British Columbia Public Works Department to build highway bridge over C.P.R. at mile 15.2 west of Revelstoke, near Three Valley, B.C.

31.124, June 15.—Dismissing complaint of Canada West Coal Co., Taber, Alta., and Intercolonial Coal & Coke Co., against rates on coal shipped from the Crowfoot Districts to Winnipeg and intermediate points, compared with rates prevailing from the Drumheller and Rocky Mountain Districts to Winnipeg and intermediate points.

31.125, June 15.—Amending order 29,672, directing Grand Trunk Pacific Ry. to build station at Leitchfield, Sask.

31.126, June 16.—Authorizing British Columbia Public Works Department to build highway bridge over C.P.R. at mile 8.7 west of Revelstoke, near Clanwilliam, B.C.

31.127, June 14.—Authorizing G.T.R. to build spur for MacConnell & Hicklin, on Lot 10, Con. 3, Canboro Twp., Ont.

31.128, June 14.—Approving Chatham, Wallaceburg & Erie Ry. standard passenger tariff C.R.C. 45.

31.129, June 14.—Extending to Sept. 30 time within which G.T.R. may complete station building at Allanburg, Ont.

31.130, June 14.—Authorizing C.P.R. to build spur for British American Oil Co., at mile 65.10 Windsor Subdivision, Chatham, Ont.

31.131, June 14.—Authorizing G.T.R. to build spur for Imperial Steel & Wire Co., Collingwood, Ont.

31.132, June 14.—Authorizing Canadian Northern Pacific Ry. to build transfer ship and trestle at Victoria, B.C., on south shore of harbor and south of Esplanade, Ont.

31.133, June 14.—Authorizing Canadian Northern Ontario Ry. to build across C.P.R. in Lot 285, Nord de la Cote des Annes Concession, St. Augustin Parish, Ont.

31.134, June 14.—Authorizing G.T.R. to install, in lieu of watchmen, required by order 27,768, improved type of automatic bell and wig-wag signal at crossing of Ingersoll Road, Woodstock, Ont.

31.135, June 16.—Extending to Aug. 1 time within which C.P.R. may build spur to make highway crossing at bend of Carlow Road, at north end of its yard, Port Stanley, Ont.

31.136, June 16.—Ordering 10% of cost of maintaining watchmen at G.T.R. crossing of Hurontario St., Port Credit, Ont., assessed against Toronto Tps., Ont., to be paid by Ontario Public Highways Department.

31.137, June 13.—Ordering Grand Trunk Pa-

cific Ry. to appoint station agent at Lortie, Sask., by Sept. 1.

31.138, June 18.—Authorizing Delaware, Lackawanna & Western R.R. to file Supplement 2 to its tariff of exceptions to official classification C.R.C. 1,645, effective July 1, on one day notice, correcting in items 5-4 and 5-4-1, as now appearing in Supplement 1 to C.R.C. 1,645.

31.139, June 10.—Authorizing Canadian Northern Ry. to build additional tracks across Fraser St., North Bay, Ont.

31.140, June 16.—Ordering that L'Anse au Beaufils, flag station at mile 65.25, Atlantic, Quebec & Western Ry., be moved and placed at Caron's Siding, mile 65.25, Gaspé County, Que., caretaker to be appointed.

31.141, June 14.—Ordering Grand Trunk Pacific Ry. to appoint station agent at Lousana, Alta., by July 15.

31.142, June 17.—Authorizing Canadian Northern to build spur for Poudre River at mile 86.2 Ruel Subdivision, Sudbury District, Ont.

31.143, June 17.—Approving plan and specifications of work done on municipal drain 13, under G.T.R. in Minto Twp., Ont.

31.144, June 14.—Declaring that for the present C.P.R. crossing near Dalhousie Mills station, Ont., is protected to Board's satisfaction.

31.145, June 17.—Extending to Aug. 31, time within which C.P.R. may build spur to make highway crossing at bend of Carlow Road, at north end of its yard, Port Stanley, Ont.

31.146, June 13.—Authorizing Western Terminal Ry. to build connecting track from Canadian National Rys. to tracks east of easterly switch, Fort William, Ont., and to cross Paterson spur near King St., all trains to stop before crossing.

The Maritime Provinces' Demand for Special Railway Rates, Etc.

The agitation in the Maritime Provinces for special freight rates and other concessions in connection with the Intercolonial Ry., which was dealt with very fully in Canadian Railway and Marine World for May and June, has been growing steadily, and culminated in about seventy Government, industrial and other representatives of the three Maritime Provinces appearing before Premier Meighen and some of his cabinet at Ottawa on June 1. The delegates included Premier Edouard, Prince Edward Island; Hon. R. E. Finn, minister without portfolio in the Nova Scotia Government; Ivan Rand, K.C., representing the New Brunswick Government; G. L. Stairs, President of the Halifax Board of Trade; H. J. Logan, representing the Maritime Board of Trade and the Maritime Stock Breeders' Association; R. Hendry, President, Commercial Club, Halifax, and representative of the Canadian Manufacturers' Association; Maritime Division, various merchants' associations and boards of trade. Members of the Dominion Parliament from the Maritime Provinces were also present.

The delegates demanded: (1) That the Intercolonial Ry. be dissociated from the Canadian National Rys., and operated as a separate unit. (2) That the Intercolonial management be located at Moncton, so that it would have a thorough understanding of the conditions and needs of the Maritime Provinces and be in a position to meet them. (3) That freight rate concessions and differentials enjoyed formerly by the Provinces should be again put into force, so far as it is possible to do this without injustice to the remainder of Canada. (4) That the Intercolonial Ry. be operated under the direction of the Minister of Railways, and that it be not subject to the Board of Railway Commissioners' regulative powers.

In making these demands, the delegates laid great emphasis on the British North America Act, sec. 145 of which provided for the construction of the

railway as a condition of Confederation, and rather, it should be said, they placed greater emphasis on the interpretation of that clause. They argued that the Dominion's obligation in the matter is a continuing one, and was not discharged by simply building the railway; the interests of the Maritime Provinces being continually at stake, and that the terms upon which those provinces entered Confederation would not be fulfilled unless, in the operation of the railway, their special claims on the Dominion were protected. In support of management in the Maritime Provinces is necessary to protect their rights from the "autocracy of Ontario and Quebec"; that the location of the Intercolonial management at Toronto deprives the Maritime Provinces of the whole value of the Intercolonial Ry., for its "special purposes" and in where management sympathetic with Maritime needs should be appointed, and located at Moncton.

In speaking of present rates, the delegation advanced the argument that the Ontario and Quebec canals were built and are maintained by the Dominion, the Maritime Provinces contributing their share through taxation. These canals, they said, are operated without toll for the interests of Ontario and Quebec, and therefore the Maritime Province producers, in their own interests, should have special rates on the Intercolonial. It was further pointed out that, prior to Confederation, the Maritime Provinces enjoyed a large volume of trade with the United States; that they are now shut out of the U.S. market by high tariff walls, which possibly might have been raised against them if they had not entered Confederation and had retained their right to bargain with the U.S. independently. In addition to being barred from the U.S. market, they claimed they are also barred from the Quebec, Ontario and Western Canada markets by high freight rates and vastly increased dif-

ferentials (See Canadian Railway and Marine World for May, page 259), and stated that unless relief were granted, the Maritime Provinces' industrial development would be seriously restricted.

In demanding that the Intercolonial be operated under the Minister of Railways and that the Board of Railway Commissioners have no jurisdiction over it, the delegates claimed that the Commission is "purely a legal organization" and would treat the Intercolonial on a "mail order" basis. They also claimed that economic regulation of the Intercolonial Ry. by the Board of Railway Commissioners would be fatal to their interests, and would constitute a violation of the Confederation terms.

In reply to the representations, Premier Meighen is reported to have stated that they would receive close attention, and that whatever could be done, without injustice to any other part of Canada, would be done. He pointed out that freight rates all over the country are high, and agreed that any special disability of the Maritime Provinces is accentuated by the present high rates.

On June 4, various members from the Maritime Provinces referred in the House of Commons to the delegation's visit, and spoke at length in support of the demands made. On June 7, Hon. R. E. Finn, minister without portfolio in the Nova Scotia Government, met D. B. Hanna, President, Canadian National Rys., in Toronto, and laid before him the views of Maritime Province interests.

An examination of these Maritime Province demands discloses the fact that they suggest what would be great injustices to the other Canadian provinces are concerned, and that supporting contentions put forward by the Maritime representatives have no foundation in fact. Great stress is laid by them on the statement that the promises of the Confederation agreement are not being carried out by the Dominion. On analysis, the fallacious

nature of this argument is fully apparent. The provisions of the agreement which concerned railway construction were given fully in Canadian Railway and Marine World for May, pg. 259. They were carried out long since by the building of the railway between Riviere du Loup and Truro, and beyond the construction of the railway the agreement did not go, so far as we have been able to determine. There were, in the agreement, no provisions that preferential rates were to be given the Maritime Provinces, or that the railway was to be operated at a loss, with the deficiency made up through taxation, or that the railway was to become and remain a great instrument for the furtherance of political aspirations. The only grounds upon which the Maritime Provinces could claim the right to use the railway in this way would be that it had been so used in the past; but the mere fact of an unjust condition having been brought about is certainly no reason for its continuance. Evidently, then, the position taken by the Maritime Province delegates, in claiming that the Confederation agreement has been violated, is thoroughly untenable.

The argument that Ontario and Quebec canals are operated without toll, in the interests of the trade and industrial expansion of those provinces, while the Maritime Provinces bear their portion of the cost of them, is equally fallacious. The Intercolonial Ry. has always been operated at a loss, and has yielded no return on its capital cost. Although its present capital cost is officially placed at \$152,000,000, and the Prince Edward Island Ry. at \$12,300,000, the accumulated cost to the country for the two railways, figuring in losses and interest, is in the neighborhood of \$570,000,000. The fact is that a free right of way has been provided over the Intercolonial in the same way that a free right of way has been provided through the canals. People using the canals pay the cost of transportation through them, as people using the Intercolonial pay for transportation on it, but there is this difference, viz., that the people using the canals have paid for transportation a charge equal to the cost of producing it, plus a fair profit, while the people using the Intercolonial have obtained their transportation at less than the cost of providing it. The members of the delegation would have been well advised not to have advanced that argument.

The demand that the Intercolonial Ry. should be operated as a unit, separately from the Canadian National Ry., and managed from Moncton, could not be met without injustice to all other parts of Canada. The complaint by the Maritime Provinces interests that the Canadian National Ry. lines in those provinces cannot be satisfactorily managed from Toronto carries no more weight than would a complaint from Alberta, that Canadian Pacific Ry. lines in that province are not efficiently operated because the C.P.R. headquarters are in Montreal. If the Maritime Provinces' demands were to be complied with, it would mark the first step in the disintegration of the Canadian National Ry. system. The people of those provinces have spent large sums in building and acquiring their various railways, and it is conceded that co-ordination of these lines into one system, accompanied by the elimination of duplicate managerial and other expense, is the only means by which the country's railway venture

can have prospects of becoming successful financially. If such a demand were acceded to, it would establish a precedent for any other province, or province of the country, to claim the privilege of directing the operation of the railway mileage within its boundaries, which, if acceded to, would mean that the National lines, now in process of consolidation into a co-ordinated system, would be broken up into a number of independently operated and loosely related portions of railway. The logical effect of this would be to make transportation charges prohibitive, and seriously restrict the development of the country. Co-ordination and consolidation are absolutely necessary to success in the operation of the Government-owned railways; compliance with this demand of the Maritime Provinces would mark the beginning of an era in Canadian railroading which would inevitably terminate in national disaster.

The demand that the principle of freight rates be based exclusively on concerns the differentials formerly prevailing, should be re-adopted, to make effective the understanding on which Confederation was based, the delegates displayed a most remarkable persistency in confusing matters of previous usage with the terms of the Confederation agreement. As before stated, we are aware of no clause in that agreement which purported to give the Maritime Provinces any rate concessions. It may be stated, in all fairness, that these concessions, so far as they were not based on purely economic and business principles, and so far as they were based on principles of political expediency, should never have been made. The Canadian Pacific Ry. was built through British Columbia as a condition of the agreement by which that province entered Confederation, and British Columbia could advance claims for preferential rates with as much justice as the Maritime Provinces. As a matter of fact, the Maritime Provinces' complaints in connection with freight rates have been echoed by British Columbia lumber producers; by the agricultural interests of the western provinces, and by the producers and consumers of Ontario and Quebec. While we are fully aware of the fact that low transportation charges are desirable from the point of view of the business development of the country, a railway should seek its revenue from the movement of the maximum of traffic at the lowest rate consistent with a fair return, it is a fact that freight rates have not increased disproportionately to the value of commodities. Present freight rates are blamed unduly for a business depression which is the logical result of other causes, which, though more obscure, are nevertheless well defined and evident to those taking the trouble to enquire into them.

The principal point worthy of emphasis, however, is that while the Maritime Provinces may be justified, as other sections of the country may be justified, in their own opinions at least, in voicing their dissatisfaction with present levels of charges for transportation service, the method of removing these grievances was not the Maritime Provinces' proposed one. The Maritime Provinces propose a method utterly wrong and indefensible in the demand that the Intercolonial Ry. be replaced under the Minister of Railways and operated as a Government department enterprise, and that the Board of Railway Commissioners has no relative authority in connection with it,

it is obvious that they desire to have their grievance removed, not by action along business lines, but by using the Intercolonial Ry. as a political weapon. Their demand could not be met without injustice to the rest of Canada; it means, in effect that the grievances of the remainder of the country would be dealt with by the Board of Railway Commissioners in accordance with strict economic principles; while the grievances of the Maritime Provinces would be entirely removed as a reward for the use, first by one political party and then by another, of the Intercolonial Ry., as a means of furthering political ends. That the remainder of the Canadian people would pay, by taxation, the greater part of the losses which would inevitably accompany Intercolonial Ry. operation.

The attitude of the Maritime Provinces' interests in this connection was admirably expressed by a member of the delegation, who is credited with stating that "if the Government ignored the deputations' requests, they would be taking their political lives in their hands." That states the whole thing. If an appeal to political prejudice could be better expressed, if the desire to put the Intercolonial back into politics and regard it as an instrument of political patronage could be more suitably conveyed by the vehicle of speech, if a more deliberate intention of wrecking the prospects of success of the Canadian National Ry. by subjecting them to political influence could be better demonstrated, and if greater disregard for the rights of the people of other parts of Canada could be shown to more advantage than in that direct statement, it would astonish us.

The Maritime Provinces demands are utterly wrong in principle. If they feel certain that increased freight rate differentials are destroying the ability of their industries to compete in central and western markets, the Board of Railway Commissioners should be empowered to investigate them. Rate adjustments are made from day to day, and if adjustments are required in the Maritime Provinces they should be made as all others are, as a matter of business equity. The Board of Railway Commissioners should have the same absolute power of regulation over the Intercolonial Ry. as over any privately owned railway. The Board was established for the very purpose of removing political influence from the business activities of railway operation, and is necessarily composed of men who would bring expert knowledge to the task of hearing the Maritime Provinces complaints. The best advice these Maritime interests can act upon is to have their difficulties reviewed and settled on business lines through the Board's instrumentality, and, above all, to stop the agitation, based on an entirely false interpretation of their rights as derived from the Confederation agreement, by means of which they would obtain concessions by the underhand and objectionable method of political action. The days when the Intercolonial was used as a political machine are not difficult to remember, but surely our railway experiences to date should indicate that those days should never return. The consensus of opinion in other parts of Canada is that in the future our railways are not to be defiled by being used as political weapons. The Maritime Provinces interests will be rendering themselves a real service by becoming educated con-

cerning the existence of this line of thought in all other parts of the country, and by deciding to adopt it and to forget the past.

Canadian Government Railways Supplementary Estimates.

The further supplementary estimates for the year ended March 31, 1921, submitted at the Dominion Parliament's recent session, contained the following item:—

Chargeable to collection of revenue—
Canadian Government Railways, toward deficit of working expenditure for 9 months ended Dec. 31, 1920, the management of the railways being hereby authorized to apply the receipts and revenues toward payment of the working expenditure, additional amount required \$2,000,000

The further supplementary estimates for the year ending March 31, 1922, contain the following items, chargeable to capital:—

Dartmouth to Deans Branch, balance due contractors \$3,000.00
Refund to St. Martins Ry. of amount overpaid \$1,405.39
Prince Edward Island, car ferry terminal, Cape Tormentine, to pay claims \$97,000.00

Railway Rolling Stock Orders and Deliveries.

The Eastern Car Co. has delivered 100 box cars, 60 tons capacity, to the C.P.R., completing a contract.

Canadian General Agencies, Quebec, is in the market for 25 second hand flat cars, of about 30 tons capacity.

Canadian National Ry. has received 29 express refrigerator cars, out of an order of 50, from Canadian Car & Foundry Co.

The C.P.R., between May 12 and June 12, received 8 steel sleeping cars from its Angus shops, Montreal, the frames of which were built by Canadian Car & Foundry Co.

The Alberta & Great Waterways Ry. is reported to have bought three passenger cars, one sleeping car, one combined sleeping and buffet car, one baggage car, 40 ballast cars and 2 locomotives in Chicago, Ill.

The G.T.R., between May 12 and June 14, received the following additions to rolling stock: 297 flat cars, 100,000 lb. capacity, from National Steel Car Corporation; 2 switching locomotives from its Montreal shops and 6 express horse cars from Osgood-Bradley Co.

pilot, of a design suitable for yard service without removal, is a feature worthy of note, as is also the specially designed cross-head wrist-pin, entering from the outside. The chief details are as follows:

Gauge	4 ft. 8½ in.
Cylinders	23½ x 30 in.
Valves, piston	14 in. diam.
Boiler, type	Straight top
Diameter	72 7-16 in.
Working pressure	250 lb.
Firebox, length	169 in.
" width	64½ in.
Tubes, diameter	5½ and 2 in.
" length	58-64 2 in. centers
Heating surface, firebox	200 sq. ft.
Tubes	1,528 sq. ft.
Arch tubes	27 sq. ft.
Flues	676 sq. ft.
Total	2,441 sq. ft.
Superheater	358 sq. ft.
Grate area	49 sq. ft.
Driving wheels, diameter	57 in. over tire
Journals, main, 11 x 24 in., others, 10 x 14 in.	
Engine truck wheels, diameter	33 in.
Journals	6 x 12 in.
Wheel base, driving	15 ft. 10 in.
Total engine	24 ft. 8 in.
Total, engine and tender	59 ft. 0½ in.
Weight on drivers	21,150 lb.
On truck	24,350 lb.
Total, engine	242,500 lb.

Consolidation, 2-8-0, Locomotive, Algoma Eastern Railway, built by Montreal Locomotive Works.

To provide for purchase, at prices not exceeding the amounts herein specified, of following railways (the debts of each railway to the Canadian Government Ry. to be cancelled, interest on the purchase price of each to be payable at the rate of 5% per annum from the date of taking possession to the date of transfer of title to each of the said railways as are within the jurisdiction of the Parliament of Canada are hereby authorized to sell their respective assets and undertakings accordingly):—
York & Carleton Ry., \$18,000; revote Moncton & Buctouche Ry., \$70,000; revote \$70,000.00
Caruquet & Gulf Shore Ry., \$200,000; revote \$50,000.00
Interest estimated, from date of taking possession to March 31, 1922, not exceeding (including revote \$30,000) \$47,500.00
The following items are chargeable to income:—

To reimburse for expenditures incurred during fiscal year 1920-21 in settlement of claims arising out of military service overseas of employees of Canadian Government Railways \$40,000.00
To supplement pension allowances payable under the provisions of Intercolonial and Prince Edward Island Railway Employees' Provident Fund Act so as to make the minimum payment, during the fiscal year of \$50.00 a month instead of \$20 as fixed by the act \$50,000.00
To pay for damages claimed by s.s. Harlem not exceeding \$130,000.00

Railway Fatalities.—During the three months ended March 31, 38 railway employees were killed in the operation of Canadian railways.

Canadian Car & Foundry Co., between May 14 and June 16, delivered 2 business cars to Canadian National Ry.s, and 234 tank cars to Imperial Oil Ltd., and received an order from the Toronto Transportation Commission for 40 additional motor cars for operation on the street railway at Toronto, this making the order at present in hand 140 motor cars and 60 trailer cars.

Algoma Eastern Ry. Locomotives.

As stated in Canadian Railway and Marine World for June, the Algoma Eastern Ry. received recently two consolidation, 2-8-0, locomotives from Montreal Locomotive Works, an illustration of one of which is given herewith. They are representative of the highest degree of development of the consolidation type for freight service, their tractive power of 49,400 lb. comparing favorably with that of many of the mikado type, with much longer wheel base. The frames are of vanadium cast steel of extra heavy section, securely panel-braced behind the cylinder castings. These, and the running gear, are designed for 24 x 30 in. cylinders, with boiler pressure of 200 lb., although the cylinders at present are bushed to 23½ in. diam. The straight top type boiler is equipped with a one-piece dome, of large pattern, to permit of convenient internal inspection. The cabs are of the vestibule type, steel and wood lined. A steel

Total, engine and tender	397,800 lb.
Tractive effort	49,400 lb.
Factor of adhesion	4.42
Weight of tender	154,800 lb.
Capacity, water	6,600 gals.
" coal	12 tons
Tender type, 8-wheel, gravity coal space, with Cardwell friction draft gear	Walschaert
Superheater	Schmidt, Type A
Brick arch	Franklin automatic, butterfly type
Grate shaker	Franklin, steam-operated
Driving box wedges	Franklin automatic
Reverse gear	Ragonet
Stay-bolts	Also flexible
Top check boxes	Nathan, type T
Cylinder cocks	Air-operated
Electric headlights	Pyle-National
Main driving boxes, Cole extension type, equipped with Franklin automatic lubricator	
Also Franklin unit safety-bar, laminated design, and Franklin radial buffers	

Railway News Agent Punished.—J. Caplan, news agent on a Canadian National Ry.s transcontinental train, was fined \$1,000 and costs or six months imprisonment, at South Porcupine, Ont., recently, for selling whisky to Indians west of Cochrane. A fellow news agent was fined \$50 and costs for tampering with Crown witnesses in the case.

The C.P.R. Land Department is reported to have let a contract for removing 6,000,000 cubic yards of earth on 50 miles of irrigation ditches in the Lethbridge northern irrigation district in Alberta at an estimated cost of \$1,680,279. The work will bring under irrigation 105,267 acres of settled country.

The Railway Problem in the United States.

Canadian Railway and Marine World for June contained, on page 303, particulars of the proceedings leading up to the hearings before a Senate Committee in Washington in connection with the railway situation, and some of the principal points made by the first witness, Julius Kruttschnitt, chairman of the Executive Committee, Southern Pacific Co.

Daniel Willard, President of the Baltimore & Ohio, stated that the present unsatisfactory railway conditions are a direct result of the war and the period of Federal control, when the railways were operated with entire disregard of their interests as independent properties. By a comparison of operating statistics, he showed that the railways under private operation in 1920 were operated more efficiently than ever before, and he expressed confidence in the provisions of the Transportation Act. He pointed out that the financial results attending railway operation in the United States in 1920 (See Canadian Railway and Marine World for May, pg. 255) were due to wage increases and high material prices, the necessity of making up for the under maintenance which the railways and their equipment were allowed to suffer during Government control, the necessity of paying back-time in wages without compensatory rates, and the necessity of getting cars back to home lines and building up operating organizations again. Dealing with charges made by W. J. Lauck (See Canadian Railway and Marine World, June, pg. 298) Mr. Willard said he would not deny there was a possibility of effecting savings and making improvements in present methods of railway operation, but this is a practical problem, not to be solved by Mr. Lauck's theoretical formulae. The physical improvements suggested would require huge sums of capital, which the railways during the past few years have found it almost impossible to obtain, and he claimed that all advisable improvements are being made as fast as capital can be obtained. If the new rates had been in effect during all of 1920, they would have added \$643,000,000 to revenue, and if the Labor Board's award had been in effect all the year, it would have increased expenses by \$102,000,000, making the net operating income for the year \$543,000,000, instead of \$62,000,000; but even at that, the return would have been scarcely more than 3% on the amount invested in the railways.

A. H. Smith, President, New York Central, who was one of the members of the committee to enquire into the Canadian railway situation in 1917, strongly urged that the Government quickly come to a settlement with the railways in connection with credits and debits arising out of Federal control, thousands of accounts being still open.

Julius Kruttschnitt, Chairman of the Southern Pacific Co., was recalled and questioned by members of the committee. His opinions may be summarized by stating, first, that the Transportation Act of 1920 is a good measure and should be given a fair trial, time for which it has not had to date; second, that the present bad financial condition of railways is the effect of the bad policies introduced during Government control; third, that the effect which it is claimed lower rates would have in the way of increasing traffic is speculative and theoretical, and,

altogether likely, fallacious, and fourth, that the only thing to help U.S. railways is an immediate reduction in their operating expenses.

Senator Cummins, who is the moving spirit of the investigation, brought out the fact that the cost of Government control of railways to the U.S. people was over \$1,500,000,000.

Howard Elliott, Chairman, Northern Pacific, outlined conditions on that line, and said that the making of a general reduction in freight rates would not help to solve the present complicated economical and psychological conditions in the U.S., but would reduce still further the ability of the railways to survive and exercise a large purchasing power. There was no inflation in railway rates during the war period and thereafter, as was the case with prices of products of most industries, so that at present there is no necessity for or possibility of deflation in rates. He considers that U.S. railways are too severely regulated, the fact being that regulation has encroached on the field of management, to the end that responsibility has been divided, and initiative checked, and costs and rates increased because of this. It was vision, initiative, energy, study and competition that made the railways what they were, and when these are removed by excessive regulation, the industry is bound to suffer.

Edward Chambers, Vice President, Santa Fe, in a prepared statement, clearly demonstrated that the present freight rates are not the cause of the diminished traffic. He showed that thousands of rates have been reduced since Sept. 1920, and that adjustments are going on all the time. By an analysis into present operating costs and past performance, he claimed that a general reduction in rates, which are not excessive under present conditions, would be impossible if the railways are not to be driven completely into bankruptcy.

H. E. Byram, President, Chicago, Milwaukee & St. Paul, outlined conditions on that system, and on other lines of that territory, which are similar to those obtaining on practically all railway properties in the U.S. On the M. & St. P., operating expenses in 1920 were over \$90,000,000 more than in 1916; net operating revenue decreased from \$36,844,637 in 1916 to \$3,461,613 in 1920, and the payroll in 1920 was \$61,000,000 greater than in 1916. He showed that, by applying all the tests by which efficiency in railway operation can be gauged, the property had been efficiently managed, but, on account of the magnitude of the operating expenses, net earnings of the railways generally have been so disappointing that capital for necessary improvements cannot be borrowed except at rates higher than the railways are entitled to earn on the value of their property under the Transportation Act.

Samuel Rea, President of the Pennsylvania, stated that the railways would be greatly helped in the time of financial trouble if the Government would quickly pay them the amounts still due from the period of Federal control. He pointed out that no general reduction in rates could be granted until such time as net operating income becomes satisfactory. He contended that the amounts, arising out of Federal control, owed to the railways by the Government should

not be offset by amounts spent for permanent improvements financed by the Government during Federal control, and owed to the Government by the railways, but that the Government should pay the railways the sums owed, and allow the railways to fund their debts to the Government. He pointed out that the Transportation Act gives the President discretion as to this, and showed why it is desirable, not only in the interests of the railways, but in those of the country also, that the funding be allowed. The amount involved for all railways is about \$800,000,000.

J. G. Walber, Secretary of the Bureau of Information of Eastern Railways, stated that the wage standardization policy of the U.S. Railroad Administration had produced many inequalities, and great injustice, in the pay of railway employees. The rigid application of standard rates of pay and working conditions, regardless of the section of the country where applied, and the great diversity in cost of living and other conditions, resulted in some employees being paid much more than they were entitled to, and others much less.

E. T. Whiter, who represented the railways before the U.S. Railroad Labor Board in the hearings leading to the abolition of the national agreements, as between railways and their employees, outlined to the senators the effects of these agreements in increasing operating expenses. He showed that the U.S. Railroad Administration made these agreements shortly before the railways were handed back to their owners. That with the shop crafts 4 months before; that with the maintenance of way employees 2½ months before; that with the clerks 1 month before; that with the firemen and oilers 6 weeks before; and that with the signalmen only one month before the properties were returned. In the classes of employment covered by the national agreement, there were employed in 1917, 1,206,520 men, whereas in 1920 there were employed 1,436,488. He showed how the abolition of piece-work brought about an immediate reduction in efficiency, ranging from 10 to 40%. He doubted very much whether the abolition of the national agreements will help the railways in their financial trouble. If employees meet the individual managements in the spirit intended by the decision ending the agreements, much will be accomplished, but if, on the other hand, the organizations maintain a position contending for that which in effect would be a continuation of the agreements, thus ignoring the principles laid down in the decision, little or no progress would be made, and the whole question would again be thrown back to the Labor Board, in the form of innumerable disputes, for decision as to what constitutes reasonable rates.

Alfred Thom, General Counsel, Association of Railway Executives, dealt with the long-standing dispute between the railways and the Government concerning the character of the maintenance which the railways receive while under Federal control. The agreement in this connection stated that the railways would be maintained during the period of Federal control in as good repair, and as complete equipment, as when taken over by the Government. The majority of the railways claim that their properties were under-maintained.

and the difficulty is to determine whether they were or not, or to find a means whereby it may be determined. The railways claim that the only true test is that of physical condition, while the Railroad Administration takes the stand that if sufficient money was expended upon maintenance, with due allowance made for increases in wages and the prices of materials, its obligations under the contract have been fulfilled. Mr. Thom analyzed the problem, pointing out that the interpretation placed upon the matter by the Railroad Administration's officers would not make the Administration responsible for the maintenance of the properties; it would only be responsible for the expenditure of a certain sum, and it would make no difference whether it were wasted or not.

Samuel Res, President of the Pennsylvania System, stated that that company had a claim of about \$40,000,000 against the Government for under-maintenance during Federal control, and that no decision had been reached as to the basis of settlement of such claims.

L. E. Wetling, Manager, Bureau of Statistics, Western railways, testified concerning the high maintenance costs

of 1920, showing how the maintenance deferred while the railways were under Government control, added to the costs of 1920, and demonstrated how higher prices for rails, ties, ballast and all other materials, coupled with increased wages, acted to increase maintenance costs.

W. H. Williams, Vice President, Delaware & Hudson Co., and Chairman of the Board, Wabash Ry., presented a detailed analysis of the relation of freight rates to cost of commodities transported. He demonstrated conclusively that increases in freight rates has not affected the volume of business, and in a clear analysis of present worldwide financial and trade conditions, showed how a reduction in rates would not have the effect of giving the railways an appreciably greater volume of traffic to handle, or improve conditions in any other direction.

Hearings before the committee are continuing, it being the expectation that the testimony of the railway executives will be finished shortly. The committee will then hear from the National Association of Owners of Railroad Securities, after which it will give shippers an op-

portunity to present their views, and finally receive testimony from labor organizations' representatives.

That the U. S. Government is fully aware of the serious nature of the railway financial situation, is shown by President Harding exhibiting a great personal interest in railway earnings and rates. He stated in the latter part of May, that he considered that a reduction in railway operating expenses and rates was necessary in the interests of increased business activity, and on June 1 he called at the Interstate Commerce Commission's offices, where the situation was discussed with Chief Commissioner Clark and other commissioners. It is stated that the President was gratified to learn of the numerous downward revisions of rates which are being made from day to day where most needed, and that he is now fully informed, as a result of his talk with the Interstate Commerce Commissioners, and his study of the matter, of the impossibility and undesirability of a flat percentage decrease in rates while the operating expenses of the railways are so high and the net earnings so unfavorable.

Caterpillars Interrupt New Brunswick Train Service.

Operation of trains on the C.P.R. between Fredericton Jct., mile 44.4, and Harvey, mile 65.1, on the St. John Subdivision, New Brunswick District, was seriously interfered with in June by great numbers of caterpillars on the rails, which made it almost impossible to prevent locomotive driving wheels from slipping. We are officially advised that difficulty was experienced in handling both passenger and freight trains, and a great deal of doubling of grades was necessary. Similar trouble was experienced on the Fredericton Subdivision, between Fredericton Jct. and Fredericton, 22.2 miles, but owing to the light grades on this subdivision, the difficulties of operation were not so pronounced.

To overcome the trouble, $\frac{1}{2}$ in. pipes were connected to the siphon valves in the locomotive domes and carried to the tops of the pilots, with $\frac{1}{4}$ in. pipes branching to each side of the pilots, and suspended over the rails, the idea being to have the jets of steam from the pipes clear the caterpillars from the rails ahead of the locomotive wheels. This arrangement did not work very satisfactorily, so $\frac{3}{4}$ in. pipes from the domes were substituted for the $\frac{1}{2}$ in. pipes, and $\frac{1}{2}$ in. branch pipes for the $\frac{1}{4}$ in., the $\frac{1}{2}$ in. pipes being supported over the rails by the pilot. This arrangement proved effective, and operation has not been interfered with by caterpillars since the locomotives were so equipped.

Railway Lands Patented—Letters patent were issued during April covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:—

	Acre.
Canadian Northern Ry.	450.00
Canadian Pacific Ry. roadbed and station grounds	72.39
Total	522.39

The production of bituminous coal in the U. S. for the year ended March 31, 1921, was 522,000,000 net tons, compared with 486,899,000 in 1919-20, 552,041,000 in 1918-19, 548,715,000 in 1917-18, and 504,102,000 tons in 1916-17.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U. S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Large Orders Given for Steel Rails.

The following orders in council were passed by the Dominion Government on the dates mentioned:—

April 21, 1921.—The committee of the Privy Council has had before it a report, dated April 20, from the Minister of Railways and Canals, representing that the Canadian National Ry. management advises that it requires for maintenance during 1921, in addition to the 20,000 tons of rails ordered in January, 20,000 tons for the eastern lines; and 35,000 tons for the western lines; and further, that to ensure safe operation, these rails should be ordered immediately. In addition to the above, 15,000 tons could be laid during this season, and thus relieve that quantity of used rails for branch lines graded last year. That negotiations have been carried on with the Algoma Steel Corporation and the Dominion Iron & Steel Co. for the purpose of agreeing on a price for the rails now required to be purchased. Both companies have quoted \$60 a ton, but the Algoma Steel Corporation now signifies its willingness to accept \$55 a ton, being the same price at which it was paid for the 50,000 tons ordered from it in 1920. The Minister, therefore, recommends that authority be given for ordering from the Algoma Steel Corporation, 50,000 gross tons of 85 lb. steel rails at \$55 a ton f.o.b. Sault Ste. Marie, Ont., and from the Dominion Iron & Steel Co., if it is willing to accept the same price, 20,000 gross tons of 85 lb. steel rails, f.o.b. Sydney, N.S.; further, if they make any other sales prior to Nov. 1 at less than \$55 a ton, the benefit of any reduced price will be given the Government on any rails so ordered. The committee concurs in the foregoing recommendation and submits the same for approval.

June 2, 1921.—The committee of the Privy Council has had before it a report, dated May 31, from the Minister of Railways and Canals, representing that, by order in council of April 21, authority was given for ordering from the Algoma Steel Corporation 50,000 gross tons of 85 lb. steel rails at \$55 a ton f.o.b. Sault Ste. Marie, Ont., and from the Dominion Iron & Steel Co., 20,000 gross tons 85 lb. steel rails at the same price f.o.b. Sydney, N.S., the said price to be subject to adjustment, if the companies, prior to Nov. 1, make other sales at a price less than \$55 a ton. These rails are required for the Canadian National Ry. To meet the G.T.R.'s requirements, the Minister, on the advice of the Deputy Minister, recommends that authority be given for ordering from the Algoma Steel Corporation 15,000 gross tons of 100 lb. steel rails at \$55 a ton f.o.b. Sault Ste. Marie, Ont., and from the Dominion Iron & Steel Co. 20,000 gross tons of 100 lb. steel rails at the same price f.o.b. Sydney, N.S. The committee concurs in the foregoing recommendation and submits the same for approval.

The total orders given for steel rails this year under the authority of Dominion Government orders in council amount to 125,000 tons, viz: 90,000 tons of 85 lb. rails for Canadian National Ry., 70,000 tons of which were ordered from Algoma Steel Corporation, and 20,000 from the Dominion Iron & Steel Co., and 35,000 tons of 100 lb. rails, A.R.A. type A for the Grand Trunk Ry., 15,000 tons from Algoma Steel Corporation,

and 20,000 from Dominion Iron & Steel Co. The price for all these rails is \$55 a gross ton, f.o.b. Sault Ste. Marie, Ont. or Sydney, N.S. respectively, provided that if the steel companies make any other sales prior to Nov. 1 at less than \$55 a ton, the benefit of any reduced price will be given the Dominion Government on rails ordered by it.

The Canadian Pacific Ry. has ordered from the Algoma Steel Corporation, 24,000 tons A.R.E.A. type, weighing 101.49 lb. a yard, shipment to be made in June, July and August.

The Napierville Jet, Ry. (Delaware & Hudson Co.) ordered recently from the Algoma Steel Corporation, 3,000 tons, 85 lb., C.P.R. section, rails, for delivery during June.

Special Instruction E to Railway Employes.

The Board of Railway Commissioners for Canada passed general order 343, June 17, as follows:—Re general order 322, Dec. 10, 1920, requiring railway companies to withdraw Special Instruction E from their respective working timetables, and hereafter observe the Uniform Code of Rules for Canadian Railways approved by general order 42, July 12, 1909; the necessary changes and instructions to employes to become effective June 1, 1921; and re order 340, May 19, 1921, extending such effective date until June 15, 1921; and re the application of the Railway Association of Canada for certain amendments to Rules 93 and 99 of General Train and Interlocking Rules, so as to provide for the method of operation now employed by certain of its member railways under Special Instruction E: Upon hearing the matter at Ottawa, June 15 and 16, the Railway Association of Canada, the Canadian Pacific, Grand Trunk, Toronto, Hamilton & Buffalo Ry. companies, and Canadian National Ry., the Michigan Central Rd., the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Engineers, the Brotherhood of Railway Trainmen, and the Brotherhood of Railway Conductors being represented at the hearing, and from what was alleged—the Board orders that the time within which the said changes and instructions may become effective be extended until Sept. 1, 1921, or until further order.

The Railway Association of Canada has applied to the Board of Railway Commissioners for certain amendments to Canadian Train and Interlocking Rules 93 and 99, to provide for the method of operation now employed by certain of its member railways under the so called Special Instruction E.

Transportation Lodge, A.F. & A.M., has been founded in Toronto, for members of the order who are in transportation service. The officers are: John Boyd, W.M.; J. W. Hickson, I.P.M.; W. Tansley, S.W.; L. C. Groom, G.W.; H. R. Buttrill, Secretary; A. R. Curran, Assistant Secretary; L. L. Grabill, Treasurer; G. A. Hoag, Chaplain; C. C. Smith, D. of C.; R. W. Long, S.J.; T. G. Gracey, J.D.; F. Fowler, I.G.; P. C. Lord, S.S.; J. H. C. Kendal, J.S.

The Canadian National Ry. Association, Toronto, held its annual picnic at Cobourg, Ont., June 25, two special trains being run from Toronto to Cobourg and return.

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian National Ry. System and Canadian Government Ry., the latter including the Intercolonial Ry., Prince Edward Island Ry., National Transcontinental Ry., and various local lines in the Maritime Provinces and in Quebec, which have been acquired by the Dominion Government.

	1921	1920
January	\$8,781,839	\$7,267,562
February	8,153,341	6,516,659
March	9,497,740	7,761,326
April	8,164,935	7,937,478
May	7,791,147	8,305,850

Gross earnings for three months ended June 21, \$44,846,120 as compared with \$43,965,120 for same period 1920.

Canadian Northern Railway System.

Following are approximate monthly gross earnings for the Canadian Northern Railway System for 1921 and 1920 respectively:

	1921	1920
January	\$5,094,100	\$4,200,790
February	4,840,500	3,862,390
March	6,119,700	4,887,700

\$16,054,300 \$12,547,700

Canadian Pacific Railway.

Following are the monthly gross earnings, working expenses and net profits for 1921, compared with 1920:—

	Gross	Expenses	Net	Increases
Jan.	\$14,465,430	\$13,824,065	\$641,425	\$5,454
Feb.	12,768,987	11,955,595	813,392	99,518
Mar.	14,765,727	12,254,818	2,405,909	493,144
April	13,761,840	11,115,769	2,646,131	304,285

\$55,701,984 \$19,150,127 \$6,551,857 \$952,431
Incr. \$2,419,962 \$1,836,742 \$585,220
Approximate traffic earnings for May, \$13,490,000, and for two weeks ended June 14, \$6,198,000, against \$16,161,000 and \$7,279,000 for same periods 1920.

Grand Trunk Railway.

Following are gross earnings, operating expenses and net earnings, monthly, for 1921, compared with 1920:—

	Gross	Expenses	Net	Increases
Jan.	\$6,402,587	\$6,954,707	\$548,120	\$270,100
Feb.	6,735,447	6,835,627	400,820	385,663
Mar.	6,223,007	6,624,893	598,131	322,880

\$18,359,041 \$17,905,227 \$ 740,113 \$1,491,633
Incr. \$2,886,907 \$1,395,274 \$1,491,633

Approximate traffic earnings for May, \$7,852,176, and for two weeks ended June 14, \$3,698,768, against \$7,562,661 and \$3,892,522 for same periods 1920.

Among the Express Companies.

W. B. Bradley has been appointed agent, Dominion Ex. Co., Estevan, Sask.

The Dominion Ex. Co.'s staff at St. John, N.B., has organized a baseball team.

The Canadian National Ex. Co. has opened offices at Grand Beach and Victoria Beach, Man.

The American Ex. Co. has declared its regular quarterly dividend of \$2 a share, payable July 1.

The Dominion Ex. Co. has opened a fruit office at Hatzie, B.C., and has appointed O. L. Andrews agent.

R. Fennell, agent, Dominion Ex. Co., Maple Creek, Sask., has retired on pension, on account of ill health.

A. McMahon has been appointed agent, Dominion Ex. Co., Weyburn, Sask., vice G. A. Brown, who has left the service.

N. K. Vosper, agent, American Railway Ex. Co., Vancouver, B.C., has been appointed the company's attorney there, vice L. E. Cochrane.

J. A. Walford, heretofore agent, Dominion Ex. Co., Edmonton, Alta., has been appointed agent at Penticton, B.C., vice W. E. Davis, who has been granted leave of absence.

The American Railway Ex. Co., a consolidation of the different express companies operating in the U.S., which was effected during the war, has declared a dividend of \$3.50 a share.

The Canadian National Ex. Co. has opened offices at Ste. Irene, Les Eboulements and Petite Riviere, Que., and has closed its office at Zephyr, Ont. The name of the Victoria Park, Man., office has been changed to St. Andrews.

A special meeting of shareholders of the Dominion Ex. Co. was called for June 28, to consider the advisability of increasing the capital stock, and fixing the amount to which it would be increased, in accordance with the amendments to its act of incorporation as outlined in our last issue.

The American Railway Ex. Co. has applied to the United States Railroad Labor Board for a hearing of its proposal for a reduction of wages for all its employees. The company has held several conferences with representatives of its different grades of employees, but no agreement has been reached.

J. B. Letellier applied to the Board of Railway Commissioners recently, for an order directing the Canadian and Dominion Express companies to accept shipments of alcoholic liquors from him, when made at Quebec in conformity with general tariff and other regulations, for delivery to points where no prohibitive law against the importation of such liquors is in force.

The National Dairy Council of Canada's application for a reconsideration of the Board of Railway Commissioners' order 28,885 of Oct. 19, 1919, refusing an application for a reduction in the express classification of ice cream from the first class to the second, was dismissed by the Board on June 8. The judgment and order are given in full under "Traffic Orders by Board of Railway Commissioners," on another page of this issue.

The National Dairy Council of Canada's application for an order directing that a reduction be made of 10c. on ice cream, and 5c. on the returned empties, shipped by express, respectively, from and to points where wagon service is provided by the express companies, whenever said service is not furnished as required, thus necessitating cartage by the shipper and receiver respectively, has been refused by the Board of Railway Commissioners.

Telegraph, Telephone and Cable Matters.

The Public Works Department has given a contract for transportation and delivery of supplies for the Yukon telegraph line, in Yukon and British Columbia, to M. Beirnes, Hazelton, B.C., at 22c. a lb.

The Naval Service Department has opened a radiotelegraph station at Port Burwell, Ont. It is equipped with the most modern sending and receiving apparatus, and has three operators. The range covers Lake Erie, and the station connects with other radiotelegraph stations extending from Port Arthur to the Atlantic.

R. C. Macdonald, of the Dominion Government Telegraphs, was reported recently to be preparing an estimate for the installation of a telegraph line in the oil territories in northern Alberta.

He is reported to have stated that the telephone line will be extended immediately from cache 23 to McMurray, and that at the end of May the right of way had been cleared to within about 2 miles from the latter point.

Canadian National Telegraphs have opened offices at Burnsville, N.B., Montreal East, Que., Beaumaris, Cardinal Canal, Clifton House, Niagara Falls, Macdill, Shakespear and Tannon, Ont., Tichfield, Sask., and Sunynook, Alta., and have closed offices at Darey, Ferguson, Gouin, Langlade, St. Jutes, and Weymont, Que., Blenheim, Collins, Hanover, Thor Lake, Uniacke and Varennes, Ont., Ladysmith and Liban, Man., and Harborg and Leslieville, Alta. The name of the office at Eaton, Sask., has been changed to Eatonia.

Aurora, or Earth Current, Effect on Telegraph Wires at Capreol.

Earth current of intensity sufficient to cause a marked reduction in the efficiency of telegraph circuits was observed on the Canadian National Telegraphs, at Capreol, Ont., at intervals for a day on two previous to May 14. It apparently reached a climax about 10.30 p.m. on that day, and persisted until after midnight, with such violence that the available measuring instruments were inadequate to measure it, and the wires were opened at 10.30 p.m. to save the equipment. It is, therefore, impossible to say exactly when the maximum disturbance occurred.

At 9.15 p.m. a no. 9 copper wire was grounded at Port Arthur, Capreol and Montreal, and mil-ammeter readings, taken at Capreol, on the west section, till 9.55 p.m., recording the maximum current value. At the beginning of the observation the wire showed a low positive potential from Port Arthur, but very quickly reversed to negative, the current rising to about 0.110 ampere. Frequent fluctuations and a maximum of 0.125 ampere were observed. The current then reversed and rapidly reached a maximum of 0.125 ampere positive, reversed to 0.070 negative, and after a few fluctuations again reversed and quickly reached 0.145 positive. Thereafter, until 9.55 p.m. the current, though fluctuating, was always positive. The maximum was 0.180 ampere. From 9.15 to 9.55 p.m. there were four complete reversals of polarity.

From 9.55 to 10.25 p.m. current readings were taken on both east and west sections of the wire at five second intervals. The section, Capreol to Montreal, showed negative potential from Montreal throughout the entire period of observation. The current varied from nearly zero to 0.130 ampere, until the final flood of current which terminated the readings. Readings on the section, Capreol to Port Arthur, followed roughly, but by no means, exactly, those on the eastern section, with the opposite polarity, as might be expected. The current from Port Arthur was generally positive, but dropped to negative four times, for brief intervals. On the western section the rise of current which terminated the readings was very rapid, rising in less than five seconds from a comparatively low value to something in excess of the capacity of the instruments and protecting apparatus. On the east section the rise was much less rapid, occupying fully a minute in reaching the limit of observation.

Before the repeater sets were cut out, the carborundum lightning arresters, having a resistance to ground of 50,000 ohms when cold, and connected in multiple with the regular set ground of 500 ohms, and the artificial line resistance of about 3,000 ohms, became white-hot. After the repeater sets were cut out, the current jumped the air gap lightning arresters at the switchboard. Attempts to open wires, by removing fuses, resulted in pulling out an arc 3 or 4 in. long. An attempt to open the line by removing a resistance lamp resulted in setting up an arc across the socket, which was blown out with difficulty.

Simplex telephone circuits were rendered useless by a roaring noise in the receivers, which rose and fell with marked regularity in periods of about two seconds. A telephone circuit became grounded at a lightning arrester. Just what happened on the telephone circuit is not clear, but the trouble was probably due to the fact that the circuit was connected to earth through the simplex.

Dominion Telegraph and Telephone Line Estimates.

The further supplementary estimates for the year ended March 31, 1921, submitted at the Dominion Parliament's recent session, contained the following item, under Public Works, chargeable to income:—

For construction of half cost of reconstruction of telegraph lines jointly owned by Anglo-American Telegraph Co. and Dominion Government \$4,750

The following items are chargeable to collection of revenue:—

Land and cable telegraph lines, Lower St. Lawrence and Maritime Provinces, including wages of ships required for cable service, further amount required	\$40,000
British Columbia and Vancouver Island District, further amount required	12,000
British Columbia, Vancouver Island District, further amount required	35,000
Yukon system (Ashcroft-Dawson), further amount required	35,000

The further supplementary estimates for the year ending March 31, 1922, contain the following items:—

Quebec County telephone lines, general repairs	\$3,000
British Columbia, Extension, Lumby to Suenar Lake	\$6,580
Telephone service on Pender Island, Mayne Island, etc., general repairs and improvements	2,000
Construction of telephone line from Houston to Ootcha Lake, Francois Lake and Burns Lake	8,200
Caribou District, telephone line from 100 Mile House to Canim Lake	4,000
Mainland telegraph and telephone lines, general repairs and improvements	21,500
Skeena District, telephone line from Clinton to Ganz ranch, to complete Skeena District, erection of telegraph office at Williams Lake	5,000
Skeena District, erection of garage and store shed at Ashcroft	2,200
Vancouver Island, telephone line from Squamish to Cheekamus House and Mons	600
Camall's Ranch and Dobson	1,200
Crestia to Anglemont	2,400
Mount Olie to Vavenby	1,600
Slocan City to Robertson	6,000
Sorrento to Blind Bay	5,160
Fairmont Springs to Canal Flats	800
Telephone exchange at Smithers, to complete	4,400
Caribou District, telephone exchange and line extensions at Vanderhoof, to complete	1,000

The further supplementary estimates for the year ending March 31, 1922, contain the following items under Public Works, chargeable to collection of revenue, telegraph and telephone lines:—

Prince Edward Island mainland	\$7,000
B.C. mainland further amount required	37,000

Electric Railway Department

Electric Railway Wages, Working Conditions, Etc.

Cape Breton Electric Co.—During March and April, the Manager, C. C. Curtiss, issued three bulletins to employees explaining the company's earnings and expenses and showing the necessity for a reduction in wages. The last bulletin, issued April 30, was as follows:—

"For some time I have been hoping that it might be possible to continue the present schedule of wages, but conditions now are such that it is absolutely impossible to avoid a reduction. The only other alternative seems to be bankruptcy, receivership and all that goes with it. As I think you know, wages constitute more than half of our total operating expenses, and with business becoming more slack each day, it is imperative that we reduce expenses to a minimum. The company went behind \$13,000 in the first three months of this year, without any allowance for depreciation, dividends, etc., and our best estimates at present indicate that April will increase this deficit. You have all undoubtedly noticed the falling off in traffic, and I can see no prospect of any immediate improvement. There is also a general falling off in the ferry and light and power department earnings from what we had anticipated. Although living costs have not fallen off as much as we would like to see, still, it is an admitted fact that considerable reduction has already been made. Such articles as sugar, butter, eggs, meats, flour, bread, etc., have declined considerably since a year ago and further declines seem certain. Clothing, shoes, etc., are also considerably cheaper than last year. It is true that coal has not yet declined in price, but for the next few months the item of coal will not be a serious consideration, and it is hoped that by the autumn there will be some reduction in the price of that commodity.

"Many men are out of employment all over the continent and thousands of others have had their wages cut, with further reductions in prospect. We are not making reductions simply because others are making them, but because we are faced by the same hard facts that confront all business men at present. You will remember that something over a year ago we merged into your regular wage schedule a 7½ to 15% war bonus, which had been in effect since shortly after the beginning of the war. Various other increases have been made to you at frequent intervals, and, as I am quite sure you will admit, we have given you every consideration at all times, and still expect to do so. Effective May 1, wages and salaries of all employees of this company will be reduced. In the case of superintendents and myself, this will mean going back to the salaries which were paid in Jan. 1920. In general, it is our intention to go back to the base of wages and salaries in effect in April, 1920, but in many cases slight adjustments will be made so that the average reduction will probably not be more than from 8 to 10%. A complete schedule showing proposed wages of each employe will be made up next week and furnished to the superintendents, so that they may communicate

to each one of you the rate which you will be paid beginning May 1, 1921. I sincerely hope, and honestly believe, that each one of you will accept these reductions in the same good spirit which you have shown at all times in the past. Even these reductions are not going to make smooth sailing for the company, and continued watchfulness, care, economy and co-operation must be exercised. I am counting on every one of you to help."

In addition to issuing the bulletins, Mr. Curtis discussed the matter with various groups of employees, and explained fully why it was necessary to make reductions, emphasizing that they were not being made simply because an opportunity offered, but on account of

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.
President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.
Treasurer, A. Gaboury, Superintendent, Montreal Tramway Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Light Co.; H. H. Connelley, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. McLintock, Vice President, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.
Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.
Official Organ, Canadian Railway and Marine World, Toronto.

the company being absolutely forced to do so, by reason of business conditions, and feeling that it was no injustice, as the cost of living had fallen off appreciably. The employees took the reductions in good spirit, without complaint or opposition. The old and new rates are as follows:—

	Cents per hour	Old	New
Conductors and motormen:			
1st six months.....	.40	.37	
2nd ".....	.42	.38	
2nd year.....	.44	.40	
3rd and 4th years.....	.46	.42	
5th and 6th years.....	.48	.44	
7th year and thereafter.....	.50	.46	
	Rate per day	Old	New
Mechanical department:		\$5.76	\$5.88
Foremen.....	4.30	4.00	
Fitters.....	6.00	5.50	
Mechanists.....	6.00	5.50	
Blacksmiths.....	6.00	5.50	
Carpenters.....	6.00	5.00	
Painters.....	5.50	5.00	
Armature winders.....	6.75	5.00	
Track department:			
Foremen.....	\$5.76	\$5.88	
Laborers.....	4.00	3.60	
Line department:			
Foremen.....	\$6.00	\$5.50	
Linemen.....	5.20	4.70	
Groundmen.....	4.00	3.50	
Power department:			
Station operators.....	\$5.38	\$4.80	
Station firemen.....	4.58	4.20	
Station repairmen.....	5.20	5.96	

London Street Ry.—We are officially advised that during the latter part of March, at approximately the same time as the employees, through their executive committee, gave the company 30 days notice of their desire to change the agreement, asking that all wages be increased 4c. an hour, and that time and a half be paid for overtime, the company notified its employees of its desire to cancel any existing agreement. The Ontario Railway and Municipal Board, which had been operating the property for nearly a year, had given the company notice that it would return the property to the company on May 1 and that a new agreement would be a matter between the company and its employees. Several meetings between the company's officials and its employees were held, at which the company offered to maintain, on a 30-day basis, the then existing rates of wages, but without any so-called surplus or bonus as had been paid to the employees by the Ontario Railway and Municipal Board for some months during its management. This so-called surplus or bonus amounted to approximately 1c. an hour for 7½ months. The company's proposition was not satisfactory to the employees, particularly with regard to the 30-day clause, under which either party could seek revision of the wage scale. The employees made application to the Minister of Labor for a board of conciliation and named J. M. Donahue as their representative. The establishment of a board was authorized and the company was asked to name its representative. At the same time, the company was advised that F. A. Stevenson, of the Labor Department, who was in London on other business, had been instructed to look into the case to see what could be done. While the establishment of the board of conciliation was being proceeded with, negotiations between the company and its employees were continued, with the result that a new agreement was drawn up containing the same working conditions as previously, and the then existing rates of wages, without the so-called bonus, pay for overtime and Sundays to be at 12c. an hour extra, and provisions were made for the revision of the rates of wages at any time upon 60 days notice from either party. This agreement having been effected, no further proceedings were taken towards the formation of a board of conciliation. The rates of wages fixed for motormen and conductors are:—1st year, 43c. an hour; 2nd year, 46c.; thereafter, 48c.

Montreal Tramways Co.—We are officially advised that on April 23, the company informed the president of the employees' union, that the agreement between the company would not be renewed on its expiry on June 30. In his letter announcing this, Lt.-Col. J. E. Blutchson, General Manager, said: "While it is not the present intention to make any general readjustment of wages, etc., at the expiration of the agreement, the management believes that it should be entirely free later to make any changes warranted by general economic conditions. A rather serious business depression is now being felt,

which causes a feeling of uncertainty regarding the future." Two or three conferences were held with the General Manager, and as a result, it was announced that the men had decided not to press for the signing of another agreement until the company gives notice that changes in wages and working conditions are to be made.

New Brunswick Power Co.—We are officially advised that the company notified its union and non-union employees May 1 that it did not desire to renew the agreement as to wages and working conditions which would expire June 14, and that the agreement would be cancelled from that date. The company subsequently submitted a new schedule of wages for motormen and conductors, and making certain changes in the working conditions. The new scale is as follows per hour:—

First 6 months.....	39c.
Second 6 months.....	41c.
After 1st year.....	42c.
After 2nd year.....	44c.
One-man car operation (extra).....	46c.
Snow work and training students (extra).....	46c.

The new scale makes a reduction of approximately 20% for motormen and conductors. For linemen, trackmen and car barn and mechanical department men, as well as for the majority of the gas house employees, the company proposed a 20% reduction, and for the power house staff, a reduction of 10%. The new schedule also abolishes overtime and extra payment for Sundays and holidays, and the wage contract is to be made between the company and individual employee. The working day is to be as near as practicable nine hours.

The local union decided, on May 24, to reject the company's proposal, and to insist upon the recognition of the union, and presented a demand for a renewal of the agreement at the old rate of wages. The company's proposals were bulletined at the shops, car barns, etc., May 26. Some attempts at negotiations were made, but without effect, and on June 6, the men applied to the Labor Department for the appointment of a board of conciliation. This was authorized, and W. F. Hatheway and C. W. Burpee were appointed to represent the employees and the company respectively.

Ottawa Electric Ry.—We are officially advised that at the end of March, thirty days prior to the expiry of its agreement with its employees, the company agreed to renew the agreement for another year to May 1, 1922. The agreement provides for the following rates of pay:—First year, 49c. an hour; second year, 51c.; third year, 53c.; fourth year and over, 55c. Time and a quarter is paid for Sundays and legal holidays, and time and a half for all overtime. The men work on a nine-hour day.

Port Arthur Civic Ry.—The city's public utilities commission is reported to have advised the railway employees that the present agreement as to wages, etc., is to be terminated before Aug. 1, and that it is prepared to meet the employees' representatives to discuss a new schedule.

The Toronto & York Radial Ry. having refused to become a party to the application of its dispatchers, storekeepers, freight men, wire men, line men, armature winders, boiler house operators and track men, for a board of conciliation, the Labor Department has appointed Allan Purvis, ex-General Superintendent, Ontario

District, C.P.R., as chairman, and F. H. McGuigan, formerly Fourth Vice President, G.T.R., to represent the company. L. Braithwaite is acting for the employees.

Toronto Suburban Ry.—Local reports state that differences between the management and the employees as to wages and working conditions are developing, and that it is likely that a board of conciliation will be applied for in a short time.

Winnipeg Electric Ry.—Negotiations which began on May 25 between the management and representatives of the employees, and with respect to spare men, were reported to have been completed on June 4. The matter is stated to have affected 170 out of the company's 1,046 employees, and only 40 at all seriously. The spare men got \$20 a week, whether they earned it or not, and the company desired to lay off about 40 of them, unless the other employees would agree to a rearrangement of hours so as to provide "time" for the spare men. The arrangement reached June 4, is reported to be the dropping of the guarantee of \$20 a week for all spare men, and for some redistribution of the work so that spare men will get a share of the work going.

Edmonton Radial Railway Operating Problems.

In connection with the consideration of plans for the improvement of service on the Edmonton Radial Ry. in Edmonton and Strathcona, Alta., a local paper has published the following from a report by the city commissioners:—

Referring to the recent plan which has been discussed and reported upon to the council, to route all street cars to a central belt line, discontinue all transfers, and reduce fares to 5c., your commissioners, after very careful consideration, are of the opinion that it would be a mistake to try such a system by using the present belt line on Sutherland Avenue from 101st St. to Syndicate Ave., for the following reasons: All cars would have to cross the C.N.R. on both sides. The belt line is too long, taking 15 minutes by car to complete the route. A definite tender is therefore being obtained for building a belt line from 101st St. along Elizabeth Ave. to Syndicate Ave., and will be submitted later.

Before coming to a definite decision on routing all cars to the centre of the city, and having no through cars, the following advantages and disadvantages must be considered: Advantages—The reduced fare from the outskirts to the centre of the city will be a benefit to the majority of citizens. The number of short-haul passengers will be largely increased. If a breakdown occurs in one section of the city it does not affect the service in another part of the city. The elimination of transfers will help to speed up the service. Disadvantages—The objection of some passengers to having to pay 10c. to obtain street car service from their homes to their work place of business; for instance, passengers from the east end going to the C.P.R. station, or the University, or passengers from the west end going to the Government buildings. The possible loss in revenue.

In connection with this, the following particulars are submitted: Passengers

and traffic receipts for the year ended Dec. 31, 1920, were: Passengers carried, 12,371,091; receipts, \$728,050. Required number of passengers at 5c. to produce same revenue during 1920: Passengers, 15,077,773; revenue, \$728,050. Additional passengers, 2,706,682; monthly, 225,557; daily, 7,416. Transfers collected during 1920 approximately 1,900,000. Deficit during 1920, \$200,100, which will probably be reduced to \$75,000 in 1921. The additional passengers required to wipe out this deficit at a 5c. fare would be 1,500,000, or 4,109 a day. The average number of passengers a day in 1920 was 33,680. The record shuttle run, apart from one year was 17,000,000 in 1913, approximately 46,580 a day, when the general fare was 6 for 25c.

One-Man Car Operating Results in Regina.

We are officially advised that the one-man cars which have been put in operation on the Regina, Sask., Municipal Ry., are remodelled single-end cars, with the exception of one single-truck double-end car in use on the short shuttle run. Apart from this shuttle car, the city's street railway department has remodelled in its own shop, 10 double-truck and 4 single-truck cars, and is giving a full service on three of the four lines. It was expected to have a sufficient number of additional cars remodelled by July 1 to give a complete one-man car service on all lines. As most of the Regina cars are of the same type as those on the Calgary, Alta., Municipal Ry., the McCauley system of remodelling the double-truck cars was adopted, but the single-truck cars are being turned end-for-end, thus taking advantage of the large rear vestibule for a front, or loading, vestibule. This has enabled the Regina cars to be provided with separate entrance and exit doors, and still operate them with hand brakes. The double-truck cars are fitted with air-brake equipment.

With the exception of the shuttle car, all cars are Y'd at the end of the lines, the cars backing on the curves in every case. To insure the pole taking the overhead frog in the right direction, there has been installed in each Y one spring frog designed and made up by the department's line foreman.

We are advised that the results in Regina from one-man operation have abundantly justified the change. Very few operating difficulties have been experienced. In fact, we are advised, some of the difficulties anticipated have failed to develop. It has been found that the car operators, on the whole, are favorably disposed to the one-man car, the comment of one of them being that he had no idea it would be so simple.

Ontario Hydro-Electric Railway Investigation.—The commission appointed by the Ontario Government, and presided over by Mr. Justice Sutherland, held a number of sittings during June for the examination of witnesses, followed by addresses by counsel, and it is expected that the sittings will be concluded early in July and that the commission will then proceed to prepare its report. Considerably over 100 sittings have been held.

The La Salle, Que., town council has under consideration tenders for the operation of an autobus service.

Toronto Transportation Commission's Motor and Trailer Cars.

Canadian Railway and Marine World for June contained a preliminary description of the 100 motor cars and 60 trailer cars ordered by the Toronto Transportation Commission. Another order has been given since for 40 more motor cars, making the total orders, 140 motor cars and 60 trailer cars. The Canadian Car & Foundry Co., Montreal, which has the orders, has supplied us with a fuller description of the cars, as follows:—

The motor car underframing will consist of roll section throughout. The center sills will consist of 4 in. o.h. steel Z bars, running from end of car to intermediate cross bearers. Balance of center sills to be 3 and 4 in. channels, all securely riveted together and further stiffened by diagonal braces. Body bolster to be made up of open heart steel plates 9 in. wide, trussed and further reinforced by cast steel center fillers. Side sills to consist of 5 x 3½ x ¾ in. o.h. steel angles, running from body end sill to body end sill in one length, reinforced at bolsters by 4 in Z bar. Side sill on side of sliding door to be depressed to provide for the steps. Body end sill front vestibule to consist of 9 in. rolled steel channel. Body end sill front and rear, built up truss construction. Buffer end sill front and rear 5 x 3½ x ¾ in. o.h. steel angle, securely riveted together to center sills and side sills, and further stiffened by diagonal braces.

The cars are to be equipped with special rolled section anti climbers for both front and rear platforms. Side girders to be 3/32 in. o.h. steel patent levelled plates, securely riveted to side sill angle and Z bar side posts, and further stiffened on top by a belt of double headed bar. Letterboard plates to be 3/32 in. o.h. steel, patent levelled, riveted to a 3 x 2½ in. side plate angle, and reinforced at lower edge with special pressed steel drip moulding. Sash rests of pressed steel riveted to belt rail and side posts.

The cars will be fitted with double floor, first course running crosswise, second longitudinal, also with maple floor slats. The roof will be of plain arch design, supported by 1½ x 1½ in. o.h. steel angle carlines, securely riveted to side plate angle. Wood furrings will be bolted to the steel carlines for supporting the roof. Roof boards to be 7/16 in. thick by 2¼ in. face, tongued and grooved, and covered with no. 8 cotton duck, stretched, and fastened to roof by upholsterers' cut tacks. Hood framing to be continuation of body roof. Joint of hood roofing to be made directly over body bulkheads facilitating easy repairs.

Each end of the car will be enclosed with a permanent vestibule, with five window openings in the circular part of the rear vestibule and three in the circular part of front vestibule. Windows in cars to be in two sections, lower part to raise except one window in front vestibule and two in rear vestibule, which will be arranged to drop. All windows to be fitted with latest improved sash fixtures.

Front entrance door to be provided with one folding step running entire width of opening and operated in conjunction with doors. Center sliding doors to be provided with stationary steps, all enclosed in body of car. Doors to be operated by National Pneumatic Co.'s latest door and step devices.

Cars to be equipped with radial draw bar of the latest design, to be fitted on rear end of motor car only and front of trailer. The front platform to be equipped with an emergency draw bar.

The interior of car to be finished in birch, stained cherry finish. Mouldings used throughout car to be of a plain and sanitary design. Head lining to be asbestos and to be in four sections. Joints of head lining to be covered with wood mouldings, which will also form an attachment for the lamps. Space is also to be provided for a standard advertising card above windows, entire length of the car body on both sides.

Car to be provided with a motorman's cab, separating the motorman entirely from the passengers. Car to be equipped with 14 cross seats, located at rear end of car. Front end of car to be equipped with longitudinal seats. All seats to be of slats and sanitary design.

Car to be equipped with route and destination sign at front of car, as well as at side sliding doors. Car to be fitted with hand brakes, in motorman's cab, and to be equipped with H. & B. life guards and fenders. Sanding arrangement to be air type, complete in every respect, with valve and traps. Side windows to have window guards located on outside the entire length. Motorman, conductor and passenger signals to be the latest improved system. Cars to be also equipped with ventilators, head lights, automatic door signals, gongs, trolley catchers, fully equipped with stanchions, illuminated by 15 36-watt tungsten lamps, all in separate circuits. Heating system to be forced air. Air brakes, Westinghouse semi-automatic.

Trucks to be C. C. & F. design, cast steel side frame, suitable for inside hung motors, including cast steel truss and body center plates and equipped with brass wearing ring between friction surface. Wheel base 5 ft. 10 in. Trucks to be equipped with roller side bearings. 30 in. diameter cast iron chilled wheels. Springs to be combination semi-elliptic and helical coil springs. One set of springs between side frames and journal box and one set of coil springs between the semi-elliptic spring and bolster, which will provide for easy riding when the car is carrying a light load. Axles, standard A.E.R.A. o.h. steel, 3¼ x 7 in. journals.

The trailer cars will be very similar in construction to the motor cars. They are to have 15 cross seats in rear end; front end of car to be equipped with longitudinal seats. The trailers will be mounted on 4-wheel trucks of C. C. & F. design, with 22 in. diameter wheels. This will provide very convenient floor height and comfortable steps.

All door openings will be provided with white enamel stanchions, which will serve as handles, making the entrance and exit safe and easy to negotiate.

Giant Motor Omnibus.—The London, Eng., General Omnibus Co. has ordered 200 motor omnibuses of its S. type, 15 of which are already in service. They are 2 ft. longer than the latest K. type and have seating capacity for 57, or 11 more than the K. type, owing chiefly to a lone seat in the inside at the front, on which passengers sit with their backs to the driver. The average London tramcar seats 74 people.

The Winnipeg Electric Railway's Franchise, Fares, Etc.

The Winnipeg City Council's public safety committee, which is considering the street railway situation in the city, had before it on June 1 a letter from the company's Vice President, A. W. McLinton, stating that pending the outcome of the negotiations the company was prepared to put into effect the following fares:—Cash, 7c. week days, 5c. Sundays. White tickets, 4 for 25c., good all times and Sundays. Red tickets, 9 for 50c., good week days 6 to 8 a.m. and 5 to 6.30 p.m. Green tickets (children), 8 for 25c., good every day all times. Or as an alternative: Cash, 7c. week days, 5c. Sundays. White tickets, 4 for 25c., good all times and Sundays. Red tickets, 5 for 25c., good week days 6 to 8 a.m., and Sundays. Green tickets, 8 for 25c., good every day all times. He also asked the consideration of the service at cost plan.

After consideration the committee instructed the special sub-committee, which is to carry on negotiations with the company, to deal only with certain questions, and not to discuss the service at cost proposals. The committee's recommendations were presented to the City Council June 5, as follows, and were approved:—"That it be authorized to discuss with the company and to include in its negotiations: Taking over the street railway at present or in 1927; general question of future relations of the city and the company for the remaining period of the franchise; making of a new agreement relating to the fares to be charged, as well as the time and manner of the determination of the existing franchise; forthwith determining the present existing franchise and the making of an agreement for an entirely new franchise."

One-Man Cars in Massachusetts.

A bill introduced in the Massachusetts State Legislature recently, in the interests of the street carmen's unions, backed by the American Federation of Labor, to prohibit the operation of one-man cars on electric railways, has been withdrawn. The labor interests centered their case on the alleged danger to the public, and the railway companies, while refusing this, showed the legitimate economy of the principles of one-man operation, and demonstrated conclusively that had it not been for one-man cars many more miles of railway track would have been added to the already large abandonments in that state. Several managers showed that the passage of any anti one-man car bill would result in the immediate suspension of service on many lines.

In regard to the operation of one-man cars in the state, the Massachusetts Department of Public Utilities requires only that some form of railway track device be installed accessible to passengers, which will permit anyone inside the car to apply the brakes and unlock the doors in an emergency.

The Montreal Tramways Commission and the Montreal Administrative Commission have been approached relative to the establishment of a line of motor busses from the foot of Beaudry St. to the St. Helen Island ferry on Victoria Pier.

Answers to Questions on Electric Railway Topics.

Snow Sweeping.—(a) In using standard self adjustable snow sweeper is it customary to release the wheel that controls the brooms entirely, thereby allowing entire weight of brooms to ride on the splints? (b) Or is it the best practice to so adjust the brooms that the splints will just touch the paving? (c) Which practice will show best economy both as to rattan saved and results accomplished?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—Brooms wear away unnecessarily fast if allowed to rest with full weight on pavement, besides which canes are bent so as to be less efficient in lifting snow. Distance from pavement will depend upon whether snow is wet or dry, and operator should lower broom until it sweeps clean, and no further. When snow is wet or gummy, it is a good plan with a double broom sweeper to lower the front broom to about 2 or 3 in. from pavement to take the loose snow, leaving the rear broom to complete the job.

W. H. Darracott, Chief Clerk to Manager, Winnipeg Electric Ry.—(b) It is our practice to so adjust the brooms that the splints will just touch the paving. (c) This practice is more economical as to rattan, and the results attained are more satisfactory.

Rolling Stock Maintenance.—What is the average number of employees per car engaged in general repairs, inspection and maintenance of rolling stock? Please state capacity of shop for handling cars, general type of equipment handled, character of service and frequency of overhauling.

W. H. Darracott, Chief Clerk to Manager, Winnipeg Electric Ry.—There are approximately 200 employees divided between three car barns and car shops. They are used for maintenance work on 340 passenger cars and 18 utility cars. Cars are inspected on a 500 mile basis, and are overhauled yearly. Shops and car barns are capable of taking in 40 cars for overhauling, and for inspection purposes practically every car on the system could be taken in.

Receipts and Deliveries by Dray.—To what extent do companies receive and deliver material and supplies by dray? Please state extent of this service and character of business handled.

H. E. Weyman, Manager, Lewis County Ry.—We did approximately \$24,000 a year in local express and freight business, employing six teams and one electric express and freight car. The electric car makes two round trips a day in summer and one in winter. The teams are used to transport freight across the ferry and as a feeder to the express car.

W. H. Darracott, Chief Clerk to Manager, Winnipeg Electric Ry.—The extent of deliveries by dray is approximately 20% of our material received, principally representing shipments by freight, the balance of our receipts, 80%, is auto truck delivery, principally from local distributing warehouses. It would pay if the railway companies cut out dray deliveries, 90% would then be auto truck service and 10% dray, this 10% being mostly bar iron and pipe, which appear to be always dray delivery.

Shop Jurisdiction.—Should a frog and switch shop operated by a street railway company be under engineering department (track division), or mechanical de-

partment? Please state reasons for answer.

W. F. Graves, Chief Engineer, Montreal Tramways Co.—Frog and switch shops should be operated by track department, in special buildings, with special equipment. This class of work is a specialty in itself, and if put in the company's general repair, will become general in supervision and routine, to which the work done was wholly foreign and, as a rule in the larger companies, there is sufficient work of this type to keep the shop in operation at all times.

W. H. Darracott, Chief Clerk to Manager, Winnipeg Electric Ry.—Our opinion is that the frog and switch shop should be under the supervision of track department. This work is distinctly one concerning track matters and should have the supervision of a foreman experienced in all around track work, who understands the requirements of the system.

Use of Air Brakes.—When using K35 controllers quadruple equipment and air brakes, how are motormen instructed to make the quickest and most reliable stops to avoid accidents?

A. Gaboury, Superintendent, Montreal Tramways Co.—Motormen are instructed that the quickest and most reliable stop to avoid an accident can be made with the brakes. The moment danger becomes apparent push brake handle to the emergency position and leave it there until car is stopped; if reverse is needed, one notch of power only must be applied. Sand to be used at same time.

Motor Repairs.—How many man-hours are required to remove armatures from box frame motors, including time of taking motor from under car, and What method of removal is used?

D. E. Blair, Superintendent, Rolling Stock, Montreal Tramways Co.—Our practice is to remove box frame motors complete from cars at car barns and to ship same to general repair shops for repairs. This practice has resulted in the average mileage between removals on all box frame motors being in the vicinity of 70,000 miles. This figure, I think, is satisfactory. Average time for removing and replacing motor, including shunting, is less than two hours. Average time for removing armature from frame and replacing, about thirty minutes. Motor frame is placed on bench raised about 12 in. from floor, in horizontal position, axis of armature being in line with bend of end of car, of 3½ in. pipe is slipped over pinion end of armature shaft. Pipe is supplied with hand and hook for attachment to crane. One man at outer end of pipe then removes armature quickly without any difficulty.

School Children's Fares.—What experience have member companies had with the abuse of school children's tickets, by reason of their being procured by students in colleges, trade schools, law schools, etc.; what form of ticket is used; what is the system of checking their issue to prevent their falling into the hands of those who are not entitled to them?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—Our school children's tickets are subject to a great deal of abuse until we adopted a school certificate. These certificates are issued, in various numbers, to the principals of public and high schools in

the city and surrounding districts, who certify the age of the bearer and that the child is a regular attendant at a school, and they in turn issue them to all pupils attending their schools, 12 years of age and over, desiring to use school tickets. To these pupils school tickets are only good on school days between 8 a.m. and 5 p.m., whereas for children under 12 years of age the school ticket is accepted as a full fare at all times. The school tickets are sold 10 for 25c.

Fare Collection in Zone Areas.—What method of fare collection have you found most satisfactory on city cars operating through three 5c. fare zones, or through three zones of any other unit fare; what type of car is used?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—Two-fare zones are the most that we have to contend with on any of our city lines. When a passenger boards a car at a point in the city, desiring to go into the second zone, or municipality, he deposits his fare in the box. On reaching the city limits the car remains at a standstill while the conductor goes through the car with his fare box (which is of the Coleman portable type), and collects an additional fare. We have both single and double end cars in use, and they are all of the p.a.y.e. type.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

Net	712	610

Edmonton Radial Ry.—A press report states that the Edmonton, Alta., public utilities showed a net surplus of \$14,989 for April, against a deficit of \$491 for April, 1920, making a total surplus for the four months ending April 30 of \$95,569. The Edmonton Radial Ry. is reported to have shown a surplus for April of \$3,406, against a deficit of \$4,434 for April, 1920.

A press report gives the following figures of the railway's earnings for the week ended May 28:—

	1921.	1920.
Earnings	\$12,449	\$12,135
Passengers carried	206,073	206,933
Wages paid	\$6,593	\$8,051
No. of employees	284	251

Oshawa Ry. Co.—Following are the directors for this year: J. E. Dalrymple, President; H. W. Cooper, Manager; J. H. Valleeau, Secretary and Treasurer; J. A. Yates, J. M. Sparling. The General Auditor is J. M. Rosevear.

Purciple Rand Belt Electric Ry. Co. A special general meeting of shareholders was called to be held in Toronto, June 4, to receive the final report of the Liquidator, J. H. Tighe, to consider the organization of a purchase company, and to receive tenders for a capital stock of \$50,000 with all assets. (Jan., pg. 26.)

Regina Municipal Ry.—A press report gives the following figures for May:—

Revenue	\$25,951.15	\$23,424.05
Passengers carried	421,806	485,830

Toronto Ry.—Gross earnings for May, \$667,056.28; city percentage, \$133,411.25, composed with \$664,438.42 gross earnings, had \$132,891.69 city percentage, for May, 1920. The amount owing to the city for percentages is \$1,318,000, plus interest.

The annual and special meetings of shareholders called to be held in February, and adjourned from time to time to June 24, were then further adjourned to Aug. 19, on account of the agreement for the sale of the power plants and radial railway properties not being completed. It is reported that one of the reasons of the delay in completing the agreement is due to vendors having asked that the Ontario Government guarantee some \$17,000,000 of the bonds to be taken in payment. Following a conference between the parties interested, it was reported that all danger of any hitch in the purchase going through had been removed.

Toronto Ry., Toronto & York Radial Ry. and allied companies.

The surplus, after allowing for fixed charges, for Apr. 1921, was \$52,310.

Death of W. W. Wylie.

W. W. Wylie, who was for over 20 years General Manager Ottawa Car Manufacturing Co., died in Ottawa, June 24, aged 62, having received a paralytic stroke a week previously. He was born at Valparaiso, Chile, May 17, 1860, of Scottish parents, and came to Canada, about 40 years ago. He engaged in carriage and wagon building, and in that capacity was brought into contact with T. Ahearn and W. Y. Soper, soon after they had taken hold of the Ottawa Electric Ry., for whom he built the first snow plough. He was subsequently given orders for car bodies, which he turned out satisfactorily. The result was the establishment of the Ottawa Car Manufacturing Co., in 1890, on the site of the Wylie carriage and wagon works plant. He was the first manager of the plant and held that position until 1912, when he retired from active work.

Toronto Railway Arbitration.—The Ontario Legislature, in order to remove doubts as to the meaning of a paragraph relating to "the award, conditions, tender and bylaw" in the agreement between the Toronto City Council and the Toronto Ry. Co., has passed an act declaring that the value of the company's real and personal property to be taken over by the city shall be determined by three arbitrators as provided in the Municipal Act, secs. 335 and 336. Sir Adam Beck has been appointed by the city council, and Sir Thomas White by the company, and Hume Cronyn, M.P., of London, Ont., has been chosen by them as the third arbitrator.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—A new intersection for crossing at Second St. has been procured from Montreal at a cost of \$6,500. (Nov., pg. 616.)

Chatham, Wallaceburg & Lake Erie Ry.—The Chatham, Ont., City Council is reported to have decided, May 31, that the company's tracks on King St., Chatham, be taken up, and that an asphalt covering be placed over the brick roadway. The Retail Merchants' Association has objected to the tracks being removed, and is reported to be asking for an injunction to prevent the council's decision being carried out.

Edmonton Radial Ry.—In connection with a proposed re-routing of cars, the City Commissioner suggests that a piece of line be built at an estimated cost of \$75,000 to connect the Namayo and 101st Street tracks. (Feb., pg. 92.)

Grand River Ry.—Owing to a lack of a two-thirds majority, the Galt, Ont., city Council failed to pass, on June 6, a bylaw granting the company the privilege of operating an industrial spur. The company desires a five-year franchise, but the hydro-electric railway interests oppose anything but a year's franchise. The matter is being considered by the local manufacturers and the railway company with a view to reaching a solution of the difficulty. (June, pg. 322.)

Hamilton St. Ry.—We are officially advised that about half a mile of double track on York St., Hamilton, Ont., will be relaid with 82-lb. girder rails in concrete. An order has been placed in the United Steel for 150 tons of steel rails for this purpose. (June, pg. 522.)

Hydro-Electric Ry.—Essex Division.—A press report states that the Windsor, Ont., City Council has authorized the expenditure of \$900,000 for improvements of the street railway.

London & Port Stanley Ry.—A press report states that a piece of land has been acquired for the addition to the London, Ont., shops; and that a paint shop is to be added to the car barns on Philip St., London.

The construction of an additional track in St. Thomas, is reported to be completed, making the line a double track one throughout that city. (June, pg. 322.)

Montreal Tramways Co.—We are officially advised that the company's programme of trackwork for this year provides for track renewals on 12 routes, a total of 8 miles of single track at an approximate cost of \$500,000 and the renewal of 20 intersections at a cost of \$300,000. On account of municipal requirements as to repaving, change of gradients, etc., tracks will have to be renewed, or relaid, on 20 streets within the city limits, totalling 19 miles of single track, at an approximate cost of \$1,000,000.

A press report states that a new line has been completed by the company from the end of the track at Abutisse westward to Bordeaux, and that it was expected to be opened for traffic during June. The question of the construction of a line up Mount Royal is reported to be not yet definitely settled. It is also stated that the Montreal Administrative Commission has no intention of urging the Montreal Tramways Commission to order for the building of the line, and the chairman of the latter commission is stated to have said there is a good deal of work to be done in other parts

of the city before the mountain line can be undertaken. (June, pg. 322.)

New Brunswick Power Co.—The St. John, N.B., city council proposes to pave Brussels St. at a cost of \$121,457, of which the track section, to be paid by the New Brunswick Power Co., is estimated at \$45,000. The company is reported to have advised the council, May 27, that it was unable to finance the work, and asked the city to raise the money on the company's note for two years at 6%. The council is considering the financing of the construction of the concrete base for the track at an estimated cost of \$27,000, on the one hand, or the paving of the sides of the street, leaving the track section as it is.

We are officially advised that the company contemplates the expenditure of about \$150,000 on trackwork during this year. (June, pg. 322.)

Sherbrooke Ry. & Power Co.—We are officially advised that the company proposes to renew about a mile of track on account of new paving, on King St. E., Aberdeen St. and Dufferin St., Sherbrooke, Que. (Dec., 1920, pg. 672.)

Electric Railway Notes.

Toronto City Council has authorized the raising of \$10,000,000 on account of the purchase and rehabilitation of the Toronto Ry.

The Port William Municipal Ry. and the Port Arthur Civic Ry. managements are reported to have practically agreed to operate the local lines in each city with one-man cars. A joint meeting of the two bodies was held June 15, to discuss one-man car operation on the line connecting the two cities.

The Edmonton, Alta., Utilities Committee is reported to have recommended a general change in the re-routing of Edmonton Radial Ry. cars, which, it is claimed, will give greater convenience to passengers and effect a saving in operation. The rearrangement was coupled with a proposal to reduce the fare to 5c, and as the City Commissioner wished to have some further facts to lay before the council, the discussion of the matter was postponed.

The New Brunswick Power Co. has, we are officially advised, decided to operate one-man cars as far as practicable on the St. John Ry., and it was expected to put them in operation by June 15. The man in charge is to be paid \$5 an hour extra. Pending a reduction in the price of new cars, the company's present car equipment will be converted for one-man car operation. The change to one-man operation will result in the dropping of about 50 men.

British Columbia Electric Ry. Franchise.—The terms of the proposed agreement between the company and the city of Vancouver, for a new franchise agreement, are still under discussion as to certain details. The propositions are also being considered by the other mainland municipalities, with a view to bringing the other franchises into line, and so having the whole of the company's lines on the mainland operated under practically similar agreements, terminating at the same time; though, of course, the fares would be somewhat higher in the surrounding municipalities. The commutation fare from the suburban zone would be 7½c. max. min.

The Toronto Transportation Commission's Work.

Equipment Orders.—As stated in Canadian Railway and Marine World for May, the Commission ordered 100 motor cars, and 40 trailer cars, from Canadian Car & Foundry Co., Montreal, taking at the same time an option on 50 more motor cars, which it has ordered since, making the total 150 motor cars, and 40 trailer cars. Other orders have been given Consolidated Steel Corporation, New York, Toronto and Montreal, for 4,800 tons grooved girder steel rails, some of A.E.R.A. standard, and the others A.R.A. series A, 122 lb. per yard, the total cost being approximately \$250,000, also to Canadian Steel Foundries, Montreal and Toronto, for a number of solid manganese intersections, at an approximate cost of \$55,000.

English Expert Engaged.—H. E. Blain, C.B.E., Assistant Managing Director of Metropolitan District Ry., London Electric Ry., City & South London Ry., Central London Ry., and London General Omnibus Co., and also a director of the Wimbledon & Sutton Ry., London, Eng., spent some time in Toronto recently, having been engaged to give the Commission general advice on the city's transportation problems.

Appropriation for \$7,000,000.—The Commission applied to the city council recently for \$7,000,000, the application being made in a letter from the General Manager, as follows:—

"The Commission, since its organization last autumn, has been engaged upon a careful survey of the city's transportation problems, in order that it might carry out the duties entrusted to it in the most efficient and economical manner. While such survey is not complete, it has become manifest that the time has now come to proceed with the work necessary for the unification of the systems, if the plan for the amelioration of the city's transportation facilities is to proceed satisfactorily when the Toronto Ry. Co.'s property is taken over next autumn. The Commission therefore begs respectfully to make requisition on the city council for \$7,000,000, in order to carry out the duties imposed on it by the statute by which it is constituted. These funds are required in order to commence the following works: (1) The connection of the existing lines now operated by the Toronto Ry. Co. with those of the civic street railway system. (2) The provision of the first installment of motor cars and trailers for the unified system. (3) The plant and materials necessary for the rehabilitation of existing street railway system and the laying of connecting lines and extensions. (4) Special work, overhead equipment, and materials generally, including labor. (5) Car barn and shop facilities for the Commission's work. (6) Preparation of designs for new plant and equipment and general organization work, including surveys, and general development work. The whole of the funds covered by this application will not be required immediately, and it is suggested that these be provided from time to time as may be arranged with the city's Finance Commissioner."

Cost of Pavement Widening, etc.—Following a conference between the Commission and the city board of control, the Commission's General Manager submitted the following proposals to the board of control recently:—

"1. Cost of roadway widenings, reconstruction of sidewalks, and other works necessitated by such widenings.

(a) Where a street on which a new line is to be laid is unpaved, the work as outlined (in brief) above to be carried out and charged as far as possible as a local improvement in the ordinary way. The Commission to pay the capital cost of the tracks, foundations and paving within the track allowance, less a sum (to be defrayed by the city) equal to the cost of a pavement (and foundation for the same) on the track allowance, of the same type and construction as is to be laid on the roadway outside the track allowance. (b) Where a street on which a new line is to be laid is already paved, the capital cost of the above work necessary to be carried out, to be defrayed by the city. The commission in this case to defray the whole of the capital cost of the work of laying the tracks, foundations and paving within the track allowance.

"2. Division of the capital cost of paving the track allowance as between the city and the commission. In the case of new lines on existing streets (other than those defined in clause 1), or in the case of rehabilitation of existing lines on any streets (including the widening of the 'devil strip' and the remodelling of curves), the Commission is to pay the capital cost of the tracks, foundations and paving within the track allowance, less a sum (to be defrayed by the city) equal to the cost of a pavement (and foundations for the same) on the track allowance, of the same type and construction as that laid on the portion of the roadway outside the track allowance.

"3. The cost of maintenance of the existing pavements on the track allowance, pending rehabilitation, to be divided between the city and the Commission on the same basis as provisionally agreed between the Works Commissioner and the Commission's General Manager in respect of maintenance of new and rehabilitated pavements on track allowance, viz:—

"The Commission to defray the whole cost of repairs arising out of repair or inspection of the rails or bonds by the Commission. The Commission to defray 25% of the maintenance cost, the balance to be defrayed by the city.

"Pending the settlement of the foregoing, the Commission is unable to proceed with its plans for co-ordinating the existing systems and ameliorating existing conditions after Sect. 1 next."

The proposals, as stated above, were approved by the board of control and city council.

Electric Railway Freight and Passenger Rates.

Chatham, Wallaceburg & Lake Erie Ry.—The Board of Railway Commissioners passed order 31,128, June 14, approving the company's Standard Passenger Tariff C.R.C. 45.

Cornwall St. Ry., Light & Power Co.—Cornwall, Ont., ratepayers are to vote on a bylaw to extend the Stormont Electric Light & Power Co.'s franchise for 10 years from 1923, when the present franchise will expire. This company is controlled by the Sun Life Assurance

Co., which also owns the Cornwall St. Ry., Light & Power Co., the electric railway tracks of which are reported not to be in good order, but the company has offered to put them in order, provided the Stormont Co.'s franchise be extended, and that the railway franchise be so amended to allow of fares being raised from 5c. to whatever the fare may be in Toronto, if the Cornwall Town Council is able legally to permit it to be done.

The Detroit United Ry. is reported to have put in operation a 5c. fare, with 1c. for transfers, on its Detroit city lines.

Edmonton Radial Ry.—On the recommendation of C. J. Yorath, City Commissioner, and R. Colwell, Superintendent, of the Edmonton, Alta., City Council's utilities committee, May 21, passed a report favoring a return to a 5c. fare, without transfers. The matter was to have come up at a council meeting on May 24, but was withdrawn from consideration, the City Commissioner desiring to have more specific information to submit.

Grand River Ry.—The Board of Railway Commissioners has passed the following orders:—31,116, June 10, re company's application for approval of Supplement 1 to Standard Freight Tariff C.R.C. 57, and Supplement 1 to Standard Passenger Tariff C.R.C. 14. The company is authorized to publish and file a standard freight tariff, showing an increase in freight rates, on the same basis as those authorized under the provisions of general order 308, Sept. 9, 1920. The application for increased passenger fares is refused.

31,118, June 16, approving the company's Standard Mileage Freight Tariff C.R.C. 57.

International Ry.-Niagara Gorge Rd. On May 1, a joint passenger traffic tariff on these lines increased the one-way fare between Buffalo and Lewiston, N.Y., by 10c., and the round trip fare by 11c. The Buffalo-Youngstown, N.Y., single fare was increased by 8c., and the round trip fare by 5c.

Lake Erie & Northern Ry.—The Board of Railway Commissioners has passed the following orders:—31,115, June 10, re company's application for approval of Supplement 1 to Standard Freight Tariff C.R.C. 165, and Supplement 1 to Standard Passenger Tariff C.R.C. 23. The company is authorized to publish and file a standard freight tariff showing an increase in freight rates on the same basis as those authorized under the provision of general order 308, Sept. 9, 1920. The application for increased passenger fares is refused.

31,117, June 16, approving the company's Supplement 1 to Standard Mileage Freight Tariff C.R.C. 165, the same being on the basis of rates authorized by order 31,115, June 10.

Montreal & Southern Counties Ry.—W. B. Powell, General Manager, is reported to have stated recently that the present fares of 3.45c. a mile will not be reduced on the coming into force of the reduced fares re steam railways June 1. The 20% increase granted steam railways in Sept., 1920, was not participated in by the M. & S.C. Ry., and it is likely that the rates on that line will remain the same as on the steam lines for some time to come.

Winnipeg Electric Ry.—See under "The Winnipeg Electric Ry.'s Franchise, Fares, etc." on another page of this issue.

Marine Department

General Shipbuilding Matters Throughout Canada.

Alberta and Arctic Transportation Co., Ltd., Edmonton, Alta., is reported to have secured a site at McMurray for a shipyard, and intends building and repairing boats. The manager is stated to be W.J. West.

Alberta Motor Boat Co., Edmonton, Alta.—The Hudson's Bay Co.'s house boat H.B.C., built by this company, was expected to sail early in June with a Government party for Dogrib and the Slave Lake. The boat is 50 ft. long, 11 ft. beam, with a draft of 12 in. Her approximate gross weight is 3 tons, and she is considered a novelty for transportation on northern waters. She has been built of Alberta spruce, and, having no machinery, will be towed by the H. B. Co.'s gasoline tug Nechemus, which is equipped with 60 h.p. Buffalo engines. With the exception of a small deck in the bows, the hull is occupied by a long cabin, with berths, a table running through the center, which, when not required, is elevated to the roof. The sides of the cabin are normally open, but are fitted with wooden shutters to close it completely as required. The galley, etc., are located at one end, and a lifeboat, and other items are stowed on the roof.

The company is also building a number of small boats and power canoes, equipped with 6 h.p. Waterman engines, for service on the Arctic coast.

It is also building a launch for Imperial Oil Ltd., for operation on Great Slave Lake, and in the vicinity of the Fort Norman oil fields. This boat will be 25 ft. long with 8 ft. beam, and will be equipped with a Scripps engine, electric starter, electric search light, etc.

The Alberta & Great Waterways Ry. is having a launch built for its officials' use on the Clearwater and Athabasca Rivers. This boat will be 25 ft. long, with tunnel for propeller shaft and rudder, and will be equipped with a 60 h.p. Scripps engine.

J. A. Balcom & Co., Magareville, N.S. The wooden steamship Ruby L. II, launched by this company recently, has been taken to West St. John, N.B., where the machinery is being installed by Union Foundry Co. When completed she will take the place of the Ruby L., which is operated on the Bay route by the Margareville Steamship Co.

Beauchemin & Co., Sorel, Que. — The ferry steamship Duchess of York, owned by the King Edward Park Co., Montreal, has been overhauled and fitted with new paddle wheels and steering gears at this company's plant. The company has also installed new steering gear in the s.s. Boucherville, operating the ferry service between Montreal and Boucherville, Que.

B.C. Marine Engineers and Shipbuilders Ltd., Vancouver, B.C.—The auxiliary powered schooner Lady Kindersley, built by this company for the Hudson's Bay Co., underwent her preliminary trials June 6, making two runs past Point Atkinson, when she registered 8½ knots, and it was expected that when the engines were in use she will reach 9½ knots with ease.

Canadian Vickers Ltd., Montreal.—The s.s. Idefjord, built recently for Nor-

wegian American Line, underwent her trial trip in the St. Lawrence recently as far as Sorel, for a thorough test of her machinery. During the trip down and back she maintained an average speed of 13 knots. After being taken over by her owners, she loaded cargo for Norway.

Canadian Government Steamship Dollard.—A Montreal paper, which professes to be an authority on shipping, published the following recently: "The Kingston Shipbuilding Co. has been awarded the contract for the new Government steamer Dollard, to cost about \$160,000." Enquiry of the Marine Department has elicited the information that there is nothing in the report. That Department already has steamship

plant and buildings are stated to represent an investment of \$1,574,149, and include office buildings, workshops, yard equipment and power house. The yard equipment includes 5 permanent shipways and 3 electric gantry cranes. The land occupied is held on a 42-year lease from the Toronto Harbor Commissioners, and consists of 13 acres with a water front of 1,868 ft. The annual rental is \$22,100 for the first 21 years, and for the remaining portion is to be determined on the value of the property at July 1, 1940. Tenders will be opened by the Official Referee, Aug. 31.

Fraser, Brace Ltd., Montreal has built a steel ferry boat, named Amy, for the Laurentide Co. Grand Mere, Que. She was shipped by rail to Grand Mere, where she will be used in transferring passengers, automobiles, etc., across the St. Maurice River.

A deputation of Collingwood Shipbuilding Co.'s employees, engaged on the completion of the two steel cargo steamships for Canadian Government Merchant Marine, at the Dominion Shipbuilding & Repair Co.'s yards at Toronto, waited on the acting Prime Minister and the Minister of Marine recently, to ask that the Dominion Government continue work on two ships, the keels of which had been laid prior to the company's bankruptcy. The deputation claimed that it would be impossible for the men now at work at the yards to obtain employment when the yards were closed, and pointed out that about 75% of the 700 employed are returned soldiers, and also asked the Government to consider the question of maintaining the yards permanently. The two keels mentioned were for ships on order for private interests, and are in no way associated with Dominion Government orders for Canadian Government Merchant Marine.

Halifax Shipyards, Ltd., Halifax, N.S. Following a survey of damage sustained by the s.s. Impeco, owned by Imperial Oil, Ltd., at Halifax, after being released from Blonde Rock, where she stranded Apr. 6, tenders were called for by the underwriters for repairs and overhauling. A press report states that tenders were sent in, 2 being by Canadian companies, viz., Fraser, Brace & Co., Montreal, and Halifax Shipyards, Ltd. Tenders are reported to have ranged from rather less than \$25,000 to \$395,000, the lowest being submitted by Halifax Shipyards, Ltd.

Harbor Marine Co., Victoria, B.C., which is a subsidiary of the Victoria Machinery Depot Co., and which was formed to carry out Marine Department contracts 29 and 30, for the construction of the steel cargo steamships Canadian Winner and Canadian Traveller, for Canadian Government Merchant Marine, is defendant, with the Victoria Machinery Depot Co., and C. J. V. Spratt, President of both companies, in an action brought by J. S. Clark, marine architect, in the Supreme Court of British Columbia, for breach of agreement. He claims to be entitled to 5% of the gross profits of the contract, with a salary of \$500 a month for several months, and

Dominion Marine Association.

President, A. A. Wright, President, Tide-water Shipbuilders Ltd., and Vice President and Managing Director, Davis Shipbuilding & Repairing Co., Montreal.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines Ltd., Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, W. E. Burke, H. W. Cowan and T. R. Enderby, Canada Steamship Lines, Ltd., Montreal; Yvon Dugre, Sincennes McNaughton Line, Ltd., Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algonquin Central Steamship Co., St. Catharines, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Col. G. P. Murray, C.M.C., Ottawa; Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Montreal; J. F. Sowards, Kerr Ferry Co., Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Kerstone Transportation Co., Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; A. A. Wright, Toronto, and L. L. Henderson, Montreal.

Dollard, which was built at Kingston in 1913, and which is at present working out of Halifax, N.S.

Collingwood Shipbuilding Co., Collingwood, Ont. See also Dominion Shipbuilding & Repair Co.

Collingwood Shipbuilding Co., Kingston, Ont. The work of overhauling the Ontario Car Ferry Co.'s car ferry, Ontario No. 2, preparatory to her summer service, has been practically completed at this plant, and work was commenced recently on similar operations on the car ferry Ontario No. 1.

Cepeland and Wright, Sidney, B.C., launched the motor tugboat Tim at the end of May, for the Timberland Development Co., Ladysmith, B.C. She is 36 ft. long by 9 ft. beam, equipped with Canadian Fairbanks-Morse engine, for a speed of 7 knots.

Dominion Shipbuilding & Repair Co., Toronto.—The liquidator, Osler Wade, Toronto, is offering this company's plant and equipment for sale by tender. The

commissions due under a contract. In his evidence, plaintiff stated that he had prepared an estimate for the purpose of showing the distribution of \$190 a d.w. ton, first offered by the Government for the ships, and later increased to \$198 a d.w. ton, and that he assured the company that the offer of \$190 a ton was worth accepting, and if it was intended to go into the shipbuilding business, then was the time, as no Government would ever make the same offer again. He stated that from July to December, 1918, his services had been voluntary, and he had received no monetary consideration, nor thanks. Prior to his services with the company, he had been engaged by the Imperial Munitions Board on ship construction and had prepared plans for the construction of ships for that board. The estimate as prepared by him, for the two ships, Canadian Winner and Canadian Traveller, according to the

tempt to figure on actual costs, owing to the fact that the company had to keep the ships in repair for six months after acceptance by the Government, and some of the bills from John Inglis Co., in connection with the machinery, were still in dispute. He stated that he secured a promise of an order from the Minister of Marine in Nov. 1918, and then went to New York to meet officials of the Foundation Co., with the view of selling the Harbor Marine Co.'s assets and the contracts. He later signed the contracts with the Government and became obligated to build the ships. He told the Minister of Marine that he had a shipbuilding plant, and the Minister was satisfied. He engaged the plaintiff as Chief Engineer of Ship Construction, and not as Naval Architect, at \$225 a month. Plaintiff demanded payment of \$20,000 after the launching of the Canadian Winner, and again

Machinery Depot Co. The notes from the Dominion Government, in payment of the work as it progressed, were given to the Victoria Machinery Depot Co., and endorsed to the Harbor Marine Co., by him as President, V. M. D. Co. The agreement called for the payment to plaintiff of 2 1/2% at the launching of the Canadian Winner, but it was claimed that this was more than offset by delays in construction, etc., which reduced profits and delayed Government payments. It was planned to launch the ships ready to steam, but this was not possible, and the Victoria Machinery Depot Co. had done what boiler adjustments and installations had been found to be necessary, and had done it more cheaply than any Vancouver or Seattle tender received. He contended that plaintiff had been engaged as "a common employee, and there had, at no time, been any subterfuge about his employment."

Steel Cargo Steamship Glenafton, Glen Transportation Co.

report, showed that a profit of \$600,000 could be made on each ship. While the case was proceeding, reference was made to a car barge being built by the company for the C.P.R., and plaintiff is reported to have stated that his estimate for the construction of the barge was \$160,000, and he understood that the whole of the overhead for that, and the whole of the cost of the barge, had been placed against the two Canadian Government Merchant Marine ships.

C. J. V. Spratt, President, Victoria Machinery Depot Co. and Harbor Marine Co., denied the plaintiff's allegation that the machinery supplied by the former company to the latter was scrap; it was mainly new, with three punches which were shop worn. It was difficult to obtain new machinery at the time, and some tools had been rented from the V. M. D. Co. at \$300 a month, and others at an additional rental, to be returned in good condition, or paid for. He claimed that plaintiff wanted money advances on his own statements, which he was advised were incorrect, being thousands of dollars out according to the company's books. He declined to at-

tempt to figure on actual costs, owing to the fact that the company had to keep the ships in repair for six months after acceptance by the Government, and some of the bills from John Inglis Co., in connection with the machinery, were still in dispute. He stated that he secured a promise of an order from the Minister of Marine in Nov. 1918, and then went to New York to meet officials of the Foundation Co., with the view of selling the Harbor Marine Co.'s assets and the contracts. He later signed the contracts with the Government and became obligated to build the ships. He told the Minister of Marine that he had a shipbuilding plant, and the Minister was satisfied. He engaged the plaintiff as Chief Engineer of Ship Construction, and not as Naval Architect, at \$225 a month. Plaintiff demanded payment of \$20,000 after the launching of the Canadian Winner, and again

McMurray, Alta. — A considerable amount of small shipbuilding is in progress here. The Hudson's Bay Co. is reported to be building a 75 ft. boat, in addition to a number of scows. The Northern Trading Co. is stated to be building a large lumber of scows, and the steamboat North Pioneer is well on the way towards completion by A. J. Bucking, while a number of similar craft are in various stages of construction.

National Shipbuilding Corporation, Three Rivers Shipyards Ltd. Division.—The oil tank steamship Capitaine Demaine, approximately 6,500 d.w. tons, was launched at this yard, June 8. This ship, which was partially built when the building company went into bankruptcy, is being completed by the owners, La Societe Naphtes Transports, Marseilles, France, and the engines are being built by Canadian Allis-Chalmers Ltd., Toronto, and auxiliary machinery by Canadian Vickers Ltd. The ship is to be classified 100A1, for carrying petroleum in bulk.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., is building a steel yacht, to be named Sea King, which was ordered last year for exploring purposes,

for Baron Bliss, Bahamas, British West Indies. She will be 137 ft. between perpendiculars, with a moulded depth of 28½ ft., and will be equipped with two 250 h.p. Vickers-Peters semi-Diesel oil engines. All the auxiliaries will be electrically driven, including the anchor 42½ ft., depth moulded 21 ft. Her gross tonnage is 1,866.31, and she has an estimated deadweight carrying capacity of 3,000 tons.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The steel freight steamship *Glenafon*, an illustration of which is given herewith, was built by this company for the Glen Transportation Co., of Midland, Ont., and was delivered April 30. She is designed for both lake and ocean service, the length over all being 250 ft., length between perpendiculars 251 ft. 1½ in., breadth moulded windlass and capstan. She was expected to be launched during May, but we were advised June 4 that launching was delayed owing to the coal strike in Great Britain, and that a definite date for the launching could not be stated.

Sydney Foundry & Machine Works, Sydney, N.S.—The marine railway which this company is building, as mentioned in previous issues, will have a lifting capacity of 1,200 d.w. tons. It will be a standard railway drydock and will measure 200 ft. over the keel blocks, and 50 ft. wide, and will give 10 ft. of water forward and 16 ft. aft at mean high tide. It will be of timber construction on a pile foundation and will be operated by two 2½ in. chains and a powerful hoisting machine capable of docking a full load in about 30 min. The work is being done by Crandall Engineering Co., East Boston, Mass., the machinery and iron work being made by Sydney Foundry & Machine Works.

Toronto Drydock Co., Toronto, built the steam tug *R. Gray* for the Spanish River Pulp & Paper Co., of Sault Ste. Marie, Ont., recently, and sailed from Toronto, towards the end of May, in charge of Capt. T. L. Ganley. Her dimensions are: length over all 151 ft., beam 24 ft., depth moulded 14 ft. She is equipped with modern engines and boilers, and has a wireless telegraph installation. She will be used for towing pulpwood to the owning company's mills and has been equipped with a steam towing machine and windlasses.

The Niagara, St. Catharines & Toronto Navigation Co.'s s.s. *Northumberland* was overhauled at this company's yard during the winter and several alterations made. Herebefore the boat deck has not been a passenger deck and the necessary changes were made to convert it into a passenger deck, thus providing deck space required for the lake business. Four state rooms at the forward end of the old dining room have been removed and the dining room has been turned into a room with hardwood floor for dancing. The forward end of the cabin has been moved aft about 10 ft., in order to increase the forward deck space. New plumbing has been installed throughout, decks have been re-canvassed, new galley and dining rooms provided for the crew, and the ship and machinery have been given a general overhauling. The improvements made have increased her license by over 100 tons. Part of these changes were made by the Toronto Drydock Co. and the balance by the owning company's own men.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—It is reported that the Dominion Government has decided to take over and complete the three remaining barquentines, of the four which this company agreed to build at the Cholberg shipyard, under special Dominion Government aid. The agreement entered into between the Government and the company provided for the construction of four barquentines, each with a cargo capacity of 2,400 d.w. tons, or 1,500,000 ft. lb. of lumber, at an estimated cost of \$250,000 each, towards which the Government was to advance \$700,000 as a loan under special terms. The ships were to be completed within 12 months of the commencement of construction. The chief object in providing this aid was to relieve the unemployment situation in Victoria, owing to the disturbance of the labor market due to military demobilization.

After considerable difficulties, one of these ships, named *S. F. Tolmie*, was finished, and it is stated that she cost approximately \$85,000 more than the estimated price. A second ship, to be named *Sir Henry Drayton*, is partially built, the keel having been laid May 15, 1920, and the launching was expected to take place in August of this year. The other two ships were expected to be launched in the latter part of this year, the keels having been laid June 4, 1920, and in Feb. 1921. The company got into financial difficulties early in the year, and a meeting of shareholders was held March 1, to consider the position, a committee of five being appointed to confer with Government representatives.

Yarrows Ltd., Victoria, B.C., did the following repair work during May: H.M.C.S. *Patriot*, docked for survey; C.P.R. s.s. *Princess Victoria*, 1,943 gross tons, docked for cleaning, painting and repairs; Frank Pacific Coast Steamship Co.'s s.s. *Prince George*, 3,372 tons, repairs to steering gear and engine room repairs; and s.s. *Prince Rupert*, 3,379 tons, reconditioning work completed after wreck at Swanson Bay last autumn; C.G.S. *Madre*, 155 tons, docked for cleaning, painting and repairs; C.G.S. *Restless*, 76 tons, repairs; Lobitos Oil Fields' s.s. *El Lobo*, 4,800 tons, docked for cleaning, painting and repairs; Kuskowin Fishing & Transportation Co.'s schooner *Ruby*, 345 tons, docked for cleaning, painting and repairs to bow damage; *Sir John Jackson* (Canada) Ltd., derrick scow, docked for cleaning and painting; Producers' Rock & Gravel Co.'s scow No. 17 docked for cleaning, painting and repairs; yacht *Truant*, owned by W. Adams, docked for cleaning and painting.

Some small pipe repair work was carried out early in June on the *Government Line's* s.s. *Spectator*. Canadian Government Merchant Marine s.s. *Canadian Inventor* was docked early in the month for some repairs caused by striking a submerged rock in Active Pass. The *Quadra Steamship Co.'s* s.s. *Quadra*, operating in the ore trade between Britannia Beach, B.C., and Tacoma, Wash., was also docked during June for repairs.

The Vancouver Harbor Commissioners are reported to have announced that the proposed coal bunkers, at Burrard Inlet, will not be built this year, owing to lack of money, but that in all probability the work will be undertaken early in 1922. In the meantime, plans are being prepared, and negotiations will be carried on for the selection of a site.

Pacific Ocean Freight Rates.

A recent Montreal press dispatch stated as follows:—"To stimulate the movement of cargoes from Pacific coast ports to Australia and New Zealand, the General Steamship Corporation, and the Oceanic Steamship Co., with carriers plying out of San Francisco, and the Canadian Government Merchant Marine, and Canadian - Australian Line, operating from Victoria and Vancouver, B.C., have agreed upon sweeping reductions in freight rates, which will be placed in effect immediately. The tariff on canned salmon is reduced to \$20, box shoeks from \$15 to \$10 a ton, portable houses from \$18 to \$15 a ton. The lumber rate, which was reduced recently, will remain at \$20 a thousand feet. The new tariffs are effective from all Pacific Coast ports to Auckland and Wellington, N.Z., and to Sydney and Melbourne, Australia."

We are officially advised that the Canadian Government Merchant Marine's present rates from Vancouver to Australia and New Zealand are as follows: Canned salmon, \$18 a ton; box shoeks, \$10 a ton; portable houses, \$15 a ton; lumber \$20 per 1,000 superficial feet.

Canadian and Norwegian Shipping Arrangements.—A delegation of Norwegian shipowners, consisting of E. W. Engleser, Managing Director J. Ludvig Mowinkels Rederei, Bergen; L. Hanson and G. von Erpecom, accompanied by Oliver Hatch, of Japp, Hatch Co., London and Liverpool, Eng., are touring the various routes of Canada Steamship Lines Ltd., with officials of that company. The delegation represents the Norwegian interests involved in an agreement completed recently with Canada Steamship Lines, for a combined passenger and freight steamship service between Canada and Scandinavian ports, under the name of the Intercontinental Shipping Co., the incorporation of which was announced in a recent issue. The agencies in Great Britain will be in charge of Japp, Hatch Co., and the operation of the line will be on a similar basis to that obtaining with La Cie. Canadienne Transatlantique, in which Canada Steamship Lines half a half interest.

Suspicious Shipping Losses.—On account of the extraordinarily numerous claims on Lloyd's underwriters for losses of Greek ships, the Greek Government has been urged to investigate the losses. It is stated that claims for ships owned by Greeks, which have foundered, or otherwise become total losses, since the decline in shipping amounts to a very large sum and that within a few weeks claims totaling over £3,000,000 were presented. A London, Eng., report states that in certain cases, criminal proceedings are pending. At least two of the Greek steamships reported as total losses recently, were built in Vancouver, B.C. **U.S. Steamships for Canadian Silver Ore Trade.**—With reference to a press report, mentioned in our last issue, to the effect that U.S. ships will be allowed to carry silver lead ore from Mayo Landing, Yukon, owing to shortage of Canadian bottoms to handle the increased output of the silver works at Ceno Hill, we have been officially advised that special permission has been given for the use of two U.S. steamships in carrying ore from Mayo to St. Michaels, provided that no Canadian ships can be obtained for this service.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launching of Steamships. We have been advised of the launching of the following steel cargo steamship for Canadian Government Merchant Marine, in addition to those mentioned in previous issues.

June 8, s.s. Canadian Logger, Marine Department contract 54, builder's yard no. 10, approximately 3,890 d.w. tons, Midland Shipbuilding Co., Midland, Ont.

Montreal Sailings.—The following dates have been announced:—

Liverpool service.—Canadian Victor, July 8; Canadian Ranger, July 22; Canadian Seigneur, Aug. 5; Canadian Commander, Aug. 19; London service.—Canadian Trapper, July 6; Canadian Rancher, July 20; Canadian Raider, Aug. 3; Canadian Trapper, Aug. 17; Canadian Rancher, Aug. 31.

Glasgow service.—Canadian Navigator, July 8; Canadian Runner, July 22; Canadian Carrier, Aug. 5; Canadian Navigator, Aug. 19.

Cardiff and Swansea service.—Canadian Harvester, July 23; Canadian Hunter, Aug. 12.

India service.—Canadian Pioneer, July 15; B. I.S.N. steamship, Aug. 15.

Australia service.—Canadian Mariner, July 23; Canadian Planter, Aug. 23.

Rio Santos, Montevideo and Buenos Aires service.—Canadian Miller, July 20; Canadian Volunteer, Aug. 20.

Barbados, Trinidad and Demerara service.—Canadian Logger, July 8; Canadian Coaster, July 22; Canadian Beaver, Aug. 5; Canadian Gunner, Aug. 19.

Nassau, Kingston and Belize service.—Canadian Forester, July 5; Canadian Fisher, July 26; Canadian Forester, Aug. 16.

Havana service.—Canadian Miner, July 12; Canadian Adventurer, July 26.

Charlottetown, P.E.I. and Newfoundland service.—Canadian Sapper, July 8, and July 29, Aug. 19.

Vancouver Sailings. The following dates have been announced:

Australia and New Zealand service.—Canadian Importer, July 25, Sydney, Melbourne, Auckland; Canadian Scottish, Aug. 15, Auckland, Sydney, Melbourne; Canadian Winter, Oct. 14, Sydney, Melbourne, Auckland.

Oriental service.—Canadian Exporter, July 27; Kobe, Yokohama, Shanghai, Takubar.

Indian service.—Canadian Transporter, Aug. 10, Calcutta.

Employees' War Risks and Pensions.—

In response to a request that about 20 employees of Canadian Government Merchant Marine, who were prisoners during the war, be given pension benefits, the Prime Minister, in refusing the request, stated in the House of Commons, June 2, that while agreeing that C. G. M. M. officers and men and their duty well, the same applied equally to other classes of officers and servants, and it was necessary to draw a line somewhere. Those who served in the military and naval forces served, not only themselves, but their country, and they were accordingly given gratuities, insurance and pension benefits, but the men in the mercantile marine made a bargain with their employers, and it was to be surmised that the risk had been duly taken into consideration.

Operating Results.—The Marine Department gave out the following statement in Ottawa June 11:—"Notwithstanding the continued depression in shipping, the Canadian Government Merchant Marine ships are succeeding in finding useful and profitable occupation. Since Jan. 1 there have been 52 ships in service. The returns from the operation of these from Jan. 1 to April 30 have been completed, and contrary to the general expectation, they show a substantial profit after deducting operating costs. When it is considered that millions of tons of shipping are lying idle in both the United Kingdom and in the United States, this result may well be regarded as satisfactory. During the period referred to, voyages were made to the

United Kingdom, South America, Australia, West Indies, Newfoundland, India and European ports. All of these services have yielded a profit to the ships operating thereon, with the single exception of that to the West Indies, where a comparatively small loss has been made. Canadian Government Merchant Marine officials intimate that the outlook for the immediate future is fairly promising."

It would be interesting to know whether the "substantial profit" mentioned is really a profit, or whether it is simply the excess of earnings over operating expenses, without allowing for interest on investment and for depreciation.

Collingwood Shipbuilding Co.—See Dominion Shipbuilding & Repair Co.

was that she would probably be launched about the end of June.

Dominion Shipbuilding & Repair Co., Toronto, which went into liquidation, July 31, 1920, had under construction for Canadian Government Merchant Marine, two single screw steel cargo steamships, Canadian Pathfinder and Canadian Engineer, Marine Department contracts 48 and 49, builder's yard nos. 10 and 11, each approximately 3,500 d.w. tons, the water bottoms of both ships being about 75% complete, and the hulls about 60% framed. As stated in previous issues, the Collingwood Shipbuilding Co. was given a contract by the Marine Department to complete the ships at the Toronto yard on a cost plus basis. The Canadian Pathfinder was launched May

Steel Cargo Steamship Canadian Harvester, approximately 3,890 d.w. tons, Canadian Government Merchant Marine.

J. Coughlan & Sons, Vancouver, B.C.—The steel cargo steamships Canadian Transporter and Canadian Freighter, Marine Department contracts 62 and 63, builders' yard nos. 20 and 21, each approximately 8,390 d.w. tons, which are being built for Canadian Government Merchant Marine, are reported to be progressing satisfactorily. The keels were laid Jan. 6. Both hulls have been fully plated, and rivetting is proceeding rapidly. The engines are reported to have been placed in the Canadian Transporter, and several other items of machinery, auxiliary and otherwise, have been installed in both ships. The engines for the Canadian Transporter were built in Great Britain, and those for the Canadian Freighter in Canada. No dates have been fixed for the launchings, but it is expected that the Canadian Transporter will be launched during August.

Davie Shipbuilding & Repair Co., Lauzon, Que., is building a steel cargo steamship, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, the keel of which was laid May 14, 1920. Our last advice

12 and we were advised June 18 that she would probably not be delivered before July. The Canadian Engineer was launched June 30.

Halifax Shipyards Ltd., Halifax, N.S., is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Cruiser and Canadian Constructor, Marine Department contracts 38 and 39, builder's yard nos. 3 and 4, respectively, each approximately 10,500 d.w. tons, the keels of which were laid Oct. 2, 1919 and Oct. 6, 1919. We were advised June 10 that the Canadian Cruiser's hull would be ready for launching on June 25, but that the boilers and engines, which are being built by Tidewater Shipbuilders Ltd. at Three Rivers, Que., would not be ready for shipment before June 20, and as considerable difficulty was being experienced in arranging for the shipment of the boilers to Halifax, it was then impossible to set a date for the launching.

Midland Shipbuilding Co., Midland, Ont., launched the steel cargo steamship Canadian Logger, Marine Department contract 54, builder's yard no. 10, approximately 3,890 d.w. tons, for Cana-

dian Government Merchant Marine, on June 8, the christening being performed by the Machioness of Hartington, daughter-in-law of the Duke of Devonshire, Governor General, who was also present, with other members of his family. The keel of this ship was laid June 9, 1920, the delay in launching having been caused by non-delivery of the engines.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—When this company went into bankruptcy in 1919, it was building for Canadian Government Merchant Marine, two steel cargo steamships, Canadian Scottish and Canadian Thrasher, Marine Department contracts 42 and 43, builder's yard nos. 1 and 2, respectively, each approximately 8,390 d.w. tons, the keels of which were laid Sept. 27, 1919 and Oct. 20, 1919, as stated previously in Canadian Railway and Marine World. When work on the ships was suspended by the Prince Rupert company, the Canadian Scottish was about 90% completed, and the Canadian Thrasher about 60%. They are being completed, at Prince Rupert, by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., on a cost plus basis, as stated previously in Canadian Railway and Marine World, the work being supervised by H. A. Butt, Overseer for the Marine Department. The Canadian Scottish was launched May 12, and is expected to be ready for delivery about the end of August. The Canadian Thrasher is expected to be launched about the middle of August.

Officers of Steamships.—In addition to appointments mentioned in previous issues, the following appointments of masters and chief engineers have been made:—Canadian Adventurer, Capt. A. J. Gilbert, master, vice Capt. H. S. Hills, resigning; Canadian Coaster, J. J. Francis, chief engineer; Canadian Commander, J. M. Roche, chief engineer; Canadian Harvester, Capt. V. R. N. Porter, master, vice Capt. J. Slater, transferred to Canadian Logger, C. Thompson, chief engineer; Canadian Leader, Jas. Campbell, chief engineer; Canadian Logger, Capt. J. Slater, master, heretofore master, Canadian Harvester; Canadian Mariner, Capt. G. B. Leonard, master, heretofore master Canadian Squatter, vice Capt. A. L. Starck; Canadian Overseer, Capt. A. O. Cooper, master, vice Capt. W. G. Tudor, transferred to s.s. Sheba; Canadian Pathfinder, Capt. W. B. Armit, master; Canadian Sealer, Capt. A. E. LeBlanc, master, vice Capt. J. A. Hiltz; Canadian Squatter, Capt. D. H. McLean, master, vice Capt. G. B. Leonard, transferred to Canadian Mariner; Sheba, Capt. W. G. Tudor, master, heretofore master, Canadian Overseer, vice Capt. D. Bluet.

Docking at U.S. Pacific Ports.—Arrangements are reported to have been made for the docking of Canadian Government Merchant Marine ships at San Francisco, San Pedro and other southern ports, in connection with the C.G.M.M. recently inaugurated Pacific coast service. It is stated that Dodwell & Co.'s dock will be used in each case, at any rate temporarily.

Romance of the C.G.M.M.—An officer of the Canadian Government Merchant Marine had difficulty in remembering the names of the 25 ships of the 8100 to 8300 tons type, until he hit upon this little "Story of the Merchant Marine":—"A PIONEER, who had been a PLANTER and a PROSPECTOR, as well as a TRAVELLER and LEADER, employed a HIGHLANDER, who was an INVENTOR, and who had been previously a

MILLER, to work with him as a MARINER, and with himself as COMMANDER they set sail in a FREIGHTER to seek their fortune. Being himself something of an EXPLORER, and the other a RANGER, they quickly proved the VICTOR and CONQUEROR in the race for wealth. The old man was made a SEIGNEUR, and as a TRANSPORTER became a wealthy EXPORTER and IMPORTER, and the old sail designed a THRASHER which he called the CHALLENGER, which proved to be a WINNER, and after having been a SKIRMISHER all his life settled down to a life of ease and spinning yarns, and being SCOTTISH, believe me, he was some SPINNER." The names in capitals are names of the 25 ships of the class referred to.

The s.s. Canadian Inventor struck a ledge in Active Pass, B.C., June 4, while bound from Genoa Bay to Vancouver, and broke her forefoot. She proceeded to Esquimaux, where she was wrecked for examination. The section of the forefoot near the keel and a few plates were renewed by Yarrows Ltd., and she proceeded to Vancouver June 14. It is stated that the accident was caused by failure of the steering machinery.

Halifax Pilotage Regulations Amendment.—An order in council has been passed repealing Halifax, N.S., pilotage district bylaw 3, which provided that ships propelled wholly or in part by steam, registered in Canada, and engaged exclusively in fishing, shall not be obliged to pay pilotage dues unless a pilot be employed; and confirming a new bylaw providing that such ships, propelled wholly or in part by steam or other mechanical power, or propelled wholly by sail, when of more than 250 tons register, shall not be required to pay pilotage dues unless a pilot be employed.

Low Price for Ships.—An English press report states that what appears to be a new low price level for shipping was reached at Liverpool recently, when the s.s. Matra, 2,476 tons net, was sold for £56 (826) a ton. She was built in 1905 and classed 100 A1 at Lloyd's.

Grain Shipped from Fort William and Port Arthur During 1920

The following table, prepared by the Board of Grain Commissioners, shows the total quantities of each kind of grain shipped from Fort William and Port Arthur during the 1920 season of navigation, and the ports at which it was unloaded. In addition to the figures given,

To Canadian ports	Wheat, Bus.	Oats, Bus.	Barley Bus.	Flaxseed Bus.	Rye Bus.
Goderich	6,618,015-50	2,594,945-31	762,149-46	292,168-32	138,371-05

Government Supervision of Trans-Atlantic Steamships.

J. E. Armstrong, Lambton East, Ont., asked, in the House of Commons, recently:—"What action, if any, has the Government taken towards accepting the recommendations in the final report of the Royal Commission on the Natural Resources, Trade and Legislation of certain portions of His Majesty's Dominions presented to both Houses of Parliament by command of His Majesty in March, 1917, showing that it is not desirable that the operations of the steamship companies carrying passengers and freight between the Dominion of Canada and the United Kingdom should remain longer without some measure of Government supervision? Does the Government intend to give effect to this legislation? What action, if any, has the Government taken to assist the Imperial Government in bringing about Government control of ocean carriers doing business (or from time to time doing business) between ports in the United Kingdom and ports in Canada?" Sir Geo. E. Foster replied:—"The recommendations referred to have been considered by the Government and the subject matter discussed with other overseas premiers and the Premier of Great Britain. An Imperial shipping committee was appointed by the British Government in June, 1920, to enquire into and report on all matters connected with ocean freights and facilities, and on all matters connected with the development and improvement of sea communications between the different parts of the Empire. On this committee Canada and other overseas dominions are represented. This committee has been in session, and a preliminary report has been made on shipowners' liabilities under bills of lading and matters pertaining thereto. This will doubtless be followed by reports on other phases of the subject being investigated by the above named committee. After this investigation is finished, and the reports made, what action, if any, is to be taken by the Government will have to be determined, after the reception and consideration of these reports of the committee."

3,252,397 lb. of mixed grains were unloaded at Midland, Ont.; 5,884,353 lb. of screenings and 3,028,174 lbs. of screenings at Buffalo, N.Y.; 3,238,175 lbs. of screenings at Chicago, Ill., and 4,036,0610 lbs. of screenings at Duluth-Superior.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out by the Government of Canada. The figures given in this list are based on the estimates of the cost of the ships, and the total freight capacity as determined after the ships have been completed. The figures in that column, not preceded by an asterisk, show the approximate total deadweight, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total price will vary accordingly.

Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for changes from specifications, additional equipment, accessories, etc.

The following contracts were made with the column listing others of the same size to be built: a, ship; b, bridge; c, cable, forecastle.

Reconditioning the Steamship Prince Rupert.

By. C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.

British Columbia has for some time past demonstrated her ability to build steel freighters in competition, as to cost, with eastern yards, and equal in workmanship and design to any similar ships built anywhere. She has now shown that she possesses the necessary skilled and experienced workmen to do the finer kinds of work required in finishing a high class passenger ship with the latest refinements.

The refitting of the s.s. Prince Rupert was an undertaking of a major character, calling for artistic taste and a high class of workmanship. That it was successfully carried out, within practically the guaranteed number of days, is not only a credit to the energy and enterprise of the yard undertaking the contract, but also to the shipbuilding interests of the province, in having workmen of sufficient number and with experience to carry out such an undertaking. At noon on May 7, just 119 running days after her arrival at Yarrow's Limited, yard at Esquimalt, the job was practically completed. The owners then took charge and the ship's officers began preparations for the voyage to Vancouver, where her furniture and equipment was to be placed aboard, preparatory to re-entering service with her sister ship the Prince George. It remained only for the contractors to complete the installation of some special electric fittings waiting at Vancouver, and some fine polishing of certain parts of the hardwood interiors, that could be done best after the large number of men employed on her had been got rid of.

It can be readily imagined what the ship's condition was after being submerged for nearly three months in salt water, and directly in line of the discharge of waste products of a large industrial plant, in which large quantities of acids were used. Suffice it to say that the entire woodwork, including passenger accommodation, freight hold, and cold storage chambers, as well as all laid decks, had to be completely torn out, so that the bare steel was exposed. This was carefully wire brushed, or scaled, as conditions warranted, and all surfaces well coated with red lead. The reconstruction could begin. To secure the necessary finer hardwoods, veneers and special fittings, not only were the markets of Canada, Great Britain, and the United States called upon, but the telegraph, cable and wireless, and the express and fastest freight services were used to prevent any delay which could possibly be avoided.

The hull damage was more extensive than was at first thought. Thirteen plates were renewed, and several others were faired in place, with the attendant work necessary on frames, floors, fore and aft stringer bars, breast hooks, collision and number 2 water tight bulkheads, tank margin plates, etc., as the result of the ship's contact with the rocky beach. In addition, resulting from pressure due to submersion, the tops of tanks 5 and 6 were seriously damaged, being set down from 6 to 24 in. The main deck plating and beams, on the starboard side, in the way of the machinery spaces, were considerably set down, and engine, boiler, fan room and dynamo air shaft casings were badly buckled and had to be slacked up, faired, and refastened as

before. One entire side of the starboard after fuel oil tank was badly damaged, requiring removal and replacement, a difficult and expensive job on account of the cramped space in which the work had to be carried on.

The engines and boilers required a vast amount of work. All cylinders, steam chests, pumps, evaporators, filters, etc., were opened up, thoroughly cleaned, and put in perfect working order, with such renewals as were found necessary. Crankshafts were lifted, main bearings renewed, thrust blocks taken down and overhauled, propeller shaft bearings renewed, and shafting re-lined. Both intermediate tail shafts were damaged, requiring renewal, and the damaged propellers were removed and new ones fitted in their place. Condensers were opened up, all tubes tested and defective ones replaced by new. The refrigerating machinery was completely overhauled and new parts installed where needed. The electric light plant was taken down, armatures and fields rewound, engines thoroughly overhauled, and all put in first class condition. Boilers were opened up and scaled, the strained seams were electrically welded and new tubes supplied as needed, and they were finally subjected to the rigid tests required by classification and Dominion Government surveyors. All steam pipes were taken out, annealed, tested and replaced, or renewed where necessary. Feed water pipes were cleaned and renewed where found defective. When all was completed the boilers were entirely recoated with heavy insulation, and covered with galvanized iron sheathing. All auxiliary machinery, such as steering engine, windlass, capstans and winches, were repaired or rebuilt as was necessary. A complete change was made in the steering control apparatus. The telemotor system was taken out and direct steering gear control fitted with roller and ball bearings for easy manipulation, was installed.

All this, however, was straight repair work, such as any well equipped yard is accustomed to. The carpenter and joiner work, with the numerous other trades required in refitting the ship, and the other matter. Carefully selected and thoroughly seasoned materials were required. Deck planking of edge sawn fir, perfectly clear stock for door and panel framing, and the finest quality of laminated materials for panelling in both soft and hard woods had to be obtained, and was only utilized after the most rigid inspection piece by piece by the owners' and contractors' inspectors. Some of the heavy and solid hardwood fittings, not too badly damaged, were carefully kiln dried, and thoroughly reconditioned, and after careful inspection, if found perfect, were to be used again. However, almost the entire woodwork of the ship had to be renewed. The extensive cold storage chambers of both cargo and ship's stores, were rebuilt, the insulating material being compressed granulated cork and mineral wool.

The principal passenger accommodation is on the shelter and shade decks. All fore and aft and thwartship bulkheads in the staterooms on both decks, much of which is composed of fine panelling, were replaced in accordance with the original design. The first class ob-

servations room, forward on the shade deck, originally done in sycamore, has been changed to a white maple with bird's eye maple panelling. This room is enclosed by 18 large sheets of very heavy plate glass, which required particular care in the designing of the panelling to conform with the divisions necessitated by the glass openings. The treatment is of a conventional design with moulded pilasters dividing into grouped panellings, decorated with wood carved garlands touched with burnished gold. The trunk of the boat deck is carried forward throughout practically its entire length, and is highly decorative, both as to deckhead and transom, adding a loftiness to the appearance of the room and making it light and airy. The blank panels of the transoms are decorated with gilded garlands of hand carved wood. The first class smoking room at the after end of this same house is a room somewhat similar in size and shape, lighted with expansive plate glass openings, and is done in polished quarter sawn oak; the panellings being so arranged that the grain of the wood has been brought out to the best effect. This room has a rubber tiled floor. The second class smoking room at the forward end of the shelter deck cabin is done in plain mahogany panels, and has heavy plate glass windows. A purser's office has been built in just aft of the bulkhead, separating the first and second class quarters on this deck. It is planned so that the staff can attend simultaneously to both classes of traffic in their respective quarters. It is fitted with dull black wrought iron grills at the fore and aft openings and with mahogany counters, desks, and cabinets. Provision is made so that telephone connection may be made by cable with the exchanges at the various ports of call when the ship is berthed at her dock. In addition to the standard passenger accommodation, there are also on this deck four cabins with private baths. Two of them are done in Indian mahogany; one in antique quarter sawn oak and one in bird's eye maple. The bathrooms in connection with them contain showers as well as hot and cold water and hot and cold salt and fresh water. The floors are finished with porcelain tiles with self blue decorations with a base to the wainscoting, which is finished in enamel tiled effect; the upper parts of the walls and ceilings are panelled and finished in dull white. These four cabins have been given special treatment and are fitted with brass bedsteads, with box springs and hair mattresses with white box pleated pique valances, the bed and port curtains of the two mahogany rooms being of rose colored wool damask, decorated with French gimp, with floor coverings to correspond with the general color scheme of the rooms. The two rooms, which are done in oak and maple, are similarly treated as far as the bedding is concerned, except that the floor covering is of ingrained blue Wilton carpet. They have blue wool damask hangings, and are supplied with short silk eiderdown comforters to correspond with the general color scheme.

The chief steward's office, near the companion way leading down to the dining saloon on the main deck, is done in mahogany, and fitted with the usual

desks and other equipment. Near this also is a bureau or news stall, encased in a grill. The after part of the shelter deck cabin forms the music room, the treatment of which is quite different to that of the other parts, being in broad panels, highly polished and finished in white enamel, ending in an expanse in which several large size plate glass windows are located, giving ample views. A grand piano, built to withstand the variations of temperatures and climates to be found only on board ship, is installed here. This room is furnished with wicker chairs and lounge seats. The main color schemes in the furnishing of these two principal cabins are rose in the shelter deck, and green in the shade deck. Specially designed carpeting, in which the company's house flag is embodied, is laid on the floors of both cabins and staterooms. The upholstery on the shelter deck, for both fixed and movable seats, is of a tapestry with a floral design, touched lightly here and there with a rose tinted effect to harmonize with the general color scheme of the rest of the furnishings. Portieres dividing it from the music room are of double faced rose colored velour, decorated with handworked Italian gimp in green and gold, with holding ties of the same material. The draperies in the music room are of silk brocade, with rose colored pattern on a cream ground. The carpeting of the observation room on the shade deck above is of green shades and of the same design and pattern as in the rose colored carpet below; with upholstery in tapestry of floral design in green tones to match. The hangings are of pea green silk, and wool casement cloth, lined with cream colored poplin, trimmed with cream colored French gimp. All berth and port curtains in the staterooms throughout the ship are of tinted shadow cloth with ties to correspond.

The dining saloon, on the after part of the main deck, is reached from the shelter deck cabin by a mahogany stair with a bannister of hand made iron work, ornamented with gilded maple leaves. A circular vestibule, also in mahogany, and fitted with an art glass screen, forms the entrance to the dining saloon proper. This room has been rebuilt to its original outline, and is done completely in mahogany; the lower portions of it retain the wood's original color, highly polished, while the upper parts of the walls are finished in white enamel with gold ornamentation. The ceiling is finished in 5 ply laminated board, divided into panels by moulded deck beams and intricate designs in relief which lend themselves to the finish of the electric light fixtures. The sides of the room are fashioned into alcoves fitted with 5 chair tables for families or small parties. The upholstery is of cherry red calf skin, especially tanned and colored. The port curtains are of light cream colored poplin, hemstitched on all edges with an especially designed stencil. The deck is of untreated edge sawn fir, holystoned, with runners of red Wilton carpet having the house flag worked into the design. The electric lighting is by 2-light ceiling clusters enclosed in large cut glass globes with burnished silver fixtures. The room is fully equipped with the company's standard pattern of electro plated hollow and solid ware, china, cut glass and linen, all bearing the company's crest. The ship's galley, pantry and serving rooms, bakery and scullery, immediately forward of the dining sa-

loon on the main deck, have been entirely done over. They are fitted out with a very large galley range, fixed stock kettle, electric dish washer, twin broilers, steam vegetable cooker, egg cookers, tea and coffee urns, etc. While very compact, this department has been most conveniently arranged so that the quickest kind of service can be rendered.

Forward of this, in the starboard and port waists are the engineers' rooms, done in mahogany; engineers' bath and

terior lines are run in lead covered tubing, the loop system being employed in making connections at the various outlets. An entirely new set of wall fixtures have been supplied in the shade deck cabin rooms, and the whole lighting arrangement has been renewed. The shades are of decorative ground glass effect in the staterooms, while in the corridors, observation room, smoke room and dining saloon they are of heavy cut glass.

Raising the S.S. Prince Rupert at Swanson Bay, B.C. Stern view, showing 70 ft. cofferdam.

mess room, also petty officers and crews mess rooms, lavatories, etc. The pilot-house, chart room, and deck officers' quarters on the boat deck are done in Honduras mahogany, finished in a chaste design. The crew's quarters have been entirely rebuilt and are exceedingly comfortable, clean and roomy for a ship of the size of the Prince Rupert, considering the number of the crew she has to carry.

The electric wiring has been entirely renewed. All external trunk lines have been laid in metal conduits, and the in-

The entire water systems of the ship, including hot and cold water to all staterooms and passenger accommodation, baths, lavatories, drinking water fountains, etc., have been entirely renewed. The sewerage system has also been completely overhauled, or renewed, as necessary. The difficulties of these latter features of the work will be realized when it is known that there are many miles of piping and wiring on a ship of the class of the Prince Rupert. Electric bells are installed in all portions of the ship for both passengers' and officers' use.

The s.s. Prince Rupert left Esquimalt May 9, and re-entered service May 21, when she left Vancouver southbound. The s.s. Prince George, which had been in service continuously for practically a year, was given a brief overhaul towards the end of May and early in June, after which she made a special trip with the Vancouver Board of Trade, and on June 14 re-entered service on the regular run between Victoria, Seattle, Vancouver and the north.

The Cofferdam Used to Raise the s.s. Prince Rupert at Swanson Bay.

Canadian Railway and Marine World for January and February contained two articles by C. H. Nicholson, General Manager, Grand Trunk Pacific Coast Steamship Co., describing the methods used in raising the s.s. Prince Rupert, which sank at Swanson Bay, B.C., on Sept. 29,

covered over with heavy canvas. To sustain the tremendous pressure which it will be subjected to, some heavy cross and sway braces have been fitted, measuring 12 x 12 and of a length to carry from one side to the other of the cofferdam at frequent intervals to give it the necessary strength."

From Canadian Railway and Marine World, February:—"There were over 125,000 ft. of timber in the cofferdam, which, with the enormous weight of the canvas, iron fastenings and other attachments necessary to its construction and strength, would approximately add nearly 200 tons additional weight to the ship, and all above her shade deck."

Dominion Government Ship Arctic.

A press report announced recently that the C.G.S. Arctic was being equipped at Quebec, Que., for a prolonged trip to the Arctic regions, while another

Operation of the Sault Ste. Marie Canals.

A summary of traffic which passed through the Canadian and U.S. canals at Sault Ste. Marie, during 1920, was given in a previous issue. The following additional details of the operation of the canals are abstracted from the report of the U.S. Corps of Engineers, under whose direction the U.S. canals are operated.

The traffic through the Canadian canal was 3% of the total freight, 9% of the total registered tonnage, and 63% of the total passengers carried, the amounts being 2,480,684 tons of freight, 5,128,731 register tons, and 43,452 passengers. Compared with 1919 there was a decrease of 1,657,275 tons of freight, 1,746,308 register tons, and an increase of 2,296 passengers. The Canadian canal was open for 244 days.

The traffic through the U.S. canals was 97% of the total freight, 91% of the total register tonnage, and 37% of the total passengers carried, the amounts being 76,801,812 tons of freight, 55,055,292 register tons, and 24,999 passengers. Compared with the figures for 1919, there was an increase of 12,704,299 tons of freight, 9,451,301 register tons, and 9,163 passengers. The U.S. canal records show that ships spent, necessarily, 17,947 hr. and 19 min. in the canal, an average of 1 hr. 15 min., which included time waiting for lockage and passage through locks and canal, the latter being 1 3-5 miles long. Other delays at the canal, including the taking on of supplies, waiting for daylight or favorable weather, amounted to 3,309 hr. 10 min. Ships were delayed 9 hr. 16 min. on account of operating the railway swing bridge, and trains were delayed 87 hr. 28 min. by passing ships temporarily preventing the closing of the drawbridges. During the period of operation, the swing bridge over the canal leading to the Poe lock was closed 1,244 hr. 10 min., and the bascule bridge over the north canal leading to the third and fourth locks was closed 1,171 hr. 20 min. During this time, 3,370 locomotives, 6,371 passenger and 36,055 freight cars crossed the bridge. The U.S. canals were open for 252 days.

The total freight passing through all canals was 79,282,496 tons; ships, 58,194,083 register tons; total mile tons, 64,702,375.119; total value of freight carried, \$1,119,774,214; amount paid for freight, \$85,571,870; total registered ships using canals, 676; total unregistered ships, 206; value of registered ships, \$239,883,750; total passengers, 68,451; average distance freight was carried, 816.1 miles; average cost per ton, freight \$1.08; average cost per mile per ton, 1.33 mills; average value per ton freight, \$14.12; average vessel passages per day, all canals, 75, and for the Canadian canal, 16.

Alien Immigration to the United States.—The law restricting immigration of aliens into the U.S. became effective June 3, and caused considerable complaint from steamship companies, chiefly owing to the short notice given them of the putting into effect of the act, and to what is stated to be the unworkable methods of carrying out its provisions. The numbers of aliens to be admitted are restricted, whether booked through U.S. ports, or for U.S. destinations through Canadian ports.

Raising the s.s. Prince Rupert at Swanson Bay, B.C. Showing cofferdam partly dismantled.

1920. We were not then able to obtain any photographs showing the operations, but we have now received some from the Pacific Coast Salvage Co., Victoria, B.C., which raised the ship. The accompanying illustrations show the cofferdam used, the following references to which are reproduced from our previous articles mentioned above.

From Canadian Railway and Marine World, January:—"The construction of the cofferdam has been a very tedious and slow job, as it was all under the water. Six of the most expert divers on the Pacific coast have been constantly engaged in the work, under the supervision of the most experienced and skillful wreckers in this part of the world. The cofferdam is built on the ship, not around it; in other words, the sides of the ship are built up to such an extent as to place them above the water level at low tide. Owing to the slope of the bottom on which the ship rests, a height of 56 ft. above the shade deck line is necessary at the stern, which tapers away to practically nothing forward. The uprights of this cofferdam are 8 x 10's of the necessary lengths, some 68 and 70 ft. long. These are bolted to the ship's side and planked in on the outside with 2 x 12's, all cracks and crevices being

report stated that she was to be sent to the Mackenzie River basin, in connection with the development of oil properties in the Fort Norman area. We are officially advised that it was the Government's intention to send the ship northward to carry on certain Government administrative work, but that that has been abandoned. In response to a question in the House of Commons recently, the Prime Minister stated that the proposed trip had been cancelled for the present. He said that it was a very expensive matter to send an expedition to Ellesmere Land, and it was not believed that there was sufficient justification for such an undertaking, merely on the score of present or prospective oil or other development there. The idea of the trip was mainly, if not wholly, to see that Canada's territorial interests were not imperilled by any other country, and this reason does not appear to be so pressing as was at first considered. If it was considered later that the matter was urgent, steps would be taken to protect the country's interests.

The Montreal-New York Transport Co., Montreal, has appointed the States Marine & Commercial Co., 17 Battery Place, New York, as its agent.

Atlantic and Pacific Ocean.

The C.P.R. s.s. Pretorian was repaired and overhauled at Govan, Scotland, during May.

The s.s. Manchester Division completed a voyage from Manchester, Eng., to Sydney, N.S., recently in slightly over eight days, which is considered a fast trip for a ship of her type.

The Red Star Line (International Mercantile Marine Co.) is reported to have decided to establish a passenger and freight steamship service between Canadian ports and Antwerp, in addition to a similar service to Mexican ports.

The Hamburg-American Line's s.s. Bayern, which was expected to be ready for service between Hamburg and New York during June, is the first German passenger steamship since the war to take up that service. She is about 12,000 tons, and carries steerage passengers exclusively.

The C.P.R. s.s. Princess Alice made a special trip on the Alaska route, leaving Vancouver June 8, to relieve the congestion of early summer travel to the north. She was not scheduled to take up that route until June 17, but the bookings had been so heavy that it was decided to put her into the service earlier.

The Sprague Line's s.s. Wathena loaded grain, flour and general cargo at Montreal, June 1, for Denmark. It is stated that should sufficient business offer, a regular freight service will be maintained by the line, which is owned in Boston, Mass., between Montreal and Baltic ports. The Robt. Reford Co. is the Montreal agent.

The C.P.R. s.s. Empress of Scotland, formerly the German s.s. Kaiserin Auguste Victoria, was expected to make her first sailing, under her present ownership, on July 29, from Liverpool, Eng., for Quebec, after which she will run on a fortnightly schedule between the two ports for the remainder of the St. Lawrence navigation season.

The Anchor Line's s.s. Cameronia, which is sailing in the Cunard Line's service between Liverpool, Halifax and New York, made her maiden trip during May. She was launched at Glasgow,

Scotland, in Dec. 1919, and has the following chief dimensions: length 571½ ft., breadth 70 ft., depth 42½ ft.; tonnage, 16,700 gross, 23,500 displacement when loaded.

The s.s. Bismarck, owned formerly in Germany, and bought recently by the White Star Line (International Mercantile Marine Co.) from the British Government, is a 56,000-ton ship and is now practically completed at the Blohm & Voss yard at Hamburg, Germany. She has been renamed Majestic. It is reported that the company paid about \$1,000,000 for her.

The C.P.R. is reported to have sold to a foreign syndicate the s.s. Sardinian, one of the ships which it took over on the acquisition of the Allan line. She was built at Greenock, Scotland, in 1875, and in her day was the finest steamship on the St. Lawrence route. She has been laid up for over a year. Her dimensions are: length 400 ft., breadth 42½ ft., depth 34½ ft.; tonnage, 4,549 gross, 2,788 net, and she is screw driven by engine of 229 h.p.

The former German s.s. Imperator, which was bought recently by the Cunard Line from the British Government, has been renamed Berengaria. It is reported that the price was \$850,000. She is of 52,022 gross tons, and was built by the Vulcan Iron Works, Hamburg, Germany, in 1912. The Cunard Line's s.s. Lusitania, which was sunk during the war, was 30,000 tons gross, and was built in 1907, at a cost of approximately \$2,000,000.

The Glasgow dockers' strike having been called off, arrangements are in progress for a complete resumption of sailings between Glasgow and Canadian ports. A press report states that the dock workers returned to work unconditionally. The Anchor-Donaldson Line's steamships Cassandra and Saturnia are again on the Montreal route, and it is stated that many cancelled bookings are now being renewed, as many who wish to go to Scotland prefer Glasgow as the port of debarkation instead of Liverpool.

The C.P.R. will, it is reported from the Pacific coast, sell the s.s. Empress of Japan, when the s.s. Empress of China, formerly Prinz Friedrich Wilhelm, is ready for the service on the

Pacific route, which will probably be in August. A San Francisco dispatch states that U.S. interests are negotiating for her, for operation between San Francisco and British Columbia ports. The s.s. Empress of Japan was built at Barrow-in-Furness, Eng., in 1890, and is about 5,700 tons gross, with an average speed of 14 knots.

The White Star Line has announced that, owing to the delay in deliveries of steamships from British shipbuilding yards, on account of strikes, it is probable that the steamships Doric and Regina will not be available for the current St. Lawrence navigation season. The Ellerman Line's s.s. City of London is reported to have been chartered by the company for service between Liverpool and Montreal. She has accommodation for two classes of passengers, and was scheduled to make her first sailing out of Montreal June 29.

The Donaldson Line's s.s. Gracia was launched at Greenock, Scotland, early in May. Her dimensions are: length 414 ft., breadth 54 ft., depth from upper deck 33 ft. 5 in. She has a deadweight carrying capacity of 8,600 tons. She is of the poop, bridge and forecastle type, with double bottom for carrying oil fuel or water ballast. The propelling machinery consists of Brown-Curtis geared turbines, 3,250 shaft h.p. Steam is supplied by four single ended boilers, each 15½ ft. by 11½ ft., arranged for either coal or oil burning, with forced draft, smoke tube superheaters, etc.

The Dominion Shipping Co., Vancouver, B.C., has been appointed agent for the Yamashita Kissen Kaisha, which is inaugurating a freight steamship service between Japan and Puget Sound ports, making calls at Vancouver as trade offers. F. C. Garde, formerly of the Foreign Freight Department, C.P.R., is Manager for the agent company, which also represents the Congress Inter-coastal Service, making sailings every three weeks between Vancouver and New York, and the Pacific-Argentine-Brazil line, operating between Vancouver and east coast ports of South America.

A somewhat peculiar case came before a Montreal court, June 7, when 29 members of the crew of the British s.s. Hyanthius, whose 12 months contracts for

Ships Registered in Canada During March, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

service with the ship expired while in Montreal, demanded to be paid off there, and given free passage home with pay, to which they would have been entitled if paid off in a foreign port, under the terms of their contracts. The master offered to sign them on for a return trip to Rotterdam, but this was refused. The judge decided that Montreal is not a foreign port, and therefore a free passage home, with pay, could not be demanded under their contract.

The Johnson Line's motorship Canada, which took a cargo of sugar to Vancouver recently, is stated to be the finest of the large motorships which have passed through the Panama Canal. She is a sister ship of the Buenos Aires, which carried wheat from Vancouver to London, via the Panama Canal, a few months ago. She was built at Gota-verken, Sweden, and is 440 ft. long, with 56 ft. beam, and on a loaded draft of 26 ft., carries 9,200 tons of cargo. The ship's quarters are commodious, and there is accommodation for a limited number of passengers. The propelling machinery consists of twin engines of 1,550 h.p. each, and the tanks placed in the double bottom, hold 1,600 tons of oil fuel, of which about 10½ tons a day is consumed.

The Royal Mail Steam Packet Co., in conjunction with the Holland-America Line, is operating a joint steamship service between London, Hamburg, Rotterdam, Antwerp and Pacific coast ports, via the Panama canal. A monthly schedule is being maintained and will be increased to fortnightly sailings as soon as some new ships are delivered. The four ships now operating on the route are the Eemdijk, Moorderdijk, Kinderdijk and Moerdijk. The R.M.S.P. Co. and the Holland-America Line have a number of motor ships being built at Glasgow, Scotland, for this service. The first two for delivery will be named Lochgoil and Lochkatrine. The ships will be 9,150 tons register and will have about 2,500 tons of refrigerator space for fruit, fish, eggs, etc.

The C.P.R. s.s. Empress of Scotland, formerly the German s.s. Kaiserin Augusta Victoria, which, as stated in our last issue, will be operated in the company's Atlantic service, is a twin screw steamship of 24,581 gross tons, and was built at Stettin, Germany, in 1905, for the Hamburg-American Line. The s.s. Empress of China, formerly the German s.s. Prinz Friedrich Wilhelm, which is to be operated on the Pacific route, is 17,082 gross tons, and was built at Geestemünde, Germany, in 1907, for the Norddeutscher Lloyd Co. The statement made by a British marine journal that the larger ship would be placed in the Pacific service, and the smaller in the Atlantic service, as the St. Lawrence route is not suited to ships of so great tonnage, is incorrect, as our official advice is as above stated, and as mentioned in our last issue.

The Cunard Line's s.s. Laconia, 21,000 tons, which was launched at Wallsend on Tyne, Eng., recently, is the fourth ship launched for this company this year. There will be accommodation for 2,500 passengers, with garden lounges for saloon passengers, verandah cafe for second class passengers and up to date accommodation for third class passengers. Her dimensions are: length 600 ft., breadth 73.6 ft., depth 45 ft. She will be equipped with Brown-Curtis turbines, driving twin screws through

double reduction gearing, with a shaft h.p. of 13,500, at an average speed of 16 knots. The auxiliary machinery will be driven by electro-hydraulic power. She will be fitted with a gyroscopic compass. The company now has 22 ocean going steamships, with a total tonnage of 228,468, and by the end of 1922 expects to have a further 12 steamships of 214,200 tons.

Col. H. Concanon, Managing Director, White Star Line, Liverpool, Eng., was in Montreal at the end of May, and made a trip of the harbor. He expressed pleasure with the facilities provided, which enable ships to make a quick turn round. He stated that it is expected that the company's s.s. Regina, 16,600 tons, will be in operation to Montreal next spring, to be followed by the s.s. Doric later in the year. The s.s. Regina was launched at Belfast, Ireland, just prior to the war, and was utilized as a war transport, in a partially completed state. When finished as a passenger steamship she will accommodate 600 cabin and 2,300 third class passengers. She is 600 ft. long by 68 ft. beam. The s.s. Doric is a similar ship, about 16,000 tons, and the company has also under construction for the Montreal route, the steamships Laurentic, 17,400 tons, and the Rimouski, 9,332 tons.

In connection with the fitting out of the motor ships which are carrying grain from Vancouver to Great Britain, a complaint was made recently as to the cost of carrying out the work, which was done by B.C. Marine Engineers & Shipbuilders Ltd., Vancouver. At a meeting of the local Board of Trade's Foreign Trade Bureau, a charge was made by S. McClay, one of the Vancouver Harbor Commissioners, that the cost of \$4,200 for work on the motor ship Buenos Aires, was excessive, and that it could have been done for \$2,280. Innes Hopkins, Managing Director, B.C. Engineers & Shipbuilders, in defending the charge, stated that there was necessarily much overtime work to be done, and the heavy labor charge resulted from this, and he also referred to the strict regulations of the port, and that these were not published at the time the work was undertaken. C. Gardner Johnson, agent for the line, at whose instance the enquiry was undertaken, suggested that the controversy be dropped, as he felt that he could assure the company that a charge of over \$4,000 would not be made against any further ships taking wheat at Vancouver.

The s.s. Hebron, owned by La Traversé de Lachine, Ltee., Lachine, Que., has had her name changed to Port Rolland.

Maritime Provinces and Newfoundland.

The U.S. fishing schooner Esperanto, which won the international fishing schooner race last year, foundered off Sable Island towards the end of May, the crew being saved.

The United States Shipping Board's s.s. Charlott struck an iceberg, June 5, about 200 miles off the Newfoundland coast, causing considerable damage to her bows.

The United States Shipping Board's s.s. Maiden Creek put into St. John's, Nfld., June 12, with disabled machinery, and a short water supply. She was en route from Mobile, Ala., to Liverpool and Manchester, Eng.

The attempts to float the s.s. City of Colombo, which stranded about 16 miles west of Digby, N.S., March 20, have been abandoned. Practically the whole of the cargo has been saved and taken to St. John, N.B.

The Canadian National Ry's car ferry Prince Edward Island was returned to her route between Cape Tormentine, N.B., and Borden, P.E.I., at the end of May, after having been overhauled at Halifax, N.S.

The French s.s. Pro Patria, which went ashore at Cranberry Head, when en route from Halifax to St. Pierre, Miquelon, during May, was refloated and made North Sydney under her own steam, and without any apparent damage.

The s.s. Lady of Gaspe, owned by Nova Scotia Steamships Ltd., which was in collision with the British s.s. Holby off the Cape Breton coast, in May, was reported on arrival at Halifax en route from St. John's, Nfld., to Boston, Mass., to have escaped with very slight damage.

The British s.s. Seapool, bound from Montreal for British ports, struck an iceberg about 300 miles off the Newfoundland coast, June 7. She arrived at St. John's, Nfld., June 9, and was docked by the Reid Newfoundland Co. for repairs to her stem, which was badly damaged below the water line.

The Boston & Yarmouth Steamship Co.'s s.s. Prince Arthur arrived at Yarmouth, N.S., June 8, after having been laid up at Boston, Mass., for cleaning and repairing in readiness for the tourist traffic. Her sister ship, Prince George, has also been overhauled, and both ships have had two suites each added on their main decks.

The s.s. St. Julien, one of the trawler type of steamships built by Polson Iron Works, Toronto, during the war, for the Dominion Government, is being over-

Ships Added to and Deducted From the Canadian Register During March, 1921.

hauled at Halifax, N.S., and it is reported that there is a probability that she will be equipped as a light ship, for service on the Sambro Ledges, while the regular ship is on duty at Anticosti.

The Newfoundland s.s. *Carmen* was destroyed by a boiler explosion off Netherton. St. George's Bay Nfld. June 6. She was used on Government special service at Port Union last year. It is stated that she sprang a leak about an hour before the explosion, and the crew had to take to the boats without being able to draw the fires, landing safely at Netherton.

The Newfoundland Government has granted \$25,000 to build a breakwater at Twillingate, and it is expected that construction will commence at once and that it may be finished before the winter. No definite site has been selected, but it was intended to build the breakwater at Harbor Rock, and a meeting has been held in the neighborhood to protest against the selection of this site.

The attempts to float the British s.s. *City of Colombo*, which was wrecked about 16 miles west of Digby, N.S., in the Bay of Fundy, March 20, have been abandoned. The cargo has been salvaged. At the wreck commissioner's enquiry into the loss of the ship, details of which were given in our last issue, the certificate of the master, Capt. J. J. Roberts, was suspended for three months.

It is reported that the harbor rates on cargo at St. John, N.B., may be increased shortly, unless traffic conditions improve. The Harbor Commissioners Act allows an additional 5c. a ton on general cargo, and it is stated that the present rate may be advanced to 6c. a ton, which, it is claimed, will then be 1c. a ton less than at Montreal. It is also stated that the harbor revenue may be further increased by reducing the free storage time from 10 to 2 days.

At a meeting of the St. John, N.B., common council committee, June 16, it was moved that whereas the council had decided to submit to the electors the question of the sale of the harbor rights and privileges for \$2,000,000, the City Engineer be directed to proceed to examine into and report on the condition of all harbor property owned by the city, and give an approximate estimate of the cost of whatever repairs, alterations and extensions may be necessary to make the present structures capable of affording such accommodation as may reasonably meet the increasing demands of the future. The resolution was defeated, being supported by the mover only.

Province of Quebec.

The small ferry steamboat *John*, operated between Port Fortune and Carillon, Que., sank at her wharf, at Port Fortune, towards the end of May.

The *Clarke Steamship Co.'s* s.s. *North Shore* has been placed in service from Quebec to the Gaspe coast. She is a recent arrival from England, having been built at North Shields, is about 900 tons gross, and is a screw driven.

The *Sincentines - McNaughton Line*, Montreal, has had its steam tugs *Fred-mac* and *Virginia* converted from coal burners to oil burners. These tugs, which are among the largest in the company's fleet, were built at Sorel in 1919, and

are said to be the only oil burning tugs in Montreal harbor.

Quebec reports state that owing to so few ships arriving there so far this year, and practically no goods being shipped to or from the city by the river, considerable hardship is being experienced by longshoremen, who are leaving the neighborhood to take other work. It is stated that trouble may occur, owing to shortage of men, when business revives there.

A fire broke out in sloop 13 at Quebec, June 9, and carried to the s.s. *North Shore*, operated by *Clarke Bros.* to Gaspe ports, damaging her to the extent of about \$75,000, which, it is stated, is covered by insurance. She was brought out from England a few weeks ago, just in time for the reopening of St. Lawrence navigation. It is announced that repairs will be undertaken at once, and it is expected to have her on the route again shortly. In the meantime, arrangements will be made for the use of another ship to take up the Gaspe service.

The U.S. Government steamships *Colonel Card*, *Colonel Peel*, *General Pond* and *Colonel Rochester*, which wintered at Quebec, were expected to sail there during June for New York. It is stated that Capt. T. M. Street, of the U.S. army, who is in charge of the ships, has registered a warning as to the difficulties and dangers attending the transfer of the ships, as they were built for river transport only, and in his opinion, there is a danger in running them down the coast. It is also reported that Canadian masters were selected to take the ships to their home port. The four ships were built at Minneapolis, Minn., in 1920, and passed through the canals before the winter set in, having had a particularly rough passage through Lake Erie, eventually being caught by ice at Quebec. About the time they were expected to leave Quebec, four other ships were due there for the U.S. Government from Bay City, Mich.

The *Kirkwood Steamship Co.* resumed its service between Montreal and Quebec, at the end of May, with the s.s. *Matak*. It has been announced that this ship will give a service of two trips a week for the earlier part of the summer, and that later another steamship will be added, permitting four trips a week to be given. Last year the s.s.

Matak was operated in the Great Lakes service, as were also the company's steamships *Lake Ontario* and *Mary Frances Whalen*. The steam yacht *Speedy II*, which the company bought from the Dominion Government recently, is reported to have been sold to the International Paper Co., New York, and it is stated that she will be used by the President and officials of that company between Three Rivers, the north and south shores of the St. Lawrence, Gaspe, Labrador and New York.

The French Government, which had five full powered wooden steamships built by Three Rivers Shipyards Ltd., Three Rivers, Que., named respectively *Bouzonville*, *Bouxwiller*, *Bumath*, *Cattenon* and *Cernay*, has sold one, s.s. *Bumath*, to Capt. Jos. Rioux, Gaspe County, Que., for \$36,750, for operation between Montreal and the Gaspe coast, calling at Quebec and ports along the south shore of the St. Lawrence. These ships have been placed in the first class *Bureau Veritas*, and were ordered by the French Government in conformity with its shipbuilding war programme, but owing to the fact that a number of ships of a similar type are laid up at various French ports on account of the navigation situation generally, it was considered advisable to offer these for sale, instead of taking them across the Atlantic. It is said that when the order was originally placed for the building of these ships, through the *Anderson Co.* of New York and the *National Shipbuilding Corporation* of Wilmington, Del., which controlled Three Rivers Shipyards Ltd., the contract price was \$322,500 each.

Ontario and the Great Lakes.

H. S. and F. S. Cronk have been licensed by the Ontario Government to operate a ferry service on the Bay of Quinte.

It is reported that a company is being organized to build an automobile ferry boat to operate between Sarnia and Port Huron, to handle the large motor tourist traffic across the St. Marys River.

The Railways and Canals Department received tenders, June 16, for the construction of the Hamlet Bridge substructure, and contingent dredging in the Trent Canal.

The Detroit & Cleveland Navigation

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May, 1921:

Articles	Canadian Canals	U.S. Canal	Total
Lumber	61	18,497	18,562
Flour		590,540	590,540
Wheat	299,790	11,024,254	11,690,469
Grain other than wheat	1,547,475	9,244,019	10,491,922

Total Freight	196,036	5,959,027	6,155,063

Co. has announced a reduction of 15% on all classes of freight, "to stimulate business on the lakes and to aid in lowering prices generally."

The name of the s.s. Samuel Marshall, owned formerly by Central Canada Coal Co., Brockville, Ont., and now owned by Steel Co. of Canada, Montreal, has been changed to Brantford.

The s.s. Jed, owned by J. F. Sowards, Kingston, while passing through the Cornwall canal, June 15, collided with and carried out the upper gate of lock 15. It is stated that the engineer mistook the master's signal. Navigation was resumed in about 12 hours after the mishap.

The schooner Ed. McWilliams, owned formerly by the Lyons Fuel & Supply Co., Sault Ste. Marie, Ont., has been sold to Keenan Bros., Ltd., Owen Sound, for operation in the lumber trade on Lake Huron. She was built at Bay City, Mich., in 1893 and has the following dimensions: length 200 ft., breadth 34 ft., depth 14 ft.; tonnage, 664 registered.

The Muskoka Lakes Navigation & Hotel Co., Gravenhurst, Ont., has appointed the following officers of its steamships for the current year:

Abmie	W. Bradshaw	E. Barnes
Cheslakee	J. Henry	T. D. McHugh
Islander	A. P. Larsen	W. Lambert
Medora	E. McAlpine	A. H. Fryer
Oriskany	G. Stiles	T. J. Heydon
Sagamo	G. Bailey	S. Beatty
	R. W. Lee	

Canada Steamship Lines' s.s. W. Grant Morden sailed from Port Arthur, May 29, for Port McNicoll with the largest single grain cargo ever taken out from the head of the lakes, consisting of 720,000 bush. of oats, and 45,000 bush. of barley. The prior record for the largest single grain cargo was 760,000 bush. of oats, and was held by the same ship.

Captain John Wharry, Owen Sound, is reported to have bought the auxiliary powered sailing ship Waycrest, in Toronto, for freight trade between Owen Sound, Manitoulin Island and Georgian Bay ports. She is a comparatively small ship, equipped with steam auxiliary power, and for some time has been used in the neighborhood of Toronto by the Navy League as a training ship for boys.

The name of the steam tug Henrietta Stewart, formerly owned by Canadian Stewart Co., Toronto, and now by the Dominion Public Works Department, has been changed to Spadina. The tug was built at Collingwood, Ont., in 1915, and was originally named Harvey H. She is screw driven by engine of 6 h.p., and has the following dimensions: length 56 ft., breadth 14.5 ft., depth 6.9 ft.; tonnage, 53 gross, 32 net.

The U.S. House of Representatives has passed a bill having for its object the lengthening of the navigation season on the Great Lakes, and it has been sent to the Senate. It provides for the opening of the navigable season on May 1, instead of May 15 as hitherto, and the closing on Oct. 15 instead of Sept. 15. It also provides that ships in operation less than 16 out of each 24 hours be permitted to place their oilers and water tenders on a two shift basis, while ships making daily runs of less than 12 hours would work their firemen also two instead of three shifts.

A bylaw is to be submitted to Port Arthur taxpayers shortly, concerning the proposed construction by the Palatine Mining & Development Co.,

of four ore docks with a capacity of approximately 500,000 tons, each dock to be 100 ft. wide and about 1,000 ft. long. They are to be of concrete and steel, on an elevation, including trestles, of 80 ft. The foundations will be of concrete and the hoppers and main sections of steel, of the same type as the ore docks at Duluth and Two Harbors, Minn. The company proposes to buy 200 acres on the Strathcona property, near Bare Point, for \$10,000, including water lot rights.

Manitoba, Saskatchewan and Alberta.

Chas. Millar, Toronto, President Alberta and Arctic Transportation Co., arrived in Edmonton, Alta., about the middle of June, and went north on the company's s.s. D. A. Thomas, on a trip of inspection over the company's routes.

One of the latest boats built at Vancouver, B.C., for the Hudson's Bay Co.'s shallow water service on the Peace River, between Hudson Hope and Vermilion Chutes, in northern Alberta, is designed with a tunnel built into the body, with sufficient room for the operation of the propeller and twin rudders.

The Hudson's Bay Co.'s steamboat McMurray sailed from McMurray, Alta., June 13, downstream, carrying a large quantity of freight for the company's stations in the north. The freight will be transferred at Smith portage to one of the company's Mackenzie River steamboats. The steamboat Liard River will come at Fort Simpson, taking freight for Fort Nelson and Fort Liard.

This construction gives ample protection for propeller and rudders, when the boat is running in very shallow waters, and allows it to be run with a minimum draft of 9 in. and a maximum of 20 in. In operation, when the propeller commences to turn, it fills the tunnel with water, and with the full area of the propeller immersed, a maximum propulsive force is obtained.

British Columbia and Pacific Coast.

The Sannie Transportation Co. is operating a ferry service between Bowen Island and Whittlecliff during the summer in conjunction with the Union Steamship Co. service between Bowen Island and Vancouver.

The Coast Steamship Co., Vancouver, issued a writ recently against the C.P.R. for damage to its s.s. Clansman, which sank at the C.P.R. pier II, Nov. 8, 1920. It is alleged that the damage was caused by the C.P.R.'s negligence.

The C.P.R. s.s. Princess Charlotte was withdrawn from service at the end of May to undergo some engine repairs by Yarrows Ltd. Her place on the Gulf route was taken by the s.s. Princess Adelaide, until she was replaced in service early in June.

Navigation on the Yukon River was formally opened May 13, by the arrival of the s.s. Nasulin at Hootalinqua, from Lake Labarge. This was followed by the sailing of the s.s. Canadian for Dawson and Mayo, and the s.s. Thistle from Lake Labarge direct to Mayo. The steamships Alaska and Tanana, which wintered at Tolivana, sailed for Neacum.

The Hudson's Bay Co. is reported to have decided to enter the Siberian trade, and it is stated that the company's s.s.

Casco has sailed from Vancouver, B.C., for Siberia, carrying two launches and two barges for river service, to enable traders to do business and operate inland, where fur trading posts will be established.

A return of the coastwise and offshore passenger steamship business out of Vancouver during the first three months of this year, covers approximately 60,000 persons, of whom about 3,000 were for Oriental ports, the balance being for British Columbia, U.S. and Alaska. Approximately 130,000 tons of freight and over 30,000,000 ft. of lumber and logs were exported.

The Canadian Robert Dollar Steamship Co., Vancouver, which bought five German sailing ships some time ago at Santa Rosalia, Mexico, is reported to have received an offer of \$1,000 each for them. This low price is stated to be due to the lack of demand for sailing ships engaged in the off shore lumber trade, and also to the fact that a heavy expenditure would be necessary to recondition the ships.

The filling and dredging at the Ballantyne pier, Vancouver, was reported recently to be about 80% completed, the filling projecting about 1,000 ft. into Burrard Inlet. The total filling, according to the contract, is about 1,400 ft. Immediately on the completion of the filling, the contractors for which are Grant & MacDonald, Vancouver, the erection of the superstructure will be commenced by the Northern Construction Co. and J. W. Stewart. About 1,500 tons of steel were reported on the ground recently, and the steel forms are all ready for the concrete pillars.

The White Pass & Yukon Ry. Co.'s s.s. Selkirk, which was wrecked on the Yukon River last year, just before the river froze up, was released by the breaking of ice in the spring, carried down the river by the current, and deposited in a slough, where, it is stated, the salvage of the machinery, etc., can be easily carried out. It is stated that, in addition to the salvaging of the machinery, the hull, which has suffered comparatively little damage, can be repaired and replaced in service. An interesting story is told in connection with the wreck of this boat and the company's s.s. Washburn in the Yukon last year. A well known deep sea diver having heard of the sinking of the two boats, went to the company's office in the hope of obtaining the contract for raising them, and explained that he had had considerable experience of deep sea work, and the raising of ships, and that he had all the tackle necessary, provided the ships were not in an unreasonable depth of water. It is said that when told that they lay in about 68 in of water, he disappeared without waiting for any further explanation.

The following masters and Chief engineers have been appointed to the C.P.R. British Columbia Coast Service steamships:-

Charmar	D. H. P. Rose	W. Harrie
Dula	W. J. Verge	A. H. Crocker
Island Princess	C. S. Saint	W. Welck
Nanawau	T. Manson	A. Dwa
Princess Adelaide	R. A. Hunt	J. M. Green
Princess Alice	A. Slater	J. Pettibone
Princess Charlotte	T. D. Griffin	J. A. Heritage
Princess Elna	T. Cliffe	W. Neuman
Princess Maquanna	E. Gillan	A. Alexander
Princess Mary	R. Ripley	R. Moffatt
Princess Patricia	W. L. Gledhill	W. L. Anderson
Princess Royal	S. H. Ormiston	E. J. Hill
Princess Victoria	R. B. Bennett	W. E. H. Oliver
Qualicum	J. R. Sibley	A. Gordon
Teas	W. J. Boyce	A. Gordon

Canada Steamship Lines Annual Meeting.

The Canada Steamship Lines Ltd. consolidated balance sheet and operating account for the calendar year 1920 were published in Canadian Railway and Marine World for June. The President, J. W. Norcross, in moving the adoption of the same at the annual meeting in Montreal, May 23, said:—"The directors beg to submit the seventh annual report, the statement for the year ended Dec. 31, 1920, having already been mailed to shareholders. The statement shows net earnings of \$4,028,274.21, and a net profit of \$1,932,772.33, after deducting all fixed charges, including depreciation, and providing ample reserve for all possible liabilities. While the statement shows a substantial increase in revenue, the operating expenses also show a large increase, so that the net revenue is less than for 1919. The high cost of fuel, provisions and wages have been to a large extent responsible for this difference. However, considering the demoralization of commerce generally which commenced about the middle of 1920, your directors feel confident that you will under the circumstances consider the result satisfactory. The balance sheet, operating and surplus accounts submitted, compiled by the company's Controller, and certified to by Marwick, Mitchell & Co., your Auditors, will convey to you in a concise manner the result of your company's operations for the year under review and its present financial condition.

"No doubt it will be of interest to shareholders to know that the advance bookings upon all the company's lines of transportation, and also the reservations already made for the coming season at the company's hotels, are very satisfactory, whereas, on the other hand, coal, provisions, and general operating costs have been reduced. Your directors, therefore, look forward with confidence to a profitable result of this year's operations. Arrangements have recently been concluded with Norwegian shipowners by which their ships, in conjunction with the ocean ships of the company, will be operated by it between Canada, England and France. Ocean freights are showing material improvement, which it is anticipated will continue, and the company's management has no fear of the results of these operations.

"The company's fleet, its docks and other properties, have been maintained in the highest state of efficiency, and many betterments and improvements have been added thereto. The directors, in view of the existing abnormal conditions, and the company's current cash conditions, have deemed it prudent to suspend for the present, payment of the dividend upon the common stock. The directors feel that their action in conserving the company's resources under the circumstances was a proper one."

The President asked if there was anything further in the way of explanation or information required, as he would be pleased to answer any or all questions shareholders felt disposed to ask. J. N. Joseph stated that he was a holder of 10 preferred shares, and asked the President his opinion as to the company's future. The President stated that he had every confidence in it, and that indications pointed to a steady improvement in the company's affairs. He himself, being a large shareholder, had every

faith in the company's future. He added that if at any time any shareholder desired information regarding the company's affairs, they would find him always available and glad to confer with them at any time, and invited them to come to the office whenever they felt so disposed.

The election of directors and of the London, Eng., advisory committee, was then proceeded with, after it had been decided to increase the committee's membership from seven to nine. The board and committee for the current year are as follows:—

Directors—Commander Sir Trevor Dawson, Honorary President; J. W. Norcross, President, M. J. Haney, and E. M. Wolvin, Vice-Presidents, F. S. Isard, Managing Director; Edmund Bristol, M.P., W. E. Burke, Hon. Frank Carrel, Hon. J. P. B. Casgrain, Tancred Bienvens, D. B. Hanna, Dr. W. L. McDougald, H. B. Smith, G. B. Smithers, J. P. Steedman, J. E. Dalrymple.

London Advisory Committee—Commander Sir Trevor Dawson, Chairman, Sir Vincent Caillard, Sir Francis Barker, J. W. Norcross, W. Grant Morden, C. G. Bryan, F. S. Isard, Sir Frederick Orr-Lewis, Viscount Long of Wraxall.

Marine Public Works Contracts Awarded.

The Dominion Public Works Department has awarded the following contracts:—

Summersville, N.S., repairs to public wharf, N. & Hiltz, Lawrencetown, N.S., Feb. 22, unit prices.

Esquimalt, B.C., construction of dry-dock, P. Lyall & Sons' Construction Co., Montreal, Feb. 17, schedule of prices.

South Gabriola Island, B.C., construction of wharf, D. O. Shook, Vancouver, B.C., March 16, unit prices.

Halifax, N.S., docking, repairing, renewal and painting of steam tug Helena, Halifax Shipyards Ltd., Halifax, N.S., Apr. 6, \$25,200.

Hamilton, Ont., superstructure of Strauss trunnion bascule bridge at Burlington channel, Hamilton Bridge Works, Hamilton, Ont., Apr. 8, \$22,896.

McLaren's Landing, Ont., construction of timber pile wharf, J. S. Leitch, Toronto, Apr. 11, unit prices.

Port Colborne, Ont., repairs to superstructure of western breakwater, Port Arthur Construction Co., Toronto, May 7, unit prices.

The Merchants Exchange, Vancouver, B.C., a recently formed organization for the promotion of the port's shipping and commerce in general, has opened offices in the Metropolitan Building there. The trustees elected at the recent inaugural meeting are: Capt. E. Beetham, J. J. Coughlan, Capt. S. Cullington, A. Melville Dollar, A. Hendry, G. V. Hout, Capt. B. L. Johnston, T. W. B. Loudon, R. McKee, J. Millard, G. D. Phillips and A. E. Stevenson. W. R. Dockrill is President, J. C. Irons, Vice President, and J. H. Hamilton and C. P. Coles are Secretary and Treasurer respectively.

The majority of South American railways, in which British capital is largely interested, show favorable operating results for 1920, the dividend rates being mostly 7, 8 and 9%.

Amendment to Canada Shipping Act to Prevent Harbor Pollution.

The Canada Shipping Act, R.S.C. 1906, chap. 113, provided, in secs. 854 and 855, as follows:—

"854. The Governor in council may make rules and regulations for the government of any public harbor or port in Canada, but, in the case of the ports of Quebec, Montreal, Three Rivers, Toronto, Halifax, Pictou, and the port of St. John, N.B., such rules and regulations as are inconsistent with any rule or regulation of any of these ports shall not be made, until application therefor from the local authorities in charge of the port has been received by the Governor in council.

"855. The Governor in council may, by any such regulation, impose, (a) a penalty, not exceeding in any case \$100, for any violation of the same; and (b) in the case of a continuing violation, a further penalty not exceeding, in any case, \$10 for every 12 hours during which such violation continues."

A bill introduced at the House of Commons, recent session, by Hon. A. K. Maclean, Halifax, N.S., and which was passed, repealed sec. 855 and substituted the following therefore:—

"855. The Governor in Council may, by any such regulation, impose a penalty not exceeding in any case \$1,000 for any violation of the same. If any such violation continues for more than 24 hours every additional 24 hours during which it continues shall be deemed to be a separate and additional violation of such regulation."

Chats Falls Navigation Co., Ltd., as mentioned in our last issue, has submitted an offer of 40c. on the dollar to its creditors, through W. A. Cole, Ottawa, authorized trustee under the Bankruptcy Act. This has been accepted by the larger creditors, and an application has been made for the court's approval. The company's assets consist of the steamboat Weldon, which was built at Aylmer, Que., in 1919. She is screw driven by engine of 24 h.p., and has the following dimensions: length 83.4 ft., breadth 19 ft., depth 6.9 ft.; tonnage, 197 gross, 65 net. She has been valued at \$19,000, but it is not expected that she will realize that amount, if sold. She was operated at a loss last year, on Lake Deschenes and the Ottawa River, making two trips a day. The company has leased the boat for the summer, and it is said that the party to whom she has been leased will operate her on Lake Deschenes and the Upper Ottawa River in the passenger excursion trade.

Closing of Atlantic Coast Radiotelegraph Stations.—The Marine Department has issued a notice calling the attention of merchant ships fitted with radiotelegraph apparatus to the closing of the following radiotelegraphic stations: Point Amour, Rich Point, Cape Ray, Heath Point, Pictou and Three Rivers. In view of the increased efficiency of these radiotelegraphic apparatus, these stations are no longer considered necessary to maintain the service in the zones which they were formerly designed to cover. The remaining existing stations in these zones are so equipped as to provide the service efficiently. All the foregoing stations were closed May 1, except that at Point Amour, which will be closed on or about Sept. 1.

Mainly About Marine People.

Hon. C. C. Ballantyne, M.P., Minister of Marine and Fisheries, and of the Naval Service, sailed from Quebec, on June 21, on the s.s. Empress of France, for England, accompanied by Mrs. Ballantyne, their three sons, and his private secretary, G. Hiedman, expecting to be absent several months.

Tancred Bienvenue, who has been elected a director of Canada Steamship Lines Ltd., is Vice President and General Manager of the Provincial Bank of Canada, and is also associated with the Lake of the Woods Milling Co., La Société d'Administration Generale, Credit Foncier Franco-Canadien, Montreal Water & Power Co., Crown Trust Co., La Sauvegarde Life Assurance, Guardian Assurance, Scottish Union and National Assurance companies.

Hon. J. A. Calder, Minister of Immigration and Colonization, is acting Minister of Marine and Fisheries, and of the Naval Service, during Hon. C. C. Ballantyne's absence in Europe.

N. A. Currie, steamship inspector, boilers and machinery, Halifax, N.S., has been promoted to senior steamship inspector.

Admiral Sir Charles Kingsmill was presented with an engraved silver flagon and tray, June 16, by Canadian naval officers serving on Canadian and Imperial ships, senior civil officers of the Naval Service Department, the Royal Naval College and the Naval Dockyards, on his retirement from the position of Director of the Canadian Naval Service. The flagon is a replica of one taken from one of the captured ships of the Spanish Armada. The presentation was made by Hon. C. C. Ballantyne, Minister of Marine and Fisheries and of the Naval Service.

Capt. E. H. Martin, C.M.G., who was for a time in charge of the naval dockyard at Halifax, N.S., and later at Esquimaux, B.C., died at Yokohama, Japan, recently. His Canadian service was during the war only.

W. L. McDougald, who has been elected a director of Canada Steamship Lines Ltd., is President, Ogdensburg Coal & Towing Co. and Century Coal Co., Montreal, in both of which companies Canada Steamship Lines is largely interested. He is also a director of the Dominion Steel Corporation, and the newly formed British Empire Steel Corporation.

Capt. J. McGrath, an old lake captain, and for several years in Richelieu & Montreal, June 5, aged 77. He entered navigation service at 14 years of age and was in R. & O.N. Co.'s service for 35 years. After his retirement from active service he served for some time as a nautical assessor on various wreck commissioners' enquiries.

W. Grant Morden, M.P., Deputy Chairman, London Advisory Committee, Canada Steamship Lines, addressed the London, Eng., Rotary Club recently on Canada's Inland Waterways.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., underwent an operation in the General Hospital, Vancouver, B.C., June 1. He was not expected to resume his duties for about a month.

Capt. G. T. Pickford, master of the Head Line s.s. Kenbarr Head, died at Newport News, Va., at the end of May.

He was well known on the St. Lawrence route, having been master of several of the Head Line's steamships operating to Montreal, and during the war was in command of the s.s. Carrigan Head, which was used as a decoy ship for enemy submarines.

H. G. Robinson, steamship inspector, general, Vancouver, B.C., has been promoted to senior steamship inspector.

Sir Alfred Yarrow, head of Yarrow & Co., Ltd., Glasgow, Scotland, and Yarrow Ltd., Victoria, B.C., who is 79 years of age, visited Victoria in June.

H. R. Smith, President, Collingwood Shipbuilding Co., Halifax Shipyards Ltd., etc., Toronto, has been elected an honorary president of the Collingwood Golf Club.

Capt. John Watkins, master of the s.s. Durham, operated between Canada and New Zealand, under the management of the New Zealand Shipping Co., Montreal, died there recently.

United States Shipping Board Notes.

W. C. Teagle, President of the Standard Oil Co. of New Jersey, formerly President Imperial Oil Co., Toronto, is reported to have declined the chairmanship of the U.S. Shipping Board.

The U.S. Shipping Board's concrete ship Latham, which ran on the rocks at the entrance to Tampico Harbor last year, has been repaired at Galveston, Texas. According to reports, the damage to the hull did not consist of any direct puncture, but was in the nature of four parallel gouges from 4 to 6 ft. wide, the entire length of the ship, the concrete being held by the reinforcing steel, and in this condition she proceeded from Tampico to Galveston under her own steam and without convoy.

The agreement proposed by the U.S. Shipping Board, to be in operation for six months, and providing for the return of the marine engineers, now on strike, at a wage reduction of 15%, was rejected at a meeting of the Marine Engineers' Beneficial Association at New York, June 12, and a telegram was sent to the President of the National Marine Engineers' Association, to the effect that if he accepted the agreement, his resignation would be requested. The chief objection to the agreement appeared to be that it did not provide for the return of the engineers to their status as before the strike.

The U.S. Shipping Board is reported to have decided to enter actions against several charterers of its ships, for amounts due for demurrage, through the detention of the ships at port during the railway strike in the U.S. last year. It is stated that the charterers were unable to get coal to the seaboard on account of the strike. No provision for strike appears to have been made in the charters. Some of the charterers claim that the Interstate Commerce Commission, a government regulatory body, made the charters void, by issuing orders to the railways preventing them from sending cars to the mines. The Shipping Board's claims are stated to approximate \$3,000,000.

A Washington, D.C., press dispatch states that the U.S. Government's venture in transportation, by land and sea, will entail a total loss of nearly \$5,000,000,000. The U.S. Shipping Board has

been instructed to charge off as loss, the war costs which have been carried on the books, and to start afresh with its assets measured on a definite basis. The U.S. Shipping Board and the Emergency Fleet Corporation represent a combined investment of approximately \$3,350,000,000, taking appropriations from the commencement of the Government shipbuilding programme, and to show for this, the Government has about 1,300 ships of nearly 11,000,000 d.w. tons. It has been stated that the sale of these ships will realize less than \$1,000,000,000, one estimate giving \$750,000,000 as the best figure obtainable.

Quebec Steamship Co. Incorporation Acts.

A bill to amend and consolidate the acts respecting the Quebec Steamship Co., and to repeal previous acts covering incorporation etc., was introduced in the House of Commons May 6. The original company was incorporated by Act of Parliament in 1873, as the Quebec and Gulf Ports Steamship Co., which name was changed in 1880 to Quebec Steamship Co. The bill fixes capital stock at \$10,000,000 in \$100 shares and the head office at Montreal. It provides that the company shall be managed by not more than 9, and not less than 3, directors, and those in office at the passing of the act are to hold office until their successors are elected. The majority of directors shall at all times be resident in Canada and be British subjects by birth or naturalization. The Quebec Steamship Co., with office at Quebec, Que., came under the control of Canada Steamship Lines Ltd., on the formation of the latter company in 1913, by the acquisition of approximately 80% of the shares. The Canada Steamship Lines sold its interest in the company to Furness Withy & Co. early in 1920. The company formerly operated a steamship service from Quebec to the lower St. Lawrence and to New York, and from New York to the West Indies, but for some time the service has been confined to the New York-West Indies route.

Canada Steamship Lines Officials. — Canadian Railway and Marine World for June stated that Dr. W. L. McDougald, President, Century Coal Co., and Ogdensburg Coal & Towing Co., was reported to have been appointed Director of Operation of Canada Steamship Lines. We need H. W. Cowan, resigned. We are advised that the report referred to, which appeared in Montreal and other daily papers, was incorrect, and that Dr. McDougald was elected a director of Canada Steamship Lines at the recent annual meeting, but does not hold any other position in the company. T. R. Enderby, Operating Manager, has been given charge of the work formerly under Mr. Cowan's control, and we are advised that it is not the management's intention to fill the position of Director of Operation.

That Great Britain is rapidly regaining her export markets for railway equipment and supplies is shown by recent statistics of exports. The value of track material exported in Jan. and Feb. 1921 was almost \$10,000,000, against only slightly over \$4,000,000 in Jan. and Feb. 1920.

Canal Openings, Traffic, Etc., for April and May.

The Dominion Bureau of Statistics' Transportation Division has compiled the following summary of canal statistics for April:

Sault Ste. Marie.—The Canadian canal was opened April 9, two weeks earlier than in 1920, and consequently there was an increase of traffic for the month. There were 104 ships through with a net tonnage of 104,328 tons, and cargoes totalling 50,405 tons. This was practically all grain down, and 5,095 tons of merchandise up. The grain shipments were barley, 2,258 tons; oats, 16,449 tons; rye, 1,226 tons; wheat, 25,375 tons. In April, 1920, the total cargoes through amounted to 29,128 tons.

Welland.—Opened April 15, four days earlier than in 1920, and 146 ships, with tonnage of 119,860, carrying 101,753 tons of cargoes passed through during the month. This was 86,609 tons more than last year. The increase being in grain and soft coal down. The totals were, barley, 9,420 tons; corn, 10,408 tons; oats, 22,879 tons; wheat, 18,908 tons; soft coal, 29,900 tons for 1921, against oats, 2,125 tons; wheat, 1,100 tons; soft coal, 2,300 tons, for April, 1920.

St. Lawrence.—Opened April 18, compared with May 1 in 1920. There were 235 ships, with net tonnage of 116,958 tons, carrying 81,848 tons of cargoes through the locks. The principal cargoes were, oats, 14,357 tons; wheat, 9,350 tons; hard coal, 9,532 tons; soft coal, 27,550 tons; all down.

Trent.—Opened April 1. Thirty-seven ships, with net tonnage of 1,630, carrying 93 tons of cargo, passed through the locks.

Ottawa.—Opened April 19, compared with May 1 in 1920. Forty-one ships, with net tonnage of 7,617, and cargoes totalling 4,632 tons, passed through during the month. This canal opened in 1920 on May 1.

Chambly.—Opened April 15, eight days earlier than in 1920. The total traffic was 75 ships of 8,993 tons, with cargoes of 6,150 tons.

Murray.—Opened April 14, two days earlier than in 1920. Eighteen ships, with tonnage of 3,656 tons and cargoes of 1,623 tons of stone westbound passed through.

St. Peters.—Closed Jan. 10 and opened again April 18. Twenty ships, with net tonnage of 1,181, and cargoes of 1,160, passed through during April.

Rideau.—Was not opened for traffic during April.

Statistics for May.

Sault Ste. Marie.—There was a decrease in traffic through the Canadian and U.S. locks from May 1920 of over 26%, or 2,263,894 tons. Wheat decreased over 880,000 tons; iron ore decreased over 4,031,000 tons; soft coal increased over 1,771,000 tons, and merchandise, stone oil, showed small increases. The chief commodities carried were flour, 89,000 tons; wheat, 12,609,000 bush; other grain, 12,431,000 bush; iron ore, 2,552,000 tons; soft coal, 2,303,000 tons; hard coal, 214,000 tons. About 3.1% of the total freight used the Canadian lock, against 6.2% in May 1920. The totals for the Canadian lock were, ships, 389; registered tonnage, 355,441, against 664 ships and 969,451 tons in May 1920; freight up 46,441 tons, down 149,600 tons, total 195,701 tons, against a total of 524,180 tons in May 1920.

Welland.—Traffic increased over 55% over May 1920, the big increase being in grains. Corn increased 112,337 tons; oats, 42,333 tons; wheat, 11,307 tons; and petroleum, 10,090 tons; 495 ships, having a total registered tonnage of 438,676 tons of cargo, used the canal. The chief commodities were corn, 117,077 tons; oats, 47,025 tons; wheat, 100,057 tons; petroleum, 18,892 tons; and soft coal, 92,101 tons.

St. Lawrence.—Traffic increased 166,632 tons over May 1920, the largest increase being in corn, viz., 115,708 tons; 988 ships, having a total registered tonnage of 592,797 tons, and cargoes totalling 515,591 tons, used the canal. The chief commodities were, corn, 117,437 tons; wheat, 95,543 tons; petroleum, 20,205 tons; hard coal, 43,663 tons; soft coal, 90,378 tons, and 30,142 tons.

Ottawa.—Ships, 191; registered tonnage, 32,686; a decrease of 8,885 tons; cargoes including lumber, 5,404, and 13,770 tons; totalling 22,554 tons, a decrease of 13,774 tons from May 1920.

Rideau.—Ships, 232; registered tonnage, 16,547; cargoes, 17,974 tons, a decrease of 620 tons. Sand and gravel amounted to 15,027 tons.

Trent.—Ships, 325; registered tonnage, 9,522; passengers, 2,925; cargoes, 7,127 tons.

Chambly.—Ships, 214; registered tonnage, 24,510; cargoes, 37,371 tons, an increase of 1,763 tons. Hard coal amounted to 29,301 tons, an increase of 13,569 tons over May 1920.

Murray.—Ships, 59; registered tonnage, 13,027; cargoes, 11,805, a decrease of 6,290 tons from May 1920. The cargoes were principally crushed stone; 11,225 tons passed through during the month.

St. Peters.—Ships, 143; registered tonnage, 9,262; cargoes, 6,653 tons.

St. Andrews.—Ships, 31; registered tonnage, 1,137; passengers, 166; cargoes, 2 tons. This canal opened May 29.

Panama Canal Tolls.—The question of the right of the U.S. Government to grant exemption to tolls for U.S. ships passing through the Panama Canal, in a coast to coast trade, is causing considerable discussion and feeling throughout the U.S. The Hay-Pauncefote treaty between Great Britain and the U.S., under which the latter built the Panama Canal, provides that the canal shall be free and open to vessels of commerce, and of war, of all nations, on terms of entire equality, and that there shall be no discrimination against any such nation, or its citizens, or subjects, in respect of the conditions of charges of traffic or otherwise. It is contended that the U.S. should not be included in the term "all nations" at least as regards its coast to coast trade.

H.M.C.S. Aurora and the destroyer **Patriot** sailed from Victoria, B.C., for Halifax, N.S. via the Panama Canal. They were followed June 6 by the destroyer **Patriot**, which was delayed in sailing by some repairs necessitated by grounding at Nanaimo recently. She was expected to join the first two ships at San Diego, Cal.

Welland Canal Contract.—The Railways and Canals Department has given the Canadian Dredging Co., Midland, Ont., a contract for placing stone protection on the Welland Canal summit level between Thorold and Port Colborne.

Great Lakes Levels.

The U.S. Lake Survey reports the mean stages in feet above mean sea level, of the Great Lakes for May, as follows: Superior, 602.12; Michigan and Huron, 580.58; St. Clair, 575.62; Erie, 573.09; Ontario, 24.68.

Lake Superior was 0.43 ft. higher than April, 0.21 ft. lower than in May, 1920, 0.10 ft. above the average May stage of the last ten years, 0.93 ft. below the high stage of May, 1861, and 1.30 ft. above the low stage of May, 1911.

Lakes Michigan and Huron were 0.24 ft. higher than April, 0.16 ft. lower than in May, 1920, 0.02 ft. below the average May stage of the last ten years, 2.94 ft. below the high stage of May, 1886, and 1.02 ft. above the low stage of May, 1896. During the last 10 years the May level has averaged 0.3 ft. higher than the April level and 0.3 ft. lower than the June level.

Lake Erie was 0.30 ft. higher than April, 0.80 ft. higher than in May, 1920, 0.39 ft. above the average May stage of the last 10 years, 1.33 ft. below the high stage of May, 1862, and 1.78 ft. above the low stage of May, 1895; during the last 10 years the May level has averaged 0.4 ft. higher than the April level and 0.2 ft. lower than the June level.

Lake Ontario was 0.30 ft. higher than April, 1.08 ft. higher than in May, 1920, 0.07 ft. above the average May stage of the last 10 years, 2.27 ft. below the high stage of May, 1870, and 1.72 ft. above the low stage of May, 1872. During the last 10 years the May level has averaged 0.3 ft. higher than the April level and 0.2 ft. lower than the June level.

DEPARTMENT OF RAILWAYS AND CANALS, CANADA.

WELLAND SHIP CANAL
Sections 1 and 2 Combined.

NOTICE TO CONTRACTORS.

SEALED tenders addressed to the undersigned and marked "Tender for Sections 1 and 2 Combined, Welland Ship Canal" will be received at this office until 12 o'clock noon, on Monday, July 25, 1921.

Plans, specifications and form of contract to be entered into can be seen on or after this date at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Engineer in Charge, Welland Ship Canal, St. Catharines, Ontario.

Copies of plans and specifications may be obtained from the Department on the payment of the sum of fifty dollars. To bona fide tenderers this advance will be refunded upon the return of the above in good condition.

An accepted bank cheque on a chartered bank of Canada for the sum of \$700,000 made payable to the order of the Minister of Railways and Canals, must accompany each tender, \$400,000 of which sum will be forfeited if the party tendering declines to enter into the contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective Contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
J. W. PUGSEY, Secretary.
Department of Railways and Canals,
Ottawa, June 24, 1921.

Traffic Records Made at Sault Ste. Marie and Panama Canals.

Comparisons of certain traffic records made at the Panama Canal and the St. Marys Falls Canal, Sault Ste. Marie, Mich., indicate in several instances that facilities on the ocean for handling bulk freight are not yet as efficient as those on the Great Lakes, according to information furnished by L. C. Sabin, General Superintendent, St. Marys Falls Canal. Records of size and tonnage of ships and of coaling and discharging coal are cited, the figures from the Isthmus being taken from the Panama Canal Record.

The s.s. Friesland, with 15,138 short tons of wheat passed through the Panama Canal Nov. 8, 1920, the largest cargo of wheat that had been carried through the canal. The Friesland is 12,321 tons gross and 8,690 net tons, 520.7 ft. in length by 64.2 ft. beam, drawing 30.4 ft. in salt water at the time of transit. The s.s. W. Grant Morden, with a cargo of 15,149 short tons of wheat passed through the St. Marys Falls Canal, Oct. 9, 1919. The Morden is 8,973 gross tons, 6,086 net tons, and is 625 ft. long with 59 ft. beam, and was drawing 20 ft. 10 in. fresh water at time of passing.

The collier Ulysses, discharged 12,030 tons of coal in 14 hr. 25 min., Nov. 12-13, 1920, which is equivalent to 834 tons an hour, allowing 1 hr. for clean up, etc. This was cited as a new record at the Cristobal coaling plant. On the Great Lakes this rate has never been exceeded. In 1918 the G. G. Barnum discharged 10,610 net tons of soft coal in 10 hr. 30 min., or at the rate of 1,010 net tons an hour. In 1919 the Wm. A. McGonagle made a record of 1,149 tons an hour.

On Nov. 25, 1920, the Cristobal coaling plant established a new record in delivering 1,102 tons of coal to the s.s. Wiltshire in 1 hr. 35 min., or at the rate of 1,609 tons an hour, equivalent to 180 net tons an hour. This coal record is often exceeded on the Great Lakes. In 1920 the H. G. Dalton loaded 13,880 net tons in 10 hr. 30 min., or at the rate of 1,322 net tons an hour; in 1919 the J. Pierpont Morgan loaded 13,534 tons in 6 hr. 59 min., or at the rate of 1,933 tons an hour.

The U. S. Shipping Board's Emergency Fleet Corporation, according to a recent decision of the Appellate Division of the New York Supreme Court, in the case of the Ingersoll-Rand Co. against the corporation, may be sued like any other corporation, and does not enjoy the sovereign right of government. The court's judgment is that when Congress provided for the incorporation of the Emergency Fleet Corporation, under the District of Columbia laws and authorized the U. S. Shipping Board to subscribe for not less than half of the capital stock, on behalf of the U. S., it authorized the creation of an artificial person, capable of suing, and of being sued, as is any other corporation of the District of Columbia. The U. S. laid aside its sovereign character, in which it could not be sued, and took that of a private citizen, a stockholder in the corporation, exercising its power, as every other stockholder, by its vote in stockholder's

Superannuation of Pilots.—Senator Daniel asked the following questions in the Senate, recently:—What are the annual amounts of pay granted to retired or superannuated pilots in Montreal,

Quebec, Sydney, Miramichi, Pictou, Halifax and St. John pilotage districts? What, if any, changes have been made in these rates during the last 7 years, giving amounts, dates and districts? Under what regulations are these annual amounts arrived at in the different pilotage districts? Sir James Loughheed gave the following answers:—1. Montreal, no pension paid by Government; Quebec, \$300 a year to those entitled; Sydney, Miramichi, Pictou, Halifax and St. John, no pension paid by Government. 2. No changes. 3. By order in council, Dec. 5, 1906, in order to reduce the number of pilots in the pilotage district of Quebec. A pilot must retire at the age of 65 to obtain this pension.

The Georgian Bay Tourist Co., Ltd., the incorporation of which, under the Ontario Companies Act, with \$100,000 authorized capital, and office at Midland, Ont., was mentioned in a previous issue, operates the s.s. City of Midland between Midland and Copperhead, connecting with G.T.R. trains at Midland, and calling at Honey Harbor, Minnecoganashene, Whalens, Go-Home, Wah-Wah, Taysee and Manitou. The s.s. City of Midland, formerly American built, was bought from the Canada Steamship Lines, and is in charge of Capt. G. W. Kinnee, master; J. E. Kane, engineer, and R. M. Johnston, second engineer. The company's officers are:—D. L. White, President; D. S. Pratt, Vice President and Managing Director; N. K. Wagg, Manager; Capt. E. F. Burke, Assistant Manager, and R. R. Wilson, Secretary-Treasurer.

The Honey Harbor Navigation Co., the incorporation of which, under the Ontario Companies Act, with \$40,000 authorized capital stock, and office at Midland, Ont., was announced in a recent issue, owns the s.s. City of Dover, the yacht Tenno and the motor launch Waterbus, and also operates Picnic Island, about 17 acres, for day picnic parties. Capt. Lagree is master of the City of Dover, and W. E. Roote is the chief engineer. The boats are operated between Midland and Minnecoganashene, calling at Honey Harbor and Minnecoganashene. H. K. Wagg is President, and R. R. Wilson is Secretary-Treasurer.

The Gulf of St. Lawrence Shipping & Trading Co. Ltd., Quebec, Que., which last year operated steamship services on the St. Lawrence River and Gulf, between Montreal and Gulf and Newfoundland ports, is in bankruptcy, and tenders for its steamships Lady Evelyn, Champlain, Labrador and Guide were invited up to April 15. The company was incorporated in 1919, its officers being: C. A. Barnard, K.C., Montreal, President; A. E. Doucet, Quebec, Vice President; H. P. Hamel, Quebec, Secretary-Treasurer; J. de S. Bosse, General Manager, and Capt. J. S. Bernier, Marine Superintendent.

Toronto Harbor Life Saving.—The Toronto Harbor Commissioners have issued their second annual report on the life saving and police patrol services. The life saving equipment, which was transferred from the Dominion Government to the Harbor Commissioners in 1919, was valued at about \$20,000, and since then a life saving station has been built at the western channel, and auxiliary stations at the Humber River and Scarborough Beach. During 1920, 29 calls were received for first aid, 39 for ambulance, 103 for rescues, 16 for fires, and 89 miscellaneous; and 15 persons were drowned, including 2 suicides.

The White Star Line (Oceanic Steam Navigation Co.) report for 1920, shows a profit of £1,372,158, after providing for excess profits, duty and contingent liabilities, and adding interest and dividends on investments, etc. With the balance of £104,512 brought forward from 1919, the total credit at profit and loss was £1,476,670, and after deducting debenture interest, depreciation, etc., there was an available balance of £780,955, from which, dividends equivalent to 15%, absorbing £750,000, were paid, and £30,885 was carried forward to this year's accounts.

Motor Boat Nokomis.—The Dominion Public Works Department received tenders to June 22 for the purchase of the motor boat Nokomis. She has a cyprus hull 14 in. thick, with frame of white oak, and is fully equipped with Buffalo engine, medium type, 20 h.p., with 20 in. propeller, 1 spare propeller and a small dinghy. She is 36 ft. long overall, 8 ft. beam, with draft of 3 ft., and an average speed of 9 miles.

The Pacific Coast Association of Port Authorities will hold its annual conference in October at Vancouver, B.C. Plans are being made for the entertainment of visitors, and it is probable that a delegation will be present from the American Association of Port Authorities' annual convention, which will be held at Seattle, Wash., immediately before the Vancouver meeting.

The Atlantic Transportation Co., Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to own and operate steam and other ships in all waters within or without Canada. H. A. Powell, W. H. Harrison, T. Nagle, H. Warwick, F. J. McDonald and J. R. Miller, St. John, N.B., are the incorporators.

Transit Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$24,000 authorized capital, and office at Montreal, to carry on business as merchants' carriers by land and water, within and without Canada, and to apply for any Post Office, Government or other subsidies, and to own steam and other ships of every description.

Northern Freighters Ltd. has been incorporated under the British Columbia Companies Act, with \$50,000 authorized capital, and office at Victoria, to carry on business as common carriers, shipping and forwarding agents, and to own and operate ships of every description for passengers and freight.

Navigation Fatalities.—During the 3 months ended March '21, two navigation employees were killed in the course of their occupation; one, an engineer, fell into an open hatchway at Cornwall, Ont., and one, a stevedore, fell through a hatchway at St. John, N.B.

The Royal Mail Steam Packet Co. announces that, subject to audit, the accounts for 1920 will permit of a balance dividend of 4½% less income tax, on the common stock making, together with the interim dividend paid in Oct. 1920, 7½% for the year.

Canadian List of Lights and Fog Signals on the Pacific and Atlantic coasts, corrected to April 1, have been published and may be obtained free on application to the Marine Department, Ottawa.

Lake Commerce Ltd., Toronto, which was formed a few years ago to own and operate the s.s. Valcartier, has surrendered its Ontario charter, having sold the ship.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

British Columbia.

Johnstone Strait.—Capt. A. Stohlberg, of the s.s. Ivanhoe, reports the existence of an uncharted shoal in the approach to Port Harvey, on the west side of the channel, about 5,100 ft. from Domville Point; depth 16 ft. This will be examined by the Hydrographic Survey as soon as possible.

Laredo Channel.—A. Dickson, master of the s.s. Camosun, reports the depth of an uncharted rock in midchannel halfway between Schooner Point and the south end of South Channel Islands, as 14 ft. and not 21 ft. as previously reported.

New Brunswick.

Bay of Fundy.—The Partridge Island radiotelegraph coast station will be closed July 1, and commercial traffic previously handled by this station will be dealt with by the St. John direction finding station, call sign V.A.R. The St. John direction finding station will maintain constant watch, and will handle commercial traffic on 600 meters. The direction finding bearings will, however, be dealt with on 800 meters as before, after communication has first been established on 600 meters.

Northumberland Strait.—The position of the front light of the channel range at the Richibucto harbor entrance has been changed to the north side of South Beach, 665 ft. 72 degrees, 30 minutes from back light.

Nova Scotia.

Cape Breton Island.—Four spar buoys, two red and two black, have been established to mark the bridge channel leading to the loading berth in McKinnon harbor, Bras d'Or Lakes.

Halifax.—Lightship 15 has been withdrawn from her station on Sambro outer bank, at the entrance to the harbor, and has been replaced by a gas and whistling buoy, painted black, showing an occulting white light.

Ontario.

Niagara River.—During work on the Chippewa power canal, the channel into the Welland River is on the west side of Hog Island, and for the present a fixed white light is exhibited on the north-east corner of the cofferdam, 900 ft. from Hog Island lighthouse.

Port Dover.—Two red wooden spar buoys have been established on the west and east ends of Fleming shoal, respectively, at the entrance to Port Dover, a black wooden spar buoy has been established at Sandhead shoal, at the west side of channel at entrance to Blind Bay, and a red wooden spar buoy has been established on the west side of the middle ground, opposite the Sandhead shoal buoy.

River St. Lawrence.—Without further notice, the fixed white light on Skelton Island, at the east end of Brockville Narrows, will be replaced by an occulting white light, automatically occulted at short intervals.

Quebec.

Gulf of St. Lawrence.—Lightship 15 has been placed off Heath Point for the summer. On the close of St. Lawrence navigation she will be replaced on the Sambro station, at the entrance to Halifax harbor, N.S.

Prince Edward Island.

St. Peter.—Owing to the shifting of

the channel at the entrance to St. Peter harbor, the back range light on the north coast will be discontinued temporarily.

United States.

Alaska.—A red and black cylindrical gas and whistling buoy, showing a flashing white light every 3 sec., flash 93 sec. duration, and whistle sounded by the motion of the buoy on the waves, has been established on the north side of Helm Rock, Summer Strait, about 13 miles off Point Baker.

St. Mary River.—The fixed red light at the Tryon Pan Island light station, on the island on the west side of Detour Passage, will be changed to a flashing red light, showing a flash of 0.5 sec. duration every 2 sec.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Association of Port Authorities. M. P. Fennell, Jr., 57 Common St. Montreal.
Bellevue Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pinkston, Bellevue, Ont.

Canadian Car Demurrage Bureau—W. J. Collins, Manager, 40 St. Nicholas Building, Montreal.
Canadian Electric Railway Association—E. Moreland, Hall Electric Co., Hull, Que.

Canada Freight Association (Eastern lines)—G. C. Ransom, 599 Shaftnessy Bldg., Montreal.
Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Bldg., Winnipeg.

Canadian Navigators Federation, Great Lakes Division.—Capt. R. D. Simpson, Owen Sound, Ont.

Canadian Navigators Federation, Pacific Division.—J. Goodlad, 1101 Rogers Building, Vancouver, B.C.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club. W. A. Booth, 131 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Traffic League, A. H. Thorpe, 25 Balsam Ave., Toronto.

Dominion Marine Association—F. King, Council Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—B. B. Webster, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

General and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.

Railway Association of Canada—C. P. Riddell, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Transportation Club of Toronto—W. A. Gray, 257 Rex Road, Toronto.

Transportation Club of Vancouver—C. E. Blaney, Travelling Passenger Agent, Canadian Pacific Ocean Services Ltd., Vancouver, B.C.

The Lord Ormonde Steamship Co. Ltd. has been incorporated under the Dominion Companies Act with 500 shares without nominal par value, provided that it shall carry on business with a capital of \$2,500 and office at Montreal, to conduct a shipbuilding business, to act as ship agents, etc., and to own and operate steam and other ships of every description. The incorporators are: F. B. Common, F. G. Bush, H. W. Jackson, G. R. Drennan and W. P. Creagh, Montreal.

Transportation Conventions in 1921.

The names of persons given below are those of the secretaries, unless otherwise mentioned:—

Aug. 9-11—American Railway Tool Foremen's Association, Chicago, Ill.; R. D. Fletcher, 1145 East Marquette Road, Chicago, Ill.

Aug. 12-14—International Railroad Master Blacksmiths Association, Chicago, Ill.; W. J. Mayer, Michigan Central Bldg., Detroit, Mich.

Aug. 24-26—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rethachild, Union Station, St. Louis, Mo.

Sept. 1-4—American Railway Master Timers, Coppersmiths and Pipefitters Association, Chicago, Ill.; C. Berchard, 202 North Hamlin Ave., Chicago, Ill.

Sept. 12-15—International Railway General Foremen's Association, Chicago, Ill.; W. Hall, 1061 West Wabasha Ave., Winona, Minn.

Sept. 22-24—Roadmen's Association and Maintenance of Way Association, Chicago, Ill.; P. J. McAndrews, Chicago & North Western Ry., Sterling, Ill.

Oct. 4-6—Maintenance of Way Master Painters' Association, Buffalo N.Y.; E. E. Martin, Union Pacific Rd., Kansas City, Mo.

Oct. 18-20—American Railway Bridge and Building Association, New York, N.Y.; C. A. Lichty, Chicago & North Western Ry., Austin Station, Chicago, Ill.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, the publishers are not for sale, either to advertisers or others.

Davis-Bournonville Co., Jersey City, N.J., has issued a catalogue of acetylene generators, welding and cutting torches, pressure regulators, portable outfits, and welding supplies.

Dominion Iron & Steel Co., Sydney, N.S., has secured a 3,000-ton contract to deliver steel to the Northern Construction Co. and Major General J. W. Stewart, for the Ballantyne pier in Vancouver harbor.

Independent Pneumatic Tool Co., Chicago, Ill., has issued circular 36, respecting its Thor portable electric drill stand.

Independent Pneumatic Tool Co., Chicago.—Ralph S. Cooper, Vice President and General Sales Manager, has returned to Chicago, after spending eight months in Europe, establishing agencies and branch offices, and has been appointed General Manager, in addition to his other duties.

Gold Car Heating & Lighting Co. has removed its offices and warehouses to Bush Terminal, 220 36th St., Brooklyn, N.Y., where it has secured much larger quarters and greater facilities for handling orders.

Orton & Steinbrenner Co., Chicago, Ill., has issued catalogue 20, "Seven and Twelve Ton Crawling Treadband Road Wheel Locomotive Cranes."

Chicoutimi Transportation Co. Ltd. has been incorporated under the Quebec Companies Act with \$5,000 authorized capital and office at Chicoutimi, to own and operate vehicles and ships, for transportation of passengers and freight in the province, to carry on a general express and transportation business, and to establish lines of ships on St. John and Kenogami Rivers, and Saguenay and St. Lawrence Rivers. The incorporators are: J. A. Tremblay, E. Jarvin, P. Tremblay, Chicoutimi, Que., and A. Royer, Quebec, Que.

Canadian Railway and Marine World

August, 1921

Standard Track Centers for Construction of Divisional Points, Terminal Sorting Yards, and Sidings.

S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, gave the following judgment under date of May 23:—As a result of investigations by the Board's officials, circular 157 was issued Jan. 21, 1918, as follows:—"The Board is considering the advisability of establishing a standard distance between track centers, for the construction of divisional points, terminal sorting yards, and sidings, which will provide a safe and satisfactory clearance for the movements of trainmen and yardmen in the performance of their duties. Railway companies are requested to file their views upon the matter within 30 days from this date, stating what clearance, in their opinion, would provide the necessary room between moving cars for the men referred to while carrying on their work."

In response to this, detailed submissions were made by individual railways, which were in accordance with the conclusions arrived at at a meeting attended by the engineers of the Canadian Pacific, Canadian Northern, Michigan Central and the Grand Trunk Railways. The recommendation which follows was a recommendation for a minimum distance between tracks for various uses, with the proviso that these recommendations should be applied to new construction.

Main tracks	13 ft.
Main and passing tracks	13 ft.
Main or running track and parallel track	13 ft.
Receiving, classification and departure yard track	13 ft.
Parallel ladder tracks	16 ft.
Ladder and other tracks	15 ft.
Freight shed tracks (A.R.E.A.)	12 ft.
Passenger station tracks (without platform between)	13 ft.
Storage tracks	12 ft.
Team tracks in pairs	12 ft.

A representation is on file from Jas. Murdoch, Vice President, Brotherhood of Railway Trainmen, stating that on account of the increased or increasing size of cars and locomotives the distance between parallel ladder tracks in yards should not be less than 14 ft. centers. Other representations from the Brotherhood of Railway Trainmen to the same effect have been submitted. The matter was set down for hearing on Jan. 7, 1919. The engineering departments of the leading roads prepared a statement which was filed at the hearing and which reads as follows:—

1. Main tracks, 13 ft. center to center. To place main tracks at a sufficient distance apart to render safe the occupation of the space between them by men during the passage of trains on both tracks would necessitate such a distance as to be altogether out of the question. This means that it will always be unsafe for men between tracks on main line and therefore the closer together the tracks can be placed with safety to the equipment, the less danger is there of men attempting to remain between them during the passage of trains. Thirteen feet is at present universal practice throughout America; it fulfills the requirement

as to safety of equipment, and is also so close as to make it extremely dangerous for men to remain between tracks while two trains are passing. It is the universal rule for railways that men stepping aside for passing trains must step to the outside of both tracks and not to the space between the tracks. We would recommend that 13 ft. be retained as the standard distance between main tracks.

"2. Main and passing tracks, 13 ft. center to center.—The object of a passing track being to permit a train to stand while being met or passed by other trains, gives, in one sense, the same condition as obtains with main tracks, the only difference being that, in this case, one train is standing while the other is moving. This difference, however, means that men caught between tracks have, every 40 ft. throughout the length of their train a refuge into which they will naturally step to protect themselves from the passing train and the possibility of anything projecting or flying from it. We recommend that 13 ft. be established as the minimum distance between main and passing tracks.

"3. Main or running track and parallel tracks, 13 ft. center to center.—This distance center to center of tracks is considered as a minimum only, and is quite sufficient on light traffic, where trains are infrequent and do not attain to high speeds customary on main lines. On main lines, all of the roads represented in this recommendation have adopted as their practice a greater distance than 13 ft., but we do not feel that anything greater than this should be adopted as a minimum.

"4 to 10 inclusive, cover tracks used for such a variety of purposes, and these under such dissimilar conditions that one class of tracks in a given yard or section of the country may require an entirely different distance center to center from the same class of tracks in another yard or section of country. The requirements of storage tracks, where movements are very infrequent, may be such as to involve a tremendous waste in using anything greater than 12 ft. centers. Freight shed tracks have been worked for years at 12 ft. centers and even less, and the manner of working these should certainly determine the necessity for anything more than 12 ft. at any given location. Team tracks in pairs, it would seem, need no argument, as there is one clear side to each track, which should preclude the necessity for men ever having to go between the tracks themselves. The numbering in the above agrees with the statement attached."

In written submissions filed before the hearing, Mr. Murdoch, in urging that there should be 14 ft. clearances from track centers, urged that this was essential, not only from the standpoint of safety but also from the standpoint of having sufficient clear way between the tracks to give proper working signals to other members of the switching crew;

and he emphasized again the increased size of cars and engines. In a representation made by Mr. Best, legislative representative of the Brotherhood of Local Firemen and Engineers, the same positions were emphasized, and it was also stated that it appeared desirable that tracks should be located at such distance as would ensure no obstruction closer than 2 ft. from the widest cab or car in operation.

At the hearing, the railways set out that without a limitation on the width of cars it was of little value to fix a clearance, and it was represented, therefore, that the matter should stand until the question of the width of equipment could be dealt with. Some years ago the Board had before it, in connection with the question of automobile cars, a proposition as to limiting the size and height of cars, but it was found impossible to make direction at that time.

Mr. McGovern, on behalf of the men employed in train and yard service, in arguing for a 14 ft. center, said this would leave a width of 3½ ft. with the widest car. A considerable amount of information was given by witnesses in regard to local conditions, and judgment was reserved.

The investigations which the Board's engineering and operating departments had been conducting prior to the hearing were conducted subsequent thereto; and as a result of the material collected and evidence submitted at the hearing the following recommendation was made by those departments:—

1. Main tracks	13 ft.
2. Main and passing tracks	14 ft.
3. Main or running track and parallel yard tracks	14 ft.
4. Receiving, sorting and classification yard tracks	13½ ft.
5. Storage tracks	13½ ft.
6. Parallel ladder tracks	15 ft.
7. Ladder and other tracks	15 ft.
8. Freight shed tracks	12 ft.
9. Team tracks in pairs	12 ft.
10. Passenger station tracks, without platform between	13 ft.

The recommendations have been checked against those applying in railway practice in the United States. Items 4 and 5, under U.S. practice, vary from 13 ft. to 14 ft. The standard width of 13½ ft., which is recommended, appears to me to be reasonable. The Chief Engineer advises that the only road he knows of which is using the parallel ladder tracks is the C.P.R. I am of opinion that items 1 to 10, as set out, may be accepted and order drawn accordingly.

An important question has been raised in regard to the effective date. A proposition has been placed before the Board that the tracks now in place should be adjusted to the minimum distance prescribed, such readjustments to be made by a definite date. I am of opinion that all tracks put in place from Jan. 1, 1922, should be subject to the minimum distance set out in the extract above from the engineering and operating departments report.

With regard to the suggestion that the

tracks now in place should be taken up and readjusted to this limited distance by the end of a definite period, on careful consideration, I have to say that I am unable to agree to this. I have a thorough appreciation of the element of human safety involved and am entirely in agreement with the proposition that the best possible precautions in this respect should be taken. The matter is not one which is measured in terms of dollars. In considering, however, the whole situation, one has to remember the effect that would be exercised on the space for cars, and the fact that established business has to be carried on to direct that by a definite date there should be a readjustment complying with the minimum distances, would dislocate business, and it would mean in various instances a serious curtailment of space. Where yard accommodation is located in a closely settled section of a city, it would mean that additional space could be obtained only at great inconvenience to the public and at almost prohibitive cost. While it does not seem to me that a definite date can be fixed, the railways should have a continuous readjustment in mind; and I, therefore, think it would be justifiable to provide that in case of any tracks now in place which are rearranged as and from Jan. 1, 1922, the rearrangements should be in compliance with the minimum clearances.

Where there are existing clearances less than those recommended, the burden is on the railway, where danger of accident arises from such clearances, to provide proper means of operating so as to adequately safeguard those who are working under such conditions.

The Chief Commissioner, the Deputy Chief Commissioner, and Commissioners Rutherford and Boyce concurred.

The Board of Railway Commissioners passed general order 345, June 23, ordering that all railway tracks laid after Jan. 1, 1922, be placed at the minimum distances recommended by the Board's Engineering and Operating Departments, as quoted in the Assistant Chief Commissioner's judgment, and that any such tracks now laid, which are re-arranged after Jan. 1, 1922, be placed in accordance with the said minimum clearances.

Ice Supply at Mulgrave for Canadian National Railways.

J. H. Sinclair, Antigonish and Guysborough, N.S., asked the following questions in the House of Commons recently, which were answered by the Minister of Railways.

Q. "What are the names of all parties who tendered for supplying ice to the Canadian National Rys. at Mulgrave, N. S., for the present season?" A. "S. H. Hagerty, Monastery, N.S.; James Dunlap, Leitch Creek station, N.S."

Q. "What were the respective amounts of said tenders?" A. "It is not in the interests of Canadian National Rys. to make these tenders public. The contract was let to the lowest tenderer."

Application for Reduced Freight Rates. The Toronto City Council instructed the Corporation Counsel recently, to apply to the Board of Railway Commissioners, to have freight rates reduced to the old basis.

The Board has stated in reply that while retaining control of the case, nothing has developed to justify any change in the rates, but that it will, when the situation changes, take action.

Birthdays of Transportation Men in August.

Many happy returns of the day to,—
V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Rys., now railway contractor, etc., Toronto, born at Ottawa, Aug. 2, 1880.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Aug. 13, 1874.

C. B. Brown, Engineering Assistant to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, born at Ithaca, N.Y., Aug. 27, 1879.

A. B. Calder, on Executive Staff, C. P.R., Montreal, born at London, Ont., Aug. 24, 1867.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

Hon. F. B. Carvell, K.C., Chief Commissioner, Board of Railway Commissioners, Ottawa, Ont., born at Bloomfield, N.B., Aug. 14, 1862.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, born at Belleville, Ont., Aug. 4, 1887.

Lieut.-Col. F. F. Clarke, D.S.O., Chief Land Surveyor, Canadian National Rys., Toronto, born at Hamilton, Ont., Aug. 22, 1878.

C. H. N. Connell, Engineer, Ontario District, Canadian National Rys., Toronto, born at Woodstock, N.B., Aug. 26, 1876.

S. W. Crabbe, Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Teeswater, Ont., Aug. 9, 1885.

H. W. Crawford, ex-General Agent, Canada Steamship Lines, now of Toronto, born at Bowmanville, Ont., Aug. 24, 1887.

E. L. Desjardins, Superintendent, Division 1, Quebec District, Canadian National Rys., Levis, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., born in Bosanquet Tp., Ont., Aug. 21, 1870.

J. V. Foy, General Passenger Agent, Canada Steamship Lines, Ltd., Toronto, born there Aug. 27, 1882.

Geo. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 28, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

W. P. Hinton, Consulting Officer to Receiver (Minister of Railways and Canals), Grand Trunk Pacific Ry., Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

F. S. Isard, Managing Director, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Aug. 14, 1888.

H. L. Johnston, District Engineer, Vancouver Island Lines, Canadian National Rys., Victoria, B.C., born at Fredericton, N.B., Aug. 29, 1862.

W. A. Kirkpatrick, Superintendent of Transportation, Prairie District, Canadian National Rys., Saskatoon, Sask., born at West Lorne, Ont., Aug. 28, 1883.

F. L. Lamplough, Superintendent, Ottawa Division, G.T.R., Ottawa, born at Cambridge, Vt., Aug. 15, 1867.

J. D. McDonald, General Passenger Agent, Western Lines, Grand Trunk Ry., and General Western Passenger Agent, Canadian National Rys., Chicago, Ill., born at Toronto, Aug. 27, 1855.

M. K. McQuarrie, Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Edmonton, Alta., born near Ottawa, Ont., Aug. 27, 1874.

H. C. Meachem, Import Freight Agent, Canadian National Rys., Montreal, born at Brantford, Ont., Aug. 11, 1863.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

J. J. Oliver, Secretary-Treasurer, New Brunswick Power Co., St. John, N.B., born there, Aug. 4, 1887.

L. Paik, Assistant to General Manager and Assistant Secretary, Winnipeg Electric Ry., and Secretary, Winnipeg, Selkirk & Lake Winnipeg Ry., Winnipeg, born there, Aug. 14, 1885.

Capt. K. G. Polybank, Division Engineer, Canadian National Rys., Horneypayne, Ont., born at Bristol, Eng., Aug. 17, 1884.

Lieut. Col. Blair Ripley, C.B.E., D.S.O., Engineer, Ontario District, C.P.R., Toronto, born at Oxford, N.S., Aug. 29, 1880.

Hon. Gideon Robertson, Minister of Labor, born at Welland, Ont., Aug. 26, 1874.

J. M. Rosevear, Comptroller, G.T.R., Montreal, born at St. Lambert, Que., Aug. 9, 1869.

W. G. Ross, President, Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. LeB. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Winnipeg, born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, Fuel Department, Grand Trunk Pacific Ry., Winnipeg, born at Fairfeld, Vt., Aug. 20, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

W. D. Waddell, Chief Accountant, Canadian Northern Ry. System, Toronto, born at Waterford, Ireland, Aug. 7, 1877.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, Division 1, Central District, Canadian National Rys., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1883.

Steam Railway Operating Revenues, Expenses and Statistics for February.

The following comparative table, for February 1921 and 1920, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics.

St. Lawrence & Adirondack Ry., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1922 figures, however, will be available for comparative purposes for 1922.

The column headed "Canadian Government," includes the Intercolonial, Prince Edward Island, National Trans-

portation Branch.

The figures in the column headed "All railways," include all steam railways with an annual operating revenue of \$500,000 and over, per year, except the

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern" includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc.," includes also the Montreal and Atlantic, and the Esquimalt & Nanaimo Rys.

The column headed "Grand Trunk" includes the Canadian lines only.

A comparison of the figures for Feb. 1920 and Feb. 1921 for all railways shows that the total operating revenue increased from \$29,072,758.29 to \$32,142,741.57, the total operating expenses increased from \$32,391,964.32 to \$33,801,143.22, the net operating deficit decreased from \$3,319,206.03 to \$1,658,401.65 and the ratio of operating expenses to revenue decreased from 110.7% to 105.1%.

The Canadian Government Rys. reduced their net operating deficit from \$1,205,925.27 to \$840,833.20; the Canadian Northern Ry. reduced its net operating deficit from \$1,839,755.66 to \$1,285,555.07; the Canadian Pacific increased its net operating revenue from \$763,919.30 to \$824,486.02; the Grand Trunk, in place of a deficit in net operating revenue of \$690,856.70, had a surplus of \$29,692.93, and the Grand Trunk Pacific increased its deficit in net operating revenue from \$670,816.50 to \$859,233.52.

The ratio of operating expenses to revenue changed as follows:—All railways decreased from 110.7% to 105.1%; Canadian Government Rys. decreased from 145.9% to 123.8%; Canadian Northern Ry. decreased from 150.1% to 123%; C.P.R. decreased from 94.5% to 93.6%; Grand Trunk decreased from 115.2% to 99.4%; and Grand Trunk Pacific increased from 175.9% to 184.7%.

While the several decreases in operating ratio are gratifying, yet the fact of their being as high as they are shows clearly the condition of Canadian railways, which is closely analogous to that in the United States, but made more serious, from a railway earning point of view, by the lower traffic density of the majority of the roads. In January and February, a large number of U.S. railways incurred an operating deficit, and a few more months like those would have bankrupted most of them. Taking into consideration all the conditions surrounding the railway industry, the fact that the C.P.R. was able to keep its operating ratio down to 93.6% may be considered gratifying, but when it is remembered that that road had an operating ratio of 69.46 in 1917; 78.10 in 1918; 81.39 in 1919; and 84.70 in 1920, it is at once evident that operating expenses have increased more than operating revenues, and that, as is indicated by the C.P.R. returns, a substantial reduction in operating expenses must be made before the industry can be considered as being on a proper basis, or before any considerable rate reduction can be looked for.

The Canadian Government Rys. reduction of operating ratio from 145.9% to 123.8% and the Canadian Northern's reduction from 150.1% to 123% are the results of vigorous efforts by the Canadian National Rys. management to reduce expenses to the utmost limit, but leave little hope to expect that for some

considerable time to come these lines will cease to require contributions from the monies raised by general taxation, to keep them going.

In the decrease of the Grand Trunk's operating ratio from 115.2% to 99.4%, a large improvement has been effected; but no railway could keep out of bankruptcy long with an operating ratio of 99.4%. However, such a result could be logically expected, since the results on the majority of the Eastern U.S. railways, operating under substantially similar conditions, have been about the same; those properties have come through the past years largely because of the U.S. Government guarantee.

The Grand Trunk Pacific was a lamentable exception, its operating ratio increasing from 175.9% to 184.7%. The official explanation is that this was due principally to an increase of over 60% in transportation expenses, and to an increase of about 20% in maintenance of way and structures, though maintenance of equipment decreased over 16%.

The traffic figures show that the business handled by the railways reflected the change in business conditions which took place between Feb. 1920 and Feb. 1921. The ton mileage of revenue freight decreased about 8%, and the passengers carried one mile decreased about 18%. Opinion is expressed in many quarters to the effect that the reduced traffic handled by the railways is a direct result of the increases in rates, but it is probable that the reduction is due almost entirely to business conditions and would have taken place had the rates not been increased. The figures certainly demonstrate the need of the railways for all the revenue it is possible for them to obtain.

The average rate per ton mile was 1.219c. in Feb. 1921, and 0.981c. in Feb. 1920, which reflects the rate increases allowed by the Board of Railway Commissioners in Sept. 1920. In 1917, the average rate per ton mile was 0.698c. in 1918, 0.847c. in 1919, 1.003c. in 1920, 1.038c. in Feb. 1920, 1.035c. and in Feb. 1921, 1.267c. per ton mile. It is thus seen that the C.P.R. average receipt per ton mile in Feb. 1921 was 81% higher than it was for the year 1917; yet the operating ratio in 1917 was 69.46%, while in Feb. 1921 it was 93.6%. The great increases in operating expenses are thus strikingly illustrated. It is notable that the Grand Trunk Pacific received only 0.830c. per ton mile in Feb. 1921, against 1.106c. for Feb. 1920, which is explained by the great increase in grain it handled in Feb. 1921.

The average passenger rate per mile increased from 2.545c. in Feb. 1920 to 3.163c. in Feb. 1921, so that, despite the reduced passenger mileage, the total revenue from passengers increased \$75,000. In connection with passenger traffic, it is noteworthy that the decrease in passenger miles took place principally on the C.P.R., which road suffered a 33% reduction. There was a slight decrease on the Canadian Northern and a 35% decrease on the Grand Trunk Pacific. The Canadian Government Rys. and Grand Trunk had slight increases.

Car loading showed an improvement, the average tons per loaded freight car increasing from 23.4 in Feb. 1920 to 27.3 in Feb. 1921. The freight and mixed train mileage decreased 10.5%, but freight car mileage decreased only 3%. The average number of freight cars per train mile was 26.7 for Feb. 1921 and

24.6 for 1920. These figures indicate the large increase in empty car mileage, as shown. Loaded car miles decreased from 73.2 to 65.9% of the total. Some reduction is also shown in passenger train miles and in passenger car miles, but the reduction is not in proportion to the reduction in passengers carried one mile.

Total operating expenses increased 4%. Transportation expense increased 10%, but maintenance of equipment and maintenance of way and structures both show decreases. The total pay roll increased 2%, the reduction in the number of employees almost compensating for the increases in wages dating from May 1, 1920. The large increase in transportation expense on the Grand Trunk Pacific is notable, and is largely the cause of the operating ratio of that road increasing from 175.9 in Feb. 1920 to 184.7 in Feb. 1921.

While the financial returns for Feb. 1921 show an improvement over those for Feb. 1920, the fact remains that it is no improvement brought about by the application of higher rates to a reduced traffic, which is undesirable. United States railways, which operate with practically the same rate and expense levels as Canadian railways, were supposed to be able to pay their way after Sept. 1920, but many have found difficulty in doing so. The recent wage reduction order should act first to restore the railways to their proper financial standing, not only in the U.S. but in Canada, because it is desirable that an industry as important as the railway one should be on a self supporting basis. It would be folly to look for substantial rate reductions because of the reductions in operating expenses which are being brought about at present; it will be in the country's interest to let these reductions stand, and let the railway industry go to a proper basis, after the accomplishment of which rate reductions may be looked for. Viewing the subject broadly, our transportation service must be paid for through railway rates and taxes for some time to come, but the greater the proportion paid through direct charges for transportation, up to the limit of a fair return to private capital, the better.

National Transcontinental Railway Locomotives at Parent.

H. Deslauriers, St. Mary, Que., asked the following questions in the House of Commons recently, which were answered by the Minister of Railways.

Q. 1. "Is the Government aware that several National Transcontinental Ry. locomotives were seriously damaged by frost, on account of having been left exposed to the weather during Dec. 1920, at the locomotive house at Parent?" A. "No."

Q. 2, 3 and 4. "If, so why were the locomotives not sheltered into shelter at the said works? Are the workmen responsible for this damage still in the Government's employ? What was the approximate cost of repairing these locomotives?" A. "Answered by no. 1."

R. W. Scott, Westmont, Que., formerly Superintendent, Montreal Terminals, G.T.R., who has been a subscriber for many years, in renewing his subscription, writes: "I would not be without Canadian Railway and Marine World if it was my last \$2."

Railway Mechanical Methods and Devices.

Riveting Coupler Pockets.

A device for riveting coupler pockets to couplers, in use at the car department C.P.R. West Toronto shops, is illustrated

Fig. 1. Coupler Pocket Riveter.

cylinder, the sleeve S, and riveting tool K, being drawn to the right, by the movement of rods and eccentric casting.

In riveting, the coupler and pocket, suspended from the arm of the hoist, are swung into position as shown, the valve A is opened, forcing the riveting tool K against the rivet, and one application for each rivet does the work quickly

Fig. 1. Pouring Hub Liners. Section Through Part of Hub.

and effectively. For this information we are indebted to Frank Taylor, Mill Foreman, C.P.R. West Toronto car shops.

Fig. 2. Coupler Pocket Riveter. General Arrangement of Parts.

ed herewith. It is located in the blacksmith shop, a few feet away from one of the larger fires, and is served by an air operated hoist, which is of such range that the drawbar and pocket can be lifted from the fire by it, and placed in position for riveting as shown in fig. 1. The riveting apparatus consists of two castings, on concrete foundations; the one to the left is solid, and the one to the right is as shown by fig. 2, one of the side walls at the rear not being shown, in order to demonstrate the arrangement of the movable parts.

At the back is a pit, with a cylinder supported in concrete, with piping for compressed air entering below the piston. By operation of valve A, by handle D, air is admitted to the cylinder, forcing the piston up, and the force is transmitted, through connecting rods and knuckle joints, to casting H, eccentric with fulcrum pin N. The sleeve S is connected to the eccentric so that a complete stroke of the piston gives it a travel of 5 in. The diameter of the sleeve is 5 in., as is also the diameter of the piston and connecting rods. The riveting tool is $3\frac{1}{2}$ in. in diameter, and screws into the chuck, or sleeve, S, threaded three threads per inch. Compressed air, at 90 lb. per sq. in., is used. On reversing the movement of valve A, air is exhausted from below the piston C, and the piston returns to the bottom of the

by fig. 1. The resulting section, in which the faces are dove-tailed, or undercut in, from the face of the hub, ensures the metal remaining in place after it has hardened, and the wheels have been put

Fig. 3. Finished Hub Liner.

into service.

After the hubs have been thus turned up, the pair of wheels is picked up by the crane, and stood with the axle vertical on the shop floor, near the melting furnace. The circular retaining or pattern rings, which are made in two halves, of cast iron, are then put into place, and a joint is made with clay. Fig. 2 shows the set-up preparatory to pouring.

The babbit is melted in a Rockwell tilting furnace, which is lined with firebrick, heat being supplied by fuel oil, in connection with compressed air. Before pouring, the hub of the wheel is oiled.

Fig. 2. Pouring Hub Liners. Wheels on End, Ready for Pouring.

Pouring Hub Liners.

The accompanying illustrations show a method of equipping locomotive driving wheels with hub liners, as carried out in the erecting shop of the Canadian National Rys. Leaside shops, Toronto. In getting the inside of the wheel hubs in shape to receive and retain the liner, the wheels are put in the lathe, and the hubs are machined to the form shown

The molten metal is then poured into the circular space provided, after which the wheel is left until the liner has solidified. The liner is poured about $1\frac{1}{4}$ in. in thickness. The wheels are then reversed, so that the other wheel is on the floor, and the operation is repeated. Fig. 3 shows a finished hub liner.

After both liners have solidified, the wheel is put in the lathe, and the liners are machined to the desired thickness.

Under ordinary conditions, such liners give the best of service from shopping to shipping, and the operation as carried on has produced successful results to date. We are indebted for this information to Otis Grant, Superintendent of Leaside shops, Canadian National Railways, Toronto.

Portable Boiler Testing Apparatus.

The accompanying illustration shows a portable hydraulic pump which is used in the G.T.R. locomotive house at Mimico, near Toronto, in applying the periodic hydrostatic test to locomotive boilers. The pump is driven by compressed air, brought at a pressure of 90 lb. through the hose shown at the left, from any valve in the compressed air piping extending throughout the house. The tank containing the equipment is kept filled with water while the boiler test is in progress, and while the pump is operating, by directing the end of a hose connected to the house water line into the

Portable Boiler Testing Apparatus.

tank, and regulating the flow by valve opening, in accordance with delivery by the pump, so as to keep the tank just nicely filled. The hose shown at the right is the connection to the locomotive boiler, a check valve to prevent any back flow toward the pump being used in connection with the apparatus. The large pipe at the right is the water intake for the pump, and the pipe of the same diameter at the left is the air exhaust, this pipe being swung around so as to have its open end out of the water when the apparatus is placed at the job ready for operation.

The tank is of riveted construction, and the truck is fitted with ball bearings. The method of mounting the apparatus in the tank is clearly shown in the illustration. On account of its compactness, and the ability to use it anywhere in the house, with short connections, this apparatus proves itself a useful piece of locomotive house equipment. For information concerning it we are indebted to H. J. Hague, Locomotive Foreman, G.T.R., Mimico, Ont.

Use of Oil Fuel for Blacksmith Shop Fires.

In eight of the fires used in the blacksmith shop at the Canadian National Rys. Leaside shops, Toronto, for forging, tool making, spring making, etc.,

In the interior of the house are four steel cylindrical storage tanks, as shown in fig. 2. They are all connected to the pipe conveying the oil from the tank car, so that if the valves A are open, the level of the oil is the same in all tanks. The oil is transferred from the tank car to

Fig. 1. Oil Storage House, Canadian National Rys. Leaside Shops, Toronto.

the storage tanks by gravity alone. The outlet pipe, through which the oil is carried to the blacksmith shop, approximately 100 ft., is as shown, the connection being to the lowest part of the tank, and controlled by valves B. Provision is

Fig. 2. Arrangement in Blacksmith Shop, for Using Fuel Oil.

made for cleaning out the storage tanks; all being provided with manholes in the top. The capacity of each is 5,274 imperial gallons.

Fig. 2. Arrangement of Oil Tanks, Canadian National Rys. Leaside Shops, Toronto.

fuel oil is used as the source of heat, and affords results greatly superior to those from blacksmith coal. The facilities at Leaside in connection with the use of fuel oil for this purpose are very complete. The accompanying fig. 1 is an exterior view of the concrete oil storage house, with a tank car in position for transfer of the oil to the storage tanks.

While the oil is unloaded from the car to the storage tanks by gravity, it is necessary to force it from the tanks to the blacksmith fire jets, a motor driven pump being used. Both motor and pump are mounted on a small platform, built as a shelf, on the interior wall of the blacksmith shop, about 10 ft. above the floor. The arrangement is shown in fig.

3. The oil delivery pipe enters the shop at A; the flow is controlled at valve B; the strainers C, G, are so arranged that sediment can be removed easily, and the pump E, driven by motor F, forces the oil into tank H, whence it is piped to the various jets supplying the fires in the shop. Additional valves, to control the flow, are provided at G and K, and control valves are provided at each individual burner.

Several kinds of burners have been tried, the oil jet being used in all, in connection with the compressed air jet, but the style which has proved most successful is one in which the oil spray enters a separate chamber, where it is given an opportunity to form a gas, before being entrained in the air flow. The effect of this is to furnish a regular and even heat throughout the entire volume of the firebox. The chief objection to the burners used previously was that the most intense heat was developed along the line of the combined oil and air jet, and it was difficult, if not impossible, to secure an even heat on a large job. The use of the improved burner has obviated this entirely. The interior of the fire-pots is lined with firebrick, and when the fire is in operation, the interior is at white heat. The fires are easy to control and operate. When the furnaces are once got hot they retain the heat a long time, and on a basis of performance and cost, the fuel oil fires are much superior to the coal fires.

We are indebted to J. Templeton, General Blacksmith Foreman, and Otis Grant, Superintendent of Leaside Shops, for this information.

The Real Railroaders on the Canadian Pacific.

(Adapted by a subscriber, with apologies to J. Edward Hungerford.)

You will find him on the section
Wid a spike and maul and bar-r-r.
And you'll find he makes inspection
From a C.P. private car-r-r;
Makes no difference where he rambles
If you make a railroad sank.
You can pretty nearly ramble
That you'll hear an Irish twang.

It's from him you buy a ticket,
And it's him that calls the thrane,
And you're hild up at the wicket
Be that rollin' linece again tri-r-r.
"Pass rollin' in, sor-r-r, to the left, sor-r-r."
Over there, thrack number eight,
Where yez see that graminish loight, sor-r-r,
And he lets you through the zente.

You will find him tendin' switches,
And you'll find him writin' cheques;
And you'll find him diggin' ditches;
That an Oirishman inspects.
He's a bossin' in the station,
And he's clikin' in the keys;
And he's makin' up the payroll
Wid official names loike these:

McKinty, Maughan, O'Hara, Bourne,
Brennan, Hurson, Gilliland,
Tobin, Whalen, Burton, Phelan,
Sullivan, Tim Roldan,
Dalton, Doonan, Bodkin, Cullen,
Landeran, Altman and Ryan,
Don't it strolly yiz all the Oirish
Fer promotion are-r-r in the Oirish?

Downey, O'Hearn, Gribbin, Mulken,
Paddy Cackley, Cottrell,
Gritt, McCallum, Burke, O'Connell,
Donnelly, Walsh, Buttersell,
Moran, Cochlin, Sheahan, Cochlin,
Powers, Mick Malloy and Cole,
And it seem as if the Oirish
Was the backbone in the r-r-oad!

Boyle, McConnell, Neal, McDonnell,
Kouch, Collins, Finahan,
Larmour, Hanes, Dennis, Sweeney,
D'Alton Coleman, Lanigan,
Marby, Kelly, Maharg, Seully,
Boatty, Shaughnessy and Ryan,
Don't yiz see it is cold Oirishland
Phwat is runnin' in the line-r?

Electric Storage Battery Passenger Car on Canadian National Ry.

An illustrated description of the electric storage battery passenger car which is being tried on the Canadian National Ry., together with an account of its first run from Toronto to Trenton, Ont., 108.4 miles, was given in Canadian Railway and Marine World for June, pg. 313. From May 16 to June 19 the car operated between Trenton and Belleville, 11.4 miles, leaving Trenton on the first trip of the day at 8.25 a.m., and arriving at Trenton on the last trip at 10.10 p.m. The average daily mileage made was 228 miles. The operating cost per car mile was 30c., this including allowance for interest or depreciation. The current consumption averaged 0.73 k.w.h. per car mile, on the basis of the input at the charging station, and actual current consumption at the motors averaged 0.464 k.w.h. per car mile. The greatest number of passengers carried in one day was 550. We are officially informed that the results of the tests exceeded expectations, and were satisfactory from both the operating and financial viewpoints. No trouble was experienced in charging the batteries at Trenton; maintenance expense was practically nothing, and the car demonstrated its ability to cover 160 miles on a single charging of the batteries, this performance exceeding the stated capacity by 20 miles.

After its last run on June 19, the car was taken in local passenger trains to the Bathurst Subdivision, Campbellton Division, Maritime District, Canadian National Ry., where it was placed in operation on June 27 between Bathurst and Campbellton, N.B., 62.96 miles. The car is operating there as a regular train, daily except Sunday, being scheduled as no. 229 westbound and no. 230 eastbound. Westbound, it leaves Bathurst at 9.05 a.m., and arrives at Campbellton at 11.55 a.m.; eastbound it leaves Campbellton at 6.25 p.m. and arrives at Bathurst at 9.20 p.m. Nos. 229 and 230 are shown in the working timetable as second class trains, with 11 schedule stops between Bathurst and Campbellton. Current for charging the batteries is available at both ends of the run, but the round trip mileage is well within the operating range of the car on a single charging.

As a result of the tests to date, the car has demonstrated its economy over steam train operation on short runs on branch lines and lines of limited traffic, and while the car has not as yet been bought by the C.N. Ry., it is probable that it, or one of slightly differing design, will be, and we are officially informed that the order and built probably in Canada.

A Toronto daily newspaper expressed the opinion recently that the length of time necessary to charge the batteries, which is between 6 and 7 hours, is a serious disadvantage in the operation of this car. But the car is designed to operate in suburban, or branch line, service, where operation throughout the 24 hours of the day is not necessary, or desirable, which leaves ample time for charging, and we are officially informed that the time required for charging is not looked upon as a disadvantage of any consequence. The same paper suggested a duplication of batteries to overcome the supposed difficulty, one set to be charged while the car is operating on the other. But the labor of changing batteries weighing 6,800 lb. would be great, and

it is not probable that the necessity for such practice is likely to arise in the work for which the car is intended.

Canadian National Railways Services Between Winnipeg and Quebec.

T. Vien, Lotbiniere, Que., asked the following questions in the House of Commons recently:—How much per bushel does it cost the Government railways for the transportation of wheat from Winnipeg to Quebec? What are the fixed charges, cost of operation and the overhead charges? What is the capacity of a locomotive on the National Transcontinental Ry. between Winnipeg and Quebec? How many passenger and freight trains per day or per week are in operation between Winnipeg and the eastern stations on the National Transcontinental Ry.?

The Minister of Railways replied as follows:—The cost of transportation of wheat depends on weather conditions, number of cars in a train, number of trains moving over the different sections, etc., and varies with these changing conditions.

There are no fixed charges on section between Winnipeg and Quebec.

Passenger locomotives vary in tractive effort from 29,000 to 38,000 lb.; freight locomotives from 30,000 to 53,000 lb.

One passenger train daily, in each direction, between Winnipeg and Cochrane, and between Cochrane and Quebec. One passenger train daily, in each direction, between Quebec and McGivney Junction, N.B. One passenger train tri-weekly, in each direction, between McGivney Jct. and Moncton, N.B. Mixed train daily except Sunday, in each direction, between Winnipeg and Reddit. Mixed train tri-weekly, in each direction, between Reddit and Sioux Lookout. Mixed train tri-weekly, in each direction, between Hearst and Cochrane. Mixed train daily except Sunday, in each direction, between O'Brien and Doucet, Doucet and Parent and Parent and Fitzpatrick. Freight service is provided to handle business offering.

The Detroit, Toledo & Ironton Rd., which was acquired by the Henry Ford interests recently, has announced that, effective July 1, the wages of every employe on the system would be placed on the same basis as obtains in the Ford motor car works, etc., viz., a minimum of \$6 a day, with bonus for demonstrated efficiency. It was also announced that a week of six days would be put into force, no Sunday traffic being permitted, except for a few milk trains, which will be eliminated in the near future.

Australian Railways Deputation.—An Australian press dispatch states that the states of Victoria and New South Wales are each sending a deputation of four railway officials to North America to study railway operation. Sir Thomas Tait, President, Frederick and Grand Lake Ry. & Coal Co., was for a considerable time chairman of the commission operating the Victorian State Railways in Australia, prior to which he was in C.P.R. service, holding several important appointments, and being at different times toward the latter part of that service, Assistant General Manager, Manager, Eastern Lines, and lastly Manager of Transportation.

Extension of Port Arthur, Duluth & Western Railway.

We are officially advised that the Canadian National Rys. is operating the old Port Arthur, Duluth & Western Ry., from Port Arthur to North Lake, 70.6 miles. A train service is given daily, except Sundays and Thursdays, from Port Arthur to White Fish, 42.8 miles, with a corresponding return train daily except Sundays and Wednesdays. On Wednesdays the train from Port Arthur runs on from White Fish to North Lake, returning on the following day. Beyond North Lake, the C.N.R. owns a right of way to Gunflint, at the Ontario-Minnesota boundary, and for 6 miles into Minnesota. This right of way has been leased to the Palatine Mining & Development Co., which proposes to lay rails on about 22 miles of it in Canada and about 3 miles in Minnesota to the Paulson iron property. The Palatine Co. will operate this mileage itself to carry iron ore from the mine which it is developing on the Paulson property, to the Atkison Iron Co.'s plant at Port Arthur, which the Palatine Iron & Steel Co. has taken over recently for making pig iron. Ore in excess of the company's requirements at Port Arthur will be shipped to the United States.

The grading is being done by the Palatine Co.'s own forces, and the track will be laid with 70 and 80 lb. steel rails. The character of the country through which the line runs is hilly and rocky, requiring considerable curvature. There is a very small quantity of earth to be moved; no tunnels, and only 4 bridges, the longest being 1,000 ft., and the shortest about 60 ft. Tenders have been invited for the bridge work. The work is being done under the charge of H. H. Charles, R. E. Hogan, Port Arthur, Ont., is General Manager.

Railways and Canals Department Salaries Estimates.

The estimates for the year ending March 31, 1922, submitted to the House of Commons recently, contain the following items for the principal officials' salaries:—

Deputy Minister	\$6,000.00
Chief Engineer	8,000.00
Solicitor for Canals	5,000.00
Comptroller	4,800.00
Secretary	3,840.00
Right of Way Agent	3,840.00
Asst. Chief Engineer	5,400.00
Assistant Solicitor	3,840.00
Assistant Deputy Minister	4,425.00
Assistant Comptroller	3,600.00
General Assistant Engineers, 2 at \$4,800	9,600.00
Senior Electric Engineer	4,800.00
Senior Hydraulic Engineer	4,800.00
Senior Office Engineer	3,600.00
Bridge and Structural Engineer	3,540.00
Assistant Purchasing Agent	2,520.00
Assistant Right of Way Agent	2,340.00

The St. Catharines Bus Co. Ltd. has been incorporated under the Ontario Companies Acts, with authorized capital of \$40,000 and office at St. Catharines, Ont., to operate in St. Catharines and neighborhood bus and taxi lines, and a general bus and taxi service. The company is not to operate or control any public utility or municipal franchise within the meaning of the provisions of the Ontario Companies Act, part 12, unless authorized to do so by supplementary letters patent. The provisional directors are:—H. Hodgkins, J. H. Ricker and R. Heaslip, St. Catharines.

Quebec & Saguenay Railway Operating Results, Etc.

P. F. Casgrain, Charlevoix-Montmorency, Que., asked the following questions in the House of Commons recently, which were answered by the Minister of Railways:—

Q. "When did the Government, through the Canadian National Rys., take possession of the Quebec & Saguenay Ry.?" A. "Under order in council, Sept. 24, 1919, the Quebec & Saguenay Ry. was transferred to Canadian National Rys., for operation. As the road was still under construction, and being operated by the contractors, that arrangement continued until completion of construction, Oct. 1, 1920, when road was put into operation by Canadian National Rys. management."

Q. "How many passengers have been carried on the railway from March 17, 1920, to date?" A. "39,712 passengers were carried from March 1 to Dec. 31, 1920."

Q. "What have been the net earnings of the railway since that date?" A. "Operating deficit March 1 to Dec. 31, 1920, \$35,869.62."

Q. "What are the salaries paid monthly to the different station agents or caretakers along the railway?" A. "Scheduled rates."

The Assistant Chief Railway Commissioner on Self Propelled Cars.

S. J. McLean, Assistant Chief Commissioner of the Board of Railway Commissioners, dealt recently with a complaint of residents along the G.T.R. west from Golden Lake Jct., Ont., against poor train service between Killaloe and Eganville, on account of trains not making proper connections with Ottawa - Pembroke trains, and also an application of residents in territory between Madawaska and Golden Lake, for a better train service on the G.T.R., in the matter of connections with Ottawa-Pembroke trains. He dismissed the cases, on the ground that the changes in the services asked for would not be warranted by the traffic, and said in part:—"The question of the possibility of having a gasoline motor passenger carrying car to give this service has been gone into. At present, the G.T.R. has no such car available. The Canadian National Rys. have one gasoline motor passenger carrying car on their line east of the Winnipeg terminals. This car is being used in service between Winnipeg and Transcona. Experiments are being made between Trenton and Belleville, Ont., with a car operated on an electric storage battery. The service in this respect has not gone sufficiently far to enable a concluded opinion to be expressed. The possibilities of gasoline or electric car service on runs where the traffic will not justify a steam passenger train is a matter which, in my opinion, might well engage the serious attention of the railways. The developments in this respect should be kept in touch with, so that, so far as possible, inconveniences such as herein disclosed may be obviated. So far as Canadian railways are concerned, however, the use of the gasoline or electric car, as an auxiliary to steam passenger train service, is in an experimental condition. Conditions of operating cost, location of charging stations, in the case of an electric car, climatic conditions, etc., will

all need to be considered. Until more definite information is obtainable, it does not appear that the Board would be justified in making any direction as to a gasoline or electric car involving a considerable expenditure. There has to be held in mind the condition of operating expenses and costs on the Canadian National system, and also the revenue which in the present instance the figures available would show not to be large.

"It is a matter of regret that the Board cannot make the direction asked for, because there are undoubtedly features of hardship in connection with it. At the same time, the Board is not justified, in the interests of the country, in directing extensions of service where the revenues are not adequate to meet the costs. This creates inconveniences and unpleasant conditions, but the facts have to be faced."

Quebec-Shawinigan Railway Service.

G. Parent, Quebec West, Que., asked in the House of Commons recently:—"Is the Government aware that the Canadian National Rys. local train from Quebec City to Shawinigan is of absolute necessity to maintain traffic between the two cities and the various parishes, such as St. Augustin, Neville, Les Ecureuils, Donnacona and others situated on this line? Is it true that it is now proposed to cancel this train in the near future? If so, is not the Government aware that such action will deprive the C.N.R. of a good revenue and occasion very serious damages to the population using this line?"

The Minister of Railways replied:—"There have been two trains daily except Sunday, in each direction, providing accommodation between Quebec and Shawinigan Falls and the parishes referred to; the numbers of the trains being 9, 10 and 20. A portion of the same territory is also served by trains 13 and 14, which run daily. It is proposed to discontinue one train in each direction; no. 20, leaving Shawinigan Falls 5.30 a.m., and no. 19, leaving Quebec at 5 p.m. No. 9, leaving Quebec at 9.20 a.m., and no. 10, leaving Shawinigan Falls at 4.45 p.m., will be continued, and should provide sufficient accommodation to meet local requirements. The earnings of these trains, except during certain summer months, do not justify the continuance of the double daily service."

A Station Agent Acquired.—Leonard Robertson, station agent and telegraph operator at Denmark, N.S., was tried before the Nova Scotia Supreme Court in June on a charge of obstructing trains on the Canadian National Rys., with intent to endanger the safety of persons travelling thereon. The charge arose out of the derailment of the express train from Pictou to Oxford Jct., at Urquhart siding early in the year, when the locomotive man was killed. After a lengthy hearing, the jury returned a verdict of not guilty.

The Pennsylvania Rd., to encourage the purchase of tickets and reduce the burden of collecting cash fares, is charging an extra 5c. on each fare paid on trains, the 5c. not being refunded. This rule applies only where tickets offices are available.

The Brazilian Railway Systems.

By Henry K. Wicksteed, B.A.Sc. C.E.

[Mr. Wicksteed, the dean of Canadian railway locating engineers, who has kindly favored Canadian Railway and Marine World with the following article, made an extended visit to Brazil recently, during which he thoroughly examined a large number of its railways.—EDITOR.]

The Brazilian railway system seems to North American eyes, at first sight, to be a little haphazard and ill-considered, and it is some time before the traveller gets rid of this impression, but there are many valuable lessons to be learned from Brazilian procedure which it would be well if we in Canada had learned some years ago.

In the first place, Brazilian roads are nearly all development railways. Some mining or other valuable territory needed to be reached, and there being practically no means of communication except the mule trail existent, or perhaps a roundabout route by a crooked river, the choice being between the highway and the railway. No private company likes to build highways or wagon roads. It cannot control the traffic upon them and it is practically impossible to exclude the public from using them, and the public does not like to be taxed for maintenance and repairs on a road which belongs to someone else. The turnpike road idea was abandoned by ourselves, after trial, some years ago, and, especially where hauls are long, the wagon road cannot compete with the railway in speed, comfort or cost of carriage, and Brazil is a country of enormous distances. But, as in other new countries, capital was scarce and difficult to obtain, and there was always the chance that the particular industry to be served would not turn out quite as well as was anticipated. Under these circumstances economy in construction was of paramount importance, and the greater number of Brazilian railways not only followed, as we did, the earlier American system of cheap construction and location, but they went a little further, and adopted the narrow gauge theories and practice, permitting, as was believed, a still closer approach to an actual contour line. The result was, in fairly rough country, a means of transport not very much more expensive than a good wagon road, and of very much greater capacity, and these early railways were so entirely successful that they were copied and duplicated, and extended, until there came to be, in the eastern half of the State of Sao Paulo for instance, a complete network of these, quite bewildering to study on the map, and every one of them is busy and most of them paying good dividends. I have said above that the network is bewildering, and it seems at first sight that the building must have been overdone, but when we get into the country they serve, and analyze the conditions, we find some startling things. The Sao Paulo railway system aggregates some 4,000 miles, and the population which it has brought in and serves is 3,600,000. There is, therefore, a mile of railway for every 900 persons.

In Canada we have a mile for every 200 persons, but this is not the whole story. Brazilian railways have cost per mile on an average not more than one third to one half as much as the Canadian, so that the average Cana-

dian is saddled with at least ten times as much railway debt as this Brazilian ally. But even this is not all, for the Brazilian roads are almost, without exception, minding their own business and developing their own territory, there are practically no competitive points or routes. If a man wants to go from Rio to Sao Paulo, for instance, he may take the Central, or he may take a steamship to Santos, and a two hour railway trip from there to his destination. There is no third alternative, nor is there any need for any, for this Central, if not quite so luxurious in its service and appointments as our own railways, will treat him very well and give him a very comfortable night's run. Very possibly this absence of competition has been carried to an extreme, and the time has come when a little more of it is desirable. I quite believe that this is the case, and that Sao Paulo and its neighboring state have outgrown the existing facilities and that these need to be supplemented, but I prefer the conservatism of the Brazilian to the wild building of competitive lines in North America, where untold millions have been spent, not to develop new trade or agricultural and mineral wealth, but to take away trade from the enterprise which has spent years in building up a business sufficient to keep it in healthy condition. Competition may be the life of trade, but competition bids fair to be the death of it in our own case, at any rate it has developed a very serious illness. Brazil may be a little non-progressive in its railway methods; it may perhaps be getting its goods handled a little more slowly, a little more expensively than we are, its people may take a little longer time on their journeys and get a trifle less comfort, but at any rate they have not flown to the opposite extreme of loading themselves and their children and children's children with a great incubus of debt, for thousands of miles of railway costing \$100,000 a mile where a few hundreds at \$30,000 would have answered every purpose of development and expansion.

The standard gauge of Brazilian railways is the meter (3 ft. 3 1/3 in., i.e., 3.28 ft.), and I am inclined to believe that the choice of the narrow gauge was, on the whole, a wise one, in spite of all the arguments to the contrary which have been used in the long controversy about the gauges, and which I myself have used. There is a marked difference in cost of construction, and in the ability of the narrow gauge to worm its way through a mountainous country, such as exists along the coast of central Brazil. Thousands of miles have been built at less than \$18,000 to \$20,000 a mile, including equipment. It is a point, not at all understood as yet by the public, and not until recently by railway men, that it is in the early years of a railway's life, when traffic is light, that interest charges are the hardest to meet, and the greatest drain upon its earnings. Not only are interest charges much less, but maintenance as well. Ties and rails are lighter and easier to handle, axle loads are less, and an idle locomotive weighs less and maintains in good order. I believe that in certain cases of specialized traffic, of moderate density, the actual cost per ton mile, exclusive of interest, is

less. But in these days of interchange and transfer it is essential that the standard should be uniform throughout the country, and it is here that the anomaly of the Brazilian system occurs. The narrow gauge systems of Sao Paulo and Parana all feed into the abnormally wide gauge of the Sao Paulo Railway from Sao Paulo to the sea at Santos, and in a much lesser degree to the Central from Sao Paulo to Ria de Janeiro. The result is a fabulous expenditure for transshipment of freight. Every ton pays enough for this transshipment to carry it another 200 or 300 miles if it could stick to the same car. This is where the shoe pinches the Sao Paulo producers and it is raising a howl among them for relief. The burden is not only that of expense, but of delay and damage.

The Sao Paulo is an English enterprise and is unique among the railways of the world. Its gauge is 5 ft. 3 in. Why this particular gauge was chosen I have never heard explained. The Grand Trunk of Canada and that of India had already been built to 5 1/2 ft., and the Canadian road had found out its mistake. The American systems had adopted the 4 ft. 8 1/2 in. gauge, which now obtains all over the continent and in England. One would imagine that even the greater facility in getting patterns and drawings for locomotives and cars would have been sufficient reason for a wider or narrower standard. The value of easy grades and their development in mountain country was already understood in America, but the Sao Paulo, confronted with a 2,700 ft. rise, tackled it with a 10% grade, and this being much too heavy for adhesion, used wire rope traction. It afterwards built an entirely new road with 8% grade and still adhered to the wire rope and the 5 ft. 3 in. gauge.

It is now notoriously conceded, and as a relief it proposes to reopen the old line in addition!! Another proposition is to use the rack system. The cost of this experiment in railroading is something fabulous. The average of the whole road of 90 miles is \$17,000 a mile, and as the balance is quite normal this mountain section of 8 miles must have cost, at least, \$250,000. It has several tunnels and viaducts, and enormous retaining walls, masonry and costly construction of all kinds, but as the sole outlet to the sea for a rich country of 3,500,000 population it seems to be rather ridiculous. Even the fast trains, which run 60 miles an hour on the very good track of the balance of the line, take two hours or more to cover the 50 miles from Sao Paulo to Santos, quite sufficient for double the distance on a line of normal type. One speciality about the situation is that the Sao Paulo is quite proud of itself, and advertises its scenery and its construction in a very well illustrated pamphlet, but I have searched in vain through this artistic publication for any reference to its economics, what it cost, or what it charges a ton for freight, or what dividends it pays its shareholders. The good people of Sao Paulo are somewhat curious to know the truth about these matters, meantime it has been left to the Brazilian people, and a Brazilian engineer, to show that a line of normal type and construction and moderate grade could be obtained up this same coast road, farther to the south, and

the Parana Railway is the result. The Parana is not only one of the scenic roads of the world, but it maintains a good service and Brazil found both the capital and the brains to build it.

I have already said that I believe the choice of a narrow gauge to have been on the whole a wise one. The railways have fulfilled their purpose of development extremely well, and at a cost which has not bankrupted the country, or even got it into financial difficulties. On the contrary, they are, on the whole, yielding good returns. The Paulista is paying 10% dividends, the Mogana 6½%, and the St. Paula-Coyar, 8½%. Few, if any, are not earning a good margin over their operating expenses. It is rather hard, however, to understand why the wide gauge should have been chosen instead of 3½ ft., which is the standard of most of the other South American republics, and to which several thousands of miles have been built. Brazil is Portuguese, all the others are Spanish, and this is probably the reason, but inasmuch as the systems are reaching out in opposite coasts to meet one another, it seems rather a pity that a friendly conference could not have settled upon the uniformity which must almost of necessity ultimately obtain. The obstinate retention of the 5 ft. 3 in. gauge by the Sao Paulo has forced the same standard upon the Paulista and the Central, both of which use the Sao Paulo's terminal station. The widening of the Paulista's gauge has cost a considerable amount in itself, for new rolling stock, extra clearances, etc., and it did not always seem advisable to make these improvements on the original line, which embodied the sharp curvature which generally forms a feature of narrow gauge construction. Reconstruction for a great many miles followed, involving still more expenditure. If these several expenditures had solved the problem and assured the transshipment altogether, it would probably have been well worth while, but it has not, and will not do so, it merely adds a few more miles of the abnormally wide gauge, which is only a minor factor in Brazilian development, and cannot possibly become standard for the whole

of South America. It is, to my mind, therefore, very doubtful whether the expenditures are justifiable.

Rates in Brazil are practically left to the law of supply and demand to determine. If the shipper does not like them he can send his goods by mule train or in some cases by steamship. The general principle laid down is that capital is entitled to a fair return, and that until a new line earns 12% its rates shall not be interfered with. When it exceeds this it must lower its rates, until it earns 6% it is free from taxation. The application of this principle has led to abuses and evasions. Human nature is fallible, but on the whole it seems to have worked out better than our own over interference and super control by boards and commissions. In matters of public safety and convenience the state does exercise control, but Brazil feels that it needs capital and that the only way to secure it is to be liberal and fair towards it, and not to frighten it away by unnecessary restrictions and confiscations. Railway rates are high in Brazil, but they are finite and determinable. It is with us pay so much per mile or per ton mile and we used to boast that it was less than anyone else in the world paid. Now we don't boast, we pay higher rates than we did and then have to pay still more, a great deal more, in the form of taxes, because the railways cannot exist on these rates. The man who does not use this railway is made to pay for the one who does. Surely this is a wrong and inconsistent and Brazil's principle is the more logical one. "If you charge too much you will get insufficient business to keep your line going and someone will be induced to step in and take your business from you. If you charge too little you will not be able to pay expenses and we shall be obliged to step in and run your road for you, which we do not want to do. Your best interest is identical with that of the storekeeper or merchant, to charge so much as will give you a fair return upon your investment and no more." Rates are high in Brazil, simply because the lines have been built as development roads, on the cheapest locations possible to find, and with com-

paratively cheap construction. Grades are steep, and curves are sharp, and, as a consequence, train loads are light and maintenance charges high. I believe that the time has come when higher standards and greater expenditures are permissible and that the growing density of traffic will render them also profitable, as supplementing the cheaper branch lines of light traffic, and relieving them of the long hauls. A generation ago we understood and accepted this principle, of small beginnings and gradual expansion and improvement. The Canadian Pacific was built on precisely these lines and was a notable success. In more recent days we have acquired the idea that because it has been a success, and because it has gradually improved its line, that therefore a line built to the highest standard in the first place must necessarily be a greater success. The ordinary voter has very little idea of interest charges, or the extraordinary way in which they mount up in a term of years. He has very little idea of the way in which traffic grows from very small beginnings and has to be nursed and fostered, and yet there are few voters who do not think that they know all about the railway question, or if they do not, that the lawyers they elect to represent them must surely do so. Railroading is one of the many subjects of which a little learning is a dangerous thing.

In Brazil the voter pretends to little knowledge, and even a politician to not a great deal, but there are statesmen in Brazil, men who believe in their country and its wonderful resources. They have encouraged immigration, they have encouraged investment, and treated both in a liberal spirit. The results show that mistakes have been made, that money has been imprudently spent in some cases, that there has been sharp practice or worse, but on the whole the results have been eminently good, the development has been effected, the industries have been started, and are prospering. The State of Sao Paulo shows a growth such as few countries have experienced, and the railways are not loaded down with debt such as bids fair to cripple some of our own.

Railway Time Service.

By H. Hulatt, Manager of Telegraphs, Grand Trunk Railway.

In recent years by far the greater proportion of the railways in Canada and the United States have spent large sums of money on safety first work, with a view not only to educate their own officers and employees in the principles of safety, but, also the public, and their work in this connection, due to the publicity necessary to ensure success, is well known.

The time service department, although it can proudly claim to be the pioneer safety first department of all railways, can also undoubtedly lay claim to the dubious distinction that it is one of the least known departments, and the importance of its work is less appreciated, not only by the public, but, very often, by the rank and file of a railway. There is an old saying that "Efficiency is the conservation of time," and in no branch of human endeavor does correct time occupy such an important place as in the operation of a railway, in connection with which a difference of only a few seconds may result in the injury

and possible death of employees and passengers.

Years ago, when operating conditions on railways were less strenuous, and trains did not travel at such fast speeds, little or no effort was made to ensure that those responsible for the movement of trains had equipped themselves with reliable watches; in fact, it was not uncommon for the only timepiece on a train to be an alarm clock hung up beside the locomotive man at his seat. Frequently if the train crew were not sure of the time, they would go on to a siding, and send the fireman over to a farm house to find out what the time was.

This condition of affairs continued until the inevitable happened, namely, serious wrecks, and heavy loss of life, and the origin of watch inspection may be said to date back to sometime between 1890 and 1895, as the result of a serious wreck to a mail train on a prominent eastern railway in the United States, causing several deaths, and to an equally serious wreck on a Pacific coast road,

both wrecks being found, after investigation, to be due to defective timepieces. As a result of the investigation as to the cause of the wreck on the eastern road, an expert watchmaker was called upon to make a thorough examination of watches carried by locomotive men and conductors on the road in question. It has been the writer's privilege, to peruse a copy of the report submitted, and to the railway men of today, it would seem impossible that conditions as disclosed could possibly have prevailed; suffice it to say that several locomotive men were found running with cheap watches which an enterprising tailor gave away with every suit of clothes bought from him. The outcome of the examination made was the inauguration of a system of watch inspection, the lead of the road referred to being more or less promptly followed by practically all the railways in North America.

In Canada, both the C.P.R. and the G.T.R. have maintained for many years their own time service departments, un-

der the supervision of officers employed directly by them, and while the details of their respective regulations differ one from another, and also from those in effect in the U.S., fundamentally they are the same, the object of such regulations, to maintain correct time, and safe watches, always being their predominant thought.

As a result of the inauguration of a time service system, it was clearly demonstrated that not only was it necessary to set standards as to makes and grades of watches employees engaged in the operation of trains should be allowed to carry, but, what was far more important, to improve the grades of watches than manufactured for railway purposes in America. At that time very few, if any, U.S. watches were what is known as "lever set," although such type of watch had been developed by the Swiss. Practically all U.S. watches were "pendant set," i.e., to set the hands you simply pull up the pendant, whereas in the "lever set" you are obliged first to pull out the lever and then turn the pendant, and it is not possible to close the watch without first putting back the lever. Such a safeguard as this would have prevented the wreck on the Pacific coast road mentioned above, investigation in connection with which developed that the locomotive man who carried a pendant set watch, had set his watch some hours before, and failed to press down the pendant, resulting in his watch being awry. When the collision occurred, he fortunately saved his life by jumping, but, his watch was one hour wrong.

The best of U.S. watches in those days were only built to a specification calling for 15 jewels, adjustment to heat and cold, single roller escapement. Today, due to the work of the various time service experts, and to the industry of the operation of the manufacturers, the minimum specification for a new standard watch allowed to be carried by the train crew of any railway is:—16 or 18 size, 17 jewels, adjusted to 5 positions, temperature, and isochronism, lever set, double roller escapement, brequet hair spring, and an extreme range not exceeding 30 seconds a week. As an additional factor of safety it is specified that all watches must have plain Arabic standard dials, open faced cases, and wind at the figure 12. Furthermore, all watch movements must have clearly stamped thereon the manufacturer's name. Generally speaking, the products of about 13 standard manufacturers comply with the above specifications, giving employees a choice of between 115 and 120 different grades of watches. The above clearly indicates, as a result of the inauguration of watch inspection regulations, the tremendous improvement in the standard of watch permitted in railway work, and consequent decrease in hazard.

When a man now enters the service, either as a trainmaster, road foreman of locomotives, supervisor of track, supervisor of bridges and buildings, inspector, locomotive men, firemen, locomotive notiomann, train baggage man, brakeman, yardmaster, yard foreman, and, on some roads, switchman, before being eligible for duty he must submit his watch to a properly appointed inspector for approval, and have, for the company's records, a certificate duly filled in. If the watch is rejected, it is necessary that he immediately provide himself with a watch complying with minimum standard, or better. Further, he is required thereafter to present his watch once a

week, on some roads, and once a fortnight on others, to an inspector, for comparison with standard time. It is also the rule that all watches must be cleaned, on some roads once every 15 months, and on others once every 18 months, and that the men must secure from the watchmaker a loan watch coming up to the minimum specification, to carry while their own watches are being repaired or cleaned.

Every man coming under watch inspection regulations is called upon to carry a rating card while on duty, which clearly indicates the history of his watch, and as to whether or not he has complied with requirements. In order to avoid hardship to new men entering service, most companies permit their watch inspectors to sell watches to employees on the instalment plan, the inspectors sending deduction orders to the railway, and the latter protecting the amounts by deductions from monthly pay rolls as called for on the order.

In addition to ensuring that men carry correct watch the railways have also undertaken the proper supervision of their own clocks. All offices in which train dispatchers are located are equipped with most accurate standard regulator clocks, which are under the constant supervision of the local watch inspector, a rating card indicating their daily performance being filled in, and forwarded to the head of the time service department monthly. Similarly, care is exercised to see that reliable clocks are installed in stations, and that all clocks are kept properly repaired and cleaned.

On all railways standard time signals are transmitted over telegraph circuits every morning, usually from some properly equipped observatory. When such signals are going over the wire, it is prohibited for any telegraph operator attempt to "break" them. Their receipt has to be acknowledged by all dispatching offices.

Stories by Railway Officials.

Grant Hall, Vice President, C.P.R., F. L. Wanklyn, General Executive Assistant, C.P.R., and J. H. Walsh, General Manager, Quebec, Central Ry., in addressing the New England Railroad Club in Boston, Mass., recently, told the following stories:—

Grant Hall:—"I was going down one of the lakes in British Columbia on one of our steamboats, and from the deck when she touched at one place I happened to look over and saw on a shop the sign, 'C.P.R. Barber Shop. Cut Rates.' So I went to the General Superintendent. 'Well, it is a little bit of a shock, you know. Nobody has any right to use those letters except the Canadian Pacific Railway, and unless we are running that barber shop, I think we ought to ask him to get another sign.' He got the name of the barber, and wrote to him. It was an Irishman that wrote him back, and the letter was written in language that I can hardly imitate. The Irishman said that he had received our letter. He said that he knewed the C.P.R. owned all the railroads, all the steamboats, most of the good lands, but it was the first time that he had ever heard that they owned every damned letter in the alphabet. And he added, 'I want you to understand further, gentlemen, that I stands for something a good deal better than the Canadian Pacific Railway; that is the initials of my old mother in Ire-

land, Clarissa Patricia Reardon, and what are you going to do about it?' He said 'I notice that you did not say anything about cut rates. You have not been doing anything like that yourselves round here.' We did not interfere with the sign."

F. L. Wanklyn:—"I happened to be fishing on a salmon river that runs into the Bay de Chaleur in Bonaventure County. I had a good many friends there, most of them from St. John, N.B. Before breaking up the camp it was the custom to invite the local member to supper. He drove down the river over most awful roads, red clay up to the hubs, and down a most frightfully steep bank from the upper plateau down to the river bottom, in a Ford car with his daughter. He was very pleased indeed to be with us as a guest of the president of the club. We were talking about the marvelous wonders of the Province of Quebec, its wonderful rivers, and its wonderful forests, and its wonderful natural resources and everything else, and finally it hinged on the population. He said, 'I will tell you something, gentlemen. I had the pleasure a few evenings ago of sitting down with a family, the father and the mother and 25 living children, every single one of them alive and well and sitting at their father's table.' He said, 'The little mother was a bright little body, smiling and happy.' I said to her, 'Madam, isn't it an awful burden to bring so many people into the world?' She said 'No, Monsieur, not at all. My great difficulty was to catch them, to put them to bed.'"

J. H. Walsh:—"In addition to the great prosperity of the Quebec district, the railway employees are also a happy, contented and prosperous class. One on a short time ago, when making a regular line inspection, I met the wife of one of our French-Canadian agents and she was delighted to tell me that she was the mother of 14 children. This, however, is nothing exceptional in Quebec; one of our foremen of a section adjoining this station is the father of 18 and another foreman quite close has 21, so you see we are progressive in that direction also. I was much amused when this little French-Canadian mother said to me in very good English, 'Mr. Walsh, every night when I am saying prayers with my children, I always tell them to say, 'God bless McAdoo.'"

A Railway Manager's Libel Suit.—A. B. Buckworth, General Manager, Pacific Great Eastern Ry., issued a writ against the British Columbia High Court recently against the Vancouver Sun and its publisher, to recover damages for alleged libel. The statements complained of were contained in articles charging that Mr. Buckworth had granted preferential rates on potatoes to a private firm in Vancouver, a representative of which travelled over the line in the General Manager's official car, and that Mr. Buckworth accompanied him in interviewing settlers. The Premier of British Columbia, who is also Minister of Railways, is reported to have stated that the United Farmers of British Columbia, meeting at Egerton, on the P.G.E. Ry., on March 26 asked for a special rate on potatoes to Vancouver, and after consultation with Mr. Buckworth, a special rate was authorized on April 8, and kept in force until May 1.

The Board of Railway Commissioners will not hold any regular sittings during August, the next date fixed being Sept 13, at Ottawa.

Locomotive House at Hornepayne, Canadian National Railways.

Hornepayne is an important division point on the Canadian Northern Ry., 721 miles west of Montreal on the main transcontinental line running via Port

Algonia Central & Hudson Bay Ry. crosses the Canadian Northern 38 miles east of Hornepayne, at Oba, and Hornepayne is almost due north of White

tive house designed to meet these conditions has recently been built there; the front and side elevations and plan of which are illustrated herewith. While,

Ground plan, Locomotive House, Canadian National Railways, Hornepayne, Ont.

River, on the C.P.R. main transcontinental line.

Locomotives used in transcontinental freight and passenger service on locomotive divisions of this length, and under winter climatic conditions, which are unusually severe, must necessarily be maintained in a state of high efficiency; and, as the locomotive terminal facilities play

in railway parlance, any structure provided to house locomotives while at terminals is generally spoken of as a roundhouse, the application of that term to the new building at Hornepayne would be incorrect, for, as shown by the plans, it is rectangular. Within the heavily buttressed brick walls, and covered by the lofty steel trussed roof, lined with num-

Front Elevation, Locomotive House, Canadian National Railways, Hornepayne, Ont.

Arthur. Locomotives working out of Hornepayne have a 148 mile division eastbound to Foleyet and a 150 mile division westbound to Jellicoe, Foleyet and Jellicoe being turn-around points. The

an important part in this maintenance work, it is necessary that the locomotive terminal at an important divisional point such as Hornepayne be fully modern and suited to existing conditions. A loco-

erous monitors, is an 80 ft. turntable, made by Canadian Bridge Co. and operated by a Taylor & Arnold Engineering Co.'s tractor, 16 locomotive stalls, machine shop, blacksmith shop, boiler room,

pump room, locomotive supply room, general office, locomotive foreman's office, and men's registering office.

The pits are of modern concrete construction, and are provided with drainage to prevent any possibility of accumulation of water in them. Drop pits are provided for driving wheels, locomotive truck wheels and tender truck wheels. The pits are 80 ft. long, inside.

The number of steel columns supporting the roof trusses has been kept to a minimum, there being only 19 in the whole building, which covers an area of 1½ acres.

Heating is provided by steam coils in the pits, and around the walls, the steam being piped from the boiler room, and the house is fitted in accordance with latest improvements, with lines for steam, water and compressed air. The smoke jacks are of wood, and were made by the company's own forces. Ample lighting is provided by roof monitors, and by large windows in the walls, the interior of the house being much better lighted than is usually the case, this constituting a great advantage in carrying out locomotive repairs. Artificial illumination is by electricity.

The blacksmith shop, fitted up so as to be able to take care of any work arising in connection with running repairs, and the machine shop, equipped with lathes, drills, etc., are adjacent to each other on one side of the building, and the boiler room, containing two 80 h.p.

Maintenance Work, Kenora Division, Canadian Pacific Railway.

The C.P.R.'s Kenora Division comprises a double track line of railway 419.3 miles long between Fort William and Winnipeg. It is the throat through which passes a large part of the traffic of the C.P.R. Western Lines en route to the lake ports and the east. A busy section of track at all times, it is at certain times under extreme traffic pressure, especially during the grain movement in the autumn. Like other track in Canada, it has to endure severe climatic changes and for winter conditions, to remain practically untouched as far as ordinary maintenance is concerned. The maintenance of an entire year has therefore to be compressed into seven months or less of working time.

Much of the necessary work of keeping the line in shape is done by the company's regular forces, that is the section gangs. Additional work during the summer is done by so-called extra gangs and it is this latter work which is hereinafter described. These gangs, ranging in size from 6 to 100 men, are housed in outfit cars, consisting in general of foreman's car, tool car, cook and store car, diners and sleepers, the entire string being set out at some point near the work, and representing a complete working and living unit although often located miles

which the laborer originated. The principal problem on this work was therefore to obtain and to retain common labor. Intensive methods were used, which in general produced results. If one did not suit another was tried until results were obtained. A special effort was made to see that labor once obtained had no cause for complaint so far as working conditions were concerned. Close watch was kept on board, camp sanitation, condition of cars and general health of men. Interpreters made periodic inspections to remove so far as possible legitimate causes for complaint, and if not possible, to see that complaints of whatever nature were given prompt attention.

Special methods were used in conducting the actual work. As an instance, tie renewals, which were an important item, were ultimately made very largely by contract, at a specified price per tie, instead of by day wages. An increase in tie output per man per day of from 50 to 100% followed. Some 600,000 ties were placed, of which 65% were placed by contract method. Ditching was done in a somewhat similar manner. A total of about 25 miles of new ditch was dug, and water, the great enemy of good track, was drained off to nearby lakes and streams.

An equivalent of about 1,000 miles of

Side Elevation, Locomotive House, Canadian National Railways, Hornepayne, Ont.

locomotive type boilers, and the pump room, containing air compressors, water forcing pumps, dynamo, etc., are together on the opposite side. Adequate stock storage space is provided in connection with the boiler room.

This new locomotive house, in connection with a modern ash and cinder handling plant, coaling plant, standard metal heated water tank, and a well laid out system of incoming and outgoing tracks, furnishes this divisional point with locomotive terminal handling and maintenance facilities that are adequate in every way. Facilities with which to carry on operations must of necessity exert a great influence on locomotive maintenance, and on the degree of efficiency shown by the mechanical department in meeting the demands of the transportation department. This new locomotive house has been built to provide good facilities, to the end that maintenance may be carried on under favorable conditions in a territory with a severe climate, and that all running repairs may be made efficiently and economically. The number of road locomotives dispatched out of this terminal in January of this year was 276.

The building was designed by G. C. Briggs, then Architect, Eastern Lines, now Architect, Western Lines, (Canadian National Rys., and built by the company's own forces.

from the nearest town or even telegraph station.

Some idea of the variety of things which these gangs are called upon to do will be gained from a partial list of things done by them during 1918, 1919 and 1920:—Applying tie plates, ballasting, bank widening, changing switches, cleaning out old ditches, cleaning up station grounds, constructing concrete culverts, constructing new passing tracks, constructing turntable foundations, constructing water tank foundations and water tanks, ditching, driving foundation piles, fencing, fighting brush fires, grading, lining track, loading coal, loading and unloading cinders, loading and unloading new and second hand steel, moving water tanks, opening new gravel pit and constructing three miles of railroad from the mainline, operating old gravel pits, painting, rail renewal, renewal of ties, surfacing, tie loading.

While the shortage of labor in the last three years is generally known, its acuteness so far as railway maintenance work is concerned is not perhaps wholly recognized. The shortage has been due to several causes, mostly connect with the war. The principal ones have been stoppage of immigration, higher wages in the war industries than in railway work, ability due to high wages to change work or stop work at will, and, since the end of the war, drift back to the countries from

single track line was surfaced and generally overhauled. About 175 miles of new steel was laid and the old steel loaded and shipped out for branch line and other use. 325,000 cu. yds. of material were dug from pits and used for filling, ballasting and bank widening, much of it in 1920. Jobs somewhat out of the ordinary were done, such as moving a water tank at Pine. The tank measured about 33 ft. high and 24 ft. in diameter, and weighed about 55 tons. After jacking it up rollers were inserted, and, with heavy tackle and a Lidgetwood engine, the entire tank was moved on to the tracks and 1,000 ft. west.

The foregoing is reproduced from Engineering and Construction Notes, issued by Sydney E. Jenkins Co., Winnipeg and Vancouver, who were the contractors, on a cost plus basis. This applied to track work only, and any train service required in connection with ballasting, etc., was excluded from the terms of the contract. The C.P.R. gave a similar contract on certain other divisions for the replacement and renewal of ties. It is not the intention to do maintenance work this year, on a similar basis, as labor conditions now approximate more nearly to normal.

British Columbia expects to ship 500,000 car loads of apples, containing 3,750,000 boxes, this year.

Mainly About Railway People Throughout Canada.

J. B. Boucher, who died at Ottawa, Ont., July 16, aged 71, was several years ago a member of the contracting firm of Keatings, Biggar, Wilson & Boucher, and built a number of bridges on the Canada Atlantic Ry., now part of the G.T.R.

Edward Greig Bowie, who has been appointed Master Mechanic, Schreiber Division, Algoma District, C.P.R., Scheiber, Ont., was born at Winnipeg, Aug. 20, 1892, and entered C.P.R. service in May, 1907, since when he has been, to Aug. 1912, machinist apprentice, Winnipeg; May 1912 to Sept. 1914, machinist, Winnipeg, and on Western Lines; Oct. 1914 to Apr. 1915, Master Mechanic's clerk, Calgary, Alta.; Apr. to July 1915, machinist, Angus shops, Montreal; July to Oct., 1915, dynamometer car operator, Eastern Lines; Oct. 1915 to Apr. 1915, Assistant Locomotive Foreman, Ottawa; Apr. to Nov., 1916, Assistant Foreman and Locomotive Foreman, Outremont, Que.; Nov. 1916 to May 1917, Locomotive Foreman, Sherbrooke, Que.; May 1917 to June 18, Locomotive Foreman, Smiths Falls, Ont.; June 1918 to Apr. 24, 1920, General Foreman, McAdam Jct., N.B.; Apr. 24, 1920 to July 19, 1921, Master Mechanic, Brownville Division, New Brunswick District, Brownville Jct., Me.

E. H. Bronson, of the Bronson Co., Ottawa, Ont., who died there, Oct. 19, 1920, left an estate valued at \$1,029,912.17, to his widow, daughter and son. He was interested in several railway and other transportation projects, including the Des Quinze & Blanche River Ry.

C. B. Brown, Engineering Assistant, Canadian National Ry., Toronto, became ill, while on an inspection trip with S. J. Hunzinger, Vice President, Operation and Maintenance, towards the end of June, and on returning to Toronto was confined to his house for some little time, with a severe attack of mumps. He left Toronto about the middle of July, for Bathurst, N.B., to recuperate.

Sir George McLaren Brown, K.B.E., European General Manager, C.P.R., has been elected Past Grand Master of the Grand Lodge of Canada, A.F. and A.M., in recognition of his services to members of the order during the war.

W. W. Butler, President, Canadian Coal & Foundry Co., has returned to Montreal, with Mrs. Butler, after spending several months in Europe.

James L. Cooke, whose appointment as Canadian Freight Agent, Pennsylvania Rd., Toronto, was announced in our last issue, was born at White Lake, Mich., April 11, 1875, and entered railway service March 1, 1899, since when he has been, to Sept. 30, 1902, clerk, Northern Central Ry., Rochester, N.Y.; Oct. 1, 1902 to Apr. 1, 1905, chief clerk, same road, Buffalo, N.Y.; Apr. 1, 1905 to Aug. 14, 1907, soliciting freight agent, Pennsylvania Rd., Buffalo, N.Y.; Aug. 15, 1907 to Apr. 21, 1910, Travelling Freight Agent, Eastern & Southern Despatch (P. Rd.), Rochester, N.Y.; Apr. 22, 1910 to Dec. 31, 1915, Soliciting Freight Agent, Erie & Western Transportation Co., Buffalo, N.Y.; Jan. 1 to Feb. 28, 1916, Soliciting Freight Agent, Pennsylvania Rd., Buffalo, N.Y.; March 1, 1916 to Aug. 15, 1918, representative, same road, Rochester, N.Y.; Aug. 16, 1918 to May 31, 1921, representative, same road, Buffalo, N.Y.

Frank Heywood Daly, who has been appointed City Passenger Agent, C.P.R., Vancouver, B.C., was born in England, Oct. 7, 1889, and entered C.P.R. service June 1, 1909, since when he has been, to May 14, 1910, ticket clerk; May 15, 1910 to June 1, 1911, advertising and refund clerk; June 1, 1911 to June 1, 1912, Travelling Passenger Agent, all at Vancouver, B.C.

J. L. Englehart, formerly Chairman, Timiskaming & Northern Ontario Ry. Commission, who died at Toronto, Apr. 6, left an estate valued at \$2,056,805, which includes 2,070 shares in Imperial Oil Ltd. After a number of charitable bequests, the estate is divided between numerous relatives of himself and his wife, who died a few years ago. The hospitals benefitted by the distribution are, the Charlotte E. Englehart Memorial Hospital, Petrolia; Hospital for Sick Children, Women's College Hospital, Hospital of St. John the Divine, Toronto, and hospitals at North Bay, Cobalt, Haileybury, Lickard, Englehart, Matheson and Cochrane, Ont., provided the different municipalities maintain such hospitals within two years of his death.

Max Enos, Representative, Bureau of Canadian Information, C.P.R., New York, was married at South Norwalk, Conn., July 7, to Miss K. Lemcke.

John T. B. Foote, whose appointment as Manager, Prince Edward Hotel, Canadian National Ry., Brandon, Man., was announced in our last issue, was born at Quebec, Que., July 17, 1878, and entered railway hotel service in June 1911, since when he has been, to Apr. 1912, night clerk, Prince Arthur Hotel, Canadian Northern Ry., Port Arthur, Ont.; Apr. 1912 to Dec. 1913, day clerk, Prince Edward Hotel, same road, Brandon, Man.; Jan. 1914 to May 1921, day clerk, chief clerk and Assistant Manager, consecutively, Fort Garry Hotel, Grand Trunk Pacific Ry., Winnipeg.

R. J. Guthrie, dispatcher, G.T.R., Alandale, Ont., was drowned July 22, while fishing from a small boat at Waghaga Beach.

E. Hancock, who has retired as Auditor of Passenger Receipts, C.P.R., Montreal, after 30 years service, was the recipient of a presentation by the office staff, July 5.

William D. Hannah, who died at Montreal, July 1, after an illness of 10 days, was born at Newton Stewart, Scotland, Sept. 1, 1844, and entered G.T.R. service Nov. 9, 1881, since when he had been, to Apr. 1, 1882, assistant agent, Toronto; Apr. 1 to Dec. 31, 1882, night yardmaster, Toronto; Dec. 21, 1882 to Jan. 1, 1887, inspector, Montreal; Jan. 1 to May 1, 1887, agent, Bonaventure station, Montreal; May 1 to Aug. 18, 1887, General Inspector, Montreal; Feb. 1, 1907 to Nov. 1, 1912, Coal Inspector, Montreal, and from Aug. 1, 1913 to Jan. 31, 1920, when he retired on superannuation, Fuel Inspector, Montreal.

Harold E. Heal, whose appointment as Canadian Passenger Agent, Pennsylvania Rd., Toronto, was announced in our last issue, was born at Bowmanville, Ont., Dec. 17, 1891, and entered transportation service in April 1908, since when he has been, to July 1908, clerk, C.P.R., Toronto; July 1908 to April 1912, ticket clerk, C.P.R., Toronto; May 1912 to May

1916, clerk, Pennsylvania Rd., Toronto; May 1916 to May 1919, in military service overseas; Dec. 1919 to June 1920, ticket clerk, C.P.R., Toronto; Aug. 1920 to May 1921, clerk, Canadian Customs, Toronto.

Sir Herbert Holt, one of the C.P.R. directors, sailed from Quebec, by the s.s. Empress of Britain, on July 5, to join Lady Holt, who has been in Europe for some time.

Miss Jessie Hutchinson, daughter of Col. J. Alex. Hutchinson, C.B.E., M.D., Chief Medical Officer, G.T.R., Montreal, is announced to be engaged to Major E. F. Newcombe, son of the Deputy Minister of Justice, Ottawa.

Q. B. Lawson, of Campbellton, N.B., who is mentioned in a press dispatch as having been a Canadian National Ry. special agent, was killed at Glen Emma, Que., 28.67 miles west of Campbellton, on July 23, in a rear end collision between two sections of a freight train. Special Agent F. B. Floyd, of Moncton, was injured.

H. E. MacDonnell, Assistant Freight Traffic Manager, C.P.R., Montreal, who was given leave of absence recently, on account of illness, has left Montreal, with Mrs. MacDonnell, to spend some time in Europe.

Sir William Mackenzie is in England. A. H. Middleton, Car Foreman, Canadian National Ry., Jellicoe, Ont., was drowned while bathing there, July 9.

A. J. Mitchell, Vice President, Finance and Accounts, Canadian National Ry., Toronto, sailed from Quebec, by the s.s. Empress of France, on July 19, for England, expecting to return about the end of August.

D'Arcy Boulton Niblock, whose appointment as Special Ticket Auditor, Canadian National Ry., Toronto, was announced in our last issue, was born at Point Edward, Ont., March 1, 1875, and entered transportation service in Feb. 1892, since when he has been, to May 1894, billing clerk, C.P.R., Winnipeg; May 1894 to Sept. 1896, billing clerk, C.P.R., Calgary, Alta.; Sept. to Nov. 1896, agent, C.P.R., Golden, B.C.; Nov. 1896 to Apr. 1897, assistant agent and agent, C.P.R., Medicine Hat, Alta.; Apr. to Dec. 1897, chief billing clerk, C.P.R., Medicine Hat, Alta.; Dec. 1897 to March 1898, night agent, C.P.R., Calgary, Alta.; March 1898 to Jan. 1901, ticket clerk, C.P.R., Alta.; March 1898 to Jan. 1901, ticket clerk, C.P.R., Brandon, Man.; Jan. 1901 to March 1906, ticket agent, C.P.R., Calgary, Alta.; March 1906 to Nov. 1909, Manager, Steamship Department, Ellis & Grogan, Calgary, Alta.; Nov. 1909 to Dec. 1914, President and Manager, Niblock & Bull Ltd., general steamship agents and city agents, Grand Trunk Pacific Ry., Calgary, Alta. From Dec. 1914 to Nov. 1917 he was in military service with the 50th Battalion from Calgary and held the rank of Captain, and from April 1918 to Oct. 1920 he was Manager and Secretary-Treasurer of the Peerless Rubber Co., Toronto. He is a son of John Niblock, who was the first passenger conductor on the C.P.R. between Emerson and Winnipeg, and afterwards Superintendent, C.P.R., at Medicine Hat and Calgary from 1887 to 1912, when he retired and went to British Columbia, dying there in 1914.

W Stapleton, District Freight and Passenger Agent, Canadian National Rys., Saskatoon, Sask., has returned after a visit to England.

A. F. Stewart, Chief Engineer, Canadian Government Rys., Moncton, N.B., who was operated on for appendicitis, early in June, was able to leave the Royal Victoria Hospital, Montreal, on July 22, and went to the Laurentian Mountains to recuperate.

M. F. Tompkins, General Freight Agent, Canadian National Rys., Mon-

cton, N.B., addressed the Rotary Club there, on July 6, on freight rates.

Lem Wah, who is stated in a press report to have been Chinese interpreter and agent in New York for the C.P.R. for 33 years, has resigned and returned to China. Officials of the New York office gave him a gold ring when he left.

A. E. Warren, General Manager, Western Lines, Canadian National Rys., Winnipeg, has been elected First Exalted Royal Knight of the Benevolent Protective Order of Elks.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—We are officially advised that the appointment of a Chief Traffic Officer, to succeed the late James Hardwell, will be made through the Civil Service Commission, upon the Board's application to that body. When Mr. Hardwell was appointed in 1904, by order in council, he was designated Traffic Expert to the Board, but the Board always referred to him as Chief Traffic Officer, except in the list of officials in its annual report, in which it followed the order in council's designation, viz., Traffic Expert to the Board. In the Civil Service Classification of 1919 he was classified under the designation of Supervisor of Railway Traffic.

Canadian National Rys.—R. R. BOSTWICK, heretofore draftsman, Chief Engineer's office, Moncton, N.B., has been appointed draftsman, Roadways Department, Engineer of Standards' office, Toronto.

C. R. DOULL, heretofore Assistant Engineer, Bridge Department, Moncton, N.B., has been appointed Assistant Engineer, Bridge Department, Engineer of Standards' office, Toronto.

A. DUNN, heretofore Chief Dispatcher, Sydney, N.S., has been appointed General Agent there, the Sydney dispatching office having been closed, and the work transferred to New Glasgow. The four train dispatchers heretofore at Sydney have been transferred to points where their seniority permitted them to relieve junior men.

J. A. ELLIS, heretofore Office Engineer, Moncton, N.B., has been appointed Assistant Engineer of Standards, in connection with Roadways Standards, reporting to the Engineer of Standards, Operation and Maintenance Department, Office, Toronto.

W. N. KENNEDY, heretofore chief draftsman, Architectural Department, Winnipeg, has been appointed chief draftsman, Architectural Department, Engineer of Standards' office, Toronto.

J. L. KEOHAN, heretofore secretary to Chief Engineer, Moncton, N.B., has been appointed chief clerk, Engineer of Standards' office, Toronto.

G. H. LAYCOCK, heretofore Locomotive Foreman, Canadian National-Grand Trunk Pacific Ry., Jasper, Alta., has been appointed Locomotive Foreman, same roads, Edmonton, Alta., vice J. E. Lewis, transferred.

J. E. LEWIS, heretofore Locomotive Foreman, Canadian National-Grand Trunk Pacific Ry., Edmonton, Alta., has been appointed Locomotive Foreman,

same roads, Jasper, Alta., vice G. H. Laycock, transferred.

L. A. McKEAGE, heretofore Assistant Engineer, Bridge Department, Moncton, N.B., has been appointed Assistant Engineer, Bridge Department, Engineer of Standards' office, Toronto.

J. SCHOFIELD, formerly Architect, Western Lines, Winnipeg, was stated in our July issue as having been appointed Architect, Eastern Lines, at Toronto, this information having been furnished us officially, but erroneously. He has been appointed Architect in connection with building standards, reporting to the Engineer of Standards, Operating and Maintenance Department, Office, Toronto.

A. M. SMITH, heretofore Designing Engineer, Bridge Department, Winnipeg, has been appointed Designing Engineer, Bridge Department, Engineer of Standards' office, Toronto.

R. O. STEWART, heretofore Assistant Bridge Engineer of Standards, in connection with Bridge Standards, reporting to the Engineer of Standards, Operation and Maintenance Department, Office, Toronto.

J. S. WATSON, heretofore draftsman, Construction Department, has been appointed draftsman, Roadways Department, Engineer of Standards' office, Toronto.

J. WHITELOW, heretofore Assistant Engineer, Moncton, N.B., has been appointed Assistant Engineer, in charge of plans and records, Engineer of Standards' office, Toronto.

Canadian Pacific Ry.—J. S. ALLAN, heretofore Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Master Mechanic, Brownville Division, New Brunswick District, vice E. G. Bowie, transferred to Schreiber, Office, Brownville Jct., Me.

W. BAIRD, heretofore General Passenger Agent for Europe, Liverpool, Eng., has been appointed Assistant European Passenger Manager, with office at 62 Charing Cross, London, S.W. England.

E. G. BOWIE, heretofore Master Mechanic, Brownville Division, New Brunswick District, Brownville Jct., Me., has been appointed Master Mechanic, Schreiber Division, Algoma District, vice J. S. Allan, transferred to Brownville Jct. Office, Schreiber, Ont.

F. H. DALY, heretofore Travelling Passenger Agent, has been appointed City Passenger Agent, Vancouver, B.C., and not City Ticket Agent, as stated in our last issue.

R. K. OLIVER, heretofore assistant foreman, West Toronto, Ont., has been appointed Locomotive Foreman, Kingston, Ont., vice F. W. Clarke, superannuated.

G. A. C. PHILLIPS, local agent, C.P.R. Telegraphs, Calgary, Alta., is reported to have been appointed local agent, C.P.R. Telegraphs, Winnipeg, vice J. R. Russell, transferred to Calgary.

J. R. RUSSELL, local agent, C.P.R. Telegraphs, Winnipeg, is reported to have been appointed local agent, C.P.R. Telegraphs, Calgary, Alta., vice G. A. C. Phillips, transferred to Winnipeg.

Grand Trunk Ry.—J. C. GARDEN, heretofore acting, has been appointed Superintendent, Motive Power and Car Departments, lines east of Detroit and St. Clair Rivers, Office, Montreal.

C. M. WALTON has been appointed acting Superintendent, Montreal Terminals, vice R. Gilmour, Superintendent, who has been granted leave of absence on account of illness, Office, Montreal.

Pennsylvania Rd.—H. E. HEAL, not H. E. Hall, as mentioned in our last issue, has been appointed Canadian Passenger Agent, Toronto.

The Greater Winnipeg Water District Railway's Future.

A meeting of the Greater Winnipeg Water District administration board on July 14, Mayor Parnell recommended that the railway be not abandoned, at least until the expiration on July 1, 1924, of the lease on the St. Boniface property on which the terminal stands, and that an investigation be made to learn if a revisions of the rates were possible to allow the railway to operate until business revives. It is estimated that it would cost \$243,575 to remove the rails and prepare the roadbed for vehicular traffic, and that if the line is retained it would cost about \$148,000 for new terminals. The deficit on operation for 1920 was stated to have been \$54,000, but the profit to the city for the delivery of gravel was put at \$35,000. No decision was reached on the matter.

Definition of Technical Railway Engineer.

The United States Interstate Commerce Commission issued regulations in Oct. 1920, placing engineers in the subordinate official class as engineers of mechanics. The American Association of Engineers, through a committee headed by C. W. Hild, Assistant to President, Chicago & Northwestern Ry., protested that the term was not clear as to whether it included mechanical and electrical engineers. The I. C. C. has now issued new regulations designating professional engineers as technical engineers to include civil, mechanical, electrical and other technical engineers inferior in rank to chief engineers of maintenance of way, division engineers and other technical engineers. The opinion is expressed that instrumentmen, rodmen, chainmen, designers, draftsmen, computers, tracers, chemists and others in similar engineering or technical work are not "officials of the carriers."

The Matheson Fire.—Two of the three commissioners who have been investigating the causes of the fire which destroyed Matheson, Ont., in 1916, have presented an interim report, in which they hold the Timiskaming & Northern Ry. responsible for some of the damage done and recommend that the compensation offered by the T. & N.O. Ry. Commission be accepted, and that further hearings be given in cases where the offers made are not accepted.

Railway Operating Revenues, Expenses and other Statistics for March.

Steam railway operating revenues, expenses and other statistics for February are given very fully on pages 403 and 404 of this issue. Since those pages went to press the statistics for March have been received and show a considerable improvement over January and February and also an improvement over March 1920. The figures given for "all railways" include all lines with an operating revenue of \$500,000 a year and over, except the St. Lawrence & Adirondack.

A comparison of the figures for March 1920 and March 1921 for all railways shows that the total operating revenue increased from \$35,259,546.96 to \$35,528,083.04, the total operating expenses decreased from \$35,072,458.91 to \$34,333,964.24, the net operating revenue increased from \$187,388.05 to \$1,194,118.80 and the ratio of operating expenses to revenue decreased from 99.47% to 96.64%. The figures for Jan. 1921 were 108.0% and for February 105.1%.

The Canadian Government Rys. operating revenues increased from \$3,344,659.04 to \$3,595,145.16, the operating expenses decreased from \$4,579,923.88 to \$4,538,904.24 and the operating deficit decreased from \$1,235,264.84 to \$943,761.08. The Canadian Northern Ry. operating revenues increased from \$4,892,576.73 to \$5,812,789.67, the operating expenses decreased from \$6,173,464.24 to \$6,746,912.06, and the operating deficit decreased from \$1,280,887.27. The Canadian Pacific operating revenues decreased from \$15,004,399.92 to \$14,882,592.55, the operating expenses decreased from \$14,067,498.71 to \$12,449,504.57 and the net operating revenue increased from \$1,936,901.21 to \$2,434,087.98. The Grand Trunk operating revenues increased from \$5,792,417.03 to \$6,271,920.55, the operating expenses increased from \$5,303,557.88 to \$5,584,720.39 and the net operating revenue increased from \$398,856.15 to \$687,200.16. The Grand Trunk Pacific operating revenue decreased from \$1,038,475.50 to \$1,007,499.04, the operating expenses decreased from \$1,694,035.69 to \$1,564,227.42, and the operating deficit increased from \$655,560.19 to \$656,728.38. Although transportation expenses increased, maintenance of way and structures and equipment both showed sufficient decreases to make a decrease in the total. The ratio of pay roll to revenue for all lines decreased from 59% to 57.20% and the ratio of pay roll to operating expenses from 59.3% to 59.2%, indicating that men were laid off or put on short time, to an extent more than sufficient to compensate for the increased rates of wages put into operation since March 1920.

The ratio of operating expenses to revenue for all railways decreased from 99.47% to 96.64%. In January it was 108% and in February 105.1%. Following is a comparison for the principal railways:—

Canadian Government—	1921	1920
January	123.3	115.9
February	123.8	145.9
March	126.3	136.9
Canadian Northern		
January	128.8	140.3
February	123.0	150.1
March	116.1	126.2
Canadian Pacific		
January	95.5	95.2
February	94.5	96.5
March	89.6	87.9

Grand Trunk—		
January	111.3	112.2
February	99.4	115.2
March	89.0	93.1
Grand Trunk Pacific		
January	125.8	173.1
February	184.7	175.9
March	165.2	163.1

The improvement in the C.P.R. operating ratio is particularly gratifying, and the decrease in those of the Canadian Government Rys. and Canadian Northern Ry. reflect the efforts being made by the management to promote economy in every direction. Low traffic density on the Grand Trunk Pacific prohibits the operating ratio on that road from being brought down to a proper figure, and while the present relationship as between traffic, expenses and revenues obtained for the Government owned properties must necessarily be a gradual process. The reduction in the G.T.R. operating ratio is gratifying, and in comparing the performance of this road with that of various eastern U.S. roads, which operate under substantially similar conditions, it is evident that the G.T.R. has made a very favorable showing. The majority of the eastern U.S. roads, during the same period, were incurring operating deficits.

The revenue ton mileage for March increased by 5% over that for February and was slightly higher than for January, but 16% less than in March 1920. It is evident that the traffic figures reflect quite accurately the general slowing up of business which has taken place since last year. The increased rates on freight traffic did not quite compensate for the decrease in tonnage handled, the total freight revenue having decreased from March 1920 by \$757,928. Passengers carried one mile showed an increase over January and February 1921, but a decrease from March 1920. The falling off in passenger traffic, however, was not so pronounced as in freight traffic being only 6%. The increased fares offset the decrease in traffic, passenger revenue increasing by \$687,948. The decreases in the number of passengers carried one mile took place on the Canadian Northern, Canadian Pacific and Grand Trunk Pacific; while the Canadian Government Rys. and Grand Trunk showed increase. Increases in the ton miles of freight handled were shown by the Canadian Northern and Grand Trunk Pacific, but the decreases in freight traffic suffered by the other roads produced, as stated above, a net decrease of 16% from March 1920. The average receipt per ton mile of revenue freight handled was 1.212c. in March 1921, against 1.054c. in March 1920, an increase of 16%. The average receipts per passenger mile was 3.245c. in March 1921, against 2.758c. in March 1920, an increase of 17.4%.

Viewing the March returns broadly, it is evident that Canadian railways have made some progress in their efforts to get operations back to a proper financial basis; in fact, the reduction of the operating ratio from 108 in January to 96.94 in March may be said to be distinctly encouraging. But it is evident that they have a long way yet to go before the railway industry, considered as a whole, will be on a self supporting basis. An operating ratio of 70 is commonly considered as necessary, if a railway is to be strong financially and able to provide

capital for the improvements and extensions which are necessary in the public interest. However, with the reductions in operating expenses, through wage reductions which are coming into effect at present, and decreases in fuel and material prices which are gradually being brought about, it would seem that the railways have turned the corner, and it may be confidently expected that further improvement will take place.

Freight and Passenger Traffic Notes.

Rossland Board of Trade has declared its opposition to the Great Northern Ry.'s application to the Board of Railway Commissioners for leave to discontinue train service on its branch line from Northport to Rossland, B.C., and the Vancouver Board of Trade has endorsed the Rossland action.

A Chicago press dispatch of July 14 stated that U.S. railways were making a 25% cut in the prices of meals on dining cars. W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars, C.P.R., Montreal, is reported in this dispatch to have said that there is but little difference in the prices of meals on dining cars on Canadian and U.S. lines. Canadian lines made a 25% cut in January, and a further cut on June 1, therefore the U.S. lines in making their recent cuts were merely following the Canadian lines' example.

The matter of the reclassification of freight rates on all Canadian railways is under consideration by two committees, one for eastern Canada and one for western Canada. These committees consist of representatives of the several railways, and in order to obtain the views of all interested parties conferences with representatives of boards of trade have been held or are being arranged. The western classification committee was formed at Winnipeg in June, and the first conference with the representatives of boards of trade of Manitoba, Saskatchewan, Alberta and British Columbia opened at Regina, July 6. Other conferences will be held at convenient centers during the summer and autumn.

The Minister of Labor is reported to have said July 11, that the usual arrangements will be made with the railways to take men at reduced rates from station points for harvest work in the prairie provinces, and that arrangements were being made to relieve the unemployment situation in British Columbia by providing facilities for cheap fares for them. The Premier of British Columbia had taken up the question with C.P.R. officials previously and had been informed that proportionately as low rates would be given to harvesters from British Columbia points as given from eastern points. Representatives of the railways and other delegates met at Winnipeg, July 11, to discuss the employment and distribution of harvest labor.

Railway Lands Patented.— Letters patent were issued during June for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—	Acres.
Canadian Northern Ry.	2,69
Canadian Northern Pacific Ry.	21,679
Canadian Pacific Ry.	50,50
Edmonton, Dunvegan & British Columbia Ry.	23,69
Nicola, Kamloops & Similkameen Ry.	5,36

Total 103,719

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1901, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 343. June 17.—Extending to Sept. 1, time within which changes and instructions, referred to in general order 322, directing all railways to withdraw Special Instructions A from their respective timetables, may become effective.

General order 344. June 27.—Ordering that the words "ordinary published rates as contained in sec. 14 of general order 252, Oct. 26, 1918, be construed to mean the rate that would be charged for the same movement as a local switching and not an inter-switching operation.

General order 345. June 23.—Establishing standard track centers for building of divisional point, terminal, and crossing stations. The judgment on which this order is based is given in full on another page.

31,177, 31,148, June 13, 16.—Authorizing C.P.R. to appoint station agents at Franktown, Ont., and Pointe au Chene, Que., caretakers to be appointed.

31,149. June 17.—Declaring that C.P.R. crossing at Wilcox station, Sask., is protected to Board's satisfaction.

31,150. June 20.—Declaring that G.T.R. crossing at Edgewood highway at station, Que., is protected to Board's satisfaction.

31,151. June 17.—Extending to Nov. 30, time within which G.T.R. may build spur for Hepworth Mfg. Co., Keppel T.P., Ont., authorized by order 30,344, Nov. 13, 1920.

31,152. June 10.—Ordering C.P.R. forthwith to widen cut on both sides of track at crossing of public road between Cons. 4 and 5, Albion T.P., Ont., to right of way limit, for 300 ft. south of crossing.

31,153. June 20.—Authorizing C.P.R. to remove station agent at East Templeton, Que., caretaker to be appointed.

31,154. June 17.—Extending to Nov. 15, time within which C.P.R. may build spur for Dominion Sugar Co., Chatham T.P., Ont., authorized by order 30,327, Nov. 15, 1920.

31,155. June 20.—Ordering C.P.R. to appoint station agent at Dunlop, Ont., by July 15.

31,156. June 22.—Authorizing C.P.R. to build three tracks across Long Lake, Ont., to connect Sudbury Beick Co.'s spur at mile 1.56 Woodstock Subdivision, in Lots 7 and 6, Con. 2, McKim T.P., Ont.

31,157 to 31,159. June 20.—Authorizing Lethbridge Northern Irrigation District to carry irrigation canal across C.P.R. at 3 points n.w. ¼ Sec. 25, Tp. 10, Range 23; n.w. ¼ Sec. 2, Tp. 10, Range 26; and n.w. ¼ Sec. 4, Tp. 12, Range 26, 4th meridian, Alta.

31,160. June 11.—Exempting C.P.R. and St. John & Quebec Ry. from complying with conditions set out in sec. 134 of Railway Act, re joint use of C.P.R. between Westfield and St. John, N.B.

31,161. June 22.—Ordering Canadian National Ry. to install crossing on s.w. ¼ Sec. 22, Tp. 27, Range 29, west first meridian, Ont.

31,162, 31,163. June 22.—Ordering G.T.R. to maintain bells at crossing of Rochester St., in its yard at Lebreton St., Ottawa, Ont., until further order.

31,164. June 23.—Extending to Oct. 1, time within which C.P.R. may build station at Victoria Ave., Westboro, Ont., required by order 30,156, Sept. 29, 1920.

31,165. June 22.—Ordering G.T.R. to maintain bell at crossing of Booth St., Ottawa, until further order.

31,166. June 23.—Authorizing C.P.R. to remove station agent at Proctor, B.C., caretaker to be appointed.

31,167. June 22.—Authorizing Canadian National Ry. to take a spur for McCullough & Sons, Windlett Coal Co., and Winnipeg Paint & Glass Co., Winnipeg.

31,168. June 22.—Authorizing Spallumcheen T.P.R.C. to make highway crossing over Haynes spur of C.P.R. Shuswap & Okanagan Branch in sec. 1, Sec. 13, Tp. 7, Ousayou Division, Yale Div. of C.P.C.

31,169. June 23.—Authorizing Canadian National Ry. to build across highway between east 22, Range 12, west 4th meridian, Ont.

31,170. June 22.—Authorizing C.P.R. to build spur for Canadian Oil Co., Camrose, Alta.

31,171. June 22.—Approving agreement between Bell Telephone Co. and Cameron Telephone Co., Victoria, Canada.

31,172. June 22.—Authorizing G.T.R. to build spur for McCrany Lumber Co., McGregor T.P., Ont.

31,173. June 23.—Ordering that diversion of side road between Lots 20 and 21, Con. 7, Chisholm T.P., Que., by Canadian Northern Ontario Ry., authorized by order 29,109, Dec. 1, 1919, be completed by July 15.

31,174. June 23.—Authorizing C.P.R. until Sept. 1, to remove station agent at Port Hope, with leave to apply for permanent closing of station after Sept. 1.

31,175. June 23.—Refusing application of City of Toronto for order directing G.T.R. to disconnect Balfour Aves., built under order 2,615, and Balfour Station, built under order 2,615, and Danforth Aves., built under order 2,615, Jan. 28, 1907.

31,176. June 23.—Amending order 27,768, Oct. 9, 1918, re granting at certain G.T.R. crossings at Port Hope, Ont.

31,177. June 24.—Authorizing G.T.R. to operate over spur serving Wm. Knechtel & Son, Peppier Bros. Co., Hanover, Ont., authorized to be built by C.P.R. under order 31,027, May 13.

31,178. June 27.—Approving agreement, June 8, between Bell Telephone Co. and Haldimand Municipal Telephone System.

31,179. June 23.—Relieving Michican Central from complying with provisions of general order 293, Apr. 26, 1920, requiring that all locomotives be equipped with seats for brakemen.

31,180. June 23.—Recommending to Governor in Council, for sanction, agreement between Ry. and Rutland & Rutland & Noyan Ry. Co., Aug. 21, 1920.

31,181. June 28.—Rescinding order 28,938, Oct. 22, 1919, re removal of G.T.P.R. spur for U.G.G. Saw Mills, Ltd., at mile 1218.5, Cariboo District, B.C.

31,182. June 25.—Declaring that G.T.R. McAnys crossing, being 5½ crossing west of Coaticook, Que., is protected to Board's satisfaction.

31,183. June 27.—Authorizing C.P.R. to build spur for Northern Construction Co. and J. W. Stewart, Vancouver, B.C.

31,184. June 25.—Approving Bell Telephone Co. and Cold Springs Rural Telephone Co. proposed changes in interlocking system of crossing of G.T.R. & James Bay Ry., on Lot 21, Con. 8, East Gwillimbury T.P., Ont.

31,185. June 27.—Amending order 27,768, Oct. 9, 1918, re G.T.R. crossing of Walton (Main St., Port Hope, Ont.

31,186. June 23.—Ordering that signalmen operating tracks at crossing of Toronto Suburban Ry. and C.P.R. at St. Clair Ave., West Toronto, be in each instance for and on behalf of the railway company.

31,187. June 29.—Authorizing Canadian National Ry. to issue periodic passes, good until Dec. 31, 1921, to persons on their lines, Edmonton, Alta., west and Sydney, N.S., east, in favor of F. S. Cleverly, G. E. McIntosh and C. Brooks, Dominion Agriculture Department, Fruit west 4th meridian, Alta.

31,189. June 24.—Approving agreement between Bell Telephone Co. and Belmont Telephone Co-operative Association.

31,191. June 23.—Ordering Canadian National Ry. to erect signboards at each side of highway crossing at Leffler, Man.

31,192. June 24.—Ordering Canadian National Ry. to provide station facilities at Cushing Station, Ont.

31,193. June 6.—Authorizing Canadian National Ry. to build spur for Douglas Fuel Co., St. Boniface, Man.

31,194. June 4.—Relieving Canadian National Ry. and C.P.R. from maintaining crossing at crossing at Rosewater, Sask., where signals and C.P.R. are set clear for C.N.R. and against C.P.R. and are to be removed by C.P.R.

31,195. July 4.—Extending to Sept. 30, time within which G.T.R. may complete station at Margville, Ont.

31,196. July 4.—Amending order 31,106, June 2, re protection of G.T.R. crossing of Kelly St., Ont.

31,197. June 30.—Declaring that for the present Canadian National Ry. crossing at mile 111.1 is protected to Board's satisfaction.

31,198. July 4.—Approving plan and specifications of work to be done under Lake Erie & Ry., in Lots 1 and 2, Range 1, Hamilton & Buffalo Div., Ont.

31,199. June 30.—Approving agreement between Bell Telephone Co. and Lambton Telephone Co., Lambton County, Ont.

31,200. June 29.—Ordering Chatham, Wallaceburg & Lake Erie Ry. on 2 days notice in writing to remove its station on crossing of C.P.R. or person in charge of its office at Chatham, Ont.

31,201. June 30.—Approving plan and specifications of work to be done under G.T.R. on Slagge crossing, between Lots 7, 8 and 9, Front Concession, Haliburton T.P., Ont.

31,202. July 8.—Ordering Lake Erie & Northern Ry. and Grand River Ry. to operate a certain portion of railway in Galt, Ont.

31,203. July 25.—Authorizing G.T.R. to move its operator from Rockfield station to Dominion station, Que., and appoint caretaker to look after Rockfield station.

31,204. June 30.—Declaring that C.P.R. crossing near Nevis station, Alta., is protected to Board's satisfaction.

31,205. July 7.—Authorizing Canadian National Ry. to build highway in s.w. ¼ Sec. 1, Tp. 15, Range 10, west third meridian, Sask.

31,206. July 7.—Amending order 7,092, July 22, 1912, re Campbellford, Lake Ontario & Western Ry. (C.P.R.) crossing of G.T.R. at mile 185.6 from Glen Tay, Ont.

31,207. July 7.—Authorizing Canadian National Ry. to divert highway in n. ½ and s.e. ¼ Secs. 5, Tp. 35, Range 7, west second meridian, Sask.

31,208. July 7.—Amending order 9,129, Dec. 31, 1909, authorizing C.P.R. to build branch on its London Section in Etobicoke T.P., Ont., and to connect with G.T.R.

31,209. July 7.—Amending order 759, Aug. 29, 1905, re C.P.R. crossing of G.T.R. near Utopia station, Ont.

31,210. July 7.—Amending order 8,937, Dec. 7, 1909, re Georgian Bay & Seaboard Ry. (C.P.R.) crossing at Port Harbord, Ont.

31,211. July 7.—Amending order 761, Aug. 29, 1905, re C.P.R. crossing G.T.R. at Colwell Jet, Ont.

31,212. July 4.—Approving agreement between Bell Telephone and Metcalfe Rural Telephone Co., Carleton County, Ont.

31,213. July 7.—Authorizing Ontario Public Highways Department to divert and widen highway across Toronto, Hamilton & Buffalo Ry., at Hamilton and Ancaster Roads, Ancaster T.P., and to build subway, and asporting cut.

31,214. July 7.—Authorizing G.T.R. to build siding into Kitchener, Ont., municipal yards.

31,215. July 7.—Extending to Nov. 15, 1922, time within which Canadian National Ry. may complete branch lines from mile 55.1 Lacute Subdivision, St. Camot and St. Jerome Parishes, Que.

31,216. July 6.—Extending to Nov. 19, 1922, time within which Canadian Northern Ontario Ry. may complete branch line.

31,217. July 6.—Authorizing British Columbia Public Works Department to make crossing over British Columbia Ry. and Crows Nest Southern Ry., at Spawood.

31,218. July 6.—Extending to Sept. 9, time within which C.P.R. may install wigwag signal at crossing of Drummond & Crows Nest Ry.

31,219. July 7.—Authorizing Grand Trunk Pacific Ry. to build spur for Balkan Coal Co. in s. ¼ Sec. 14, Tp. 49, Range 21, west 5th meridian, Alta.

31,220. July 7.—Declaring that for present, G.T.R. crossing near Tavistock station, Ont., is protected to Board's satisfaction.

31,221. July 6.—Extending to Nov. 19, 1922, time in which Canadian Northern Quebec Ry. may build branch line, mile 35.16, Lacute Subdivision to St. Monique, Que.

31,222. July 7.—Dismissing Montreal Central Terminal Board's application for approval of route from showing general location of its line.

31,223. July 8.—Relieving Grand River Ry. from maintaining speed limitation of 20 miles an hour imposed by order 30,100, May 1, 1920.

31,224. July 8.—Ordering Canadian National Ry. to grade up diversion between Cons. 2 and 3, station near Littleton, Ont., an additional foot to bring it to road level.

31,225. July 8.—Extending to Aug. 15, time within which C.P.R. may make road diversion in Manvers T.P., Ont.

31,226. July 11.—Extending to Nov. 30, time within which C.P.R. may make road diversion Lime Co. station, near Elmfield, Ont.

31,227. July 8.—Ordering Central Vermont Ry. to make farm crossing for Col. A. M. Labelle, 250 ft. south of station, near Elmfield, Ont.

31,228. July 8.—Approving agreement between Bell Telephone Co. and Ingersoll Telephone Co., Ingersoll, Ont., declaring that G.T.R. crossing near Crazeville station, Ont., is protected to Board's satisfaction.

31,230. July 8.—Approving clearance on C.P.R. at crossing of small branch line, Public Works Department at postal station A, Winnipeg.

31,231. July 12.—Authorizing C.P.R. to make crossing over Lot 33, First Concession, and Concession A, Ottawa Front, Nepean T.P., Ont., ordering protective island, two automatic electric lights and standard crossing warning board to be installed.

31,232. July 11.—Approving revised location (Shakatchewan Land Survey) of portion of C.P.R. Branch from East Beaver Creek, Okla. to Mildred in Sec. 32, Tp. 21, Range 16, west third meridian, mile 222.14, Sask.

31,233. July 8.—Authorizing Canadian Northern Ontario Ry. Co. to remove station agent at Elgin, Ont., caretaker to be appointed.

31,234. July 9.—Ordering C.P.R. crossing over G.T.R. tracks at Port Huron, S.D., Sept. 1, 1920, authorizing Ontario Lands and Forest Department to make highway crossing over G.T.R. tracks; also ordering construction of bridge.

31,235. July 12.—Authorizing G.T.R. to build spur at Mount Dennis, Ont., for G.W. Howard & Sons, Ltd.; also authorizing same company to construct building for Rainier Brewing Co., Kamloops, B.C.

31,237, 31,238. July 11.—Ordering C.P.R. to build farm track across road near Burstall, Sask.

31,239. July 11.—Authorizing C.P.R. to remove station agent at Sand Point, Ont., caretaker to be appointed instead.

31,240, 31,241. July 12.—Authorizing C.P.R. to cross, close and divert road allowance N.E. sec. 16, T. 27, R. 27, range 17, at mile 217.45, w. s. 1/4 Sec. 17, Tp. 27, Range 17, west 3rd meridian, mile 217.8, Bassano Easterly Branch, Alta.

31,242. July 12.—Authorizing C.P.R. to cross, close and divert road allowance in s.e. 1/4 Sec. 15, T. 27, Range 17, west 3rd meridian, mile 214.10, Bassano Branch, Alta.

31,243, 31,244, 31,245. July 8.—Amending orders 760, 720, Aug. 1, 1919, as follows:

(A) Near Coldwater, and at Alliston, by providing that watchmen be provided by C.P.R. instead of G.T.R.

(B)—Amending order 22,325, Aug. 1, 1914, authorizing Glenagarry & Stormont Ry. (C.P.R.) to cross under watchmen be appointed by C.P.R. instead of G.T.R.

31,247. July 12.—Authorizing C.P.R. to build branch from G.T.R. mainline north of Winnipeg, Man.

31,248. July 12.—Authorizing Canadian National Ry.s. to remove station agent at Peconatic, Mich.

31,249. July 12.—Approving relocation of C. P.R. station at Westboro, Ont.

31,250. June 15, approved certain officials to prepare and issue tariffs.

31,251. July 12.—Authorizing C.P.R. to move station at Macnza, Que., near River Rouge Bridge, highway to be diverted under bridge, cost to be paid by C.P.R.

31,252. July 12.—Ordering Canadian National Ry.s. to build standard third class station at Ranbarry, Alta.

31,253. July 12.—Authorizing C.P.R. to cross, divert and close, within right of way limits, the Swift Current to Battleford subdivision, between mile 217.8, Bassano Easterly Branch, Alta.

31,254. July 12.—Ordering C.P.R. to cross highway between Lot 75 and 76, Con. Range 10, Signal Tp., Quebec, where it crosses Highway No. 10, south side of lot 75, within limits of right of way, road allowances in n.w. 1/4 Sec. 15, T. 27, Range 17, west 3rd meridian, mile 213.80, Bassano Branch, Alta.

31,255. July 12.—Ordering C.P.R. to cross, divert and close, within limits of right of way, road allowances in n.w. 1/4 Sec. 15, T. 27, Range 17, west 3rd meridian, at Brookdale, mile 36.9 Varco Subdivision, Sask.

31,256. July 13.—Declaring that for present C.P.R.'s crossing at mile 11 Port Burwell Subdivision, near Windsor, Ont., are protected against encroachment.

31,258. July 13.—Ordering Esquimaux & Nanaimo Ry. (C.P.R.) to erect concrete retaining wall about 1,953 ft. north of Wellington South mile board, Vancouver Island.

31,259. July 13.—Ordering G.T.R. to install two automatic electric bells with wigwags attachments at Lacrosse St.

31,260. July 13.—Declaring that for present, C.P.R.'s crossing of Dundas St. at mile 7.75 Galt Division, is protected to the Standard L'Air Liquide Society to use 2,500 high pressure cylinders, requiring test of 3,000 lb. sq. in. for transportation purposes.

31,262. July 13.—Appointing Great Northern Ry. supplement 13, standard freight tariff (C.N.R.).

31,263. July 13.—Ordering Toronto, Hamilton & Buffalo Ry. to build wooden bridge over its tracks at Niagara Falls Station.

31,264. July 13.—Ordering G.T.R. forthwith to remove from service, and repair and reinforce car 2-265.

31,265. July 14.—Authorizing C.P.R. to build spur for Irvin Lumber Co. at mile 8.80 Galt Subdivision, near Fort Erie, Ont.

31,266. July 14.—Ordering that Yonge St. be carried under G.T.R. crossing south of station at Aurora, Ont.

31,267. July 15.—Ordering that so long as present character of movements over crossing of Grand Central Ave. and Main Street, North York, N.W. Saskatchewan Ry. over C.P.R. at Yorkton, Sask., continues, the companies be relieved from maintaining separate stations there.

31,268. July 15.—Ordering that so long as

present character of movements at crossing of Canadian Northern Saskatchewan Ry. by C.P.R. at Yorkton, Sask., continues, the companies be relieved from maintaining signalman on Sundays.

31,269. July 14.—Authorizing G.T.R. to connect with Canadian National Rys. on Lot 28, Con. 2, Elizabethtown Tp., Ont.

31,270. July 15.—Ordering that so long as present character of movements continues over crossing of Canadian Northern Ry. and C.P.R. at Morris, Man., the companies be relieved from

Railway Rolling Stock Orders and Deliveries.

Factor of adhesion	3.38
Superheater	Superheater Co.
Reverse gear	
Motive power	Standard
Tender, frame	Steel channels
Tender, truck wheel chair	33½%
Tender, truck journals	5½ x 10½ in.
Tank, type	Water bottom
Capacity, water	4,250 imp. gall.
Capacity, coal	10 tons

Tank Cars for Russian Soviet Govern- ment.

The Russian Socialist Federal Soviet Republic has ordered 500 fifty-ton tank cars from Canadian Car & Foundry Co., for transporting oil from the Caucasian oil wells to Black Sea ports. The order was obtained in Berlin, Germany, by W. W. Butler, President of the company, through the co-operation of Canadian Government Merchant Marine, and the cars will be shipped by that line to Novorossisk. It is expected that delivery will commence in October and be completed in November. Following are the chief details:—

Gauge	5 ft.
Length of truck centers	10 ft. 7 in.
Length over end sills	30 ft. 6 in.
Truck wheel base	6 ft. 3 in.
Wheels, type and diam.	Chilled cast iron 39 in.
Height from rail to top of tank	11 ft. 7 3/16 in.
Height from rail to top of dome	13 ft.
Tank diam.	86 in.
Dome diam.	54 in.
Tank length	26 ft. 11 in.
Width over side sills	9 ft.

Equipment Painting Section, Mechanical Division, American Railway Associa-

tion.—Notice has been issued that, owing to present unsettled conditions, the annual meeting fixed for Cleveland, Ohio, Sept. 6 to 8, has been postponed for later date. The president, officers and committee will be present. The members are: Master Painter, C.P.R., Montreal, is Second Vice Chairman, chairman of the committee on shop construction and equipment and a member of the committee of direction and of the special committee on protection by paint of parts of equipment subjected to corrosion. The collectors are also on the committees named.—Thos. Marshall, Foreman Painter, C.P.R., Montreal, on classification of painting repairs and shopping of equipment; Jas. McCarthy Foreman Painter, G.T.R., Montreal, on tests; Robt. Woods, Foreman Painter, G.T.R., Montreal, on tests; H. H. Hurn, Mich., on safety and sanitation. V. R. Hawthorne, 431 South Dearborn St., Chicago, is Secretary.

Seats on Locomotives for Brakemen.—

The Board of Railway Commissioners passed order 31, July 23 as follows: "April 26, 1920, The Board of Railroad Trainsmen, on behalf of the Michigan Central Rd. Co., for an order exempting the company from complying with provisions of General order 293, April 26, 1920, requiring that all locomotives be equipped with seats for brakemen. Upon reading what is alleged in support of the application, and the report and recommendation of the Board of Railroad Trainsmen, the Board orders that the M. C. Rd. be hereby relieved from complying with the requirements of the said general order.

The C.P.R., between June 13 and July 12, received 15 steel sleeping cars, the frames for which were built by Canadian Car & Foundry Co. from its Angus shops; and 138 steel hopper bottom box cars, 60½ tons capacity, from National Steel Car Corporation.

The C.P.R. has ordered 4 locomotive tenders from Montreal Locomotive Works. Following are the chief details:

Frame	Commonwealth	36½ in.
Journal		6½ x 12 in.
Tank type	C.P.R. Standard water bottom	
Capacity, water		10,000 gal.
Capacity, coal		31 tons

Locomotives for South African Government Railways.

The South African Government Ry. has ordered 4 (4-S-2) locomotives from Montreal Locomotive Works. Following are the chief details:—

Gauge		8½ ft.
Weight on engine truck		32,200 lb.
Weight on drivers		41,000 lb.
Weight on trailing truck		15,000 lb.
Weight, total		192,000 lb.
Wheelbase, driving		12 ft. 6 in.
Wheelbase, trailing		30 ft. 8 in.
Cylinders, drive and stroke		22 x 26 in.
Driving wheel, diam.		48 in.
Driving wheel, pitch		9 x 10 in.
Driving journals, others		8½ x 10 in.
Engine truck wheel, diam.		28½ in.
Engine truck wheel journals		5½ x 8 in.
Trailing truck wheel diam.		33 in.
Trailing truck journals		6 x 12½ in.
Boiler type	Harpair straight top	
Boiler diam. at main		50 in.
Boiler dir. first riv.		67½ in.
Firebox, length and width		79½ x 65½ in.
Heating surface, tubes		139-2½ in.
Heating surface, tubes		1,555 sq. ft.
Heating surface, flues		657 sq. ft.
Heating surface, total		2,212 sq. ft.
Superheating surface		2,350 sq. ft.
Grate area		558 sq. ft.
Grate area		36 sq. ft.
Grate area		4,300 sq. ft.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—H. A. Warner, Superintendent, on returning to Edmonton, Alta., from a recent trip of inspection, is reported to have stated that the line from Carbondale Jct. to Lac la Biche was in the best of shape, and that the track from Lac la Biche to the Clearwater River was in a fair condition, and being improved daily. A ditcher is being operated between Carbondale and Lac la Biche cleaning out ditches and improving the drainage, and a gang is putting in new ties and repairing trestles, etc. A new ballast pit has been opened at mile 84, and ballasting is reported to have been started. This work is being done by the Alberta Government with the railway's own forces. Beyond Lac la Biche the work is being done by the Northern Construction Co. About 150 men are reported to be putting in new ties, and others are being put on the track up to the condition of the south of Lac la Biche. Gangs are reported to be grading on the recently located new route from the end of track into Fort McMurray. It is reported that rails, etc., for laying this extension have been delivered, and that the track will be laid into Fort McMurray by Sept. 30. (June, pg. 305.)

Canadian Niagara Bridge Co.—Following are directors elected at a meeting of shareholders in Hamilton, Ont., recently: Lord Shaghnessy, E. W. Beatty, K.C., Grant Hall, J. N. Beckley, A. H. Smith, A. H. Harris, I. A. Place. The meeting was formal and no intimation was given as to when active construction on the bridge across the Niagara River and the connecting railways will be started. The entire work projected comprises the construction of a bridge of truss type connecting the Toronto, Hamilton & Buffalo Ry. and the Michigan Central Rd., near Welland, Ont., to the Niagara River, the erection of a bridge which will cross Grand Island, and the construction of 11 miles of line in New York State to connect with the New York Central Lines. (Feb., pg. 82.)

Canadian Transit Co.—Preliminary work on the detail design for the proposed railway and general traffic bridge between Windsor, Ont., and Detroit, Mich., is reported to have been completed, and it is said that they are to be submitted for approval by a consultative committee consisting of Lt. Col. C. N. Monsarratt, Consulting Bridge Engineer, Canadian National Ry.; W. H. Burr, New York; C. R. Young, Toronto, and G. Pegram, New York; with C. E. Fowler, New York, as chairman. The bridge is proposed to be built jointly by the Canadian Transit Co. and the American Transit Co., which will be controlled by a joint board of directors, the organization of which is reported to be in progress. Arrangements are reported to have been completed for putting a bond issue on the market. Other reports state that a contract has been given for the wire for the cables, and that some contracts have been made for foundation work. (June, pg. 305.)

Central Canada Ry.—The Alberta Government started negotiations with the C.P.R. some time ago for the completion and operation of a 26 mile extension of the Central Canada Ry., beyond the Peace River. The Central Canada Ry. extends from Winagami, mile 272, from Edmonton, on the Edmonton, Dunvegan & British Columbia Ry., to Peace River,

48.5 miles, and is being operated, together with the E. D. & B.C. Ry. by the C.P.R. A bridge has been built across the Peace River, and some grading has been done in the direction of the Waterhole district. The Alberta Legislature at its last session provided \$600,000 for the completion of the extension. We are officially advised that the general terms of the agreement for the extension of the line have been settled between the Alberta Government and the C.P.R. The extension will run from Peace River Landing to south of Bear Lake, approximately 25 miles. A contract for grading the extension has been let to W. A. Sutton, Winnipeg, and the work was reported to be well under way on July 5, and rails and other track materials were being delivered. It is expected that track will be laid by Sept. 30. The work is being done under the supervision of J. A. Macgregor, Manager, and Lt. Col. J. G. Reid, Chief Engineer, E.D. & B.C. Ry. (June, pg. 305.)

The Central Ry. Co. of Canada, the affairs of which are being wound up under the direction of the Exchequer Court, has been granted a 5-year extension of time by the Dominion Parliament for the completion of certain pieces of line under construction at the time of its failure, viz., the uncompleted portions of lines authorized between South Indian and Hawkesbury, Ont.; and between St. Andrews and Ste. Agathe, Que. (July, 1919, pg. 381.)

The Edmonton & Mackenzie River Ry. Co. was incorporated by the Dominion Parliament at its last session to build a railway from Fort McMurray, on the Athabasca River, to the junction of the Jackfish and Peace Rivers, and thence to the mouth of the Hay River on Great Slave Lake. It was stated before the House of Commons railway committee that Imperial Oil Ltd., which is interested in the Fort Norman oil district, was substantially supporting this proposal. The provisional directors are: R. G. Brett, W. T. Henry, J. Ramsey, E. Taylor, H. G. Macdonald, E. N. Kennedy, D. Carter, H. L. McInnes, J. Pirie, R. L. Shaw, R. W. Jones, H. L. Hyndman, Edmonton, Alta. (May, pg. 241.)

Edmonton, Dunvegan & British Columbia Ry.—Negotiations are reported to have been completed for handing this line's traffic at the C.P.R. station at 109th St., Edmonton, Alta.

See also Central Canada Ry.

Esquimalt & Nanaimo Ry.—The Victoria, B.C., City Council is reported to have let a contract to the Canadian Bridge Co., Walkerville, Ont., for the fabrication and erection of the steel Strauss bascule lift span which will form the superstructure of the bridge under construction at Johnston St., at an estimated cost of \$239,000. Fabrication is to be started at once, and the erection is to be begun in November. The substructure work is reported to be progressing satisfactorily under the direction of F. M. Preston, City Engineer.

The Mayor of Victoria is reported to have stated on returning from Montreal recently that the President of the C.P.R. had informed him that the replacing of the building now serving as a terminal on Store St. had been decided on, and that work would be started thereon soon after the completion of the Johnson St. bridge. (June, pg. 305.)

Grand Trunk Ry.—Montreal City Council

has appointed a special committee, consisting of the Mayor, Aldermen Baydeur, O'Connell, Hushion, Elle and Bedard, to take up the question of the elimination of the G.T.R. level crossings in Montreal, with the Dominion Government.

A press report states that plans are being prepared by the G.T.R. and the City of Detroit, for a temporary steel and timber bridge 150 ft. long by 30 ft. wide on East Larned St. over the G.T.R. tracks in Detroit, at an estimated cost of \$75,000. (June, pg. 305.)

Grand Trunk Pacific Ry. —Tenders were invited recently for the construction of a frame warehouse on the new dock in the harbor at Prince Rupert, B.C., for the erection and completion of station buildings at Prince Rupert and Prince George, B.C., and for the excavation and laying of cast iron pipe lines at Margot, Sand, Watson, and Kindersley, Sask., for the excavation of reservoirs and construction of earth dams at Archydale and Hubbard, Sask., and for the construction of earth dams at Riverhurst and Kindersley, Sask.

Great Northern Ry.—The City Engineer of Vancouver, B.C., is reported to have advised the city council recently that the G.N.R. had forwarded to the Board of Railway Commissioners plans for the construction of the roadway parallel to its tracks through Grand View as required, and that sanction of the same was expected at any time. (Nov. 1920, pg. 606.)

Kettle Valley Ry.—It is expected that track will be laid at an early date on the line from South Penticton, B.C., to the north end of Dog Lake, about 2 miles. The railway runs on to a wharf, which has just been completed. A steamboat will be operated from this wharf to a similar one which has been built at the southern end of the lake. From this point a railway will be built to the demonstration farm in the Oliver irrigation district. Later on, a railway will probably be built to connect the two sections of line mentioned.

It is reported that consideration is being given to a proposal for the electrification of the line from South Penticton to Dog Lake. We were advised recently that the West Kootenay Power Co. was preparing estimates, not only for the section of the line now being completed, but also for the section on which it is expected to start construction this year, from the south end of Dog Lake. (June, pg. 305.)

Lacombe Northwestern Ry.—The Premier of Alberta is reported to have announced July 7 the intention of the Government to have the old Lacombe & Blindman Valley Ry., which now has its northern terminus at Rimby, extended for a considerable distance during 1922. The Alberta Legislature at its last session authorized the extension of the line from Rimby northwesterly to Pigeon Lake, thence northeasterly to Edmonton, approximately 125 miles. (June, pg. 305.)

Luscar Collieries Limited.—A contract is reported to have been let to Carleton & Fetter, Prince George, B.C., for building of a line, between five and six miles long, from Leyland siding, on the Grand Trunk Pacific Ry.'s Mountain Park Branch to the Luscar collieries. Construction will, it is said, be started at once, and the line is expected to be com-

pleted in October. The company is reported to have had a force engaged for the last six months in opening up its mining properties. It is claimed that in two seams there are about 9,000,000 tons of coal of the best quality already provided. The property was acquired originally by R. W. Jones, an engineer engaged on the Grand Trunk Pacific Ry. exploration work, and J. J. Gregg. The company holds a provincial charter. A. C. Dunn, R. G. Drinnan, J. C. C. Bremner and J. C. Dunn, Edmonton, being interested, as the title is said to have been subscribed in Glasgow, Scotland. R. W. Jones, 708 Taylor Building, Edmonton, Alta., is Chief Engineer. (June, pg. 305.)

Maritime Coal, Ry. & Power Co. Ltd. The Dominion Parliament at its last session declared this company's railway to be works for the general advantage of Canada, and granted an extension of time for its construction. The company owns a railway from Maclean, N.S., on the Intercolonial Ry., to Joggins Mine, 12 miles, and another from Maclean to the Chignecto collieries, 3 miles. (April, pg. 198.)

Montreal Central Terminal Co.—The Board of Railway Commissioners heard at Ottawa on July 6 this company's application for approval of its route map showing the general location of its proposed tunnel and railway. The Canadian National, Canadian Pacific and Grand Trunk Railways, the City of Montreal and the Montreal Harbor Commission were also represented and offered objections, and the application was refused.

Pacific Great Eastern Ry.—A Victoria, B.C., press dispatch states that track was laid on July 22 to Quesnel, completing the railway from Squamish, on the Pacific Coast, to that point.

Pere Marquette Rd.—Hon. F. B. Carrivell, Chief Railway Commissioner, visited Sarnia, Ont., recently, and went into the Pere Marquette Ry. station and terminals question. The Northern Navigation Co. is reported to have given permission to use its docks for terminal purposes, but the railway management pointed out the added expense of running tracks to the docks, and expressed its preference for building a new station. The matter is being investigated by one of the Board's engineering staff, and a report is expected shortly. (June, pg. 306.)

Quebec Central Ry.—A press report states that a contract between the Quebec Government and the Q.C. Ry. for the construction of the extension from Scott Jct. to the southern end of the Quebec Bridge, was signed June 21. (June, pg. 306.)

Quebec, Montreal & Southern Ry.—The Dominion Parliament at its last session granted an extension of time for five years within which the company may complete the construction of an extension of its line from the present terminal at Fortierville, Que., to the southern end of the Quebec Bridge, and of an extension of its line from the present terminus at Noyan Jet to the International Boundary line. (Dec., 1919, pg. 655.)

Squamish-Lake Alice Logging Railway.—A British Columbia press report states that construction is about to be started on a logging railway from Squamish to the vicinity of Lake Alice. The new undertaking will, it is stated, have incorporated with it the booming grounds at Squamish, operated formerly by the old Howe Sound & Northern Ry.

Toronto, Hamilton & Buffalo Ry.—The Board of Railway Commissioners has approved plans for the construction of a spur line into By Products Coke Ovens property at Hamilton, Ont., but judgment was deferred on the question of its general use by the railways, and of the right of future acquisition by the city council or the harbor board. (Feb., pg. 83.)

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Ry., Prince Edward Island Ry., National Transcontinental Ry., and various local lines in the Maritime Provinces and in Quebec, which have been acquired by the Dominion Government.

	1921	1920
January	\$8,781,839	\$7,267,562
February	8,150,341	6,516,689
March	9,497,740	7,761,326
April	8,164,355	7,937,478
May	7,794,147	8,305,550
June	7,885,548	7,776,539
	\$50,284,190	\$45,564,824

Approximate gross earnings for two weeks ended July 14, \$3,976,095, against \$3,933,954 for same period 1920.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government, as far as they are available to date.

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$3,537,304	\$4,847,728	\$20,423
Feb.	3,526,585	4,367,491	840,833
Mar.	3,595,144	4,538,904	943,761
	\$10,649,106	\$13,254,251	\$2,266,071

Following are approximate monthly gross earnings for the Canadian Northern Railway System:

	1921	1920
January	\$5,094,100	\$4,200,700
February	4,840,200	3,862,300
March	6,119,700	4,587,700
April	4,978,500	4,732,623
May	4,742,200	4,983,500
June	4,606,800	4,427,600
	\$30,381,800	\$26,611,423

Approximate gross earnings for two weeks ended July 14, \$2,446,000, against \$2,376,900 for same period 1920.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date:—

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$5,851,220	\$7,538,786	\$1,687,566
Feb.	5,675,782	8,661,337	1,285,555
Mar.	5,812,790	6,746,912	934,122
	\$17,239,792	\$21,447,035	\$3,907,243

\$17,239,792 against \$17,239,792

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1921, compared with 1920:

	Gross	Expenses	Net
	1921	1921	1920
Jan.	\$14,465,430	\$13,824,005	\$641,425
Feb.	12,768,987	11,935,550	\$833,437
Mar.	14,705,727	12,254,818	2,450,909
April	13,761,840	11,115,769	2,646,071
May	13,892,045	10,598,493	3,293,552
June	\$69,594,029	\$59,748,621	\$9,845,408
	\$69,594,029	\$59,748,621	\$9,845,408

Approximate traffic earnings for June, \$1,859,000, and for two weeks ended July 14, \$6,837,000, against \$1,917,000 and \$7,627,000 for same periods 1920.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, also total net operating revenue or deficit for 1921 and 1920, with increases or decreases in

totals, as compared with those for 1920, as far as they are available to date:—

	Gross	Expenses	Net revenue or deficit
	1921	1921	1920
Jan.	\$6,187,539	\$6,886,931	\$669,391
Feb.	5,468,132	5,439,039	29,693
Mar.	6,271,912	5,584,720	887,190
	\$17,927,583	\$17,910,699	\$17,502
	2,497,750	1,565,940	938,510

*Deficit.

Grand Trunk Pacific Railway.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available to date:—

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$1,444,225	\$1,813,982	\$372,757
Feb.	1,013,712	1,872,172	859,234
Mar.	1,907,429	1,964,227	656,728
	\$3,465,366	\$5,551,155	\$1,888,719

\$2,063,734

Railway Finance, Meetings, Etc.

Grand Trunk Western Ry.—Before the passage of the Winslow Bill in the United States, the Grand Trunk Western Ry., on behalf of itself and a number of other roads similarly situated, applied to the District of Columbia Supreme Court for a writ of mandamus to compel the Secretary of the Treasury to pay it \$500,000 as a partial payment on the sum owed it by the U.S. Government, under the guaranty provisions of the Transportation Act. It will be remembered that when the Interstate Commerce Commission certified amounts due to various U.S. railroads as partial payments of the amounts due them, Treasury officials refused to pay the sums, and stated they would not pay the railways anything until the accounts were completely adjusted and the total sums had been decided upon. This attitude by the Treasury officials led to the Grand Trunk Western Ry.'s application, which was refused by the District of Columbia Supreme Court, and when the railway appealed to the District of Columbia Supreme Court, that court also dismissed the application, although action was not taken by it until June 5. In the meantime, however, the railways were able to impress the Government with the seriousness of their financial situation, and to show that the withholding of the partial payments due them was creating business depression. As a result, the Winslow Bill was passed, as mentioned in Canadian Railway and Marine World for April, pg. 190. The effect of this bill is to compel the Treasury to pay the railways sums on account, under the guaranty sections of the Transportation Act, so long as the amounts are properly certified by the Interstate Commerce Commission. Therefore, notwithstanding the dismissal of its application, the relief sought by the Grand Trunk Western has been accorded it by the Winslow Bill.

Kettle Valley Ry.—There has been deposited with the Secretary of State at Ottawa a mortgage deed, dated June 16, mortgaging the Kettle Valley Ry. property to the Royal Trust Co. to secure an issue of bonds.

New York Central Rd.—There has been deposited with the Secretary of State at Ottawa an agreement, dated May 16, between John Carlstens and others, vendors, Guaranty Trust Co. of New York, trustee, and New York Central Rd. Co., amending an agreement of Dec. 15, 1920, supplemental to an agreement of April 15, 1920, establishing the N.Y.C. Rd. Co. Equipment Trust of 1920.

Canadian National Railways Construction, Betterments Etc.

Canadian Government Rys. Contracts. As the Canadian National Rys. Act has not been brought into force by proclamation, contracts for work on the Canadian Government Rys. have still to be approved by the Dominion Government. The preliminary work, including the obtaining of tenders, is done by the Canadian National Rys. management, but contracts have to be authorized by order in council, a red tapeism that should be wiped out without further delay. The following contracts have been authorized during the last few months:—

Construction of bridge at mile 4.2, Pughwash subdivision, the Hamilton Bridge Works, Hamilton, Ont. Contract dated Feb. 26. Schedule of prices.

Construction of bridges over Cocagne, Little Buctouche, and Petitcodiac Rivers, N.B. Dominion Bridge Co., Montreal. Contract dated Feb. 10, 1921. Schedule of prices.

Construction of 350-ton, 3 track, mechanical coaling plant and wet sand bin, etc., at Chaudiere Jct., Williams & Wilson, Montreal. Contract dated Feb. 10, 1921. Amount, \$40,800.

Labor only for erection and completion of car repair shop at Mission, Ont. Canadian National Rys., J. H. Simmons, Winnipeg. Amount, \$7,228.

Construction of rock fill to protect sliding embankment at mile 73.7 Sioux Lookout Subdivision, Central District, Canadian National Transcontinental Ry. John Welch, Port Arthur, Ont. Contract dated Oct. 1, 1920. Cost plus 10%.

Construction of alterations on and additions to passenger car paint shop at Transcona, Man., J. B. Duncan, Winnipeg. Contract dated Dec. 17, 1920. Amount, \$22,000.

Halifax Terminals.—Tenders were received to July 18 for paving approximately 2,300 square yards at Halifax deep water freight shed, and approximately 4,500 square yards at Halifax ocean terminals station.

Island Yards, St. John.—The yards at Gilbert's Island, St. John, N.B., having been found too small for the increasing traffic, have been considerably enlarged recently. The original yards were laid out on the northerly bank of Marsh Creek, up to a point where the creek is crossed at the section of the yard leased to the Dominion Agriculture Department. For extension purposes, about 47½ acres were acquired northerly of the main line tracks, practically to the city boundary, and extending from the bundary of the old yards to where Marsh Creek comes closest to the tracks. It is proposed to straighten out the channel of the creek, by constructing two stretches of straight channel, cutting out two bends, the reclaimed area to be used for general yard purposes. Construction of one of these diversions, 1,000 ft. long has been completed and a double track pile trestle is 90% completed, across the creek northerly from the existing structure, which it is proposed to replace with a new double track pile trestle. Up to the present there has been completed of the track lay out nine body tracks, averaging about 2,700 ft. long, with a combined capacity of 515 cars. The switching lead is 2,700 ft. long at the east end of the new yard. There is one double track ash pit in connection with the present locomotive house, and one 200-ton mechanical coal-

ing plant. Work on the extensions was started May 20, 1920, and ceased March 10, 1921.

McLeod's Wharf Shed, St. John.—In connection with projected developments at McLeod's Wharf, St. John, N.B., the Canadian National Rys. has been asked by the city council to buy or appropriate the existing shed on the wharf. The railway management desires to lease the property at \$300 a year, the city to remove the shed, but the city wants the shed to be bought at \$9,000, its appraised value, or taken over by expropriation proceedings.

Petitcodiac River Bridge.—The Petitcodiac is a tidal river in New Brunswick, flowing into the northern end of the Bay of Fundy. About 1.4 miles from Salisbury, on the branch line from Salisbury to Albert, is a railway bridge which is now being rebuilt. The old bridge was 432 ft. 5 in. long from face to face of the ballast walls of the abutments, with depths from base of rail as follows: to ordinary high tides, 22.3 ft., to ordinary low tide, 30.7 ft., to bed of stream, 30 ft., and to average rock level, 41 ft. The substructure consists of two masonry abutments, two masonry concrete piers, and one masonry pier, and the superstructure of three wrought iron deck plate girder spans of 100 ft. each in length, and one wrought iron through truss span of 128 ft. 5 in. long. The new bridge is to occupy the same location as the old bridge, and will be approximately 433 ft. between faces of ballast walls. The substructure will consist of two of the old masonry abutments remodeled and extended with concrete, and three new concrete piers resting on a rock foundation. The superstructure will consist of four pony truss spans, each 107 ft. 10 in. long. These spans have been removed from a location on the main line and will be re-erected at this point. The contractors for the substructure are Gorman & Peckham, Halifax, N.S., and for the superstructure, the Dominion Bridge Co., Montreal.

Moncton Locomotive House, etc.—A press report states that considerable progress has been made with the construction of a new locomotive house on the Wilbur property, just west of the Moncton, N.B., city boundary. It is stated that the building will accommodate about 100 locomotives. Considerable track work is being done in connection with it.

Minto to National Transcontinental Ry. A press report states that the Minto & Coal Operators' Association has discussed with the C.N.R. management the construction of a spur line from the Minto, N.B., coal fields for 6.50 miles, to the National Transcontinental Ry. At present coal from these fields has to be hauled from Minto over the Fredericton & Grand Lake & Ry. Co.'s line, to Chipman, 12 miles, to reach the N.T. Ry.

St. Lawrence Subdivision Bridges.—In connection with the recent invitation for tenders for bridges on the Quebec District, we are officially advised that only two of the four mentioned will be built at present. These are at the crossing of the Shawinigan River, mile 86.7, and at the crossing of the St. Norbert River, mile 128.8. At the Shawinigan River a steel viaduct will be erected, and at the St. Norbert River a steel bridge will replace the present steel one, which is too

light for the power which it is intended to use. At the St. Norbert crossing two concrete abutments will be built to replace the timber which is now supporting the ends of the short girders. We are officially advised that contracts for the erection of the two substructures have been let to Brigadier General C. L. Hervey, D.S.O., Montreal.

C.N.R.-G.T.R. Connection at Pembroke. We are officially advised that a switch has been installed at Pembroke, Ont., to give a connection between the C.N.R. and G.T.R., the work involving only a small expenditure. The construction of the switch will permit G.T.R. locomotives to use the C.N.R. Y at Pembroke for turning purposes.

Timiskaming & Northern Ontario Ry. Connection.—The Board of Railway Commissioners has authorized the C.N.R. to open for traffic its connection with the T. & N.O. Ry. at North Bay, Ont.

Orient Bay Stream Diversion.—Tenders are under consideration for the grading and completing of a diversion of Orient Bay, Lake Nipigon, at mile 43.67 Nipigon Subdivision, Ont. We are officially advised that this diversion is really a small work. The railway crosses Orient Bay several times, and by cutting a channel through on one side of the track two of the existing crossings, each of 90 ft. trestle bridge, will be done away with.

Acadia Valley Branch.—The Board of Railway Commissioners has approved location plans for this branch, in Saskatchewan and Alberta, mile 25.03 to 43.36, and has authorized the construction of the line across highways.

Western District Betterments.—W. A. Brown, General Superintendent, is reported to have stated on returning to Edmonton recently, after an inspection trip, that the betterment work on the Brazeau branch line, now in the hands of contractors, will be completed this year; the trestle work of a bridge across the Blindman River near Burbank, Alta., is being filled in; the trestle work at mile 130, west of Lockearn has been filled in, and the renewals and ballasting are being gone on with. Extra gangers are at work on the Scorn and Battle River subdivisions. The 60 lb. rails on the line between Kindersley and Hanna are being replaced by new 85 lb. rails, and about 60 miles of ballasting have been done. The putting in of a second track between Drumheller and Wayne is nearly completed, and additional passing tracks are being laid at Drumheller to facilitate the coal traffic. Work is reported to have been started on the filling in of the trestle west of the steel bridge at Fort Saskatchewan.

Onaway to Whycetourt Branch.—A line has been in operation for some years from Peace River Jct., on the C.N.R., west of Edmonton, to Sangudo, Alta., 31 miles, and in 1912 grading was completed for an extension of the branch for 22 miles in the direction of the Grande Prairie district. In 1921 this grading was overhauled, and early this year track was laid and operation of trains extended to Robinsons, 3 miles. A recent press report stated that track had been laid to a ballast put in the Athabasca flats, a few miles from the present terminus at Whycetourt township. Ballasting of the line as far as the gravel pit was expected to be completed by July 31.

Application for Reduction of Live Stock Freight Rates.

A meeting between railways traffic officials and representatives of the live stock industry was held at Ottawa July 19, to consider proposed reductions in live stock rates. The meeting was presided over by J. G. Rutherford, C.M.G., one of the Board of Railway Commissioners. The C.P.R. was represented by W. B. Lanigan, Freight Traffic Manager, and E. P. Flintoft, Assistant General Solicitor; the G.T.R. by F. J. Watson, General Freight Agent, and W. C. Chisholm, K.C., General Solicitor; the Canadian National Rys. by G. Stephen, Freight Traffic Manager, C. E. Friend, Comptroller, and G. F. Macdonnell, Ottawa, Solicitor, and the Toronto, Hamilton & Buffalo Ry. by R. F. Hill, General Freight and Passenger Agent; the Eastern Canada Live Stock Union was represented by Mr. McKay, C.M.G., M.P. for South Ontario, and Geo. Pepper, Toronto; the Toronto Live Stock Union by O. W. Atwell; the United Grain Growers and Canadian Council of Agriculture by O. Freer, Winnipeg; and the Canadian Livestock Exchange by H. Talbot and C. H. Mabey.

Commissioner Rutherford, in opening the meeting, emphasized that the subject should be discussed without the introduction of controversial factors as to the fairness of the present rates, and the meeting resolved itself into a discussion as to how far the railways could go in helping the live stock industry maintain itself during the crisis with which it is faced. The Eastern Canada Live Stock Union's original application was for a 50% reduction, and in support of this application Mr. McKay stated that the industry as a whole is in the most precarious position in which it had ever found itself, that the prices for live stock at present are lower than they were in 1914, while costs in the industry are being maintained at high levels. As an illustration, he said that of a carload of cattle sold in Winnipeg and reshipped to Toronto, 24 sold for an average of \$37.38 each, of which the railway got \$17.90, while \$6.57 went for running expenses, leaving the shipper \$12.81. The loss of the United States market through the operation of the Fordney emergency tariff bill was emphasized, also the financial inability of a large number of European consumers to buy. Mr. McKay suggested that the railways replace the present rates by those of pre-war times, and leave the new rates in operation till the end of the year, when the condition of the industry could be reviewed and further action taken.

W. B. Lanigan, Freight Traffic Manager, C.P.R., said he was fully aware of the importance of the Canadian live stock industry, not only of itself, but also because of its great place in the whole scheme of agriculture. He agreed that the live stock business is in a worse position at the present time than ever before, and admitted the advisability of railways doing all they can to help it. He thought the good effects of reduced freight rates would be largely of a psychological nature, and the other railway representatives agreed with him when he pointed out that live stock prices were the result of the interaction of supply and demand, but that even though reduced rates would not have much effect in the creation of additional demand,

they could not fail to be of some benefit at least. He pointed out, however, that the live stock business is not a profitable one for railways, and represents only 0.95% of the ton-mileage handled by the C.P.R., while the capital investment for yards and feeding facilities is necessarily large. He stated that the average haul on live stock is only 287.4 miles, as against a much longer haul on most other commodities; that the average carrying for live stock is 9.53 tons, against an average car-loading for all commodities of 23.77 tons; that the annual earnings from a stock car are \$644.61, against \$1,689.81 for a box car, and that stock cars are hauled empty for 64.3% of their mileage, while other cars on the average are hauled empty for but 26.12% of their mileage. He added that if the railways expressed a willingness to make concessions for the benefit of the live stock industry, it likely would not be long before the Board of Railway Commissioners would be flooded with applications from all industries for freight rate reductions, based on those applied to the live stock industry as a precedent. He emphasized that any reductions the railways would be willing to make would be made solely because of the fact that the industry is harder hit than any other, and that it must be supported in the national interest. Mr. Lanigan was assured by Chief Commissioner Carvell that reductions in live stock rates would not be looked upon by the Board as a precedent for other rate reductions.

F. J. Watson, General Freight Agent, G.T.R., stated that reductions in the live stock rates could not be justified as a matter of transportation policy, but all the railway representatives were agreed that they could be justified as a matter of national policy.

The meeting was suspended from 2.36 till 3 p.m., and on re-assembling the live stock men reported that they had got together and agreed that they would be satisfied with a 25% reduction in rates. In view of the fact that the matter had resolved itself from a straight traffic question into a question of general policy, the railway traffic representatives stated that it would be necessary to take the matter up with their respective managements, to whom they would make recommendations for reductions, with the understanding that they would not be considered as precedents for reductions in other rates. They were asked by Chief Commissioner Carvell to have their decision presented to the Board within a week, and it was felt at the conclusion of the meeting that the railways and the representatives of the live stock industry would be able to come to an agreement without the necessity of an order by the Board.

An Ottawa press dispatch of July 28 says that reductions of rates on live stock had been announced in a letter from the carriers to the Board of Railway Commissioners, to go into effect immediately new tariffs are filed with the Commission. It adds that Western Canada and British Columbia local rates in effect prior to Sept. 13, 1920, are restored, as also are local rates in Eastern Canada prior to the same date, and that the new rate on cattle from Winnipeg to Montreal or Toronto will be 85c. per 100 lb.

Express Companies Consolidation.

In pursuance of the policy of co-ordinating the G.T.R. services with the Canadian National Rys., the Canadian Express Co., which is owned by the G.T.R., will be consolidated on Sept. 1 with the Canadian National Express Co.

John Pullen, President, Canadian Express Co., Montreal, will be appointed President, Canadian National Express Co., and W. C. Muir, General Manager, Canadian National Express Co., Winnipeg, will be appointed Vice President and General Manager.

The location of the head office has not been settled.

Canadian Northern Railway Bond Issue.

The Dominion Government sold recently, to a syndicate of New York bankers, headed by Dillon, Read & Co., \$25,000,000 Canadian Northern Ry. Co. 25 year, 6½% sinking fund gold debenture bonds, dated July 1, 1921, due July 1, 1946. Interest payable on Jan. 1 and July 1 principal and interest payable in gold of the Canadian Bank of Commerce New York agency. The prospectus states that the Dominion of Canada guarantees principal and interest by endorsement and adds that they are the direct obligation of the Canadian Northern Ry. Co., which is owned by the Government of Canada, and forms part of the Canadian National Rys. System, which will consist of over 22,000 miles, extending from the Atlantic to the Pacific Ocean, and reaching every important traffic center in Canada. Canadian counsel advise that these guaranteed bonds are secured by the full credit and taxing power of the Dominion equally with its direct obligations.

The bonds were offered to the public on July 7 at 96½ and interest, to yield about 6.80%, and it was reported that they were all disposed of during the day.

David Russell's Actions re Western Railway Lands.—David Russell has entered another action in connection with his dealings with western railway lands which have been before several courts in Canada of late years. The present action is entered in the Ontario High Court, against Sir Edmund Osler, Hon. William Pugsley, the National Trust Co., executors of the late H. C. Hammond, and C. S. MacInnes as trustee of the late Hon. D. MacInnes's estate. The net amount claimed is \$7,799,250 for alleged breach of contract in connection with the delivery of 433,000 acres of land north of Regina, Sask., which formed the Qu'Appelle, Long Lake & Saskatchewan Ry. land grant. The total amount involved is stated to be \$8,175,000, of which is deducted \$255,000 and \$150,750 interest, stated to have been paid March 28, 1920, by Mackenzie, Mann & Co. When the action last came before the Ontario High Court on April 27, 1920, Russell was not in court, and no one appearing in his behalf, the court dismissed it. (July, 1920, pp. 378.)

Public Health Train.—A Montreal press dispatch says that Grant Hall, Vice President, C.P.R., has offered the Child's Welfare Association the use of two railway cars, to be fitted up and operated for public health demonstration purposes, which will be hauled free between points within the Province of Quebec.

A Lurid Example of the Difficulties of Operating Government Railways.

Events which followed a recent decision by the Canadian National Ry. management to close the train dispatching office at Sydney, N.S., and to transfer the dispatching of trains on Cape Breton Island from that place to the New Glasgow Division's headquarters, at New Glasgow, should be thoroughly understood throughout Canada, as showing the difficulties that confront the management under present conditions. The New Glasgow Division, of which W. R. Fitzmaurice is Superintendent at New Glasgow, N.S., and which, as a portion of the Maritime District, comes under the jurisdiction of J. C. O'Donnell, General Superintendent at Moncton, has a mileage of 368.01, its main line running 122.35 miles from Truro to Mulgrave, on the south side of the Strait of Canso, which is crossed by a car ferry, and from Point Tupper, on the north side of the strait, to Sydney, 101.84 miles, a total main line mileage of 224.19. The rest of the division, 138.82 miles, consists of branches, of which 112.82 miles are on the Nova Scotia mainland, and 31 miles on Cape Breton Island, so that the total mileage on the mainland is 235.17 and on Cape Breton Island 132.84. New Glasgow is conveniently situated, on the main line, for dispatching purposes, and is near to practically all the branch lines, while Sydney is at the extreme north end of the division. Before the centering of the dispatching for the division at New Glasgow, that office dispatched for 235.17 miles on the mainland, and Sydney dispatched for 132.84 miles on Cape Breton Island. Even since the closing of the Sydney office, New Glasgow is dispatching for only 368.01 miles and is the smallest dispatching district on the whole C.N.R. system, from the Atlantic to the Pacific, with the sole exception of the Prince Edward Island Ry., which has only 27.67 miles and is dispatched from Charlottetown.

Some years ago, it is said to be over 20, when the Intercolonial Ry. was directly under the Railways Department at Ottawa, a dispatching office was established at Sydney. There could not have been any reason for this, from an operating standpoint, and it must have been done for political reasons, to satisfy local demands. All that the Sydney dispatchers had to do was to handle trains on one main track of 101.84 miles and a branch of 31 miles. The regular train service between Sydney and Point Tupper consists of two passenger trains, and three freight trains, daily except Sunday, and between Point Tupper and St. Peters there is a mixed train each way daily except Sunday. For this a force of a chief dispatcher and four dispatchers was maintained.

The C.N.R. management, in pursuance of its absolutely necessary policy of cutting out unnecessary expenses, decided recently to close the Sydney dispatching office early in July, and to have the whole of the dispatching for the New Glasgow Division done from New Glasgow, thereby effecting a saving of between \$8,000 and \$9,000 a year. Immediately this was announced some Sydney people started an agitation to try and prevent the change being made. Telegrams which were sent to the management, and which have been published in local papers, throw a lurid light on the situation. J.

C. Douglas, of Glace Bay, M.P. for South Cape Breton and Richmond, whose services were enlisted, telegraphed President D. B. Hanna on June 25 as follows: "Notice published dispatchers' office Sydney to be closed July 4. This office in existence 21 years. Presume idea is economy in operations, and while appreciating necessity for same, safety of travelling public is vital, and business interests involved important. Kindly have matter further enquired into before definite action is taken and favor me with your advice on subject."

Mr. Hanna replied as follows:—"Change in dispatching office due to business conditions. Chief Dispatcher will continue to remain at Sydney, and any changes which we are making will have no effect whatever on business interests nor can in any way affect safety in operation."

The member of Parliament's telegram was followed by one from the Sydney Board of Trade, asking the withholding of action until "some official competent to deal with the matter" could meet Sydney merchants, and adding that the proposed change was likely to seriously affect the service given by the railway. The fact that the change had not been decided on until the matter had been most thoroughly considered by the very competent officials responsible for the operation of the division, and approved by the higher officials of the operating department, and ultimately by the President, was entirely ignored by the Board of Trade. There was no earthly reason for discussing the matter with the merchants, and very properly no action was taken on the request, the decision to close the Sydney dispatching office being put into effect as scheduled, the Chief Dispatcher, A. Dunn, being retained at Sydney, as General Agent, and the four dispatchers being transferred to other points, where their seniority permitted them to relieve junior men.

Following the action by the member of Parliament, and the Board of Trade, the Mayor of Sydney sent Mr. Hanna a telegram in which he said that the citizens could not see the economy of the move, as they would lose \$5,000 a year by it, in other words that the removing of the dispatchers to other points would mean that that much less in wages would be spent in the city. He followed this up with the impudent threat that if the proposed change was carried out, Sydney business men would immediately give instructions that all rail shipments from the west for the Sydneys be routed via C.P.R. to St. John, N.B., instead of via the G.T.R. and C.N.R., and that the C.P.R. would be asked to send "route agent" to Cape Breton to look after the business.

The contents of the telegrams referred to show that Sydney people had no tenable objections to offer. The contentions that because the office had been there for over 21 years, that \$5,000 a year less wages would be spent there, that the safety of the travelling public would be endangered and that business interests generally would suffer, were childish in the extreme, but they show the lengths to which people will go in endeavoring to use public influence for their own selfish, local ends. If the Sydney people generally were correctly represented by their mayor's hectic action

which is doubtful, they should be given to understand that the Canadian National Ry.s. are not being operated for the especial benefit of any particular local community, but for the Canadian people as a whole, who have to foot the bills, and that interference with the management in its endeavors to effect necessary economies, and to get rid of the barnacles which grew during years of direct Railways Department management will not be tolerated.

That the Mayor of Sydney does not represent the views of all his constituents is evident from the Sydney Post's attitude. It is gratifying to note that that paper has taken a very fair position in connection with the matter, as the following extract from a recent editorial will show:—"It is well to bear in mind that the National Ry.s. lost something like \$5,000,000 a month last year in their operations . . . In the circumstances, reasonable people will not criticize the management for changes it has inaugurated, that will effect a saving, or improve the organization, without crippling the efficiency of the service, or unduly curtailing it. Changes in the direction of economy are perforce being made on the C.N.R., all over the country. Employees that can be spared as being dispensed with. Many local trains have been discontinued in several provinces. The argument is heard, in every locality affected by these measures of retrenchment, that the saving brought about thereby is trifling, by contrast with the inconvenience to the people. But the saving, in the aggregate, is by no means trifling. Our national railways comprise a vast system, of some 20,000 miles of road, which is kept in operation at a prodigious cost, which the people of Canada, not the railway management, have to meet. The last C.N.R. statement, which showed a net loss for the year of approximately \$70,000,000, provoked keen

criticism in Parliament, and widespread criticism in the country. It is illogical to assail the management, in one and the same breath, for extravagance and economy. Some local inconvenience must be paid for in order to secure the retrenchment it is to make any appreciable improvement in the C.N.R. financial statement. And there shall have to be a very substantial improvement in the financial position of our national railways, if they are to continue to carry on. In all the circumstances, it is the part of common sense to make sure that the significance of changes, such as that contemplated with respect to the Sydney dispatching office, is understood, before hazarding any strong comment thereon. It is the management, not employees who happen to be inconvenienced by re-organization, that are responsible to the people of this country for the ordering of the C.N.R. business."

This Sydney episode, unfortunately, is only the tip of what is going on in some other localities, and emphasizes the necessity of placing the C.N.R. management in such a position that it will not be subject to interference by members of Parliament, whether they are ministers for the time being, or ordinary members. No doubt ministers at Ottawa are being appealed to constantly by some of their constituents and by other members to interfere with the C.N.R. management, for the furtherance of local interests. It is stated by a Sydney paper that the member of Parliament for the district is pursuing the Sydney dispatching office matter with the Minister of Railways. That minister, and other ministers, should refuse to interfere, and reply that the C.N.R. management rests entirely with the President and other directors. It would be interesting to know whether they pursue this policy. Canadian Railway and Marine World has grave doubts on the question.

United States Railways' Financial Position.

From the trend of operating returns of United States railways as referred to in previous issues of Canadian Railway and Marine World, and also in this one, it is evident that the railways there have been, and are, experiencing great difficulty financially. While the Transportation Act allows railways to earn 5½%, or, at the discretion of the Interstate Commerce Commission, 6%, on the value of their properties, the rate of return for April, 1921, was 2.2%; for May, 2.41%, and for nine months from Sept., 1920, when the Government guarantee period expired, the rate of return, as based on the valuation furnished by the Interstate Commerce Commission, was but 2.41% also.

As a result of these conditions, many roads have not paid dividends, maintenance of equipment, has been allowed to fall behind, economies, many of which are false but unavoidable, have been made in every direction, over 600,000 railway employees are out of work, and the purchasing power of many of the railways has been curtailed, and in many cases destroyed. As a further result, railway supply manufacturers have had to restrict operations, resulting in more unemployment. Many manufacturers, not able to collect amounts owed by the railways, have had to be carried by banks, resulting in a lack of credit for industries of every kind, and consequent

ly more unemployment. Without tracing further the vicious circle in which industry in the U.S. finds itself locked, due to the fact that the operating expenses of railways have been so large as to destroy their purchasing power and deprive invested capital of a fair return, we may at once proceed to the conclusion that industry would be improved, and the economic situation given an impetus toward stability, if the railways' credit could be restored.

President Harding's administration, being aware of this fact, took the stand, for some months, that a large part of the trouble lay in high railway rates. However, deeper study, advice from the Interstate Commerce Commission and information from numerous railway executives, has apparently succeeded in proving to the administration that the movement of traffic would not be materially increased if it were to be carried free. It is now seen, evidently, that lack of confidence, unwillingness to buy more than absolutely necessary in a falling market, and impaired credit, and lack of purchasing power, have combined to bring about the situation which has affected the railways so adversely, and it is also seen that impaired credit and lack of purchasing power on the part of one of the largest contributing factors in the situations which is affecting industry as a whole so adversely.

Negotiations are in progress between Government officials and railway executives at Washington, in an effort to arrange the financial relations between the U.S. Government and the railways in such a way as to restore the latter's credit. The railways' claims against the Government amount to about \$1,250,000,000, but even after deducting the amounts claimed for alleged under-maintenance of their properties, during the period of Federal control, the Government's debt to the railways is placed at \$600,000,000, about \$300,000,000 of this arising out of the guarantees made for the period of Federal control, and \$220,000,000 from the six months guarantee period immediately following the return of the railways to their owners. The railways still owe the Government a considerable portion of the \$750,000,000 spent by the Railroad Administration in additions and betterments to the roads while under Government control. The railway executives desire that this debt be funded for 10 years at 6%, and that the Government pay its debts to the railways as quickly as a final accounting can be reached. The executives point out that they are utterly unable to get necessary capital, and argue that this action of the Government would provide credit for the railways which is necessary to carry them over the present trying period.

It is stated that President Harding regards the proposition favorably, but the disagreement between the railway executives and the officers of the Railway Administration as to the railways' claims for under-maintenance has been standing in the way of a final agreement. A recent press dispatch stated that an arrangement had been arrived at by which the Government would accept security of the railways at 6% for their debts to the Government, and would pay the railways at once to the extent of \$500,000,000 on their claims, but this dispatch was apparently without foundation. It is stated that only \$200,000,000 is available to the Railroad Administration's credit to pay the railways at present, and Congress would have to make an appropriation for the balance. Latest advices indicate that the negotiations are, however, likely to result in the Government agreeing to fund the amounts owed it by the railways, and to make arrangements to pay the railways what it owes them, the basis of the agreement being that the railways reduce considerably their claims against the Railroad Administration for under-maintenance. It has been pointed out that such a procedure, involving the acceptance by the Government of securities issued by the railways, would involve no more preferential treatment for the railway industry than has been accorded to Governments of foreign countries, and in view of the fact that the accreditation of railway credit would undoubtedly mark the beginning of the end of the present industrial depression, it may be hoped that the railways' requests will be acceded to, and that a vast improvement in general conditions will result.

There were exported from Montreal during May and June 6,648 cattle and 1,884 sheep, and during the first two weeks of July nearly 1,000 cattle were added, making a total of 7,774 cattle exported during the month of July. Of the cattle, 2,634 are reported to have been taken to Montreal from United States points.

The Railway Wages Question in Canada and the United States.

The United States Railway Labor Board's decision 147, providing for a reduction of railway employees' wages, by an average of about 12%, was given in Canadian Railway and Marine World for July. As was explained in the article on "The Railway Wages Question in Canada and the United States" on pg. 364 of that issue, the decision covered dispute brought before the Board prior to April 18, and as a result only certain of its articles applied to the various railways concerned; that is, only specified classes of employees on these railways were affected. The railways, after April 18, made application to the Board for permission to reduce the wages of classes of employees not specified in their previous applications; and, as a result, the Board issued, on June 25, addendum 1 to decision 147, applying the deductions ordered to practically all classes of employees on all the chief U.S. railways.

Decision 147 stated in part:—"The Labor Board decides: 1. That the rates of wages heretofore established by the Board's authority shall be decreased as hereinafter specified, and that such decreases shall be effective as of July 1, 1921. 2. That the scope of this decision is limited to the carriers named under article 1 herein, to such carriers as may be included hereafter by addenda, and to the specific classes of employees named or referred to under each particular carrier. 3. That the reduction in wages hereby authorized shall be made in accordance with the following articles which prescribe the regulations, designate the employees affected, and establish the schedules of decreases."

Articles 2 to 14, as set forth in addendum, are the same as the corresponding articles in the original decision, as given in Canadian Railway and Marine World for July, pgs. 347 and 348, except that additional sections were added to articles 10 and 12 so as to make the order applicable to certain marine employees, and chefs, restaurant workers, dining car stewards, buffet porters and laundry workers. Article 1 of addendum 1 specifies the articles and section numbers which apply to the different roads specified, to show which classes of employees are affected, and includes a number of railways not dealt with in article 1 of the original decision. The Brotherhood of Dining Car Conductors is added to the list of parties to the dispute which was given in the original decision.

In reproducing decision 147 in Canadian Railway and Marine World for July, the list of railways given in article 1, and the number of articles, and sections of articles, applying to each was not given, on account of its great length. Following is a list of roads, more or less connected with Canada, showing the employees on each affected by both decision 147 and addendum 1 thereto. The articles and sections referred to by numbers were given in full in Canadian Railway and Marine World for July, pgs. 347 and 348. Where sections are mentioned as from one number to another number, both numbers are inclusive:—
Central Vermont Ry.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1 to 3; art. 9, secs. 1 to 4.

Deleware & Hudson Co.—Art. 3, secs. 1 to 8; art. 4, secs. 2, 3 and 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 9, secs. 1 to 4.

Duluth, South Shore & Atlantic Ry.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 2 and 3; art. 11, sec. 1.

Grand Trunk Ry.—Western Lines.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1, 2 and 3; art. 9, secs. 1 to 4; art. 11, secs. 1 and 2.

Great Northern Ry., including Brandon, Saskatchewan & Hudson Bay Ry.; Crow's Nest Southern Ry.; Manitoba, Great Northern Ry.; Midland Ry. of Manitoba (Great Northern trains only); Nelson & Port Sheppard Ry.; New Westminster Southern Ry.; Red Mountain Ry.; Vancouver, Victoria & Eastern Ry. & Navigation Co.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 2 and 3; art. 9, secs. 2, 3 and 4; art. 11, sec. 1.

Michigan Central Rd.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1, 2 and 3; art. 9, secs. 1 to 4; art. 11, sec. 1.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 2, 3 and 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 2 and 3; art. 9, secs. 2, 3 and 4; art. 11, sec. 1; art. 12, sec. 7. This latter section affects dining car stewards, who were not affected in the original decision.

New York Central Rd.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1, 2 and 3; art. 9, secs. 2, 3 and 4; art. 11, secs. 1 and 2.

Pere Marquette Ry.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1, 2 and 3; art. 9, secs. 1 to 4; art. 11, secs. 1 and 2.

Wabash Ry.—Art. 2, secs. 1 to 9; art. 3, secs. 1 to 8; art. 4, secs. 1 to 4; art. 5, secs. 1 and 2; art. 6, secs. 1 to 4; art. 7, secs. 1, 3 and 4; art. 8, secs. 1, 2 and 3; art. 9, secs. 1 to 4; art. 11, secs. 1 and 2.

Action by Railway and Labor Organizations.

Addendum 1 to the Labor Board's decision 147 as quoted above having applied wage reductions to all classes of railway labor, the general chairman and other chief executives of all the labor organizations met at Chicago on July 1 to determine what action to take. A committee of five representatives of the organizations, consisting of B. M. Jewell, President, Railway Employees' Department, American Federation of Labor; F. H. Fitzgerald, President, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; L. E. Shepard, President, Order of Railway Conductors; E. J. Manion, President, Order of Railway Telegraphers, and T. Shea, Vice President, Brotherhood of Locomotive Firemen and Engineers, was formed, to prepare and submit recommendations to the members of the or-

ganizations. On July 2, sub-committees of 10 members for each organization were appointed to consult with the above committee. Great differences of opinion were evident as to the procedure which should be adopted, the more radical element being checked by the conservatism of the "big four" brotherhoods. The greatest dissatisfaction was caused by the Labor Board's decision 119, which was supposed to abolish the national agreements, and which it was contended would give the railways opportunity to introduce rules and working conditions which would be much more unfavorable to labor. However, on July 3, all the representatives at the meeting had become informed as to the effect of the various interpretations of decision 119, and of the Labor Board's decision to continue the national agreements for the time being (see below), which served to lessen the dissatisfaction to a large extent. On July 4 and 5 further meetings were held, the result being the adoption of a resolution by the train service brotherhoods providing for a referendum vote, as to whether the wage reductions would be accepted or not. The resolution said in part, that the general chairman cannot assume the responsibility of accepting wage reductions, and that not later than Sept. 1 the entire subject matter be referred to the membership, through the various general chairmen, for acceptance or rejection." The other labor organizations have, in effect, followed the lead of the train service brotherhoods, and accepted the reduction under protest. It was also resolved at this meeting that the labor organizations' leaders attempt to arrange a meeting with a committee of railway executives, and ask that the railways go on record as to whether or not they would ask for further decreases in rates of pay, the abolition of schedule rules now in force, and the elimination of time and a half for overtime. The effect of these moves on the part of the labor organizations' leaders is to leave the way open for action against the railways should they attempt to enforce drastic changes in existing rules or working conditions. The reductions in wages, as contained in decision 147 and the addendum thereto, became effective on U.S. railways on July 1.

The Labor Board issued a decision July 2, that Pullman Co. employees will receive the same wage reductions as were ordered for railway shop employees. The Pullman Co.'s case before the Board was dealt with briefly in Canadian Railway and Marine World for July, pg. 364.

The Labor Board issued another order July 12, reducing American Railway Express Co. employees' pay by 6c. an hour, effective Aug. 1. The saving to the company will, it is said, be about \$8,000,000 a year. In July, 1920, express company's employees' wages were increased 6c. an hour by the Labor Board's order, so that the new order leaves their wages 10c. an hour greater than before July 1920.

As stated in Canadian Railway and Marine World for June, pg. 298, the Labor Board on April 14, by decision 119, terminated the national agreements, effective July 1, and instructed railways and their employees to make individual agreements covering rules and working conditions. However, when this came to be done, the result was complete disagreement in the majority of cases, the

employees striving for the retention of the rules to which the railways objected as arbitrary. The Board was soon flooded with disputes to decide, and on June 28 it issued an order, as an addendum to decision 119, continuing the national agreements in effect until such time as it could consider and decide them. The order also ended the payment of time and one half for overtime except on the railways where such rate was paid for overtime work prior to Federal control. No indication is given as to when the Board will deal definitely with the agreements covering rules and working conditions, nor as to whether it will attempt to draft rules and working conditions to be applied to all railways, to replace the present national agreements.

A very significant decision was rendered by the Board in a dispute between the Missouri, Kansas & Texas Ry., and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The question was whether the railway could make an agreement covering working conditions with its employees, or if it had to recognize, in the agreement, the organization which claimed to represent the employees. The railway conceded that the organization represented the majority of the employees, but declined to have it recognized in the title of the agreement. The Labor Board decided in favor of the organization, and gave attention to a portion of decision 119, as follows: "The majority of any craft, or class of employees shall have the right to determine what organization shall represent the members of such craft or class. Such organization shall have the right to make an agreement which shall apply to all members in such craft or class."

The Pennsylvania System has entered into agreements with its train service employees, and its shop and other employees, which has given rise to a similar case before the Board. The railway claims it is given power by the Transportation Act to make agreements with its own employees, which right, it further claims, is also given it by the spirit of decision 119. It also claims that the Labor Board had no right to order the continuation of the national agreements. The railway is opposed by the American Federation of Labor's Railway Employees' Department, which claims absolute right to make agreements with the railway on behalf of its employees. The outcome of the case, which involves, in effect, the principle of the closed shop on the railways vs. the open shop, will be awaited with interest. The decision of the Board against the Missouri, Kansas & Texas Ry. would indicate that its opinion will likely favor the labor organization, but, on the other hand, the Pennsylvania employees have entered voluntarily into working agreements with the road's executive, and the railway is determined to maintain its open shop principles.

Between Aug. 1920, and July 1921, the number of railway employees laid off in the United States, according to Interstate Commerce Commission statistics, was 604,756. In the first three months of 1921, the total pay roll for U.S. railways was \$38,000,000 less than in the corresponding three months of 1920, despite the increases in wages.

The U.S. Railroad Labor Board has prepared a new classification of railway employees, which was approved by the Interstate Commerce Commission, and became effective July 1. It is to be used in reporting the earnings of employees to the I.C.C., and to supply a standard for

the regulation of wage rates by the Labor Board. It classifies employees into 17 distinct services, which are sub-divided into 119 groups, and within the groups are separate grades and distinct class titles.

In Canada, many meetings were held during July between representatives of the railways and of the employees, to consider agreements in connection with wage reductions. Grant Hall, Vice President, C.P.R.; S. J. Hungerford, Vice President, Operation and Maintenance, Canadian National Rys., and W. D. Robb, Vice President, Transportation, Construction and Maintenance, G.T.R., represented their respective companies in negotiating with the employees, and a committee of the Railway Association of Canada, of which Grant Hall is chairman, negotiated with the shop and maintenance of way employees, who have agreements covering all roads. On July 13, representatives of the shopmen reached a tentative agreement with the Railway Association committee, by which reductions averaging 8c. an hour were accepted, this being the amount of the reduction for most classes of shopmen specified in the U.S. Labor Board's decision.

On July 20 a tentative agreement was made between the Railway Association of Canada's operating committee and the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, by which the employees represented by that organization agreed to reductions in pay, effective July 16, as set forth in the U.S. Railroad Labor Board's decision. About 40,000 employees are affected.

All classes of employees have been advised by the railways that reductions in rates of pay practically equal to those contained in Labor Board's decision 147 have been adopted by Canadian lines, effective July 16.

It is not known at the time of writing (July 25) what action will be taken by the train service organizations, but it was expected that they would arrive at a decision July 27, a joint conference of all the general chairmen of the running trades having been called for that date. The head of the Canadian Brotherhood of Railway Employees, an organization composed principally of clerks, is reported to have stated in Ottawa on July 24 that that organization had offered to submit the question of wage reductions as they affect that organization to a board of arbitration, but that the Canadian National and Grand Trunk Rys., on which roads practically all of the organization's membership is employed, had refused. He is reported as claiming that this action by the railways constitutes a lockout, and that they are liable to a fine of \$1,000 a day until the matter is adjusted. He is also reported as stating that the wage cut is altogether unfair, the lowest paid men receiving the largest percentage of reduction, and that a reduction is not justified on the basis of present living costs. It is stated that employees who are members of this organization have expressed an unwillingness to accept the proposed reductions.

Ottawa press dispatch of July 26 stated that application had been made on behalf of this organization to the Minister of Labor for a board of conciliation. Although the reduced rates of pay were in effect in the United States in the first half of July, they did not become effective in Canada until July 16, on account of ne-

gotiations having started later than in the U.S., and because the contract with the maintenance of way employees, who were not notified of the railways' desire to readjust wages until May 13, calls for 60 days notice. No changes of any importance have taken place in the agreements covering rules and working conditions for the various classes of Canadian railway employees.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John Bridge.—The Dominion Bridge Co. has started work on the erection of the new bridge over the St. John River, at the reversible falls, St. John, N.B. The height of this bridge above the water line was brought before the New Brunswick Government at St. John on July 5, by a delegation of marine men, who claimed that it would interfere with ships passing up and down the river. This question was previously discussed fully before the Board of Railway Commissioners, and the Dominion Minister of Public Works, without effect, and the company's plans were finally approved.

New Brunswick District.—A press report states that the work to be done this year includes the laying of seven miles of new rails on the main line, principally between St. John and Westfield.

Fort William Coal Dock.—Referring to the press report mentioned in Canadian Railway and Marine World for June, pg. 306, that a contract had been let to the Hurst Engineering & Construction Co., Fort William, Ont., for the erection of a concrete and steel addition to the C.P.R. coal dock there, at an estimated cost of \$250,000, we are officially advised that a contract for the erection of the dock was let in 1920 to a contractor named Bradon, who was unable to complete the work, and the contract has simply been turned over to the Hurst Engineering & Construction Co. The work, which was discontinued some months ago, has since been resumed.

Saskatchewan Water Supply.—A press report states that the C.P.R. is prepared to guarantee \$140,000 a year towards the cost of securing a water supply from the South Saskatchewan River for the area between Regina and Moose Jaw.

Saskatchewan District Stations.—The new station at Moose Jaw, Sask., has been opened for use. A description of the building was given in Canadian Railway and Marine World for May, 1920, pg. 246, and an illustration in June, 1920, pg. 291.

Tenders were received to July 11 for the erection of three frame station buildings at Handel and Blucher, Sask.

Alberta Branch Lines.—D. C. Coleman, Vice President, Western Lines, is reported to have stated in Calgary, July 10, that the line under construction from Acmé to Drumheller, Alta., will probably be completed by September, but that he could not give any probable date for the completion of the Lomond-Blackie extension.

Suggested Extension to Fort Norman. D. C. Coleman, Vice President, Western Lines, is reported to have stated recently at Winnipeg, that railway construction to the Fort Norman oil district will certainly not be provided until at least it has been shown conclusively that oil does not exist in paying quantities nearer to existing lines of railway. (June, pg. 306.)

Grand Trunk Railway Arbitration Proceedings.

The proceedings in the arbitration at Montreal before Sir Walter Cassels, President, Exchequer Court, as chairman; Sir Thomas White, representing the Dominion Government, and W. H. Taft, representing the G.T.R., to determine the value of certain G.T.R. capital stocks to be acquired by the Dominion Government, were dealt with in Canadian Railway and Marine World for July up to June 24, when the presentation of evidence was concluded, and an adjournment was made to June 30, to enable counsel to prepare for their arguments. It was arranged that counsel for the G.T.R. should have three days for the presentation of arguments, and the Government counsel the same time after which rebuttal arguments might be presented.

Eugene Lafleur, K.C., opened the argument for the G.T.R. on June 30, speaking on general matters connected with the case, and presenting a carefully prepared and studious review of the whole situation. He argued that it was the aggregate value of the G.T.R. property which must be considered, as a going concern, and not the value to individual shareholders. As to the "market value," he said no such thing existed, there being no market in the ordinary sense for so vast a railway system. He argued that the arbitrators should not consider stock depreciation consequent on the agreement to turn the G.T.R. over to the Government, nor should it consider depreciation in the value of G.T.R. securities due to financial and business depression. He pointed out the great increases in traffic in recent years on the G.T.R., and said that the company's earning power would be great in the future, when prosperous conditions return and immigration resumes. He claimed that the Government was buying assets rather than stock, and also showed how the unfavorable conditions surrounding the railway industry during recent years had reduced G.T.R. earnings in common with those of all other roads. Through all of his argument ran an unbroken series of references to the fact that the G.T.R. had offered evidence as to the physical value of the property, which evidence had been rejected by the arbitrators. It was evident that he attached great importance to this feature of the case, and that he wished to make it clear that the G.T.R. counsel had not receded from their attitude in connection with it.

A. W. Atwater, K.C., followed for the G.T.R. on June 30 and July 1, arguing the financial side of the question. He contended that evidence as to physical value should not have been ruled out, stating that it would be practically impossible to form a just appreciation of the value of the properties without the admission of such evidence. This, in his opinion, applied particularly to the G.T. Pacific, as the enormous assets of that road had not been taken into consideration, although they constitute the basis of value. On the other hand, he said, full consideration had been given to liabilities, in order to show decreased value. He dealt at length with the general finances of the G.T.R. and its subsidiaries, pointing out that, while there had been a great growth in traffic, this had been offset by abnormal costs which had not been compensated for by rate increases

granted. After showing how rate increases allowed the G.T.R. had been inadequate, he contended that railways, which are regulated by Government agencies, should have their rates fixed so as to provide a reasonable return on invested capital. He pointed out that the G.T.R. net income from 1912 to 1916 inclusive had been sufficient to pay dividends on the guaranteed stock, and provide approximately \$2,500,000 a year for dividends on preferred and common stock. He considered the period from 1912 to 1916 inclusive a fair one to take as a test of the earning capacity of the railway, and stated that the ratio of net operating income to revenue was higher on the G.T.R. than on the other roads in the eastern U.S. group operating under similar conditions. After presenting an analysis of the financial condition of the Central Vermont Ry., he dealt with the Grand Trunk Pacific Ry. and the Grand Trunk Pacific Development Co., pointing out the value of their assets in the way of hotels, docks and wharves, steamships and lands. Summing up, he declared that the financial position he had outlined justified him in saying that the G.T.R. and its subsidiary properties have a great potential earning capacity, in view of which G.T.R. counsel would not be satisfied unless the maximum sum mentioned in the reference is awarded the company.

F. H. Chippen, K.C., spoke on July 2, 4 and 5 for the G.T.R. He reviewed the situation caused by the rejection of evidence as to the physical value of the property, contending that the only basis on which the value of the stocks could be determined was with any degree of accuracy had been ruled out by the arbitrators. He reviewed the portions of the Drayton-Acworth report dealing with the G.T.R. and G.T. Pacific Ry., pointing out errors in connection with their future financial requirements. He criticized the evidence submitted on behalf of the Government in connection with the physical condition of G.T.R. properties and equipment, and maintained that other evidence submitted demonstrated that the property had been kept in good working order in every department. He admitted that during the war the G.T.R. had got behind in maintenance work to a certain extent, but explained that every railway had the same experience, on account of labor and material shortages, while since the war deferred maintenance had been caught up. He went into the financial position of several G.T.R. subsidiaries, pointing out that they had passed through a difficult period, but that the future promised an opportunity for all of them to realize on their potential earning capacity. He argued against the Government's right to deduct from the compensation allowed the shareholders the amount of G.T.R. guarantees to subsidiaries. He contended that the Government had not been able to produce a witness who could show that the road is not in first class operating condition. He quoted H. H. Vaughan and W. D. Robb to the effect that the G.T.R. is in first class condition physically, and in connection with Lt. Col. C. N. Monsarrat's evidence concerning the bad condition of bridges, he quoted several G.T.R. engineering officials to the effect that all the bridges require is the usual maintenance work, which they will receive in the usual

course of events. He pointed out that in 70 years of operation, there had never been an accident on the G.T.R. due to a bridge failure. He also showed that when F. H. McGuigan was appointed to supervise the rehabilitation of the system, the road was only in fair condition, but that since that time the property has been practically rebuilt, relaid with heavy steel, equipped with modern locomotive houses and other facilities, and double tracked to Chicago, making it an enormously valuable system. He stated that labor and other operating problems are approaching a solution, to the end that the G.T.R. would be enabled to make much better returns in future than it had during the past few years. He gave figures showing the great increase in traffic from 1911 to 1920, pointing out that this increase may logically be expected to continue, and stated that the railway could handle an increased traffic of 50% without any material increase in capital investment, which would add to the property's value. He submitted tables showing the average selling price of G.T.R. stocks, both preferred and common, on the London stock exchange, for a number of years past, and reviewed conditions prevailing for the last few years as they affected these stock values.

At the conclusion of Mr. Phippen's argument the chairman, Sir Walter Cassels, brought up the question of the division, among the holders of the various classes of G.T.R. stock, of any award the arbitrators might make. A. W. Atwater, K.C., for the G.T.R., stated that cable communication had been had with the shareholders' committee in England as to the division of any such award received among the holders of the 1st, 2nd and 3rd preference stock and the common stock, but the information received had been very indefinite. After some discussion, he undertook to cable to England and ask the shareholders' committee for a definite statement of their views concerning a division, by percentages, of any award made.

W. N. Tilley, K.C., for the Government, presented his argument on July 5, 6 and 7. He reviewed the agreement which provided for the arbitration, and expressed the opinion that there had been a good deal of juggling of G.T.R. accounts, and that market quotations for the stock were useless as a basis for fixing values. He declared that the common stock is not worth a dollar. He thought the way in which the award should be divided between the various classes of stock holders should be on the basis of the intrinsic value of the shares, and that voting power should have nothing to do with it. Mr. Taft took exception to this view, saying that voting power gave control, and therefore had value, and considerable discussion ensued. Mr. Tilley devoted a large part of his argument to the G.T. Pacific, stating that when the G.T.R. undertook its western venture, it did so in the hope of improving its position financially, but that the continued losses of the future Government had never materialized. He said that the losses sustained by the G.T.R. were due partly to abnormal conditions, but mainly to the G.T. Pacific venture. However, apart from the growing deficits of its subsidiaries, he claimed, the G.T.R. itself would in time go into liquidation.

H. A. Lovett, K.C., for the Government, followed on July 7, dealing mainly with the value of the G.T.R. rail and river coal mine property in Ohio.

Pierce, Butler, of the Minnesota bar, followed for the Government. He analyzed the G.T.R.'s general physical and financial condition, and stated that the arbitrators' work would have been much easier if Sir Alfred Smithers and E. J. Chamberlain had come to give their testimony as to finances. He criticized statements made by President Kelley of the G.T.R., saying they were too broad and sweeping in statements of the future. He pointed out the facts presented to support them. In his opinion, the evidence submitted by G.T.R. counsel and supporting witnesses as to physical condition, and in connection with deferred maintenance, had not been at all convincing, and he pointed out that the G.T.R. had come before the arbitrators without a dollar reserve to meet the millions required for maintenance, notwithstanding the assistance given by the Government. He claimed that deferred maintenance had been so treated that the accounts were eventually made a charge against capital, and made a severe attack upon the absentee system of management which the G.T.R. had experienced. It seemed to him that the G.T.R. management had been asleep while the period of rapid western development had been going on. Dealing with the Central Vermont and the Grand Central, he said that the deficits incurred by these subsidiaries had been much greater than shown, and that many of the assets were largely imaginary.

On July 8, Messrs. Whippen, Lafaer and Atwater spoke in rebuttal for the G. T. R. Mr. Whippen analyzed the arguments advanced by Government counsel, differing with the conclusions drawn by them, notably in connection with the matter of deferred maintenance. He claimed that the G.T.R. had made every effort to get the property into first class shape after the termination of the war, and had succeeded. He pointed out the great increases in traffic which had taken place on the G.T.R. and its subsidiaries during the past 10 years, which, he said, taken in combination with promised increases in operating expenses, would have the effect of increasing the carrying capacity of the properties. E. Lafaer, K.C., dealt with legal points, and A. W. Atwater, K.C., dealt shortly with financial matters.

Argument was closed on July 8 at 4.30 p.m., bringing to a close one of the most important arbitration proceedings ever held in connection with a public utility. It occupied 72 days of actual sittings; the evidence and argument taken by the stenographers covered 8,000 typewritten pages, and 518 separate exhibits were filed. The arbitrators were then faced with the task of studying the evidence and preparing a report to support the finding or findings they may arrive at. While Sept. 1 has been mentioned as the date on which a final award may be expected, it was intimated by Sir Walter Cassels that, in view of the length of the sittings, and the mass of evidence to be reviewed, it may be later than that before the decision is given.

The American Railway Engineering Association's directors met in Montreal, July 13. They were taken over the harbor in the afternoon and entertained at dinner in the evening by a number of Montreal engineers.

Exhaust from Locomotive Booster Engine.

In an article in Canadian Railway and Marine World for June on the locomotive booster tests on the Timiskaming & Northern Ontario Ry., reference was made to the method of handling the exhaust from the booster engine. It was pointed out that the exhaust steam, instead of being exhausted through a stack or pipe, to exhaust from the top of the tender, or being carried back to exhaust into the water in the tank, as has been the practice in installations on U.S. railways, is exhausted through the stack. It was also stated that this method would be followed in future applications of the officially adopted method, but that in future applications the method of exhaust will undoubtedly be governed by local conditions, and the preference of the railways ordering the device. As was pointed out in our article, the T. & N.O.R. has given entire satisfaction to the method of exhausting the exhaust steam as employed on the T. & N.O.R. has given entire satisfac-

tion, and cylinder back pressure has not been increased to any extent by handling the exhaust steam from the booster through the stack.

*Week ended July 1. **Overshipped.

The Proposed Grouping of Railways in Great Britain.

In Great Britain, as in Canada and the United States, railway operation, during the past few years, has been marked by operating expenses increasing in greater proportion than operating revenues, and the Government has been called upon to make good the deficits incurred in the operation of the majority of the railways. The British Government has been in control of the railways since the outbreak of the great war, and has guaranteed a stated return to them. They are to be returned to private operation in August. Railway legislation in Great Britain, since the time when railways were first introduced, has been added to in large measure year by year, and it is now proposed to wipe out these accumulated masses of legislation, and start the railways under private operation again under new and radically changed regulative law. To this end, a bill was introduced in the House of Commons on May 12, by Sir Eric Geddes, Minister of Transport, providing for the return of the railways to private ownership, their re-organization, and future regulation.

The bill contains over 700 clauses, and is divided into six parts. Part 1 contains provisions for the compulsory grouping of the railways into six territorial groups, the undertakings in each group being divided into constituent companies and subsidiary companies, the former, generally speaking, being main line companies and the latter tributary companies. The groups are as follows: 1. Southern group, including the London & South Western Ry., the London, Brighton & South Coast, South Eastern, and the London, Chatham & Dover Railways, and 15 subsidiary companies. 2. Western group, including the Great Western Ry., and 35 subsidiary companies. 3. North Western and Midland group, including the London & North-western, the Midland, the Lancashire & Yorkshire, the North Staffordshire and the Furness Railways, and 18 subsidiary companies. 4. North Eastern and Eastern group, including the North Eastern, the Great Central, the Great Eastern, the Great Northern and the Hull & Barnsley Railways, and 19 subsidiary companies. 5. West Scottish group, including the Caledonian, the Glasgow & South Western and the Highland Railways, and 10 subsidiary companies. 6. East Scottish group, including the North British and the Great North of Scotland Railways, and 5 subsidiary companies.

The constituent companies in each group are mutually to agree on and submit a scheme for amalgamation. The amalgamated companies are to submit schemes for the absorption of the subsidiary companies in their groups. Failing agreement, schemes for amalgamation and absorption are to be settled by a tribunal which is provided for in the bill. Amalgamation and absorption schemes are to be brought into operation on Jan. 1, 1923. A payment to the railways by the Government of £60,000,000 as completion of compensation arising out of the period of Government control, one-half to be paid at the end of 1921 and one-half at the end of 1922, is also provided for in this part of the bill.

Part 2 of the bill deals with the powers of the Minister and of the Railway and Canal Commission, as to the future regulation of the railways, including the gradual standardization of equipment.

Part 3 deals with the regulation of railway rates. Theoretically, the scale of rates is to be such as to yield a net revenue equal to that of 1913, plus 5% on capital expenditures made by the railways during Government control, plus a reasonable allowance for capital expenditures on revenue producing improvements which had not become fully remunerative at the beginning of 1913. Rate regulation is to be in the hands of a tribunal of three members to be appointed by the King, on the joint recommendation of the Minister of Transport, the Lord Chancellor, and the President of the Board of Trade. The chairman of this tribunal is to be a railway man, the second member a business man and the third a lawyer. If the groups, either through falling costs, or improved efficiency, produce a surplus over the standard revenue, they will be entitled to retain 20% of such surplus, rates and fares being adjusted so as to absorb the remaining 80%.

Part 4 deals with management, wages and working conditions. Provision is made that all the directors of the new groups shall be qualified proprietors elected by the proprietors. Any dispute concerning wages or working conditions is first to be referred to a Central Wages Board, which is to be made up of five railway management representatives and five employees' representatives. An appeal will lie from this body to the National Wages Board, made up of four railway management representatives, four employees' representatives, and four public representatives.

Part 5 deals with light railways, and provision is made for the assumption by the Minister of Transport of the existing powers and functions of the Light Railway Commissioners.

Part 6 contains clauses of a general nature, dealing with the question of the preparation of accounts, returns and statistics. The Minister seeks power to regulate the compilation of accounts, and to continue for five years the present system of statistics, after which their continuance may be determined by a committee drawn from a panel set up under the Ministry of Transport Act, 1919, sec. 23.

Irish railway companies are affected by the bill only in so far as the rendering of statistics and returns is concerned.

The second reading of the bill was carried on May 30. The principal opposition during the discussion in the House of Commons came from the Labor party, which wants railway nationalization; there was also some opposition from the Scottish railway companies, who desired a different grouping of their properties. After the second reading, the bill was referred to a standing committee of the House of Commons, and on June 14 it was announced by the committee that the demands of the Scottish railways would be acceded to, the effect of this being that the bill will be changed in such a way that several Scottish railways will be grouped longitudinally with railways in England over which through traffic between the two is run. On June 16, the committee rejected an amendment to provide that any particular area should be served by at least two groups, to preserve competition. On June 21 it rejected an amendment to provide that

the railway systems only should be amalgamated, leaving to the several railway companies their canals, wharves, docks, harbors, etc. At the time of our last advice, discussion of the bill in committee was continuing.

Comparing this legislation with the Transportation Act passed in the U.S. for similar purposes in 1920, it is seen that both provide for the consolidation of railways into a few large systems. However, in the U.S., these consolidations are to be optional, and are not expected to take effect for some time, whereas in Great Britain the consolidations are proposed to be compulsory and to take effect in the near future. The consolidations proposed in the U.S. would be such as to make the new large systems competitive, but those contemplated in Great Britain are, apparently, territorial consolidations purely, and non-competitive. Similarity between the two acts is seen in the rate making clauses, the returns in each case to be a direct percentage on the value of the property used in the public service. There is further similarity in the clauses covering the settlement of wage disputes, the public being represented on the final appeal board in Great Britain in the same way that it is on the U.S. Railway Labor Board in the U.S. (See Canadian Railway and Marine World for May, pg. 257.)

Inspector of Railway Safety Appliances at Calgary.

The Civil Service Commission in inviting applications for the position of Inspector of Railway Safety Appliances, Board of Railway Commissioners, Operating Department, Calgary, Alta., at an initial salary of \$1,920 a year, which will be increased upon recommendation for efficient service at the rate of \$120 a year until a maximum of \$2,400 has been reached. This initial salary will be supplemented by whatever bonus is provided by law.

Duties.—Under supervision, to inspect locomotives, cars, and other railway equipment for compliance with legal requirements for safety of operation; to inspect fire prevention appliances; to inspect protective conditions at highway and other public crossings; to investigate and report on accidents and complaints of violation of operating rules; and to perform other related work as assigned.

Qualifications.—Education equivalent to high school graduation; at least three years of experience in mechanical or motive power department of a railway; thorough knowledge of operating safety appliances; good judgment. Preference will be given to candidates between the ages of 21 and 35 on Aug. 4, 1921. A rating on education and experience will be given from the sworn statements submitted by applicants on their application forms. To those who qualify, an oral examination may be given, if necessary.

Baggage Insurance for Travellers.—

The Canadian National and Grand Trunk Rys. are arranging for the issue at their city and larger station ticket offices of insurance policies on personal baggage of travellers while journeying by land or sea, also while staying at hotels, etc., and covering fire, theft, pilferage and water damage.

The Railway Problem in the United States.

The U.S. Senate committee's investigation into the conditions surrounding the railway industry in the U.S. has served to bring out many important facts, and has presented the railway executives, who were called upon to testify first, with an opportunity to acquaint the Government with the details of the situation. The investigation was summarized in *Canadian Railway and Marine World* for July up to the point where L. E. Wetting, Manager, Bureau of Statistics, Western U.S. Railways, and W. H. Williams, Chairman of the Board, Wabash Ry., had begun their testimony. Continuing, Mr. Wetting presented many statistics of the railway business, and pointed out that railway operating revenues in 1920 were the largest on record, but that the net operating income was the smallest ever obtained. Of every dollar earned in 1920, 59.9c. was paid out to labor, as compared with 55.3c. in 1919. Locomotive fuel took 10.9c., as against 9.2c. for 1919; 17.3c. went for material, supplies and miscellaneous, as against 15.5c. in 1919, and 10.9c. for loss and damage, injuries to persons, depreciation and taxes, as against 11.1c. in 1919. Only 1c. was left in 1920 for return on investment, as against 8.8c. in 1919 and 28.9c. in 1916. Speaking of the increases in railway operating revenues and expenses within recent years, he presented statistics to prove that from 1912 to 1920 the increase in total operating revenues was \$3,366,000,000, or 120%; the increase in operating expenses was \$3,809,000,000, or 194%; and the increase in compensation of employees was \$2,489,000,000, or 205%. The pay roll was 34.13% of the revenue in 1912, and 59.92% in 1920. In connection with traffic handled, he showed that the railways in 1920 rendered more transportation service than ever before, showing 12.6% more freight ton mileage and 1.2% more passenger mileage than in 1919. Including non-revenue freight, the ton miles handled in 1920 exceeded those handled in 1919 by 13.2%. This increased tonnage was handled with an increase in train miles of only 11.3%.

W. H. Williams, Chairman of the Board, Wabash Ry., presented some interesting statements in connection with maintenance of the railways while under Federal control. He stated that a substantial portion, if not all, of the increase in number of hours of service performed in 1920 as compared with 1919, over and above that necessitated by increased service, was due to the under-maintenance of 1919, and not to any over-maintenance in 1920. He pointed out that the Director General had issued many orders in 1919, and before the roads were turned back in 1920, which had for their purpose the limiting of expenditures, during the period of Federal control, to the amount which the Government was obligated to expend for maintenance of the properties. One order in May of 1919 was that the expenditures for the following months should not be more than the average, but the spring and summer months are those when the greater part of the maintenance work is done, and the effect of this order was to cause serious under-maintenance, which was not made up till 1920. Speaking of the Wabash Ry., he said that during Federal control 1,052,043 ties should have been put in

to maintain previous standards; but only 861,794 were put in, leaving a shortage of 412,880.

[Practically all of the railways which were operated by the Government during the period of Federal control have made claims against the Railroad Administration for under-maintenance. The stand taken by the U.S. Government in this connection, and the attitude of the railways, was explained in *Canadian Railway and Marine World* for July, pg. 374. The total amount of the claims involved in connection with alleged under-maintenance is between \$700,000,000 and \$800,000,000, most of this sum representing the difference between the railways and the administration on the interpretation of the contract. No indication has as yet been given as to how these claims will be ultimately settled.—Editor.]

Mr. Williams made some suggestions for the relief of the railways, one being that power to order the re-establishment of unprofitable passenger services, the erection of new stations, etc., be taken from the state commissions and vested solely in the Interstate Commerce Commission. He also suggested that freight rates for carload shipments be based on the cars being loaded to capacity, and that the seniority rule of promotion of employees be modified in such a way that a man without the necessary qualifications could not receive promotion.

S. Davies Warfield, President of the National Association of Owners of Railway Securities, who was the next witness, claimed that the big requisite of U.S. railways at present is economy in operation, and advocated the formation of an organization embracing all railway officers, for the purpose of studying all possible economies, and to make available scientifically assembled information for the use of the officers generally. He urged the Federal incorporation of the National Railway Service Corporation, which was organized by the association of security owners in July last, and which has been supplying equipment to railways otherwise unable to get it. In his opinion, this corporation should not only supply carriers with equipment under long-time yearly payments, but should also acquire a floating supply of equipment to loan to them on a per diem basis. He also advocated co-ordinated relations between the Interstate Commerce Commission and the U.S. Railroad Labor Board, stating that the present system, wherein one body regulates rates and earnings, and the other, totally independently, regulates wages, representing 65% of operating expenses, is farcical. He stated that his association represents the owners of \$11,000,000,000 worth of railway securities, and that it has appointed a Board of Economics and Engineering, which would be glad to co-operate with any railway executives who care to make use of the results of its studies and enquiries.

Forney Johnson, counsel for the Association of Owners of Railway Securities, declared upon Mr. Warfield's plan for an organization of railway officers, and urged that such an organization should be authorized to act as an agency of the Interstate Commerce Commission. He proposed a bill entitled "An act to further economies and efficiency in railway transportation," which would bring about

such an organization. He also proposed legislation to extend the activity of the National Railway Service Corporation in connection with the securing of equipment for railways.

Edwin Ludlow, President of the American Institute of Mining and Metallurgical Engineers, addressed the committee in connection with proposed economies in the purchasing of coal, and J. F. Wallace, a member of the Board of Economics and Engineering referred to above, pointed out the need for economy in the operation of terminals and terminal facilities. George Brock, President of the National Association of Mutual Savings Banks, told the committee that these banks own \$900,000,000 of railway bonds, but that they are acquiring none at present, nor will they until proper safeguards are placed around railway investments. If such were done, he said, these banks could supply the railways with \$100,000,000 new capital every year. L. B. Stillwell, consulting electric engineer, and a member of the Board of Economics and Engineering, pointed out the economies to be obtained in equipment standardization. W. A. Colston, Director of the Bureau of Finance of the Interstate Commerce Commission, expressed his approval of the National Railway Service Corporation's work, and stated that it had been very helpful in financing purchases of equipment for certain railways. He advocated the enlargement of its powers, as suggested by Mr. Warfield. He thought it should have a Federal charter, and that the act of incorporation should provide that the assets and profits of the corporation shall be the assets and profits of the United States. W. L. Fisher, Counsel, Chicago Railway Terminal Association, urged the importance of legislation to compel the better coordination of railway facilities, by the unification of terminals and in other ways.

Hearings before the committee have been suspended till about Sept. 1, it having been proposed in the Senate to take a series of recesses in July and August. Shippers, and the representatives of organized labor are yet to be heard, and it is probable that S. Davies Warfield, and other representatives of his association, will be recalled.

North Bay Freight Terminals.—The Canadian National Ry. maintained their own local freight sheds and office on their station grounds at the head of Sherbrooke St., North Bay, Ont., until July 1, when they were closed, and all C.N.R. local freight for North Bay has since been handled at the Timiskaming & Northern Ontario Ry.'s local freight terminal at Regina St., which, although owned and operated by the T. & N.O.R., has always been a joint terminal with the C.T.R.

Civil Service Act does not apply to Canadian Government Railways or Steamships.—The Dominion Parliament, at its last session, enacted an amendment to the Civil Service Act, 1918, providing as follows: "38a. The provisions of this act shall not apply to positions in connection with the Government Railways or any railway owned or controlled by His Majesty, or to any position on any ship of His Majesty, until Parliament otherwise enacts."

Newfoundland's Railway Difficulties.

The question of Newfoundland's railway and steamship transportation interests, in so far as they are a matter of arrangement between the Newfoundland Government and the Reid Newfoundland Co., is the most important one at present under consideration in that island Dominion, as it has been for many years past. The late Sir Robert Reid entered the railway construction field in Newfoundland after he had carried out important contracts on the C.P.R. transcontinental line, and then concentrated the whole of his attention on the provision of transportation facilities for Newfoundland. The railway lines were built and placed in operation under agreements with the Government; a telegraph line was built, steamships were put in operation to connect the island railway with Canada at Sydney, N.S., and various steamship routes were established, under Government subsidy, to connect various ports in different parts of the island with St. John's. A drydock and ship repairing plant, and electric railway were built at St. John's. All these enterprises were operated by the Reid Newfoundland Co., but it has been almost entirely in connection with the railway that the controversy has arisen. After prolonged discussion an agreement was made with the Reid Newfoundland Co. in 1901 under which the company was to operate the line under lease for 50 years, when the line was to pass into the Government's possession, and all claims of a financial nature between the two parties were to be settled. The railway was operated under this agreement, at a loss to the company, until June 30, 1920, when, in consequence of the increasing cost, and the necessity of large expenditures for repairs, which the company was not prepared to undertake, the Government obtained legislative authority to appoint a commission to operate the railway and to supervise the expenditure of \$1,000,000 provided out of a Government loan, on track repairs, additional rolling stock and some new terminal facilities at St. John's, and at Argentia, a new port. The commission was to consist of six members, three to be appointed by the Government and three by the Reid Newfoundland Co. Hon. W. F. Coaker, Minister of Finance, was the chairman of the commission.

On April 7, 1921, the Premier informed the Legislative Assembly that the amount paid out by the Government to that time for construction, equipment and operation of the railway from July 1, 1920, was \$1,500,000, and that the further amount required to pay for the work, etc., estimated to be completed by June 30 was approximately \$1,000,000.

The Government members of the Commission on June 15 presented an interim report, promising a detailed financial statement and other information on the winding up of the year's operations on June 30, when they would cease to have control. As this interim report had not been made public, Sir M. P. Cashin on June 24 asked a lengthy series of questions based thereon, from which it would appear that \$300,000 provided for the purchase of fishplates and angle bars, had not been expended; that 100 freight cars ordered had not all been delivered; that work had not been started on the additional freight accommodation provided for at the St. John's terminals, and that work on the new terminals at Ar-

gentia had not been completed as promised.

As the result of the operation by the Commission of the railway, and of certain steamship lines, which were also taken over under an order in council of Aug. 23, 1920, showed an increasing loss, the Government directed the abandonment of the operation by the Commission, its disbanding on June 30, and the return of the railway to the company for operation on July 1. The company then notified the Government that unless substantial aid was forthcoming it could not operate the railway.

Sir George Bury's Report.

The Government, early this summer, invited Sir George Bury, ex Vice-President of the C.P.R., to visit the island and look into the railway's position, etc., and on June 29 he made the following report:—"I have made a study of the railway situation in Newfoundland, as desired by you, and my suggestions are:

"That a contract be entered into for one year, from June 30, 1921, with the Reid Newfoundland Co., to operate your railway, without prejudice to former agreements. That the company be required to operate the railway with the utmost economy, consistent with safety and reasonable service. That a capable general manager be appointed by the company to operate the railway and that the appointment be subject to your approval. That a commission of three be formed with the powers of the Canadian Board of Railway Commissioners, except where such powers would conflict with any agreement existing between the Government and the company. This commission to deal with all public utilities in addition to the railway. That expenditure on capital account be made only upon the written sanction of the Government and that these works be paid for when completed upon a certificate from the Government Engineer.

"The railway since 1904 to date has cost to operate \$5,750,000 more than it earned. Of this amount \$1,650,000 was lost during the past year when the railway was operated by the Commission appointed by the Government, and \$1,355,107.50 the year previous. During the year ending with this month wages of employees were increased, rolling stock, shop force, maintenance men and porters on June 30, 1920, and locomotive men and firemen at the end of September and the station staff and trainmen at the end of the year. The officers of the railway estimated that the loss on the coming year's operations will be over \$2,000,000. The earnings are falling, and the railway's traffic officers place the decrease to be expected at almost half the present receipts. I believe their estimate is too pessimistic and have made my calculations on a more hopeful outlook.

"To operate the railway at the minimum cost, consistent with safety and reasonable service, certain changes in operations must follow, which have been placed before the Reid Newfoundland Co. in the form of suggestions. That the Government agree to pay the actual loss from operating the railway during the company year, but that should the loss exceed \$1,500,000 that such excess should be borne by the company.

"The very large expenditure that was proposed, to place heavier rails on the line, should be deferred. The rails on

the Fortune Bay branch (never operated) should be taken up and used for replacing worn rails. For a number of years to come the rails at present on the railway will answer by anchoring them either by substituting angle bars for the fish plates now in use, by rail anchors, or by slotting the rails at the ends to hold the joint on the tie. I recommend that the rails be slotted, which can be done cheaply as they lie, and that only sufficient angle bars for 100 miles of track be bought to substitute fish plates on swamps and such places where the most difficulty is experienced in preventing the rails running.

"A series of light snow sheds, through a side hill, to the extent of about a mile should be constructed west of Avondale. Much delay to traffic would be avoided and economy will result.

"So soon as money is available, a coal handling plant should be built at Argentia, one suitable to the present and prospective tonnage to be transferred.

"If you are unable to enter into a contract with the Reid Newfoundland Co., or believe it undesirable to do so, there is only operation by the Government left. In view of the unfortunate results which have come from government operation of railways in Canada, the United States, Great Britain and elsewhere, I imagine you would prefer to go to some lengths before embarking upon such an undertaking."

Sir George Bury's report has been criticized considerably by the Newfoundland press, one of the chief objections urged being that he did not spend sufficient time there to look thoroughly into the situation. His suggestion for the appointment of "a capable general manager" is particularly resented. In this connection the St. John's News says:—"The present General Manager is both capable and experienced, and given the facilities and the backing that Sir George asks for his proposed successor, would accomplish more than any railway man unacquainted with local conditions could hope to do."

The Government's Action.

In the House of Assembly on July 7 the Premier moved it go into committee of the whole on the resolution authorizing the Government to enter into an agreement with the Reid Newfoundland Co. for the operation of the Newfoundland Ry. for 12 months, and submitted a copy of the agreement dated June 30. The house went into committee and without any explanation or information being given the committee rose, and the house then adjourned until July 11, to take the matter up further.

A St. John's press dispatch of July 21 says that the House of Assembly passed the bill, after three days debate, by a vote of 18 to 14.

The agreement, which is to run from July 1, 1921, to June 30, 1922, follows largely the suggestions contained in Sir George Bury's report. It provides for the operation of the railway, at the minimum cost, consistent with safety and giving a reasonable service; the service being specified as follows:—Bonavista branch, 88 miles, tri-weekly instead of daily, up one day and down the next; Heart's Content Branch, 42 miles, tri-weekly instead of daily, up and down the same day; St. John's to Carbonear, 80 miles, one train daily each way, except Sunday, instead of two trains; Baie de

Verde Branch, 52 miles, tri-weekly instead of daily except Sunday; St. John's to Trepassay, 105 miles, tri-weekly, up one day and down the next, as at present, except during severe winter months; St. John's to Port aux Basques, semi-weekly instead of tri-weekly, unless freight picks up to warrant tri-weekly trains during August. The following lines are to be closed down during the first quarter of 1922:—Humbermouth to Millertown Jct., 94 miles; Shoal Harbour to Bonavista, 88 miles; Carbonear to Baie de Verde and Gratts Cove, 52 miles; Waterford Bridge to Trepassay, 105 miles.

Further provisions are as follows:—The company shall secure the services of a competent person from Canada or the United States as General Manager, the appointment to be subject to the Government's approval. Expenditures on capital account shall be made only on the Government's written sanction. Payment for the work shall be made by the Government upon the Government engineer's certificate, the amount to be charged to the company with 6% interest, and to be brought into the settlement in 1951. The Government will pay the actual loss sustained in operation during the year up to \$1,500,000; the loss not to include any claim for interest or provision for amortization. The Government shall appoint one or more auditors. Except as expressly provided in the agreement, anything done under it shall be absolutely without prejudice to the rights and liabilities of either party under existing contracts and agreements.

Coal Supply.—A press report says that the Reid Newfoundland Co. has bought the Hiawatha coal mine at Foley Bay, N.S., for supplying its railway and steamships. The property was bought by J. Caviechi, of Halifax, about a year ago. After some 5,070 tons of coal had been mined the colliery was closed down.

C.P.R. and G.T.R. Disputes About the Toronto-Hamilton Joint Section.

On July 8, C.P.R. passenger train 792, due to leave Hamilton at 4:25 p.m., and arrive at Toronto at 5:38 p.m., and which is operated over the G.T.R. tracks between Hamilton Jct. and mile 37.3 from Toronto and Bathurst St., Toronto, was delayed for about two hours at Burlington Jct., mile 31.72 from Toronto, owing to a dispute between C.P.R. and G.T.R. representatives concerning the C.P.R.'s right to pick up an express refrigerator car, which it had set off there previously, and which had been loaded with fruit and consigned via Dominion Express to Winnipeg. The dispute was caused by a difference as to the interpretation of a clause in the agreement under which the C.P.R. has running rights over the G.T.R. tracks, the G.T.R. agent claiming that the C.P.R. did not have the right to pick up the car while R. W. Scott, Superintendent, Toronto Terminals Division, Ontario District, C.P.R., and members of his staff, claimed that it had. After considerable discussion, the car was finally picked up by train 792 and taken to Toronto.

The agreement between the G.T.R. and C.P.R. companies for the joint use of the G.T.R. tracks between Bathurst St., Toronto, and Hamilton Jct., about 36 miles, dated May 13, 1906, and which was ratified by the Dominion Parliament in the same year, and published as a schedule

to the statutes, 60 Vic., chap. 6, contains the following as a part of sec. 16, the G.T.R. being referred to as the party of the first part, and the C.P.R. as the party of the second part:—"The party of the second part further agrees that it will do freight and passenger business over the said joint section as follows: Passenger and freight business between the City of Toronto and the City of Hamilton shall be considered through business, and the party of the second part shall have the right to handle it over the said joint section, in competition with the party of the first part and all others, but business between either Hamilton or Toronto and an intermediate station on the said joint section, or business between two intermediate stations on the said joint section, shall be considered local business of the party of the first part, which the party of the second part shall not be permitted to handle except as hereinafter provided. The party of the second part shall have the right to take passengers or freight from or to any station on the said joint section, originating at or destined to any point on its own lines or its connections, beyond the said joint section, in either direction, and it shall be the duty of the agents on the said joint section to waybill such freight and ticket such passengers without discrimination or hindrance, and the party of the first part shall account to the party of the second part therefor, in the same manner as if such agents were the agents of the party of the second part."

The G.T.R. contention is, apparently, that express business is not specifically mentioned in the agreement, the C.P.R. had not the right to pick up a car of express goods at a station on the joint section. The C.P.R. has, however, been handling through express business over this section.

Another matter in dispute between the G.T.R. and the C.P.R. in connection with the joint section is as to whether the G.T.R. has the right to use certain industrial sidings on the section, has been referred to arbitration. F. H. McGuigan, formerly 4th Vice President, G.T.R., representing the G.T.R., and J. T. Arundel, formerly General Superintendent, Ontario District, C.P.R., representing the C.P.R., and it is possible that the dispute as to express business will be referred to them also.

Railway Accidents Throughout Canada.

The total number of accidents reported to the Board of Railway Commissioners in June was 130, resulting in 24 persons being killed and 136 being injured. Of the killed, 1 was a passenger, 6 were employees, and 17 were others. Of the injured, 24 were passengers, 80 were employees, and 31 were others.

Under "others" are included highway crossing accidents, in which 9 were killed and 25 injured. In 16 cases there was no protection, in 2 cases there were bells, in 1 case gates, and in 2 cases flagmen. One pedestrian was killed at a crossing protected by gates. In 9 of the crossing accidents automobiles were concerned, in 4 there were trucks, in 7 horse vehicles and in 1 a bicycle.

A. B. Buckworth, Manager, Pacific Great Eastern Ry., Vancouver, B.C., is reported to have told the United Farmers of British Columbia, meeting at Pemberton Meadows, that a revision of rates will immediately follow the completion of the line into Fort George.

Traffic Orders by Board of Railway Commissioners.

General Interswitching Order Construed.

General order 344, June 27.—Re consideration of ruling of the Canadian Freight Association, as communicated to the Board by letter, June 30, 1921, from W. C. Chisholm, K.C., that section 14 of the Board's General Interswitching Order 252, dated Oct. 26, 1918, is construed to authorize the local road haul scale of 24c. first class as the "ordinary published rate to the interchange." Upon hearing the matter at Ottawa, Dec. 21, 1920, the Canadian Freight Association, Canadian Pacific and Canadian National Railways, and the Toronto and Montreal Boards of Trade being represented, the Board orders that the words "ordinary published rate," as contained in sec. 14 of general order 252, be construed to mean the rate that would be charged for the same movement as a local switching, and not an interswitching, operation.

Express Classification Supplement.

31,217. July 15.—Re application of Express Traffic Association of Canada, on behalf of express companies subject to the Board's jurisdiction, for approval of Supplement 1 to Express Classification for Canada 5 (first submitted as Supplement A to Express Classification for Canada 4). Upon it appearing that the items covering light and bulky goods, such as millinery, and the proposed item covering liquids, to which objection was taken in the supplement as originally presented, have, by consent, now been eliminated from the revised supplement, and that the other items have been agreed to by the parties interested, the Board orders that the said supplement no. 1, submitted by C. N. Ham, Secretary, Express Traffic Association of Canada, with his letter of July 13, 1921, be approved.

Michigan Central Railway Tariffs.

31,250. July 11.—Granting application of Michigan Central Rd. Co., under sec. 323 of the Railway Act, 1919, for approval of a bylaw passed June 15, 1921, in so far as it authorizes Carl Howe, Traffic Manager, in respect of both passenger and freight traffic; L. W. Pandemon, Passenger Traffic Manager, or C. C. Clarke, General Passenger Agent, in respect of passenger traffic; and O. R. Bromley, General Freight Agent, and C. A. Hunt, in respect of freight traffic, from time to time to prepare and issue tariffs of tolls to be charged in respect of the company railway.

Great Northern Railway Standard Freight Tariff.

31,262. July 13.—Granting application of Great Northern Ry., under sec. 330 of the Railway Act, 1919, for approval of its Supplement 1 to Standard Freight Tariff C.R.C. 1630.

Exchange and Surcharges on International Freight and Passenger Business. In accordance with the Board of Railway Commissioners' order of June 14, the rate of exchange in connection with shipments of freight between points in Canada and the United States from July 1 to 14 was 13 15/16% and from July 15 to 31 it was 14%. The rate of surcharge on freight traffic during July was 8%. The rate of surcharge on international passenger business for July was based on 14% exchange.

Electric Railway Department

Electric Railway Wages, Working Conditions, Etc.

Hydro Electric Ry.—Essex Division.—A Windsor, Ont., press report states that the employees have demanded an increase of 5c. an hour in wages, time and a half for overtime and double pay for Sundays and holidays. The present rates are from 45c. to 55c. an hour.

A press report of July 14 stated that an agreement has been reached on 26 of the points in the proposed new contract presented by the men, and that the points about which there was still controversy were the demand for 5c. an hour additional pay; the 8-hour day; time and a half for overtime, and double pay for Sundays and holidays.

The Interurban Transit Co., New York, N.Y., gave notice recently of a 10% cut in wages, to take effect July 24. It was announced July 12 that 27 of the local unions affected had accepted the reduction, and that the other unions were likely to accept also. The reductions are said to affect 19,500 men.

The Montreal Tramways Co. advised its employees on April 25 that the then existing agreement as to wages and working conditions would not be renewed upon its expiration, June 30, and after several conferences the men decided not to press for another agreement unless the company gave notice of changes in wages or working conditions. A press report states that at a recent conference the President advised a committee of employees that the company proposed to make a reduction of 20% in the wages schedule on Aug. 1. This was taken up at a mass meeting of the men on July 14, and a resolution was passed unanimously declining to accept the reduction.

New Brunswick Power Co.—We are officially advised that the company took no part in the recent appointment of a board of conciliation or in the proceedings before it, in connection with the differences with employees as to wages and working conditions. As stated in Canadian Railway and Marine World for July, pg. 378, the company gave notice of a new wage scale, approximately 20% less than the then existing one, with other terms, to go into force on June 15, the old agreement expiring June 15. The local union officials and the company's representatives held several meetings to see if a settlement could be arrived at, but without effect, and the men applied to the Minister of Labor for a board of conciliation, naming W. F. Hathaway, St. John, as their representative. The formation of the board was authorized and the company, declining to have anything to do with it, the Minister appointed C. W. Burpee, of McAdam, N.B., to represent the company, and Judge Chandler, Moncton, was subsequently chosen chairman. A report, dated July 1, signed by the three members of the board, stated that prior to the opening of the sittings on June 15, an attempt was made by the members to effect a settlement, but without result, and a further, ineffectual attempt at settlement was made at the close of the sittings. The board states that the three points of difference between the parties were rate of wages, working agreement and operation of one-man cars. The

board, after hearing the statements of the men and the representations of the company's officers, recommends that the agreement dated June 15, 1920, remain in effect until June 15, 1922, except as to wages; that the wages of motormen and conductors be reduced from 55c. an hour to 52c., with 5c. an hour extra for men operating one-man cars, and that the wages of all other employees be reduced in the same proportion as the wages of the men who have served for more than two years; that certain specified decisions for the rear emergency doors of the one-man cars be provided, that air brakes be substituted for hand brakes, and that air emergency brakes be provided in place of the present hand emergency brakes. The board calls attention to certain sections of New Brunswick

power plant with a relief gang. The company stated it was prepared to operate the gas plant and the street cars if the Dominion Government would give adequate protection through the Royal Canadian Mounted Police. This was refused, but later, owing to representations by the city council and the New Brunswick Government, 75 of the R.C.M.P. were sent from Ottawa to St. John for the purpose of maintaining law and order in case necessity demanded their interference. We were officially advised July 6 that the gas plant was closed down for one day only, and resumed work with a full force, while the electric light and power plant had been carried on without interruption with a temporary force. We were subsequently advised that partial operation of the street railway service was started July 10, about one-third of the regular service being given. The motormen and conductors operating the cars were obtained from eastern points. Some little trouble was experienced in the operation of the cars on the outskirts of the city, rowdies breaking car windows. The outside service was withdrawn, and attention concentrated on providing a service in the center of the city. This will be increased as new motormen are trained. During the night of July 11, about 100 ft. of track on Queen Square, West St. John, were torn up by a crowd. The old single truck cars are being operated as one-man cars, the rear door being closed up. The company proposed to remodel the present cars in due course.

An attempt at settlement was made July 7, when the men offered to take 48½c. an hour with recognition of the union, but this latter point was refused by the company. Five one-man cars were reported to be in operation on July 13, and additional numbers of men were reported to be offering themselves for service. Former conductors had motormen have applied to the city council for licenses to operate jitneys.

Toronto & York Radial Ry.—Allan Purvis, chairman, and F. H. McGuigan, representing the company on the board of conciliation which recently considered differences between the company and its electrical employees, represented by the Canadian Electrical Trade Union, have presented a majority report recommending that no change be made at present in working conditions or rates of pay. They refer to the fact that no agreement has hitherto existed between the company and its employees, and state that it is gratifying to note that although recent requests for increases have not all been complied with, the relations between the company and the men have not been affected, but remain amicable and friendly as heretofore. It is pointed out that the ownership of the property is about to be changed, which was the reason given by the company for not desiring to enter into an agreement, a reason concurred in by the Secretary of the Hydro Electric Power Commission of Ontario. L. Braithwaite, the men's representative, in a minority report, recommended the adoption of the rates of wages in force on the Toronto

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.
President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.
Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.
Executive Committee: E. C. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Cousins, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Electric Co.; A. W. McLintock, Vice President, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.
Auditor, H. E. Weyman, Manager, Lewis County Railway.
Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.
Official Organ, Canadian Railway and Marine World, Toronto.

statutes, under which it appears that the St. John City Council has control over the company's rules and regulations; that the city council may appeal against any regulations made by the company to the Board of Commissioners of Public Utilities, which has power to overrule, modify or vary them.

Pending the report of the board of conciliation, the company continued the operation of its cars, electric and gas plants, and on June 28 the men by a vote of 214 to 2 agreed to accept the conciliatory board's findings. The company refused to accept the report on the ground that the reduction of wages proposed was not sufficient, and that it provided for impossible clauses regulating the company's affairs. A conference was held with the men and the civic authorities, at which the company offered to compromise on a 15% reduction of wages instead of the 20% which it is contended is justified by the reduction in the cost of living.

This the men would not accept, consequently the cars ceased operating on June 29, work being continued at the

Suburban Ry., which vary from 45c an hour for general laborers and winders' helpers, to 79c. an hour for wire and repair men; \$120 a month for section foremen, and \$160 a month for dispatchers. In this connection it may be noted that the same workmen's union is demanding increases over and above this scale from the Toronto Suburban Ry., as referred to farther on.

Toronto Suburban Ry.—A board of conciliation was appointed recently by the Minister of Labor to consider differences as between the company and certain of its employees, who are members of the Canadian Electrical Trades Union, Toronto Branch. The company has appointed G. Kelly, Ottawa, as its representative, and the men have appointed H. E. Manning to represent them, and U. E. Gillen, General Manager, Toronto Terminals Ry. Co., has been appointed chairman by the Labor Department.

The union asks for an agreement with linemen, operators, wiremen, bonders, winders, groundmen, helpers, troublemen and repairmen, and asks wages of \$180 a month for linemen foreman, \$150 a month for operators, 75c. an hour for linemen and bonders, 80c. an hour for troublemen and repair men, 85c. an hour for winders and wiremen, and 60c. an hour for all helpers, with an 8 hour day, 4 hours overtime worked in 5 days to be paid at time and a half; all other overtime, all Sunday and holiday work to be paid double time. We are advised that the union referred to is a new one and that the company's previous agreements were with the International Electric Brotherhood.

The Ontario Hydro Radial Railway Enquiry.

After 106 sittings, extending over many months, the examination and cross examination of witnesses before the Royal Commission appointed by the Ontario Government to enquire into the Hydro Electric Power Commission's proposals to build and acquire a system of electric radial railways, came to an end on June 27, and the following sittings up to July 2 were occupied by counsel's addresses which were very lengthy. R. S. Robertson, K.C., representing what are termed the anti hydro radial municipalities, spoke first, concluding by submitting a number of reasons why the Royal Commission's report should be adverse to the proposal. Robert McKay, K.C., for the Hydro Electric Power Commission, took exactly opposite ground, and I. F. Hellmuth, K.C., counsel for the Royal Commission generally criticized the Hydro Commission's proposals and opposed their adoption. Since then the Royal Commission has sat almost daily, examining and discussing evidence and preparing its report, which, it was announced on July 23 would probably be submitted to the Government by the end of July.

Cornwall St. Ry., Light & Power Co.—On July 8, Cornwall Ont. ratepayers, by a vote of 799 to 540, carried a bylaw extending the Stormont Electric Light & Power Co.'s franchise for another 10 years. The extension was strongly opposed by the Hydro Electric Power Commission of Ontario. The company is owned by the Sun Life Assurance Co. Montreal, which also owns the Cornwall St. Ry., Light & Power Co., and it is

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Brantford, Ont., City Council is reported to have approved of proposed extensions of the railway in Eagle Place and the North Ward. The city council recently authorized the issue of \$80,000 of debentures to cover the extension of lines serving Mohawk Park, West Mill St., West Oxford St., Holmedale and Terrace Hill, and Eagle Place. (June, pg. 322.)

Calgary Municipal Ry.—We are officially advised that the city council has ordered from Canadian Steel Foundries, Montreal, one double diamond and one double track Y, and from an English company one single track diamond for renewals. (July, pg. 381.)

Dominion Power & Transmission Co. During a violent thunderstorm on July 8 the company's substation on Victoria Ave., North Hamilton, Ont., was struck by lightning and damaged to an amount estimated at between \$75,000 and \$100,000. Although considerable power for the operation of the Hamilton St. Ry. and the company's radial railways is taken through this station, the car service was only interrupted for a short time, the necessary power being obtained through other substations. Repair work at the substation was put in hand at once.

Grand River Ry.—Lake Erie & Northern Ry.—The Board of Railway Commissioners is reported to have made an order, on the application of the Galt, Ont., City Council, directing these two railways to build a branch line from the southerly limit of the city to Walnut St., thence westerly crossing the Grand River bridge, across West Main St., and along Malcolm St. to the corner of Gleebe St., thence southerly along Gleebe St. and along Middleton St. to its southerly end. With the exception of a short piece of line on Middleton St., in North Dumfries Tp., the whole of the line is in Galt. (July, pg. 381.)

Hamilton St. Ry.—We are officially advised that the track on York St., Hamilton, Ont., is to be relaid, and that work is expected to be started early in August. (July, pg. 381.)

Hydro Electric Ry.—Essex Division.—In connection with a recent press report that the Windsor City Council had authorized the expenditure of \$900,000 for the improvement of the local electric railway system, the council has passed a bylaw authorizing the issuing of debentures and the depositing of them with the Hydro Electric Power Commission of Ontario to the amount of \$457,500, this being Windsor's proportion of the total expenditure of \$900,000 being raised to pay the cost of extension, additional works and equipment of the Hydro Electric Ry.'s Essex Division, formerly the Sandwich, Windsor & Amherstburg Ry.

We are officially advised that the following improvements, etc., are proposed for the year by the Hydro Electric Power Commission of Ontario, which operates the lines:—Rehabilitating present rolling stock and buying 20 new cars. Installing additional rotary converters at Windsor and Amherstburg, with an automatic sub-station at Amherstburg. Double tracking Ouellette Ave., from London St. to Erie St., and repairing Ouellette Ave., from Erie St. to Tecumseh Road. Double tracking and repairing Wyandotte St. from Ouellette Ave. to Devonshire Road. Building loop at Ferry St. New car barn entrance layout on

London St. Double tracking London St., from end of present double track to Michigan Central Rd. bridge. Ballasting suburban lines, extending feeder system and bonding.

London & Port Stanley Ry.—The terminal improvements which are reported to have been completed at Port Stanley, Ont., are said to have cost \$8,000. An enclosure has been built around the two tracks on the beach to prevent accidents, and concrete platforms have been built alongside the tracks. A ticket office and other conveniences have been built close to the gates of the enclosure. On the south side of the enclosure is a large concrete platform 400 x 20 ft., on which have been built two shelters, each 70 ft. long, and provided with seats for waiting passengers.

Considerable improvements are about to be made at Port Stanley town station, including the putting in of a concrete foundation and the remodelling of the interior. (July, pg. 381.)

Montreal Tramways Co.—About 1,500 men were reported to be at work recently upon the renewal and extension works in progress on the company's various lines. (July, pg. 381.)

Ottawa Electric Ry. ordered recently 200 tons 82 lb. T rail, and two Westinghouse transformers. It is relaying 1½ miles of track with 80 lb. T rail and is building and equipping a transformer room at a sub-station.

Saskatoon Municipal Ry.—We are officially advised that orders have been given to Davidson Bros., Melfort, Sask., for 1,800 ties, and to J. McKay, Prince Albert, Sask., for 4,000 ties for replacements on the lines in Saskatoon, Sask. (Feb., pg. 92.)

Washburn, Me., to Frontier Lake, Que. We are advised, in connection with a press report that an electric railway is to be built from the Aroostook Valley Ry., Washburn, Me., to the International Boundary at Frontier Lake, Que., 111 miles, that A. R. Gould, Presque Isle, Me., is interested in the project. He controls the Aroostook Valley Electric Ry., running from Presque Isle to Washburn, New Sweden and Caribou, together with a hydro electric plant at Aroostook, Me., and it is said he proposes to extend the railway westerly from Washburn to Frontier Lake, if he can finance it, but we are advised that nothing will be done this year.

Windsor, Essex & Lake Shore Rapid Ry.—We are officially advised that it is proposed to change the location of about 2,850 ft. of track in Windsor, Ont., from the center to the side of a street which is now being repaved, and that orders have been given for the material. (July, pg. 381.)

Detroit United Ry.—A press report states that the Detroit, Mich., Street Railway Commission has agreed to offer \$388,000 to the D.U.R. for the Foot and Woodward lines, involving about 21 miles of tracks. An arbitration board, consisting of W. E. Davis, Cleveland, Ohio, chairman; W. H. Mabury, representing the city, and H. E. Riggs, representing the company, has been formed to name a price for what are known as the day to day lines, which it is proposed to take over and add to the municipal street railway system.

Winnipeg Electric Railway's Low Floor Cars.

The Winnipeg Electric Ry. placed in service recently 20 low floor cars, which embody most of the latest features in city transportation rolling stock and replace those lost in the fire at the company's Main St. barns on April 7, 1920. Following the destruction of the cars by fire, tenders for new cars were asked for, but immediate delivery could not be promised. It was imperative that the rolling stock be increased in order to take care of the winter rush and so the company bought 20 passenger car bodies, without trucks or motors, from the Twin City Traction Co., Minneapolis, Minn., in July 1920, and rehabilitated them in its own shops. The accompanying photographs show the Minneapolis cars as

outside of car body, extending back, parallel with the sides of the car to a point of intersection on the $\frac{1}{2}$ x 7 in. steel bumper, these vestibule knees being supported by carrier bolts and plates held by the steel body truss under the bulkhead. These, in addition to extensions on old vestibule knees and lateral braces, old the vestibule firmly in position. The original vestibule was then replaced and posts securely bolted to crown head and the intervening space in the floor and roof filled in. This gives ample room for the conductor's compartment, also for the entrance and exit double folding doors. Owing to the front vestibule floor being on the same plane as the car floor, it was found necessary

All steps in and out of the car are equipped with lead filled safety tread, reducing to a minimum accidents due to passengers slipping on the steps. The rear entrance and exit doors are operated by the conductor; the same mechanism and similar features as applied to front door being used. The entrance to the car is the last door on the rear, thereby giving ample standing room for passengers, while the conductor is making change or issuing transfers.

The destination signs are placed in three locations. There are 47 route names on each, and they are located as follows: One on the right side of the front vestibule in gothic sash, and one on each side in the last gothic sash on the car

Winnipeg Electric Railway Low Floor Cars.

The upper illustration shows one of 20 cars bought from Twin City Traction Co. The lower illustration shows the same car, after rehabilitation in the Winnipeg Electric Ry. shops.

they appeared in the Winnipeg Ry. Co.'s shops before rehabilitation. The features embodied in these cars adapted themselves to the company's rolling stock standards.

In the process of rehabilitation, the cars were first stripped of their rear vestibules and interior fittings, front and rear bulkheads; all to be replaced by the features which make up the company's standard, single end, double truck, p.a.y.e. low floor car, with front and rear exit and rear entrance. In order to incorporate these features it was found necessary to lengthen the rear vestibule 30 in. This was accomplished by placing on each side of the car one $\frac{1}{4}$ x 5 x 5 in. angle iron vestibule knee 8 $\frac{3}{4}$ in. from

to drop a pit, the size of the front passenger vestibule, in order to have the one step from the vestibule floor to the pavement. The steps on these cars are, from pavement to first step, 15 in.; from first step to vestibule floor, 14 in.; from vestibule floor into car, 6 in.

The interior of the car has six rattan cross seats on each side, with longitudinal seats on both sides in front and rear of car, giving in all a seating capacity of 42 passengers. The front bulkhead has a double acting door, leading into the passenger vestibule, thereby closing off the cold and draft when the front vestibule door on the outside is open. This door is operated jointly with the step from the motorman's compartment.

body. These signs are of the roller type and are worked from the inside of the car body.

The cars are equipped with hot water heating system and are fitted throughout with new equipment of the latest design, comprising no. 46 arch bar trucks with 26 in. steel wheels; C.G.E. 258 C. air cooled ball bearing motors, inside hung; K.6 controllers; compressors; type G Westinghouse governors; circuit breakers; 3 bank type C.G. resistance 8 in. brake cylinders; no. 45 drop brake handle.

Every consideration has been given to the safety and convenience of the passengers, the cars being equipped with a door signal system, the operation of which notifies the motorman, by means

of a small lamp placed in front of him, when the doors are closed or open. The high tension buzzer system is used with buzzer in front and rear vestibules. The lighting system of the car comprises one 23 watt, five light system, with trouble light, as follows: Headlight, front exit light, front destination sign light, two lights in rear vestibule, also one 50 watt, five light system in car body with selector system in conjunction with same. All the lights in the car body and vestibules are fitted with large opal shades. The conductor's cab is equipped with individual heater (run from the trolley), folding seat, foot rest, etc.

The dimensions of the cars are as follows:

Overall length	45 ft. 7 in.
Car body	33 ft. 3 in.
Front vestibule	4 ft. 4 in.
Rear vestibule	6 ft. 10 in.
Overall width	6 ft. 8 in.
Overall height	8 ft. 4½ in.
Rail to top of roof	10 ft. 8 in.
13 windows to top of car body	13 windows
Approximate weight	36,000 lb.

In the painting of the cars the enamel system has been used for the exterior and headlinings, the color scheme being, tan color below belt rail, ivory above belt rail, with the exception of sash and doors, which are of cherry, while the roof is oxide red. The interior is of natural cherry oiled and varnished with ivory headlinings.

Electric Railway Freight and Passenger Rates.

Edmonton Radial Ry.—A press report states that it has been decided to abolish the after midnight fare of 15c. and to return to the 10c. rate, also to return to the former regulation and allow children's tickets to be used by children under 14, instead of under 12, as at present.

Montreal & Southern Counties Ry.—The St. Lambert, Que., City Council proposes to apply to the Board of Railway Commissioners in regard to the fares on the Macauley Ave. section of this line. This section of St. Lambert was not included in the city when the franchise was granted, and as it is only 200 yards beyond the last stop on the line within the old boundary, the residents object to having to pay an extra 5c. fare. There is also the matter of a roadway involved, as people have to go over the company's right of way to get into the city.

Port Arthur Civic Ry.—The Port Arthur, Ont., ratepayers voted on July 27 on a bylaw for putting in operation of the following fares:—Regular fare, 7c. cash or four tickets for 25c.; child's fare, 10 years and under, 3c. cash or 10 tickets for 25c., good at all times; pupils' fare, under 17 years, 5c. cash or eight tickets for 25c. Tickets sold only at office. Pupils must present certificate (that they are bona fide pupils), signed by their principal teacher. Pupils' tickets good only between 8 and 9.30 a.m., and 3.30 and 5 p.m., and then only for going to and returning from school. Children in arms carried free. The result was not available when this went to press.

Winnipeg Electric Ry.—Winnipeg press dispatch, July 23:—"The city council and the Winnipeg Electric Ry. have come to an agreement over car fares and the following schedule, which is a reduction from the present rates, goes into effect on Aug. 1. Cash fares, 7c., week days, 7c. Sundays, good at all hours; 4 tickets for 25c., good at all times; 9 tickets for

50c., good at morning and evening rush hours and on Sunday; and 8 school children's tickets for 25c., good at all times. The appeal to the British Privy Council from the decision rendered by the Manitoba Court of Appeal, granting the company the increase in rates allowed by the Public Utilities Commission, will be withdrawn. The new agreement provides that the original agreement between the city and the company, which gives the city control of its own streets, will be maintained in its entirety, with the exception that the fares provided by the original agreement are changed; an annual revision of fares is provided for by arbitration if necessary; all agreements and dealings between the city and the company are placed beyond the jurisdiction of the Public Utilities Commission; the rights of the city at the termination of the franchise in 1927 are in no way affected and all matters still outstanding can still be discussed by the city and the company."

Electric Railway, Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:

	10 mos. to 10 mos. to	Apr. 30, 1921	Apr. 30, 1920
Gross	\$791,688	\$749,081	\$7,978,641
Expenses	\$591,779	\$44,276	\$5,845,617
Net	\$199,909	\$294,805	\$2,133,024

Calgary Municipal Ry.—A press report states that the total receipts of the Calgary Municipal Ry. during the annual fair week were \$19,277, against \$20,339 for the corresponding period of 1920.

Cape Breton Electric Co.:

	4 mos. to 4 mos. to	Apr. 30, 1921	Apr. 30, 1920
Gross	\$51,164	\$47,111	\$216,986
Expenses	\$43,026	\$41,116	\$198,406
Net	\$8,138	\$5,995	\$12,580

Edmonton Radial Ry.—A press report gives the following figures for the week ended June 25:—

	1921	1920
Earnings	\$13,011.37	\$12,617.86
Wages	\$6,690.00	\$6,609.00
Power	\$1,764.00	\$2,196.00
Passengers carried	21,426	215,884
Cars in service	32	37

Montreal Tramways Co.—E. A. Robert, President, is reported to have stated July 7, that the company was preparing to place a new issue of stock, but that nothing would be done until market conditions were more favorable. The company had been expending heavily on improvements and extensions, as ordered by the Montreal Tramways Commission, and the new issue would partly reimburse the company for these expenditures. An issue of \$3,000,000 of the company's bonds matures in 1922, and provision will have to be made for it. The total issue to be made will probably be between \$5,000,000 and \$10,000,000, and the issue price will probably be par. The company does not owe anything to banks; its dividends of 10% are guaranteed; earnings are good, and the management intends to accumulate a good surplus.

On July 12 the directors declared the regular dividend of 2½% on the common stock, payable on Aug. 1. No action was taken with regard to the remaining deferred dividends, which amount to 5%, but it is said that the directors hope to clear these off during this year. If this is done, the regular and deferred dividends paid to the shareholders during the present year will amount

to 15%.

Nipissing Central Ry.—The annual meeting of this company, which is owned by the Ontario Government, the line being operated by the Timiskaming & Northern Ry. Commission, was held at North Bay July 21. The following commissioners and officials of the T. & N.O.R. are the directors for this year:—G. W. Lee, Chairman, the Ontario Government; President, Col. J. I. McLaren and Lt. Col. T. L. Martin, D.S.O., Commissioners; S. B. Clement, Chief Engineer; W. A. Griffin, Superintendent of Traffic.

Toronto Civic Ry.—The passenger earnings for six months ended June 30, were \$404,513.83, against \$258,169.33 for the same period 1920. The passengers carried during the same periods were 18,128,244 and 15,354,543 respectively.

Toronto Ry., Toronto & York Radial Ry., and allied companies:

	4 mos. to 4 mos. to	Apr. 30, 1921	Apr. 30, 1920
Gross	\$1,259,923	\$1,211,708	\$5,491,179
Expenses	\$97,018	\$29,572	\$7,093,443
Net	\$126,818	\$111,071	\$65,334

Winnipeg Electric Ry. and allied companies:

	5 mos. to 5 mos. to	May 31, 1921	May 31, 1920
Gross	\$123,836	\$404,742	\$2,357,777
Expenses	\$97,018	\$29,572	\$7,093,443
Net	\$126,818	\$111,071	\$65,334

The surplus, after fixed charges for May 1921, was \$56,176.

Uniform Coinage Advocated.—At a recent meeting of the Canadian Electric Railway Association's executive committee, R. Mayne-Read, Superintendent, Quebec, Railway, Light & Power Co., pointed out that a number of English pennies are in circulation in Canada. In some places they are accepted as 2c., and in others as only 1c. With the introduction of the new Canadian 1c. piece, there are now three coins of various sizes used as 1c. pieces. It is also proposed to establish a new 5c. piece. Mr. Read suggested that the Finance Department should be asked to take early steps to call in all coins which differ from the new standards. The Association's President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co., took the matter up with the Deputy Minister of Finance, who has advised him as follows:—"On the adoption of the new 1c. piece, we immediately stopped the issue, for circulation, of the old 1c. piece. We will do the same in connection with the new nickel coin, when issued. We are anxious to have the old coins out of circulation as soon as possible, and will do all that we are empowered to do towards that end."

British Columbia Electric Ry. Franchise.—The Vancouver Board of Trade, on June 28, discussed the terms of the proposed new franchise for the British Columbia Electric Ry., a summary of which was given in Canadian Railway and Marine World for June, pg. 320, and passed the following resolution by 79 to 24, a large number of members refusing to vote:—"That this board is of the opinion that the proposed agreement between the City of Vancouver and the B.C.E.R. is not in the best interests of the city and thinks the same should not be completed by the city council. This board recommends the city council to take no further action toward the execution of the proposed agreement, and we are strongly in favor of the B.C.E.R. Co. going under the control of the Board of Railway Commissioners."

Arbitration of Price to be Paid for Toronto Railway.

The arbitration to determine the price to be paid, by the City of Toronto, for the Toronto Ry., which is to be taken over on Sept. 1, opened in Toronto July 18, before Hume Cronyn, M.P. for London, Ont., Chairman; Sir Thomas White, for the company, and Sir Adam Beck for the city. The company was represented by Hon. N. W. Rowell, K.C.; Wm. Laidlaw, K.C.; F. H. Phippen, K.C.; and Robt Mackay, K.C. The city was represented by W. N. Tilley, K.C.; G. R. Geary, K.C., Corporation Counsel, and A. C. MacMaster, K.C., R. C. Harris, City Works Commissioner, sat with the city counsel. I. S. Fairly appeared for the Toronto Transportation Commission. N. R. Butcher, chartered stenographer, was appointed Secretary.

Chairman Cronyn announced that, although the property is to be transferred on Sept. 1, the company wanted to postpone the arbitration until September, but that the city objected to this, and desired to go on at once. After considerable discussion, during which the city representatives did not object very strenuously to a postponement, the next sitting was fixed for Sept. 13.

R. J. Fleming, General Manager, Toronto Ry., was the only witness called, and was examined for a few minutes, testifying that he had occupied his position for 16 years, that the franchise would expire Aug. 31, and that the city had given notice of its intention to take the property over. On Sir Adam Beck's suggestion it was decided that the arbitrators inspect all the company's property.

The Nova Scotia Tramways & Power Co. and the N.S. Government's Hydro Electric Power.

The Nova Scotia Government, through a Power Commission, is developing a water power in the vicinity of Halifax to supply electric energy in Halifax and other places, and has under consideration the question of its distribution in Halifax. The City Engineer stated in a recent report that the aggregate requirements of 52 prospective and actual consumers in the city amounted to 6,802,000 kilowatt hours a year, but to make the figures conservative 1,000,000 k.w. hours are deducted from prospective consumers who estimated their probable requirements. This would leave a total consumption, including the shipyards and the city service, of 5,802,000 k.w. hours, of which 2,366,762 k.w. hours are under contract with the Nova Scotia Tramways & Power Co. The cost of equipment to take care of the available supply, exclusive of street lighting equipment, is estimated at \$815,000, and on the basis of an estimated sale of 5,802,000 k.w. hours, the cost would be about 4.1c. per k.w. hour.

The Nova Scotia Tramways & Power Co. has stated its position in a letter to the Premier of Nova Scotia. The company expresses the belief that if the Power Commission is willing to contract with the company for its output of hydro electric power, or that part of it which may not be desired by the city for the purpose of lighting its streets, the company in turn can distribute it to the citizens of Halifax at less cost than

it can be distributed through any other agency. The company is prepared to undertake to deliver and sell the current so obtained to the Halifax citizens at cost, such cost to be determined generally upon the same principles as the cost of the hydro electric power to be sold to the company by the Power Commission, following an actual independent appraisal of that part of the company's undertaking used and useful in furnishing electric energy. The company, however, would prefer to be placed under the Public Utilities Commission by proclamation of the act passed at the Legislature's last session, and that a valuation of its property be promptly made. It is pointed out that the Power Commission is not prepared to sell this power to the company, there will be required a heavy capital expenditure to construct distribution lines, duplicating the company's, and that such distribution lines cannot be provided by August, or indeed this year. In the event of the Power Commission determining not to sell the power to the company, which is in a position to undertake its immediate distribution, it is suggested that the company's entire property be taken over by the Power Commission by arbitration or in some other fair way.

Electric Railway Notes.

The Guelph, Ont., Radial Ry. started Sunday operation on July 25.

The Moncton, N.B., City Council, members of the Moncton Board of Trade and other business men, met recently to discuss the electric railway and electric light services given by the Moncton Tramways, Electricity & Gas Co.

The Hamilton St. Ry., owing to damage by storm to the Victoria Ave. N. sub-station on July 8, had to operate its cars on a 10 minute schedule; to reduce the number of cars on the belt line and the James St. South line, and to cut off the James St. North line, for several days.

The Hydro Electric Railway, Essex Division, is going to rehabilitate its present rolling stock, and buy 20 new cars. Additional rotary converters are to be installed at Windsor and Amherstburg, Ont., with an automatic sub-station at Amherstburg.

The special civic sub-committee which has been negotiating with the Winnipeg Electric Ry. for a settlement of all matters at issue between the company and the Winnipeg City Council, was reported on July 14 to be preparing a report for early presentation.

F. Hoover, Vice President of the International Street Railwaymen's Union, is reported to have stated at a meeting of the Winnipeg Trades and Labor Council recently that the local union had been permanently re-established and that there was nothing to prevent it regaining its former strength.

The Alberta Legislature at its last session authorized Edmonton City Council to assess the several municipally owned public utilities for taxation as if they were operated by private corporations. The public utilities owned by the city include the Edmonton Radial Ry., which is assessed as follows: land, \$30,280; improvements, \$1,307,648, at 6%, \$784,888; total, \$815,168.

The Moncton, N.B., City Council discussed the Moncton Tramways, Electricity & Gas Co.'s franchise on July 13,

when representatives of several public organizations were present. It was stated that there is nothing in the franchise to compel the company to operate the two miles of railway all the year, and nothing to compel it to discontinue operating. The discussion was adjourned to obtain some information as to the plans of the Government hydro electric development plant.

The valuation of the Ottawa Electric Ry.'s property, which the Ottawa City Council arranged to have made by the Hydro Electric Power Commission of Ontario's staff, is reported to have been started on July 12. F. U. Fairlie, of the Commission's railway staff, is in general charge of the work, and it is reported that Alex. McDougall, another of the Commission's railway engineers, is at the head of the working staff. The report is expected to be ready in about three months.

The Kingston, Portsmouth & Cataract Electric Ry. Co. has the right to operate cars on its railway on Sundays, but ceased to do so about 10 years ago, as it did not pay. A car service was put in operation over the lines on Sunday, July 10, to enable people to get to Lake Ontario Park, and since we are advised, to continued temporarily. A cash fare of 5c. is charged, with 5 tickets for 25c., same as on week days, and children's tickets are sold 2 for 5c.; workmen's tickets are not accepted. The cars are being operated on Sundays from 10 a.m. to 10 p.m. H. C. Nickle, who is General Superintendent of the company, is also Mayor of Kingston, Ont.

Mainly About Electric Railway People.

C. H. Boire, of the Secretary-Treasurers' staff, Montreal Tramways Co., was given a cabinet of silver by his colleagues in the office on June 1, on his marriage.

C. W. Carson, heretofore Relief Inspector, Ottawa Electric Ry., has been appointed Assistant Superintendent (Car Service).

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., received the congratulations of the staff and many outside friends on July 12, on entering his thirty-second year of continuous service with the company and its predecessors, having started work as messenger boy in 1890.

George C. Graham, who has been appointed Superintendent of Rolling Stock and Shops, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., was, prior to his present appointment, engaged in commercial business in Hamilton, Ont., and before that was, for six years, Superintendent of Rolling Stock, International Ry., Buffalo, N.Y.; three years, Master Mechanic, United Traction Co., Albany, N.Y., and three years, Superintendent of Rolling Stock and Shops, Los Angeles Pacific Co., Los Angeles, Cal.

C. E. Taylor, a former superintendent of the Edmonton Radial Ry., Edmonton, Alta., and latterly in Imperial Oil Ltd. service, committed suicide by shooting on the s.s. McMurray, July 14, while en route to McMurray, via the Athabasca River.

R. G. O. Thomson, of Mackenzie, Mann & Co.'s staff, Toronto, who is also President of the Chatham, Wallaceburg & Lake Erie Ry., has left Toronto, with Mrs. Thomson, on a trip to England.

Answers to Questions on Electric Railway Topics.

The following answers have been sent, by Canadian electric railway officials, to questions addressed to the American Electric Railway Association's question box:—

Armature Removals.—How many man-hours are required to remove armatures from box frame motors, including time of taking motor from under car; what method of removal is used?

Winnipeg Electric Ry., Winnipeg.—Two man-hours are required to remove armature from G.E. 258 box frame motor. This is the only class of box frame motor we have. The motor is dropped from car by a lift jack, and armature removed on the floor.

Car Painting Systems.—Have any member companies employed the enamel system of painting cars in place of the flat color varnish method? If so please describe same briefly and indicate the comparative durability and general appearance. Is it possible to make the change from the old style to the enamel system? What effect have climatic conditions on the enamel system?

Winnipeg Electric Ry., Winnipeg.—"Comparative durability" is a question in our minds so far, as we have not been using enamel to any considerable extent except for a short period. Enamel on interior car wood linings, which has been on for nearly two years, is standing up well. General appearance we think favorable, providing cars can be washed and cleaned regularly on a basis of about 1,000 miles. A combination of circumstances enters into this question, in regard to material used, enamel, state and class of wood enamel is put on, length of periods between painting of cars, etc. We think it is possible to change oil and varnish system to enamel system. Makers of enamel recommend that all old varnish be removed, especially if in cracked condition. We are at present, however, enameling over varnish that is in fairly good condition.

Life of Car Wheels.—(a) What mileage are you making with your car wheels? (b) Please state whether wheels are steel or cast iron, and type of equipment used.

Please state the limiting conditions which determine the useful life of a wheel on your property. (d) What is the cost of wheels per 1,000 miles on the above basis?

Winnipeg Electric Ry., Winnipeg.—(a) 50,000 miles out of cast wheels; 150,000 miles out of steel wheels. (b) Western Wheel & Foundry cast wheels. Carnegie steel wheels. (c) The motor clearance governs the wear of wheels. (d) On the actual cost of wheels, i.e., factory cost, the cost per 1,000 miles is approximately 40c. a wheel. (Cast) 2¢ in steel wheels approximate 26¢ per 1,000 miles.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—

Type of wheel	Size & flange	Average	Maximum
Chilled iron	33 in. $\frac{3}{4}$ x 1 in.	46,000	136,000
Rail-Steel	34 in.	B	195,000 320,000
Steel tire			
24 in. Ctr	34 in.	B	176,000 221,700
Rail-Steel	33 in.	A	150,000 276,000
Steel tire	33 in.	A	150,000 276,000
28 in. Ctr	36 in.	A	112,700 131,600
Steel tire			
24 in. Ctr	35 in.	A	146,000 199,600
Steel tire (Loco.)	36 in.	A	69,500 74,900

(c) Iron wheels, 85¢ are scrapped for broken or chipped flanges; others for flat

spots or broken tread; steel wheels, 100¢ for worn or sharp flanges. (d) See answer to a previous question, given in Canadian Railway and Marine World for Dec. 1920, page 672.

Traffic Checks.—(a) Is it the practice of your company to make characteristic traffic checks of the riding on each route? (b) What is the average length of ride per passenger on a typical route? (c) Based on such typical checks, have you calculated the annual passenger miles on your system; that is, the average actual length of ride per passenger multiplied by the total annual passengers carried? (d) What is the ratio of passenger miles to car miles for your system? (e) What is the ratio of the passenger miles to the seating miles, furnished on your system? (Seating miles being the sum of the actual seating capacity of each type of car, multiplied by its car miles.)

Winnipeg Electric Ry., Winnipeg.—(a) It is not the practice of this company to make checks of this nature. (b) From data available we are justified in assuming the average passenger car ride on a typical route to be approximately 2 miles. (c) 130,497,680 passenger miles. (d) 13.44. (e) 0.336.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—(a) Periodical checks are made by special census men placed on streets. Last point of loading is selected on lines to be checked, and number of passengers on car after leaving that point is noted and recorded. Maximum car requirements are thus learned. This last loading point shows heaviest loads carried. Lines are regularly checked approximately every two months—excepting when special check is desired oftener. (b) 2½ miles. (c) 119,105,000 passenger miles for year 1920. (d) 15.30 passenger miles to 1 car mile. (e) 2.8 seat miles to 1 passenger mile.

Toronto Electric Railway, Light and Power Matters.

The Toronto Board of Works has approved the Works Commissioner's report recommending an expenditure of \$365,000 for laying tracks on Yonge and Teravay Streets. It is proposed to lay tracks on Yonge St. from Farnham Ave. to the north city limits, and on Teravay St. from College St. to Davenport Road.

The City of Toronto's application for immediate judgment against the Toronto Ry. for \$1,200,960.50, for overdue percentages, has been dismissed by the Master in Chambers, the company having counterclaimed for damages, alleged to have suffered owing to the city's neglecting to lay pavements properly, and to keep them in repair.

The Toronto Transportation Commission will receive tenders to Aug. 3, for building extensions to the St. Clair Ave. car houses, to consist of three new reinforced concrete car houses, with provision for offices and stores, and including plumbing, heating, wiring, and rolling steel doors, together with alterations to existing buildings.

The Toronto Transportation Commission and the Toronto Hydro Electric Power Commission have bought the old Board of Trade building at the corner of Front and Yonge Sts., Toronto, and

some properties adjoining it on both those streets, giving a frontage of 170½ ft. on Front St. and 123 ft. on Yonge St. for \$372,500. The building will be used by the two commissions for offices, etc.

The Toronto Transportation Commission, as stated in our July issue, ordered some six solid manganese steel intersections from Canadian Steel Foundries, Montreal, at a cost of about \$55,000. Two more intersections have since been ordered from the same company at a cost of about \$10,000, and three intersections and a series of special work for the Danforth and St. Clair Ave. car houses, have been ordered from the U.S. Steel Products Co., at a cost of about \$90,000.

Sir Adam Beck has been named as the city's representative on the arbitration to fix the value of the Toronto Suburban Ry.'s lines, etc., on the streets in Ward 7, etc., which the city is to acquire under the franchise. The lines include a section from Humberdale Ave. to Keele St., which for some years has been operated, under an agreement, by the Toronto Ry. In preparation for the transfer of the Toronto Ry. to the city, the question of a new agreement between the Canadian National Ry., of which the Toronto Suburban Ry. is a part, and the city is being considered by the city council.

The Hydro Electric Power Commission of Ontario was expected at a meeting called for July 19 to deal with a number of matters connected with the closing up of the purchase of the electric power and radial railway interests owned by the Toronto Ry. Co. The agreements in connection with the matter have been under consideration since Nov. 1920, and the delay in reaching a final settlement has been due, to a large extent, to the negotiations necessary in adjusting matters between the Commission, the City of Toronto, the County of York, and the Ontario Government.

Nipissing Central Railway Operation, Fares, Etc.

A recent press report stated that G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, and President, Nipissing Central Ry., replying to a delegation from Liskeard, respecting railway matters, had offered to hand over the operation of the N.C. Ry. to the municipalities through which it runs and that as an alternative the railway might be placed in the hands of the Board of Railway Commissioners for operation.

The N.C. Ry. was built and is being operated by the T. & N.O.R. Commission under a Dominion charter, and its rates, etc., are controlled by the Board of Railway Commissioners. An application was made to the Commission recently for power to increase the fares and to reduce the service, but the Board has not given its decision up to the time of writing. The railway being operated at a heavy loss, and we are advised that it is not thought likely that the T. & N.O.R. Commission will continue to do this. The suggestion made by the Liskeard delegation was that the municipalities interested could take over the operation of the line, or that if there was dissatisfaction with its present management the Board of Railway Commissioners could be asked to name a manager. Of course that Board could not operate it.

Car Painting Costs Reduced by British Columbia Electric Railway.

Canadian Railway and Marine World has been favored by W. G. Murrin, Assistant General Manager, B.C.E.Ry., with the following description of the company's car painting methods, by which costs have been halved:—On the mainland divisions, comprising 144 miles of city and 158 miles of interurban tracks, the Mechanical Department has the care of 250 city cars, 73 interurban passenger and express cars, 13 locomotives, over 400 standard freight cars, and a number of service and construction units, totalling 805 cars. These are maintained in four car houses and one freight repair yard, the general shops being in the car house at Prior St., Vancouver. Painting is done to freight equipment at the repair track in New Westminster, which is the center of the interurban systems, and to all other equipment in the paint shops at Vancouver, which have a capacity of six cars.

Passenger Equipment Painting.—Up to the middle of 1915, when the effects

The old method of doing passenger cars, taking city equipment for example, was as follows: 1, washing; 2, varnish removed where necessary; 3, sandpapering, putting up nail holes, joints, etc., where repairs had been made, and priming over new work; 4, two coats of body color; 5, lettering and striping put on; 6, two coats of varnish; 7, painting trucks, ironwork, etc. The average cost of this work, per city car, was about \$28 for material, \$46 for labor, a total of \$74. In some cases this reached \$85 or more. Interurban cars were proportionally higher.

The revised method was simpler, as follows: After washing, the body is sandpapered, where necessary, such as around repairs, over scratches, or where the varnish shows cracks, and new work is primed. The light color is given one coat, and the dark color touched up, where necessary, to an even base for the next coat, with one coat over new work. Then, after retouching the gold leaf work

The following comparison of the average cost of painting city cars shows the effect of rising labor rates:—

	Material	Labor	Total
1915-16	\$16.65	\$26.10	\$42.75
1916-17	14.70	30.75	45.45
1917-18	15.00	32.60	47.60
1918-19	15.65	35.26	50.90
1919-20	20.00	42.25	62.25
1920-21	20.30	53.60	73.90

Had the old method been still in use, this last figure would be about \$125 a car; the saving, therefore, has been over 40%.

Freight Equipment Painting.—As most of the freight equipment was bought in 1912 and 1913, repainting on an extensive scale was not begun till early in 1919, and in July of that year a Dunn type AA painting machine was bought, with a capacity of 10 gall. The saving effected by this machine was such that it was paid for before 12 box cars had been done. To paint and letter a 40 ft. box car by ordinary means required 8 to 12 hours for lettering, and about 36

British Columbia Electric Ry. Car Painting Methods.

of the war, combined with the peak of the jitney craze, brought the railway revenue down to the lowest point in the last 10 years, passenger cars were painted about every two years, the whole car being repainted, as outlined in the schedule below; but the need for stringent economy led the Master Mechanic and paint shop force to study the work more closely, as a result of which they developed a method of treating the cars, which practically cut the cost of ordinary periodical painting in two. It was found that while cars require revarnishing comparatively often, the ground work would be in good condition for about 10 years, and so, until the varnish began to show signs of peeling off, it could be used as a ground, and need not be entirely removed at each time of painting. Since the method was changed, six consecutive wage increases have brought the cost back to what it was under the old method, but in view of this, the actual saving is the more noticeable.

where required, one full coat of dark color is applied, "cutting in" around the lettering and striping with a fine brush. Then follow the usual cost of rubbing and finishing varnish. The cost of this material averaged at first about \$16 for material, and \$28 for labor; total, \$44. The interior painting was not materially altered, except to substitute paint for where the original natural finish was becoming discolored from age.

The color standards for city equipment are: red roof, dark green on fascia, corner posts, dash, sides below belt rail, vestibule ceilings; light corn color for window posts; light red on sash, doors, and seat frames; drop black on mouldings, and black asphaltum for trucks and ironwork. For interurban cars, the corn color is replaced with dark green, with a little striping on mouldings of vermilion. Locomotives have Pullman green, with yellow lettering instead of gold leaf.

hours for painting, practically all of which was done by a first class freight car painter, and the average cost for material was \$18.50, and labor \$27, a total of \$45.50 a car. The standard color is green, with lettering in white lead, put on with stencils. About 6 gall. of mixed green, 1 gall. of red roof paint, and 1/2 pint of white lead were used to a car. After a few cars had been done with the machine, and the men had acquired experience in operating it, it was found that better work was being done with 1 1/2 gall. less paint per car. The average time for applying the green paint on all four sides was about two hours; one hour was plenty for the roof, and the time for lettering about eight hours. The machine does not require a regular painter, and can be operated by a brush hand. The actual cost of the first 24 box cars done with the machine was \$14.50 for material, and \$6.80 for labor, a total of \$21.35 a car. The saving was therefore about 51%.

The accompanying photographs show the machine in operation, and an idea of the rapidity with which it does the work can be got by noticing how far the work had progressed while the photographer was changing plates and taking three exposures. The paint is laid on in two coats, the amount to a coat being determined by the distance from the surface at which the nozzle is held. Rough spots, cracks, nail holes, etc., are penetrated more thoroughly than can be done with the brush, and the finish is all that could be desired. At first some difficulty was found from the spray being carried by air currents, till all the surrounding scenery was being painted, as well as the operator, but experience has enabled this to be reduced to a negligible amount, and, as already stated, the actual amount of paint used is less than with the brush. A flat car will require about $\frac{1}{2}$ gal. of paint, and $\frac{1}{4}$ pint of lead, and all that could be done with the machine and four and a half for stenciling, the total cost being about \$8.

The machine is operated by compressed air, at 60 lb. pressure, supplied from a pipe line, through a feed valve, with outlets convenient to the painting track, and since, in order to avoid clogging of valves and atomizer, it is better to clean out the machine after using, the work is arranged so as to keep the machine in operation all day, a sufficient number of cars being done at a time, thus reducing the extra labor for cleaning the machine to a minimum per car. The success attained in painting cars has suggested the use of the machine for painting shelters, and other structures along the right of way, such as telephone booths.

Montreal Tramways Co.'s Capital Valuation.

Under the act creating the Montreal Tramways Commission the value of the Montreal Tramways Co.'s property used in connection with the operation of its lines, and upon which a 6% revenue is to be received, had to be fixed. This value was placed at \$36,286,295. The Montreal Tramways Commission on Aug. 25, 1919, deducted \$534,055.68 from the value of the property on which the company had the right to receive 6% interest, on the ground that the amount should not have been included, but should have been under another heading. The company appealed to the Quebec Public Service Commission, and the late Chairman gave judgment upholding the Tramways Commission's finding. The Montreal Tramways Commission also refused to approve of the company's application to add to the value of the property upon which the 6% interest is to be received, \$243,516.11, in respect of supplies, etc., ordered before Dec. 31, 1917, but subsequently received. An appeal was also made against this finding, but the Quebec Public Service Commission also upheld it.

The company then appealed both these decisions of the Quebec Public Service Commission to the Quebec Court of Appeal, which gave judgment June 28, dismissing both appeals with costs, the court holding that if the amounts were included in the valuation the company would be receiving a double payment, as the one part of the amount was never intended to be included in the valuation, and in the other the amount was already included, although the goods had not been received.

Telegraph, Telephone and Cable Matters.

C. T. Barber, night chief operator, C. P.R. Telegraphs, Toronto, died there in St. Michael's Hospital, July 18, aged 42, from acute septicaemia and pneumonia. He had been in C.P.R. Telegraphs service for nearly 30 years.

J. McMillan, Manager, C.P.R. Telegraphs, with Mrs. McMillan and two daughters, sailed from Montreal, July 1, on the C.P.R. s.s. Melita, for a tour through England, Scotland and France. W. J. Camp, Assistant Manager, is acting Manager during his absence.

What is stated to be the largest submarine cable in the world was laid, July 12, in the bed of the Detroit River, between Windsor and Detroit. It carries 408 pairs of telephone wires, enabling 600 conversations to be carried on simultaneously between the two points. It is operated jointly by the Bell Telephone Co. of Canada and the Michigan State Telephone Co. The cable weighs 50,870 lb. and is 3,000 ft. long and $10\frac{1}{2}$ in. diameter.

Canadian National Telegraphs have opened offices at Kedgwick, St. Quentin and Upsalquitch, N.B.; Abenakis Springs, Cap Rouge, Les Ebolements, Little Metis Beach and Portage du Fort, Que.; Kilrush and Royal Muskoka Hotel, Ont.; and Colinton, Alta.; and have closed offices at Beauceville, Gently station and St. Yvon, Que.; Birch River and Broad Valley, Man. The name of the Stanley Jct. office, Ont., has been changed to Stanley.

Replying to questions in the British House of Commons recently, the Postmaster General stated that he did not agree with the statement of the Chairman of the Imperial Wireless Union, that "the first link in the Imperial chain of wireless telegraph stations is not yet fashioned, and that it may be a dead end for some years after it is complete." The stations at Leafeld, near Oxford, Eng., and at Abu Zabal, near Cairo, Egypt, which are to form the first link, will be ready for use by the end of the year. An expert commission has been appointed to consider the design of the other stations recommended by the Imperial Wireless Telegraphy Commission. In regard to wireless communication between Great Britain and Canada, conversations, which constitute the necessary first step, have been proceeding.

Sunday Cars in Oshawa.—The Oshawa, Ont. Town Council has renewed an agreement with the Oshawa Ry. Co. for the operation of a Sunday car service. An agreement had been in force for the last two years, under which the cars were operated on Sundays at the same fares as on week days, between 7 and 10.45 a.m.; 12.30 and 6.45 p.m., and 8.15 and 11 p.m. In discussing the renewal of the agreement a suggestion that permission be given to operate the cars continuously on Sundays during June, July, August and September met with some support, but was not adopted, the majority contending that the cars would disturb the congregations in the churches along the car line. The Sunday car service has, we are advised, been much appreciated by the public, who have been enabled to visit the new park at Oshawa-by-the-Lake in large numbers with their families at very little expense. A press report states that 7,500 persons were carried to the park on July 10.

Among the Express Companies.

The United States Railroad Labor Board, on July 12, ordered that wages of American Railway Ex. Co.'s employees be reduced 6c. an hour from Aug. 1.

The Board of Railway Commissioners passed order 31,271, July 13, approving Supplement 1 to Express Classification for Canada, No. 5, which was submitted originally as Supplement A to Express Classification for Canada No. 4, the items covering light and bulky goods, such as millinery, and the proposed item covering liquids, to which objection was taken in the Supplement as originally presented, having been eliminated from the revised Supplement, and the other items having been agreed to by the parties interested.

Canadian National Express Co.

The office at Birch River, Man., was reopened for business, July 11.

The Canadian National Ex. Co. has opened an office at Libau, on its Victoria Beach Subdivision, Man.

The Canadian National Ex. Co. announces that the name of the station heretofore known as Lochearn, Alta., has been changed to Rocky Mountain House and the name of the station Rocky Mountain House has been changed to Lochearn. Rocky Mountain House will be an open office to Lochearn a prepay point.

Dominion Express Co.

E. R. Cadwallader has been appointed cashier, London, Ont., vice W. B. Knott, promoted.

W. B. Knott, heretofore cashier, London, Ont., has been appointed agent, there, vice T. H. McFarrell, promoted.

T. H. McFarrell, heretofore agent, London, Ont., has been appointed acting route agent there, vice O. A. Sharp, transferred.

R. Murray, heretofore route agent, North Bay, Ont., has been transferred to the Niagara fruit district, with headquarters at Hamilton, Ont.

J. A. Parker, heretofore depot agent, Ottawa, Ont., has been appointed acting route agent, North Bay, Ont., vice R. Murray, transferred.

E. W. Richardson has been appointed depot agent, Ottawa, Ont., vice J. A. Parker, promoted.

O. A. Sharp, heretofore route agent, London, Ont., has been transferred to the Leamington fruit district, with headquarters at Leamington, Ont.

George Mott, special agent, Ottawa, Ont., was in charge of the race horse traffic handled by the company during the racing season in that district.

T. E. McDonnell, Vice President and General Manager, accompanied by George Parker, Superintendent, Toronto, made the trip of inspection over the company's lines in Western Ontario recently.

J. T. Riley has been appointed agent of the recently opened fruit office at Summerland, B.C. The small fruit cron is reported to be exceptionally good, and the movement in refrigerator car lots is unprecedented on the division.

Prior to the coming into effect of the total prohibition of importation of intoxicating liquors into Ontario, at midnight, July 18, the company handled considerable quantities from St. John, N.B., to different points in Ontario, the amount of traffic necessitating the use of extra cars. The last consignment left St. John July 14, to allow of delivery being made before July 19.

Marine Department

General Shipbuilding Matters Throughout Canada.

B.C. Marine Engineers and Shipbuilders Ltd., Vancouver, B.C.—The Hudson's Bay Co.'s motor auxiliary schooner *Lady Kindersley*, built at this yard, and illustrated in this issue, has the following dimensions:—Length over all 200 ft., length loaded water line 188½ ft., beam 36 ft., moulded depth 15 ft., draft loaded 12 ft. She is rigged as a 3-masted, bald headed schooner, with a jib headed mizzen and top sail for running purposes, and carries a large square sail forward, with a triangular shaped top sail. The total area of fore and aft sails is about 10,960 sq. ft., and the approximate total area of all sails is 15,610 sq. ft. She is equipped with a 350 b.h.p. semi-Diesel engine, for a speed of about 7 knots an hour. The order for building this schooner was given early in 1920, and it was intended to have her ready for service by Oct. 1920, but considerable delay was caused owing to the non delivery of the engines, which were ordered in England. She was launched March 27, and underwent her trials June 6, making two runs past Point Atkinson, registering 8½ knots. She sailed from Vancouver, early in July, and after calling at Prince Rupert, sailed direct to Herschel Island, whence she will proceed, conditions permitting, as far as Banks Sound, returning late in the autumn. Her cargo consisted of 200 tons of coal for various Hudson's Bay posts and settlements, general supplies, trading materials, etc., 2 knock-down scows, 5 knock-down houses, about 1,000 ft. of lumber, 6 schooners ranging from 26 to 43 ft. long, several canoes and trappers' supplies, etc., totalling over 1,000 tons. She is expected to average about 7 knots an hour on the trip.

Collingwood Shipbuilding Co., Kingston, Ont.—A Kingston press dispatch of July 3 stated that the daily working hours in this shipyard had been increased from eight to nine, and that wages had been decreased 15%.

Dominion Shipbuilding & Repair Co., Toronto.—As mentioned in our last issue, a deputation of employees engaged at this company's yard, by the Collingwood Shipbuilding Co., which is completing the two steel cargo steamships which were under construction for Canadian Government Merchant Marine, at the time of the Dominion company's bankruptcy, waited on the acting Premier and the Minister of Marine recently, to urge that the Government take over the plant with a view to making it a permanent, and in the meantime proceed with the construction of two steel cargo steamships, the keels of which were laid at the plant some time ago, for Norwegian interests. It is announced that the ministers stated that the Government will not proceed with ship construction at this plant after the completion of the steamships *Canadian Pathfinder* and *Canadian Engineer*.

The Manitowick Shipbuilding Corporation has been authorized to do business in the Province of Quebec, its chief place of business in the province being at Montreal, and Arnold Wainwright, advocate, its principal agent.

National Shipbuilding Co., Goderich,

Ont., which builds marine boilers and other shipbuilding equipment, had its machine shop destroyed by fire recently, the loss being estimated at \$100,000. It is stated that it will be replaced.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—A press report states that an order in council has authorized the payment of 50% of the approved claims of certain of the creditors, in the bankruptcy of this company. It is stated that this decision follows the decision of the British Columbia Court

being handed over in an unfinished condition to the owners, La Societe Naphtes Transports, of Marseilles, France. The owners subsequently rented the shipyard plant from the liquidator and proceeded to complete the ship. She is considered a unique ship of her class, and is stated to be the first tanker of her type to be built in Canada, and the first to be built in eastern Canada on the Isherwood system. She has been built to carry benzine, is equipped with oil burning furnaces and is designed for a speed of

Motor Auxiliary Schooner *Lady Kindersley*, built for Hudson's Bay Co.'s Pacific-Arctic Service

of Appeals dismissing the Dominion Government's appeal against the creditors. Under this decision, it is said that the materials and fittings in the yard at Prince Rupert, outside of the ships, remain in the liquidator's possession, and that the creditors are thus protected, with the likelihood that they will receive payment of their claims in full, through their hold on the yard.

Three Rivers Shipyards Ltd., Three Rivers, Ont.—The tank steamship *Capitaine Damiani*, the launching of which was announced in our last issue, was in course of construction at the time of the bankruptcy of the builders, and was the subject of considerable litigation before

11½ knots on 22½ ft. draft. She has a block co-efficient of 0.77. Her dimensions are,—length b.p. 380 ft., beam 52 ft., depth to deck moulded 28½ ft., capacity, 6,500 d.w. tons. The machinery consists of a triple expansion engine, with cylinders 27, 43 and 72 in. diam. by 48 in. stroke, and has a modified type of the British standard engine, the crank shaft being in three interchangeable pieces. There are 3 boilers of the Scotch marine type, each 15½ x 12 ft., and one donkey boiler 11½ x 10 ft., all supplied by Canadian Allie-Chalmers Ltd., Toronto. The switching engine is of the Brown type, by Clayton, Neil & James, and the windlass and other deck machinery were built

by Canadian Vickers Ltd., Montreal. The work is being carried on under the direction of Capt. Quedrué, representing the owners, and the French Government, which is financially interested. The design and construction of the ship is under the supervision of A. J. Murray, naval architect.

Transportation & Shipping Co., Sorel, Que., which acquired the Sorel Shipbuilding Co.'s plant from the receiver in bankruptcy, has, since operating it, built 3 schooners and is completing 2 more of a similar type. In addition to these, 3 steel trawlers, which were built during the war for war patrol purposes, are being converted into seagoing tugs. The plant was originally operated by the Leclaire Shipbuilding Co., which built some trawlers during the war, and it was subsequently reorganized with the Leclaire Bros., and C. Hannevig, of New York interested. After the failure of this company the plant was sold to the present owners. The headquarters of the new company are at Quebec, Que., where

have been completed, but owing to the falling off of freights, she had not been placed in service. As a matter of fact, she is not ready for sea, and a contract is reported to have been awarded to Victoria Machinery Depot Co., by the Marine Department, for the finishing work to permit of her being used. This consists of rigging, finishing, cleaning and painting. It is announced that tenders will be called for shortly, for the completion of the remaining three ships, which are in various stages of construction at the Cholberg shipyard. The four ships were designed with a cargo capacity of 2,400 tons each, or 1,500,000 ft. b.m. timber.

Capt. Montague Harbord, heretofore Vice President, has been elected President, Victoria (B.C.) Shipowners, Ltd., vice C. Hoad, resigned.

Victoria Machinery Depot Co., Victoria, B.C.—See Victoria (B.C.) Shipowners Ltd.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—J. W. Troup,

speed of 16 knots. There will be accommodation for about 200 first class passengers, and cargo capacity for about 600 tons. The furnaces will be arranged to burn oil as fuel, but will be easily convertible for coal burning. The ship will be amply lighted, and all staterooms will be provided with hot and cold water, and every modern convenience.

Yarrows, Ltd., Victoria, B.C., did the following repair work during June:—C. P.R. s.s. Princess Adelaide, 2,061 gross tons, docked for cleaning, painting and repairs; C.P.R. s.s. Princess Alice, 3,087 gross tons, docked for cleaning, painting and repairs; C.P.R. s.s. Princess Charlotte, 3,844 gross tons, docked for cleaning, painting and repairs; Canadian Government Merchant Marine s.s. Canadian Inventor, 5,500 gross tons, docked for bottom repairs due to stranding; Pacific Construction Co.'s dredge John A. Lee, docked for cleaning, painting and repairs; Producers Rock Gravel Co.'s scow No. 11, docked for cleaning, painting and repairs.

Steamship Idelford, 6,100 d.w. tons, built by Canadian Vickers, Ltd., for Norwegian interests.

the Manager, J. L. Lechance, is located, the Local Manager at Sorel being J. Simard, with whom is associated F. Brydges as Naval Architect.

Vancouver Shipyards Ltd., Vancouver, B.C., has done the following repair work recently. Overhauling of steam tugs Berquist, Elsie, Glenboro and Moonlight; cleaning and painting one of the Dominion Public Works Department's dredges; changing propeller on s.s. Westham; and painting and overhauling some small gasoline boats.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—As indicated in our last issue, the Dominion Government has decided to take over and complete the four wooden barkentines, which this company was formed to build, under special aid from the Dominion Government, for the relief of unemployment during and immediately following demobilization. Owing to financial difficulties, and to the excess of cost of building over the estimates, the company has found it impossible to proceed. The first of the four ships was launched some time ago, and named S. F. Tolmie. It was reported to

Manager, British Columbia Coast Steamship Service, C.P.R., is reported to have stated recently that it is expected that the steel passenger steamship which this company is building for the C.P.R. will be ready for launching during August. All the steel work is reported completed, and the date for the launching is dependent on the completion of the machinery, as it is intended to send her into the water with boilers and engines installed. The ship has been built to conform to the requirements of the British Corporation Register, under special survey, to class B2X, with freeboard. The machinery is being built by the shipbuilding company, under the supervision of James McGown, Superintendent Engineer, C.P.R. steamship lines, and the boilers are being manufactured by the Vulcan Iron Works, Vancouver. Her dimensions are,—length b.p. 317 ft., beam 48 ft., depth of hold 18½ ft. She has a cellular double bottom, and the hull is divided by 8 transverse bulkheads. She will have a single screw, driven by reciprocating engines, balanced on the Yarrow, Schlick and Tweedie system, for a

Steamship Service, Plus.

"In ten minutes, gentlemen, our siren will blow," announced the captain of an ocean liner to a crowd in the smoking room.

"Anything wrong, captain?" asked a timorous passenger.

"No, everything is all right. That will be the highball signal. We are nearing the three-mile limit."—Birmingham Age-Herald.

H.M.C.S. Niobe.—On account of the failure of the New Brunswick Rolling Mills Ltd. to complete the purchase of H.M.C.S. Niobe and 2 submarines, sold to it by tender some time ago, the Dominion Government has entered action against the company at St. John, N.B., for the recovery of \$115,000, the balance claimed to be due. The company, whose tender of \$135,000 for the purchase of the ships as scrap, was accepted, paid \$20,000 on account, and has since endeavored to get out of its contract, on account of the heavy fall in price of scrap metal.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launchings of Steamships.—We have been advised of the launchings of the following steel cargo steamships for Canadian Government Merchant Marine in addition to those mentioned in previous issues.

June 30, s.s. Canadian Engineer, Marine Department contract 49, builder's yard no. 11, approximately 3,500 d.w. tons. The contract for this ship was given the Dominion Shipbuilding & Repair Co., Toronto, and, after that company became bankrupt, the Collingwood Shipbuilding Co., Collingwood, Ont., was given a contract to complete her on a cost plus basis at Toronto.

July 7, s.s. Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, Davie Shipbuilding & Repairing Co., Lauzon, Que.

July 9, s.s. Canadian Cruiser, Marine Department contract 38, builders' yard no. 3, approximately 10,500 d.w. tons, Halifax Shipyards Ltd., Halifax, N.S.

Delivery of Steamship.—In addition to the ships mentioned in Canadian Railway and Marine World previously, the following has been delivered to Canadian Government Merchant Marine for operation.

July 18, s.s. Canadian Pathfinder, Marine Department contract 48; builder's yard no. 10; approximately 3,500 d.w. tons. The contract for this ship was given the Dominion Shipbuilding & Repair Co., Toronto, and after that company became bankrupt the Collingwood Shipbuilding Co., Collingwood, Ont., was given a contract to complete her on a cost plus basis at Toronto.

Change of Ship's Name.—A prince Rupert press dispatch of July 21 states that the name of the second steel cargo steamship, of 8,390 d.w. tons, which is being built there for Canadian Government Merchant Marine under Marine Department contract 43, has been changed from Canadian Trasher to Canadian English.

Officers of Steamships.—In addition to appointments mentioned in previous issues, the following captains and chief engineers of steamships have been appointed or transferred: Canadian Beaver, chief engineer, W. Geddies; Canadian Commander, chief engineer, J. J. R. Pringle; Canadian Conqueror, captain, G. Foy, heretofore captain, Canadian Raider, chief engineer, R. H. Murphy; Canadian Cruiser, chief engineer, J. M. Roche; Canadian Gunner, chief engineer, G. Smith; Canadian Logger, chief engineer, E. G. Rankin; Canadian Mariner, chief engineer, D. Cameron; Canadian Observer, chief engineer, G. Stephen; Canadian Pathfinder, chief engineer, W. L. Hunter; Canadian Raider, captain, H. E. Webb, heretofore captain, Canadian Conqueror, vice G. Foy, transferred to Canadian Conqueror; chief engineer, G. V. LeBlanc; Canadian Sealer, captain A. E. Webb, vice J. A. Hiltz; Canadian Seigneur, chief engineer, F. W. Cunningham; Canadian Settler, chief engineer, F. Todd; Canadian Squatter, chief engineer, C. Lilburn.

Ships Names and Signals.—A daily press warfare with a penchant for hunting trouble, states that "a practical difficulty with Canadian Government Merchant Marine names must be the signaling of such names as Trapper and Trooper, Rancher and Ranger and Sailor

and Sealer, since a dot or a dash in either case may cause error as to name."

When ships are placed in service, code letters for signalling purposes are assigned to each, so that names having any similarity in sound cannot be confused. The call signal letters of each of the ships names are as follows: Canadian Trapper V.G.M.C.; Canadian Trooper, X.V.M.; Canadian Rancher, X.W.O.; Canadian Ranger, X.V.F.; Canadian Sailor, X.V.R.; Canadian Sealer, X.W.K.

Paper from British Columbia.—Canadian Government Merchant Marine is reported to have secured a contract for carrying of paper from Ocean Falls, B. C., to San Francisco, Cal.

Cargoes from Sicily.—The s.s. Canadian Miller sailed from Messina, Sicily, on June 10, and arrived at Montreal on June 28, discharging there, in perfect condition, a cargo of lemons, lemon extract, fiberts and liquor, for many points

wood, Ont.—See Dominion Shipbuilding & Repair Co.

J. Coughlan & Sons, Vancouver, B.C., advised us July 5 that no dates had been fixed for the launching of the steel cargo steamships Canadian Transporter and Canadian Freighter, Marine Department contracts 62 and 63, builder's yard nos. 20 and 21, each approximately 8,390 d.w. tons, which are being built for Canadian Government Merchant Marine, and the keels of which were laid Jan. 6.

Davie Shipbuilding & Repairing Co., Lauzon, Que., launched the steel cargo steamship Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, July 7, the christening being performed by Mrs. R. B. Teakle, wife of the Manager, Canadian Government Merchant Marine, who was presented with a cluster ring of diamonds and sapphires, set in platinum, as a souvenir. The contract for building this ship was signed Feb. 2, 1920, and the keel was laid May 14, 1920.

Dominion Marine Association.

President, A. A. Wright, President, Tide-water Shipbuilders Ltd., and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.
First Vice President, H. S. Cowan, Director of Operation, Canada Steamship Lines Ltd., Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, W. E. Burke, H. W. Cowan and T. R. Enderby, Canada Steamship Lines, Ltd., Montreal; Yvon Dupuis, Sincennes McAlwain Lines, Ltd., Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Alaska Central Steamship Co., Seattle, Wash.; Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Col. G. F. Murphy, C.M.G., Ottawa, Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Kingston Transportation Co., Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; A. A. Wright, Toronto, and L. L. Henderson, Montreal.

Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

in Canada. The great bulk of the cargo consisted of Messina lemons. Forwarding instructions were in the hands of Canadian National Rys. agents within three hours after the arrival of the ship at Montreal, and a trainload of lemons consisting of 22 cars, for points in Ontario and the west, reached Toronto on the morning of July 1. Quantities of the fruit were on sale in stores throughout Ontario on July 2, or within 22 days from the date of loading in Sicily. The rail portion of the transaction was done over C.N.R. rails with the exception of the consignments to Sherbrooke and Medicine Hat, and the C.N.R. lines handled the latter as far as Port Arthur. The points served by this shipment were Montreal, Quebec, Sherbrooke, Toronto, Guelph, Brantford, Hamilton, London, Ottawa, Kingston, Belleville, Port Arthur, Brandon, Moose Jaw, Medicine Hat and Edmonton. The Canadian Ranger, which cleared from Messina, June 22, is also bringing a large shipment of lemons to Canada.

Collingwood Shipbuilding Co., Colling-

Dominion Shipbuilding & Repair Co., Toronto, which went into liquidation, July 31, 1920, had under construction for Canadian Government Merchant Marine, two single screw steel cargo steamships, Canadian Pathfinder and Canadian Engineer, Marine Department contracts 48 and 49, builder's yard nos. 10 and 11, each approximately 3,500 d.w. tons, the water bottoms of both ships being about 75% complete, and the hulls about 60% framed. As stated in previous issues, the Collingwood Shipbuilding Co. was given a contract by the Marine Department to complete the ships at the Toronto yard on a cost plus basis.

The Canadian Pathfinder was launched May 12, made her trial trips July 15, was delivered to the Marine Department July 18, transferred to Canadian Government Merchant Marine and sailed the same day, light, for Montreal, whence she proceeded to St. John, N.B., to load a full cargo of sugar for a United Kingdom port. The Canadian Engineer, which was launched June 30, and christened by Mrs. J. H. Porter, is built for ocean service and is canal size; length over all, 261 ft.; breadth moulded, 43 ft.; depth moulded, 24 ft.; draft loaded, 21 ft.; deadweight carrying capacity, approximately 3,500 tons. The engines and boilers are the usual triple expansion type with cylinders 20, 33 54 x 40 in. stroke, taking steam from two Scotch boilers 14½ ft. diameter by 11 ft., working under forced draught, working pressure 180. The ship has one hold forward and one aft, with machinery space. She is of the single deck type, Canadian bridge and forecastle. Four large hatches are provided and 7 winches and 8 derricks, for handling of cargo. The ship is in an advanced state of construction and will soon be ready for sea. The boilers were built by the John Inglis Co., and the machinery, which was partially built by the Dominion Shipbuilding & Repair Co., prior to liquidation, is being finished by the John Inglis Co. She is expected to be delivered about the middle of August.

Halifax Shipyards Ltd., Halifax, N.S., the steel cargo steamship Canadian Cruiser, Marine Department contract 38, builder's yard no. 3, approximately 10,500 d.w. tons, for Canadian Government Merchant Marine, the keel of which was

launched Oct. 2, 1919, was launched July 9, the christening being performed by Mrs. G. H. Murray, wife of the Premier of Nova Scotia. The Canadian Cruiser is said to be the largest ocean going ship ever built in Canada, her dimensions being 430 ft. long, 56 ft. beam and 38 ft. depth of hold from spar deck. She will have a load displacement of 15,000 long tons. She will be driven by triple expansion engines of about 4,000 i.h.p. with steam supplied from 4 Scotch boilers, oil burning. She will have a speed when loaded of about 13 knots. She is being built to Lloyd's highest class 100-A-1. We are informed that she will be able to carry over 350,000 bush of wheat, which, taking 20 bush to the acre as an average, would represent a crop of 17,500 acres, and would embrace a strip of land a mile wide and 27 miles long. This ship is being built entirely by Canadian workmen, and with Canadian materials, the steel plates, shapes, angles, etc., having been rolled by the Dominion Iron & Steel Co., at Sydney, N.S., the rivets, heavy forgings, etc., being made by the Nova Scotia Steel Co., New Glasgow, N.S. The engines, boilers, winches, auxiliaries, etc., were also made in Canada.

The steel cargo steamship Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, which is also being built by Halifax Shipyard Ltd. for Canadian Government Merchant Marine, and the keel of which was laid Oct. 6, 1919, is expected to be launched about the middle of September.

Midland Shipbuilding Co., Midland, Ont., has under construction, for Canadian Government Merchant Marine, a

steel cargo steamship, Canadian Logger, Marine Department contract 54, builder's yard no. 10, approximately 3,890 d.w. tons, the keel of which was laid June 9, 1920, and which was launched June 8, 1921, the delay in launching having been caused by the non delivery of the engines.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—When the company went into bankruptcy in 1919, it was building for Canadian Government Merchant Marine two steel cargo steamships, Canadian Scottish and Canadian English, Marine Department contracts 42 and 43, builder's yard nos. 1 and 2, respectively, each approximately 8,390 d.w. tons, the keels of which were laid Sept. 27, 1919, and Oct. 20, 1919. When work on the ships was suspended by the Prince Rupert company, the Canadian Scottish was about 90% completed, and the Canadian English about 60%. They are being completed at Prince Rupert, by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., on a cost plus basis, the work being supervised by H. A. Butt, Overseer for the Marine Department. The Canadian Scottish was launched May 12, and at the time of our last advice was expected to be ready for delivery about the end of August. The Canadian English was then expected to be launched about the middle of August.

The Hudson's Bay Co.'s Steamships Baychimo and Nasconie arrived at Montreal recently from London, Eng. The Nasconie took on additional cargo at Montreal, and sailed July 9 on her annual trip to Hudson Bay. The Baychimo was expected to follow later.

Ocean and River Service Estimates.

The estimates for the year ending March 31, 1922, passed at the House of Commons' last session, contain the following items:—

Maintenance and repairs to Dominion steamships and icebreakers	\$1,750,000
Examination of masters and mates	20,000
Investigation into wrecks	12,300
Expenses of schools of navigation	8,000
To provide for temporary relief of distressed seamen and to cover expenses of shipping forms	3,000
Registration of shipping	6,000
Removal of obstructions in navigable waters	18,000
Inspection of live stock shipments	3,000
Subsidies for wrecking plants, Quebec and British Columbia	35,000
Unforeseen expenses	5,000
Life saving service, including rewards for saving life	90,000
	\$1,950,300

The further supplementary estimates for the year ended March 31, 1921, contained the following items:—

Maintenance and repairs to Dominion steamships and icebreakers, further amount required	\$304,000
To provide for temporary relief of distressed seamen and to cover expenses of shipping forms, further amount required	\$3,500

U.S. Seamen's Strike.—A. D. Lasker, Chairman, U.S. Shipping Board, is reported to have announced, June 13, that the marine strike, affecting the whole of the U.S. Merchant Marine, and which had been in effect since May 1, had been settled at a conference he had with the U.S. Secretary of Labor, and representatives of the labor organizations.

Ships Registered in Canada During April, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorised, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are in italics, are the approximate gross tonnage of the vessel, and are not preceded by an asterisk, show the approximate total deadweight, subject to modification as they may vary above or below the figures given and as may be ascertained after the ship is completed. The other figures, which are preceded by an asterisk, show the approximate gross tonnage and as may be ascertained after the ship is completed. Where the total price does not agree with the gross tonnage, the difference is the cost of the cargo gear.

The following contractions are used in the column giving the type of the vessels to be built: a.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p-500p; b., bridge; f.c.e, forecastle.

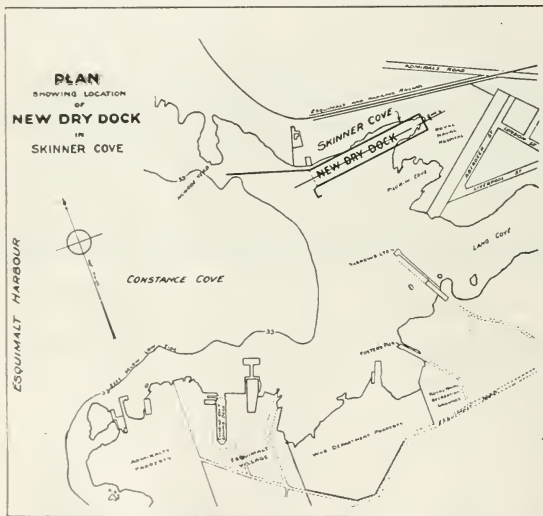

[illegible]

Additional Drydock at Esquimalt, B.C.

The accompanying plan shows the site of the new drydock being built for the Dominion Government at Skimmers Cove, Esquimalt, B.C., also the sites at the existing Government drydock at Constance Cove and Yarrow's Limited shipyard. The drydock will have the following dimensions: total length from outer caisson to head wall, 1,150 ft., divided into three compartments, two end compartments being 400 ft. each, and the central one 350 ft.; width of entrance 125 ft., width of coping 157 ft., width on floor 107 ft.; depth on sill, at high water spring tide, 40 ft.; depth on sill, at low water spring tide, 30 ft., spring tide rise 10 ft., coping of side wall above high water spring tide $4\frac{1}{2}$ ft., floor at outer sill $4\frac{1}{2}$ ft., depth in entrance channel at low tide 33 ft.

head; elevator shaft and tunnels, with elevator and enclosed stairway, the elevator to be of drum type with capacity of 4,000 lb., or about 25 passengers; landing wharf 750 ft. long, west of the dock entrance, and bulkhead 100 ft. long, south of the entrance, built of timber cribs, sheathed with reinforced concrete, filled with stone ballast and mass concrete superstructure; standard gauge railway track on each side of the dock and along the landing wharf, to be laid with standard sections 80 lb. rail.

Construction was commenced in March. The false work for the inner cofferdam has been built, and the filling for the cofferdam is in progress. Material excavated above high water level on the dock site is being used for the dam, the outside of which is being sheeted with

The contract, which was given the P. Lyall & Sons Construction Co., Montreal, includes the construction of a substantial cofferdam to enclose the area within which the works are to be built; the unwatering and keeping free from water of the enclosed area during construction; excavation, both earth and rock, over the area to be covered by the dock, part of entrance pier and channel, and excavations for pump well, drains, culverts, etc.; dredging entrance channel, and other areas, to a depth of 33 ft. below low water, construction of dock complete, with concrete walls, bollards, keel blocks, etc.; two sets of stairs in walls of dock at each end, 16 galvanized ladders on the side walls, and ladders in each sump; two timber slides longitudinal with, and at each end of, the north side wall, with sliding faces of granite 18 in. thick; a roadway 50 ft. wide on both sides of the dock and round the

clay, which is obtained from the dredging being done on the site of the landing stage. A railway spur is being built from the Esquimalt & Nanaimo Ry. to the drydock site, $\frac{3}{4}$ mile, grading on which was completed at the end of June. A contract has been entered into with the British Columbia Electric Ry., by the contractors, for the supply of 750 h.p. of electrical energy, for the operation of compressors, pumps, hoists, etc., during the work, and the company is building about a mile of transmission line. The power will be delivered at 2,200 volts a. c., 3 phase. On the completion of construction, the company will supply all the electrical energy for the operation of the drydock plant, which will be approximately 3,000 h.p., used on three main centrifugal pumps, drainage pumps, miscellaneous motors, lighting, etc.

The subcontractors for the dredging and excavation work are Pacific Con-

struction Co., Vancouver. The cofferdams for the landing stage are being built by Yarrow's Ltd., Victoria. J. P. Forde, Victoria, is District Engineer in charge for the Public Works Department. Hew M. Scott is Superintendent, and G. H. Pethick is Resident Engineer, for the contractors.

Accident to s.s. Rapids King at Long Sault Rapids.

Canada Steamship Lines' s.s. Rapids King, while passing through the Long Sault Rapids, about noon, July 16, met with an accident to her steering gear, and was driven, stern on, on the rocks at Barnhart Island, about 7 miles west of Cornwall. As the island is practically isolated, some difficulty was experienced in obtaining assistance for landing the passengers and their transfer to the mainland. During the afternoon, the captain and purser had one of the ship's lifeboats launched, and eventually landed on the mainland near Cornwall, where they communicated with headquarters. It was not, however until the next day that the 329 passengers could be landed. This was accomplished by means of two lines between the ship and Barnhart Island, one of the ship's lifeboats being used for the transfer, being hauled back and forth with each load. After a climb of about 60 ft. up the bank, the passengers were motored across the island and ferried to the mainland at Maple Grove, and then motored to Cornwall, whence they continued their journey, either by steamship or by train. For the night spent on board, the officers of the Rapids King gave up their staterooms to the women and children among the passengers, and the male passengers distributed themselves in the saloon and at convenient points on deck, so that there was no actual discomfort. After the removal of the passengers and baggage, the ship was worked off the rocks, and as the steering gear damage had been repaired, she proceeded to Montreal. W. E. Burke, Director of Transportation, Canada Steamship Lines, and other of the company's officials were present to superintend the removal of the passengers and to look after their comfort.

British Corporation Classification.—It is announced that in connection with the agreement between the British Corporation for the Survey and Registry of Shipping and the American Bureau of Shipping, providing for technical co-operation and dual classification under equally effective rules, that a new agreement has been entered into whereby the British Corporation's organization in Canada will be utilized for classification in Canada of ships which are classed, or are intended to be classed, with the American Bureau of Shipping. W. I. Hay is the principal surveyor for the British Corporation in Canada.

The Brantford Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with 500 shares of no nominal or par value, provided that it shall carry on business with a capital of \$2,500, and head office at Montreal, to carry on the business of shipbuilder, ship agent, forwarding carrier by land and water, etc. The incorporators are F. B. Common, F. G. Bush, H. W. Jackson, G. R. Drennan, and W. P. Creagh, Montreal.

Atlantic and Pacific Ocean.

The Quebec Steamship Co.'s steamships Fort Hamilton and Fort Victoria have been removed from the Canadian register and registered at Hamilton, Bermuda.

The International Petroleum Co.'s s.s. G. Harrison Smith was launched at Sparrow Point, Baltimore, Md., July 12, the christening being performed by Mrs. G. Harrison Smith, Toronto, wife of the President, International Petroleum Co., and Vice President, Imperial Oil Ltd.

The name of the s.s. Speedy II, sold recently by Kirkwood Steamship Co. to International Paper Co., New York, has been changed to Canipco. It is stated that she will be operated out of Three Rivers, Que., to points on the north and south shores of the St. Lawrence, Gaspé, Labrador and New York.

The former German s.s. Clare Hugo Stinnes I, which was bought by H. A. Powell, St. John, N.B., has been placed on the Canadian register and renamed Philip T. Dodge. She was built at Vegesack, Germany, in 1910, and is screw driven by engine of 270 h.p. She is intended for coastwise telegraph cable, the following dimensions, length 384 ft., breadth 51.7 ft., depth 26.8 ft., tonnage 5,047 gross, 3,691 net.

The Baltic American Line, which has succeeded the Russian-American Line, operating a steamship service between Russian and German ports on the Baltic Sea, and New York, has resumed service, and will, it is stated, make calls at Halifax, N.S. The steamships engaged are named Baltamar, Baltara and Baltida, having been named formerly, Czar, Czarine and Kursk respectively. Pickford & Black have been appointed local agents at Halifax.

The White Star Line (Oceanic Steam Navigation Co.) has bought the former German s.s. Columbus from the Reparations Committee, and it is announced that she is to be placed in the company's service between Southampton, Eng.; Cherbourg, France; and New York. She is a new steamship of about 35,000 tons gross, and was built at Danzig by F. Schichau & Co. She is driven by twin screws, at about 19 knots, and has accommodation for 2,700 passengers. She is 775 ft. long overall, with 83 ft. beam.

The C.P.R. s.s. Empress of Canada, built by Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland, for the C.P.R. trans-Pacific service, underwent her trials in the Clyde during the latter part of June. All tests were reported to have been satisfactory and she returned to the builders for the finishing touches. The completion of this ship has been very much delayed owing to labor difficulties. A full description of her was given in Canadian Railway and Marine World for Sept. 1920, pg. 511, and an illustration in Nov. 1920.

The C.P.R. s.s. Montreal sailed from Antwerp, Belgium, July 12, for Montreal, to open the company's new service between Montreal, Naples and Genoa, in conjunction with that being given by the Navigazione Generale Italiana, with the s.s. Caserta. The s.s. Montreal was formerly the German steamship Koenig Friedrich August, and was bought from the Reparations Committee by the C.P.R. after which she was thorough overhauled at Antwerp. She was built at Hamburg in 1906, her dimensions being, length 476 ft., breadth 55 ft., depth 31

ft. The s.s. Caserta was built in 1904, by Sir W. G. Armstrong, Whitworth & Co., Newcastle-upon-Tyne, Eng.

Maritime Provinces and Newfoundland.

The Emma Bellevue Shipping Co. Ltd., St. John's, Nfld., is being wound up. Tasker Cook is liquidator.

A Dominion order in council has been passed making it an offence to discharge oil, tar or other similar substances into Halifax harbor and providing a penalty of \$1,000 for each offence.

The Eskasoni Steamship Co. Ltd., St. John's, Nfld., is being voluntarily wound up, in accordance with a resolution of an extraordinary general meeting of shareholders. A. J. Harvey is liquidator.

The St. John's, Nfld., longshoremen, who went on strike a few weeks ago, returned to work July 12, on the understanding that the difficulties would be adjusted by the end of the month.

The Dominion Atlantic Ry. s.s. Prince Albert was towed into Parrsboro, N.S., July 14, having broken her tail shaft. It is stated that she struck an obstruction, probably a sunken log, near Cape Blomidon, and broke the shaft, eventually being taken in tow by the tug Onawana.

The s.s. Ruby L. II, which was launched by J. A. Balcom & Co., Margaretsville, N.S., recently, was fitted with boilers and engine by Union Foundry Co., West St. John, N.B., and left for Margaretsville, July 15, where she is to replace the s.s. Ruby L. on the Margaretsville Steamship Co.'s bay route.

The U.S. fishing schooner Esperanto, which the Interior Department's fishing schooner race last year, and which foundered off Sable Island towards the end of May, was raised early in July, but before she could be completely salvaged she again sank. Four other attempts to keep her afloat after raising having failed, she was abandoned July 16.

The s.s. Roseina B., owned by C. & G. Brister, Halifax, N.S., was practically destroyed by fire at the owners' wharf at the Northwest Arm, Halifax, at the end of June. She was built at Mahone Bay, N.S., in 1917, and was screw driven by engine of 54 h.p. Her dimensions were, length 123.2 ft., breadth 21.7 ft., depth 9.3 ft., tonnage, 320 gross, 181 net.

The s.s. Bassam, at one time owned by the U.S. Shipping Board, which met with a series of mishaps off Newfoundland and Miquelon, a short while ago, was towed into Halifax, N.S., early in July. She is a wooden steamship of about 3,500

tons, and ran ashore on the Newfoundland coast, and, after being refloated, again went ashore at St. Pierre, Miquelon, where she was abandoned. Further efforts by outside parties were successful in floating her and taking her to Halifax. It is estimated that repairs will cost about \$20,000, and it is reported that a contract for them has been awarded to C. A. Huntley, Parrsboro shipyards, Parrsboro, N.S.

Province of Quebec.

The Dominion Public Works Department received tenders to July 26 for the reconstruction of training and landing piers at Poupore, Que.

Ha Ha Bay harbor has been proclaimed as a port to which the Canada Shipping Act, part 12, shall apply. Its limits include all the waters of Ha Ha Bay and the Saguenay River, southwest of a line drawn from the point where the division line between Bagot and Otis Tps. meet high water mark, due northwest astronomically to the shore at Cape West.

The Dominion Government has appointed Mr. Justice Panneton, of the Quebec Superior Court, as a commissioner to investigate and report in respect to the amount required to pay the Park St. Charles Co. Ltd., land occupied by the Quebec Harbor Commission as per the arbitrator's verdict, which has been sustained by the Superior Court in the company's favor, for \$60,000.

The Quebec Harbor Commissioners entered action recently against the Frenhe Government s.s. Bouzonville, and caused its seizure, on a claim for \$30,000 for damage to the lift bridge at the Louise docks, where the ship was being towed to its winter berth by steam tug J. S. Thom. The French Government protested the seizure, claiming that, according to custom, usage and law, a ship belonging to a sovereign state, which is an ally of Great Britain, cannot be seized in time of peace. The judge in Admiralty has been asked to annul the seizure on these grounds.

A claim by the Societe Maritime et Commerciale, France, against Webster Steamship Co., and Levis Ferry Ltd., for \$240,000, was dismissed at Quebec, Que., June 30. From the evidence it appears that the French company, three years before the armistice, bought the s.s. John S. Thom from Levis Ferry Ltd., for \$240,000, and paid \$180,000 to that company, and \$60,000 to Hon. L. C. Webster, President, Webster Steamship Co. The intention was to operate the steamship in transporting troops across the Eng-

Ships Added to and Deducted From the Canadian Register During April, 1921.

Added.	Steam.		Sailing.	Tonnage—

lish Channel. Subsequent to the signing of the armistice, the French company claimed that it found the ship unsafe for navigation, and asked a return of the purchase money.

Cross actions for damages, sustained in a collision between the Canada Steamship Lines' s.s. Maplehurst, with barge brookdale in tow, and the George Hall Coal Co.'s steam tug Margaret Hackett, with the barge Gladys H. in tow, in Lake St. Peter, July 16, 1920, came before the Admiralty Court at Montreal, recently. The damages claimed for the Maplehurst are \$6,000, and for the Margaret Hackett, \$58,000. Judgment was reserved. In the Wreck Commissioner's enquiry, which followed the collision, the master of the Margaret Hackett was exonerated from blame, as were those on the barges Brookdale and Gladys H., but the officers were advised to keep a better lookout in future. The Maplehurst was also exonerated, but the master was found in default for not carrying properly constructed lights, in accordance with International Rules of the Road, article 5, and he was severely reprimanded. In addition, the pilot and the mate of the s.s. Maplehurst were cautioned.

Ontario and the Great Lakes.

Canada Steamship Lines' s.s. Mapleboro, en route from Montreal to Toronto with package freight, ran ashore about 5 miles below Prescott, July 11.

Canada Steamship Lines' Mapleboro, downbound, from lake ports to Montreal, went aground on shoals near the Cardinal Canal, July 12, and was reported to be badly damaged.

Canada Steamship Lines' s.s. City of Hamilton, while upbound from Montreal to Toronto with package freight, ran ashore near Iroquois, July 13. She was released July 19 by a wrecking company.

The Queen Victoria Niagara Falls Park Commission is reported to be considering the operation of passenger steamships between Toronto, Niagara-on-the-Lake and Queenston in the summer excursion trade.

The movement of grain from Lake Superior ports, during the early part of July was reported to be light, with little chartering. For the first week of the month, 2,666,494 bush. of all kinds of grain were shipped from Fort William and Port Arthur, the receipts for the same period being 2,922,734 bush. At the end of that period the elevators at those ports held 15,018,022 bush.

The Cleveland Cliffs Iron Co.'s s.s. Andaste is being shortened by 20 ft., to allow her to pass through the Welland Canal. The work is being done by the Great Lakes Engineering Co. at its Ecorse yard, where she was towed after having been laid up at Cleveland for some time. She was expected to be ready for service during July. It is stated that owing to a good demand for tonnage in the lower lakes trade, more steamships may be reduced to Welland Canal size.

The U.S.s. s.s. William P. Palmer, with a cargo of corn from Buffalo, N.Y., for Montreal, while passing down through the Welland Canal, July 3, had some difficulty in getting over the miter sills at lock 6, having sprung a leak. She lay below lock 6, until July 6, when she was taken to Port Dalhousie, after having been lightened somewhat. The leak was repaired there, and she was further

lightened, and on July 7 she went up the canal, bound to Buffalo for repairs. It is said that the leak was caused by the loosening of 5 rivets. There was no damage to the canal, and no delay to navigation.

The steam tug Wahnapiatae, owned by C. Beck Mfg. Co., Penetanguishene, Ont., which struck a rock near Clapperton Island, in June, and was saved by the Georgian Bay Shipping & Wrecking Co., Midland, and taken to port for repairs, July 15. A large hole was torn in her bow, but she was expected to be ready for service before the end of the month. An attempt to raise her by another wrecking company was abandoned, owing to the death of diver Godfrey, whose helmet became partially dislodged. The Wahnapiatae was built at Penetanguishene in 1904, and is screw driven by engine of 37 h.p. Her dimensions are: length 91 ft., breadth 18.6 ft., depth 10.2 ft.; tonnage, 153 gross, 95 net.

The Ontario Transportation & Pulp Co., Thorold, Ont., has bought the s.s. Linden, and transferred her from the U.S. to the Canadian register. She was built at Port Huron, Mich., in 1895, was rebuilt there in 1908 and underwent large repairs in 1913. She has an oak hull and is of the well deck type, with diagonal strapping on frames, steel arches, steel boiler house, steam pump wells, and with bow sheathed for operation in ice. Her dimensions are:—length h.p. 206 ft., breadth moulded 36 ft., depth moulded 13 ft. 8 in., tonnage, 894 gross, 708 net. She is equipped with fore and aft compound engine, with cylinders 22 and 44 in. diam. by 30 in. stroke, 490 i.h.p. at 90 r.p.m., supplied with steam by a fire-box boiler 10½ x 13 ft. at 125 lb.

A steamship company is reported to be in process of organization in Detroit, Mich., to operate steamships between Detroit and Montreal. It is stated that the ships to be utilized were built originally for the lakes trade, were transferred to salt water service some time ago, and have now been returned to the lakes. It was expected that the first sailing would take place from Detroit during July, and that other sailings would be arranged as business offered. Docking facilities are reported to have been arranged for near the entrance to the Lachine Canal at Montreal, and at the Great Lakes Engineering Co.'s wharves at Detroit. It is stated that freight rates

will be 20% below the all rail rates, with 5% discount for prepayment.

Manitoba, Saskatchewan and Alberta.

The Northern Trading Co. launched the tow barge Belle Rock at Fort Smith, during June, after which she left, in tow of the s.s. Northland Trader, for the north. The boat Northland Pioneer, to burn oil, was also launched at Fort Smith, and left for Fort Norman, July 2. This boat was built at a mill south of the point and shipped in knock-down shape to Fort Smith, where she was assembled.

The Alberta & Arctic Transportation Co., Edmonton, Alta., recently announced its steamboat services to the Fort Norman oil fields and other northern points. A steamboat service is given via the Peace River route, from the terminus of the Edmonton, Dunvegan & British Columbia Ry., and via the Athabasca River route from Lynton, the terminus of the Alberta & Great Waterways Ry. The steamboats D. A. Thomas, Slave River, B. C. Express and Distributor are being used. The company also operates the gasoline boats Canadusa on the Athabasca and Lower Peace Rivers, and Lady Mackworth on the Slave River and Lake and the Mackenzie River. Caterpillar tractors are operated across Smith portage, each having a capacity of 30 tons of freight.

British Columbia and Pacific Coast.

The C.P.R. steamship service by the s.s. Tees, between Vancouver, Ocean Falls, Swanson Bay, Prince Rupert and way ports, has been discontinued temporarily.

The Marine Department has announced that a survey of Ripple Rock, in Seymour Narrows, will be made to determine the approximate cost of its removal, in the interests of navigation.

The small s.s. Gunner, which was bought from the British Government recently by Capt. C. O. Polkinghorne, Vancouver, has been taken to the Pacific coast by him for operation in the north coast trade. She has a steel hull, was built in 1915, and used during the war as a submarine chaser. She took 56 days on the voyage from Cardiff, Wales, to Vancouver, via the Panama Canal.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June, 1921:

Articles	Eastbound	M. ft. B. M.	Canadian Canal	U.S. Canal	Total
Lumber	1,134	35,877	1,134	35,877	36,511

Mainly About Marine People.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, and of the Naval Service, after being in England, with Mrs. Ballantyne and their two sons, for some weeks, made an automobile trip with them in Belgium and France and is expected to sail for Canada Aug. 4.

E. H. Beasley Memorial.—In connection with the death of E. H. Beasley, General Manager, Union Steamship Co. of British Columbia, Vancouver, B.C., in an aeroplane accident last year, a local committee, consisting of C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co.; George Kidd, General Manager, British Columbia Electric Ry.; F. W. Peters, General Superintendent, British Columbia District, C.P.R.; K. Houlgate, B. Wilson, C. Spencer and W. G. Payne, with C. S. Meek as Chairman, was formed to carry out a suitable memorial. Mr. Meek, who was a son in law of the late Sir William Whyte, formerly Vice President, C.P.R., died in March, but the committee continued the work and decided to equip a ward for sick mariners in St. Pauls Hospital, Vancouver. This has been completed and is reserved exclusively for sick mariners. A brass plate indicates the situation of the ward in the hospital and another is placed over the door. In the ward is hung a large steel engraving of a life sized portrait of Mr. Beasley.

Capt. W. H. Crossley, a shipmaster of the Grace Steamship Lines, New York, on leave of absence through ill health, died at Winthrop, N.S., his birthplace, on July 14, aged 56.

M. P. Fennell, Secretary, Montreal Harbor Commissioners, has been invited by the Mayor of St. John, N.B., to speak there on the commission method of governing harbors.

E. Hawken, Assistant Deputy Minister of Marine, and his family, are spending a little time at Victoria, Prince Edward Island.

Frederick S. Isard, whose appointment as Managing Director, Canada Steamship Lines, Ltd., Montreal, was announced in a recent issue, was born at Hamilton, Ont., Aug. 4, 1888, and educated there. He commenced his business career with the International Harvester Co. at Hamilton. He entered transportation service in 1911, and has been to 1913, Comptroller, Canada Inter-lake Line, Toronto; 1913 to 1919, Comptroller, Canada Steamship Lines, Montreal; 1919 to May 1921, Director of Finance, Canada Steamship Lines, Montreal. He is a director of the latter company and also of the Collingwood Shipbuilding Co., Halifax Shipyards Ltd., of which he is also Treasurer, Cluff Ammunition Co. and Canadian Chadwick Metals Co. He is a member of the Engineers' and Albany Clubs, Toronto, Hamilton Club, Hamilton, Ont., and Montreal Club.

C. Gardner Johnson has been appointed agent at Vancouver for the Williams Line steamships, the head office of which is at Seattle, Wash.

Wm. Lockerbie, for 25 years chief engineer, C.P.R. upper lakes steamship Athabasca, until he retired in 1914, died at Edmonton, Alta., July 15, aged 72, and was buried at Collingwood, Ont.

A. B. Mackay, formerly of R. O. & A. B. Mackay, steamship owners, etc., Hamilton, Ont., is spoken of by the Liverpool

Journal of Commerce, Southampton, Eng., correspondent, as "the great Canadian shipping magnate" in connection with a statement that he has taken a long lease of Kent House, East Cowes, Isle of Wight, from the Marquis of Milford Haven. The correspondent adds that "Mr. and Mrs. Mackay propose to make their home at East Cowes, for, at any rate, a few years, while Mr. Mackay will make some three or four business trips to Canada and the United States each year." The fact that Mr. Mackay had leased Kent House was mentioned in Canadian Railway and Marine World several months ago.

Charles F. Mason, heretofore Assistant Manager, White Star Line (Oceanic Steam Navigation Co.), Winnipeg, has been appointed Assistant Passenger Manager of the line at Montreal.

F. S. Isard,
Managing Director, Canada Steamship Lines, Ltd.

Sir Frederick Orr-Lewis, President, Canadian Vickers Limited, who has been spending some time in Montreal, sailed from New York, on July 15, on his return to England.

Jas. B. Stewart, Toronto, has been appointed Inspector of hulls and equipment of steamships, there, with the title of Steamship Inspector (General).

F. C. Thompson, agent, Ulster Steamship Co. (Head Line), and marine insurance broker, Toronto, died suddenly, aged 46, while on business at Boston, Mass, July 11. He was buried at Toronto, July 15.

Welland Canal Contracts.—The Railway and Canals Department has given the Canadian Dredging Co., Midland, Ont., a contract for placing stone protection on the Welland Canal summit level between Thorold and Port Colborne. The Department will receive tenders to July 25 for the completion of sections 1 and 2 combined.

Suction Dredge Tornado.

J. H. Sinclair, Antigonish and Guysborough, N.S., asked a number of questions in the House of Commons recently, which were passed as an order for a return, which has been sent as follows:—

Q. "Was suction dredge Tornado employed in dredging in Courtenay Bay, or St. John Harbor, N.B., during 1920?"
A. "Yes, employed by St. John Drydock & Shipbuilding Co. in performing its contract for harbor improvements in Courtenay Bay."

Q. "If, so who is the owner?"
A. "St. John Drydock & Shipbuilding Co."

Q. "Where was the dredge built?"
A. "Toronto."

Q. "From what port did it sail and at what date did it arrive at St. John?"
A. "From Norfolk, Va., arrived Aug. 5, 1920."

Q. "What was the total expenditure to Dec. 31, 1920, in connection with the work done by this dredge?"
A. "\$140,440."

Q. "Were certain pontoons lost when the dredge was taken to St. John, and if so were they recovered?"
A. "No information."

Q. "Where is the dredge Tornado now?"
A. "At Courtenay Bay."

The Dominion Line, now associated with the White Star Line, as the White Star-Dominion Line, celebrated its 50th anniversary during July. The Dominion Line commenced business in 1871 as the Mississippi & Dominion Steamship Co., its fleet during its early years consisting of the steamships Memphis, Mississippi, St. Louis, Texas and Vicksburg. Summer sailings were made to Montreal, the winter ports then being Boston, Mass., and Baltimore, Md., and later changed to Portland, Me. The steamships Dominion and Ontario were added in 1874, and in 1879 other ships, named Montreal, Ottawa, Toronto, and City of Dublin, were used, the last named being changed later to Quebec. In 1883, the steamships Sarnia and Oregon were added, and were the first of the company's steamships to have first class accommodation amidships. The s.s. Vancouver was added in 1884, and the s.s. Labrador in 1891. In 1896 was commenced the building up of the fleet as it is at present, with the arrival of the s.s. Canada at Montreal. The company became associated with the White Star Line in 1899, and has since maintained a combined and extended service on the St. Lawrence route.

The Gaspe Coast Co. Ltd. is reported to be under organization, with office in Merger Bldg., Quebec, Que., to take over the s.s. Brumath, and operate her between Montreal and Quebec, and a number of small ports on the Gaspe coast below Matane. The Brumath is one of the five full powered wooden barges built by Three Rivers Shipyards Ltd., Three Rivers, Que., last year, for the French Government, and as mentioned in Canadian Railway and Marine World for July, she was sold recently to Capt. Jos. Rioux, Gaspe County, Que., for \$36,750. It is stated that this ship, which was built originally to carry freight only, has been fitted with passenger accommodation for 21 first class, and from 50 to 60 second class passengers. She took her first cargo at Montreal, at the end of June, and is operating on a fortnightly schedule.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held, and judgments delivered in connection with the following casualties:—

Stranding of s.s. Keyingham.

Held at Quebec, Que., recently, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and T. McGough, as nautical assessors, into the stranding of the s.s. Keyingham, owned by the Preston Steam Navigation Co. (England), bound from Port Alfred, Cap. to Great Britain, with pulpwood, on the Bar Reef at the mouth of the Saguenay River, May 14. After hearing the evidence, the court decided that neither the master, officers, nor pilot, was in default, but that the casualty was due to the fact that the pilot expected to hear the bell of buoy 95, which failed to sound in time, and to an act of God, and exonerated the ship's officers and pilot from all blame. The following was added as a rider to the finding:—The court being composed of men who have had extensive experience in the navigation of the Saguenay River, and in view of the evidence adduced respecting the usefulness of aids to navigation at the mouth of that river, is of unanimous opinion that the bell buoy mentioned in the course of this enquiry, is useless for the purpose for which it is placed. A bell buoy can be effective only when it stands in a perpendicular position, when the hammer can strike both sides of the bell. Its efficiency is decreased on account of the force being reduced when the buoy is at an angle, which happens at the beginning of flood and ebb; but when through the strength of the tide, it is forced into a horizontal position, it becomes absolutely useless, and it is at the strongest of the tide it is most needed, as the eddies near that vicinity are more numerous and the race strongest. The court cannot suggest a substitution, but intimates that if a lightship is thought useful in June and July and until the end of the navigation season, the same necessity exists at the opening of trade in that river, which is now very extensive. The court is also of opinion that a powerful whistle and light should be installed on the lightship, and is submitting the above for the serious consideration of the Marine Department. If a buoy is to be maintained, it can only be effective and useful if buoyed or stayed, if such is possible, to keep it upright. This suggestion is made with all reserve, and is only submitted tentatively.

Grounding of s.s. John Rugee.

Held at Montreal, recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre as nautical assessors, into the grounding of the George Hall Coal Co.'s s.s. John Rugee on Pointe Noire in the Saguenay River, June 1. The evidence showed that early in the morning of June 1, the pilot retired from the bridge, leaving orders to keep the ship in position, which he stated was n.w. by w. During his absence a green light and masthead light were seen on the starboard bow (the witness said it was a red light). Two blasts of the whistle were given, and the wheel was ordered starboard, by the mate, who was on the bridge, the master being on the lower bridge. The

oncoming ship had not given an immediate reply, so the helm remained starboard, with a strong wind blowing from the northward, and tide ebbing at about 6 or 7 miles. The ship must have swung rapidly. The pilot must have seen the return he found her heading s.e. by e. and gave an order full speed ahead and hard aport. The evidence on this point seemed conflicting, and the court concluded that the pilot had been on deck for a time before he gave an order. The helmsman the anchor were let go and the order given, full speed astern. The ship immediately grazed land for a good distance, and evidently dragged her anchor, as she was about 2 miles southward before the anchor caught. The evidence showed that the pilot exercised poor judgment in attempting to bring a light ship to the wind under such conditions, and as there was no particular haste, it having been decided to await daylight before entering Tadoussac, the most sensible thing to have done was to have a starboard anchor bring her up port side to the wind. Under the circumstances it is to be wondered that the hawse pipes were not torn off and the anchor lost. The master should not have abstained from offering a suggestion, but he seemed to have been under the impression that as the pilot was supposed to know more than he of Saguenay navigation, it would have been wrong to interfere, though he admits that the reverse of the pilot's order would have been the proper way. He therefore failed to exercise his prerogative in suggesting or ordering a different manoeuvre. The pilot, H. Lachance, committed a grave error of judgment and the court expressed the opinion that he was too long absent from the bridge. The court therefore found that the master, Capt. A. R. Barrett, was in default for not having asserted his authority, reprimanded him and cautioned him to assert himself when a question of seamanship is involved. The pilot, H. Lachance, was also found in fault, but owing to the climatic conditions and the ship being light, thus affording less facility in operation, the court decided to deal leniently with him, fined him \$50, to be paid by June 30, and cautioned him that should he be called before the court in future and found in default, he would be more severely dealt with.

The Donaldson Line's s.s. Gracia, which arrived at Montreal, July 13, from Glasgow, Scotland, on her maiden trip, was completed recently at Greenock, Scotland, and has the following dimensions: length 425 ft., breadth 34 ft., depth 33 ft., with a carrying capacity of 8,000 d. w. tons, or 490,000 cu. ft. She has been specially designed for handling cargo, and her high 'tween decks of 9 ft. make her an exceptional ship for carrying perishable freight. There are 14 winches, and in no. 2 hatch there is a derrick tested to 14 tons. Special attention has been paid to ventilation. The propelling machinery consists of a set of double gear-turbines, for a speed of 12½ knots at sea with full cargo. Steam is supplied by 4 Scotch boilers equipped for burning oil fuel, and so arranged that the furnaces can be changed to burn coal as required. Oil fuel is carried in the double bottom and side tanks. She sailed from Montreal, on her return trip, July 16.

The Champion-Corcoran Collision.

An action brought by the U.S. Shipping Board against the s.s. Champion, owned by La Cie. Maritime et Industrielle de Levis, Levis, Que., for damages sustained by the s.s. Corcoran, in a collision between the two ships, just below Quebec, June 26, 1919, came before the Admiralty Court at Montreal, July 5, when judgment with costs was given against the Champion. The Corcoran was built on the Great Lakes, and was taken down to Quebec, whence she was to sail for France. The Corcoran and Champion both left their docks about the same time, the latter to go to St. Joseph de Levis, to pick up passengers, and thence to the Isle of Orleans. As there were no passengers at St. Joseph, the Champion did not stop, but put her helm to starboard and proceeded diagonally across the river, which at that point is about ¾ mile wide. The Corcoran was going down in mid channel, with the Champion on her starboard quarter, and it was stated that when the Champion starboarded they were about 500 ft. apart, and a few minutes afterwards they collided, each blaming the other. The evidence on this point was conflicting, and the officers of the Champion claiming that they did not see the Corcoran at the time of starboarding, although, as stated, 500 ft. apart. Mr. Justice MacLennan, in giving judgment, stated that they ought to have seen the Corcoran, if a proper lookout had been kept. The Champion was the overtaking ship, and it was her duty to keep out of the Corcoran's way, and the court had boarded across the channel, she had committed a breach of article 24 of the International Rules of the Road. No signal was given, as required by Article 28, but that did not contribute to the accident. The difficulty, and hazard of collision, were created by the improper navigation of the Champion, and at the last moment it was clear that there was no possibility of the Champion avoiding the collision by keeping out of the Corcoran's way, and this justified the Corcoran in putting her helm hard a port, but she did not give the whistle signal called for by article 28, and though she was considered blameable for this omission, it was held that it did not contribute to the collision. The Champion was held to be solely responsible for the accident, through failure to observe articles 24, 27 and 29 of the International Rules of the Road, and the Corcoran was not held responsible through any fault on the part of those in charge of her.

Cpts. A. L. Starratt and H. Kjerland acted as nautical assessors at the trial.

United Transit Co. Ltd. has been incorporated under the Dominion Companies Act with \$24,000 authorized capital and office at Montreal, as a private company, to carry on business as merchant and carrier by land, air and water; ship, cargo, lighter and large cargo; wharfinger, storekeeper, dockowner, ship, freight and insurance broker and kindred business. The provisional directors include L. P. Crepeau, K.C., Montreal.

Rafting Logs by Electricity.—The Nashwaak Pulp & Paper Co. is reported to have adapted electricity to the rafting of logs on the Nashwaak River in New Brunswick. The raft is equipped with a two-phase motor of 20 h.p., and this, with a crew of 70 men, will, it is claimed, do the work which formerly took a crew of 200.

Harbor and River Estimates for 1921-1922.

The Public Works Department estimates for the year ending March 31, 1922, passed at the House of Commons' last session, contain the following items:

Chargeable to Capital.

Port Arthur and Port William, improvements	170,000
Quebec Harbor, Champlain dock to complete	136,000
St. John Harbor, improvements	1,250,000
Toronto Harbor, improvements	1,000,000
Toronto Island, breakwater protection	175,000
Total	\$2,731,000

Chargeable to Income.

NOVA SCOTIA.

Bailey's Brook, extension to pier	\$6,000
Bass River, wharf	20,000
Disby, repairs to pier	5,000
East Sheet Harbor, repairs to wharf	1,200
Harbors and rivers generally, repairs and improvements	60,000
Lower West Public, repairs to breakwater	1,000
Maitland, completion of extension of ferry wharf	1,000
North Landing, repairs to wharf	1,600
Noel, repairs to wharf	2,500
Nyanza, repairs to wharf	1,200
Parabrook, repairs to wharf	1,650
Parker's Cove, repairs to wharf	1,200
Port Hood, wharf repairs and extensions	7,000
Scotch Cove, (White Point), breakwater extension	9,800
Seaford, rebuilding part of breakwater	7,100
Seaford's Cove, wharf	2,500
Summersville, repairs to breakwater wharf	2,600
Sydney, wharf	100,000
Three Fathom Harbor, repairs to breakwater	9,000
Watt Settlement, repairs to wharf	2,000
West Arichat, repairs to breakwater	3,000
West Chezzetcook, repairs to breakwater	15,000
Western Head, repairs to breakwater	1,500
Whycocomagh, repairs to wharf	4,000
Yarmouth Bar, repairs and improvements	4,000
Total	\$274,050

PRINCE EDWARD ISLAND.

Annapolis, repairs to wharf	\$1,400
Belfast, repairs to wharf	2,100
Hager's wharf, repairs	1,150
Harbors and rivers generally, repairs and improvements	14,000
Naufrage Harbor, repairs to breakwater	1,000
North Lake, boat harbor	17,000
Port Selkirk, repairs to wharf	1,100
Porcupine, repairs to wharf	1,500
Vernon River South, repairs to wharf	2,250
Victoria, repairs to pier	1,800
Total	\$43,400

NEW BRUNSWICK.

Cape Bald, repairs to breakwater pier	\$6,500
Harbors and rivers generally, repairs and improvements	40,000
Lord's Cove, wharf	14,000
North Head, Grand Manan Island, repairs to breakwater wharf	1,600
Quaco (St. Martin's), reconstruction of breakwaters	29,800
Richibucto Cape, completion of pier and breakwater	1,000
St. Andrews, repairs to wharf	7,500
Wilson's Beach, repairs to breakwater wharf	1,700
Total	\$102,100

QUEBEC.

Anne aux Gascons, wharf	\$49,000
Aylmer, repairs to wharf	1,800
Contrecoeur, repairs to wharf approach	5,400
Croix Point, repairs to wharf	3,800
Deschambault, repairs to wharf	1,095
Gaspé, wharf repairs and reconstruction	84,000
Grande Méchinné, repairs to wharf	1,850
Grosse Ile Quarantine station, extension of and repairs to wharves	60,000
Harbors and rivers generally, repairs and improvements	76,000
Île Perrot, wharf repairs and improvements	1,100
New Richmond, repairs to wharf	2,600
North Timiskaming, wharf	8,800
Notre Dame des Sept Douleurs (Isle Verte), completion of western wharf	2,800
Pointe aux Trembles, repairs to wharf	5,800
Point Shear, Amherst, repairs to pier	6,500
Rimouski, harbor improvements	17,900

Riviere du Loup (en bas), repairs to wharf	4,100
Riviere du Loup, lock and dam, reconstruction of protection walls	14,400
St. Famille, wharf repairs and reconstruction	4,000
St. Francis, repairs to wharf	9,000
St. Jerome, repairs to wharf	1,000
St. Mathias, wharf repairs and improvements	1,700
Tadoussac (Anne de l'Est), repairs to wharf	1,125
Thurso, repairs to wharf	1,650
Total	\$93,820

ONTARIO.

Bayfield, repairs to pier	\$4,400
Collingwood, breakwater reconstruction	25,000
Detroit Harbor, repairs and renewals to wharves	15,000
Dyer's Bay, repairs to wharf	1,400
French River, Dams, repairs and maintenance	3,500
Goderich, repairs to docks	6,600
Harbors and rivers generally, repairs and improvements	65,000
Kenora, repairs to wharf	1,900
Kingston, maintenance and operation of combined wharves and bridges	17,800
Kingsville, repairs to wharf and renewals to piers	8,500
Leamington, repairs to pier	5,500
Little Current, rebuilding wharf	31,000
McLaren's Landing, wharf	6,600
Midland, repairs to wharf	1,000
Owen Sound, wharf reconstruction	70,000
Pelee Island, repairs to piers	4,400
Port Colborne, repairs to breakwaters	55,000
Port Dover, repairs to piers	11,000
Providence Bay, repairs to wharf	4,400
Rondeau, harbor repairs and improvements	10,000
Shequandah, wharf reconstruction	4,700
Thessalon, to complete reconstruction of wharf	12,250
Total	\$370,850

MANITOBA.

Harbors and rivers generally, repairs and improvements	\$15,000
Selkirk, repairs to wharf	15,000
Fas, wharf	7,000
Total	\$37,000

SASKATCHEWAN AND ALBERTA.

Harbors and rivers generally, repairs and improvements	\$20,000
--	----------

BRITISH COLUMBIA.

Alice Arm, wharf, conditional on Provincial Government building road	\$18,500
Albion, repairs to wharf	1,150
Boswell, floating wharf	8,500
Carroll's Landing, wharf	11,000
Fraser River, (lower), operation of snag boat	30,000
Graham, wharf	7,700
Harbors and rivers generally, repairs and improvements	95,000
Hope Bay, North Bender Island, repairs to wharf	3,600
Iloca, wharf	9,200
Ketchikan, wharf	11,000
Kuskokum, wharf	6,800
Ladysmith, wharf	12,000
Nanaimo, repairs to wharf	6,500
Mission, repairs to wharf	1,800
Nanaimo, repairs to wharf	2,150
North Gabriola Island, repairs to wharf	1,750
Prince Creek, floating wharf	2,800
Proctor, floating wharf	1,700
Sandspit Point, reconstruction of wharf	11,500
Skidegate, repairs to wharf	5,500
South Gabriola Island, wharf	2,300
South Pender Island, repairs to wharf	1,800
This Island, reconstruction of wharf	4,600
Tofino, repairs to wharf	4,600
Total	\$259,950

GENERALLY.

Harbors and rivers generally	\$30,000
--	----------

DREDGING.

Maritime Provinces	\$500,000
Ontario and Quebec	450,000
Manitoba, Saskatchewan and Alberta	50,000
British Columbia	400,000
Total	\$1,400,000

Working Expenses, Etc., Chargeable to Collection of Revenue.

East River, lock and dam	\$2,000
Fort Simpson, wharf	5,000
Montreal River, dam at Latchford	3,900
Riviere du Lievre, lock and dam	25,800
St. Andrew's, wharf, lock and dam	25,800
Selkirk, repair slip	5,800
Total	\$44,800

The further supplementary estimates for the year ending March 31, 1921, contained the following Public Works items:

Nova Scotia, Owls Head, repairs to wharf, further amount required	\$1,110
Nova Scotia, Port Lorne, breakwater repairs and renewals, further amount required	1,250
British Columbia, Moreby Island, wharf renewal, further amount required	1,250
Total	\$2,610

The further supplementary estimates for the year ending March 31, 1922 contain the following Public Works item, chargeable to capital.

Port Arthur and Port William, harbor improvements, further amount required	\$100,000
--	-----------

The further supplementary estimates for the year ending March 31, 1922 contain the following Public Works items, chargeable to income:

Nova Scotia.

Belliveau's Cove, breakwater renewals	\$3,900
Big Pond, repairs to wharf	2,000
Black Rock, breakwater improvement	3,500
Blanche, breakwater repairs	1,500
Bluff road, replace damaged breakwater	10,600
Canada Creek, rehabilitating part of breakwater	2,800
Canning, Corbitt sheds and repairs to wharf	1,500
Cheticamp, enlargement of freight shed	1,200
Cow Bay (Port Morien), repairs to breakwater	8,000
Diligent River, repairs to wharf	900
Fourchu, wharf extension	2,200
Hall's Harbor, repairs to wharves and sluice gates	1,600
Ingonish ferry, repairs to wharf	1,100
Iona, repairs to wharf	1,000
Krant Point, repairs to wharf	1,000
Long Cove, repairs to breakwater	1,300
Malahat, wharf extension	1,750
Malignant Cove, wharf reconstruction	2,000
Mira River, to repair and extend jetty	3,500
New Glasgow, wharf reconstruction	2,700
Petite Riviere, repairs to breakwater	1,200
Port Hawkesbury, repairs to wharf	1,000
Poulin, repairs to wharf	3,400
Prospect, reconstruction of wharf	1,500
Ray's Creek, repairs to wharf	3,600
Sandford, breakwater repairs	3,600
Salmon River, repairs to breakwater	7,000
Sandy Cove, breakwater repairs and renewals	1,400
Smith's Cove (Port Hood Island), breakwater extension	5,000
Trou Cove, repairs to breakwater	1,700
Bay Fortune, wharf repairs and enlargement	1,850
Belle River, repairs to breakwater	3,000
Rustico, repairs to breakwater	7,000
Black's Harbor, New Brunswick, wharf extension	2,000
Chocolate Cove float	1,000
Gull Cove, breakwater completion	2,000
Benford, reconstruction of wharf	1,700
Two Rivers, repairs to wharf	1,200
Woodlands, repairs to wharf	2,000

Quebec.

Anse St. Jean, wharf reconstruction	\$2,000
Beloeil Station, repairs to protection piers	12,300
Cacouna, repairs to wharf	3,600
Cape Cove, repairs to wharf	3,600
Cap St. Ignace, repairs to wharf	6,000
Chicoutimi, repairs to wharf and construction of wharf	3,200
Father Point, repairs to wharf	3,600
Grand River, repairs to pier	12,000
Kamouraska, repairs to wharf	1,200
La Malbaie, repairs to wharf	1,400
Lavaltrie, reconstruction of wharf approach	2,000
Paspébeau East, to repair and reconstruct wharf	4,000
Piche Point, repairs to wharf	4,000
Pointe St. Pierre, repairs to wharf	2,400
Quyon, repairs to wharf	1,500
Riviere Quie, repairs to wharf	1,540
Russell, repairs to wharf and improvements	3,300
St. Alphonse, repairs to wharf	2,600
St. Godfroy, repairs to wharf	2,300
St. Ignace de Loyola, repairs to wharf	2,600
St. Jean Port Joli, repairs to wharf	2,600
St. Laurent d'Orleans, repairs to wharf	1,800
St. Michel de Bellechasse, repairs to wharf	25,000
St. Nicholas, repairs to wharf	6,200

St. Clair, repairs to wharf	1,900
St. Roch, s.s. Aulnais, repairs to wharf	1,100
St. Zotique, repairs to wharf	2,000
Samit, repairs to breakwater	2,000
Sussex, repairs to wharf	1,500

Ontario.

Pharos, repairs to wharf	1,800
Bruce Mines, repairs to wharf	1,050
Colborne, reconstruction of pier and breakwater	50,000
Colingwood, breakwater reconstruction, additional amount required	35,000
Garzantus harbor, repairs to wharf	2,000
Grand Bend, repairs to piers	1,000
Kincardine, repairs to piling	3,000
Kincardine harbor, improvements	3,500
McLaren's Landing, wharf, further amount required	1,500
Midland, wharf, further amount required	8,400
North Bay, reconstruction of wharf	25,000
Oakville, repairs to pier	2,000
Owen Sound, repairs to wharf	13,000
Perry Sound, wharf improvements	32,000
Pembroke, repairs and wharf replacement	60,000
Peterborough, reconstruction of wharf	7,900
Port Stanley, repairs to harbor works	10,000
Rondeau, harbor repairs and improvements, further amount required	15,500
St. John's, wharf, extension, further vote \$14,500	1,750
St. Joseph, wharf, extension	6,750
Sturgeon Falls, wharf, extension	13,500
Whitby, reconstruction of piers	13,500

Manitoba.

Delta, completion of protection work	2,500
Little Pembina River, repairs to dam building	1,600
Red River, repairs to channel protection work	12,000
Wanipicew River, removal of obstructions	5,000

Saskatchewan and Alberta.

Fort McMurray, temporary wharfage accommodation	2,500
Harmon and rivers general repairs and improvements, further amount required	30,000

British Columbia.

Ans-worth, fender boom	1,750
Cowichan Bay, wharf, repairs	9,800
Fraser River, improvements	100,000
Fraser River (lower), operation of	5,000
Fraser River, boat, improvements	2,500
Maples Bay, repairs to wharf	2,600
New Massett, to settle claims due to collapse of wharf	2,600
Port Washington, repairs to wharf	2,700
Quatshaski Cove, new float and repairs to wharf	2,700
Saxby, repairs to wharf	2,700
Sicamous, wharf extension	2,800
Sorrento, wharf repairs and extension	3,100
Squamish, repairs to wharf	1,500
Stewart, enlarging warehouse and wharf improvements	1,000
Upper Pitt Lake, addition to wharf	6,900

Yukon Territory.

Stewart River, improvements	10,000
-----------------------------------	--------

Roads and Bridges.

Burlington channel, new bridge, further amount required	70,000
Capilano River, B.C., bridge, contribution by Dominion Government, Provincial Government, and municipalities each to contribute a like amount, vote	11,000
Grand River Bridge, repairs and renewals	5,400
St. John's, N.B., repairs to wharf	1,700
St. John's, N.B., repairs to wharf	1,700

Miscellaneous.

Temporary relief of distressed seamen and expenses of shipping forms, further amount required	1,000
Compassionate allowance to widow of the late J. T. Kitch, formerly engineering storekeeper on C.G.S. Estevan	1,000

Beeson's Marine Directory of the Northwestern Lakes for 1921, the 35th year of its publication, contains classified lists of freight and passenger steamships, tugs, barges, etc., operating on the Great Lakes, and on both the U.S. and Canadian registers, together with particulars of various docks, marine associations, and several illustrated articles dealing with transportation facilities and construction work on the lakes, including a scene at the Canadian canal at Sault Ste. Marie. The publisher is Mrs. H. C. Beeson, 732 South Sherman St., Chicago, Ill.

Spitzbergen Coal for Canada?

Railway and Marine News, Seattle, Wash., said, in a recent issue: "A late project has been announced in Canada for transporting coal from Spitzbergen to the Great Lakes; by sea to James Bay, from James Bay to Lake Nipissing by rail, and from there to Lake Huron by canal. One is struck with the vastness of the proposal. But then this larger outlook is due to living in a vast country like Canada, great tracts of which have never even been explored. A few years ago one would have been laughed at for even mentioning the idea of bringing coal from a far-away place like Spitzbergen to stoke the furnaces of Canadian industries, but soon it may be an accomplished fact."

Many people may not be aware that Spitzbergen, which is a group of rocky, barren and snow-clad islands in the latitude of the Arctic Ocean, some 400 miles n.w. of the North Cape of Norway, is practically uninhabitable.

If any such scheme as outlined by our contemporary has been propounded in Canada, or elsewhere, it cannot possibly be taken as a serious proposition. The distance between Spitzbergen and James Bay is approximately 4,000 miles, and the cost of taking coal that distance, apart from the cost of building the railways and canals mentioned, in order to reach Lake Huron, certainly would be sufficient cause for laughter at the idea of bringing coal from Spitzbergen to stoke the furnaces of Canadian industries.

Coal was discovered in Spitzbergen in 1900, and has been developed to a considerable extent by the Northern Exploration Co. (British), which had an output in 1918 of about 80,000 tons. The question of sovereign rights over Spitzbergen was being dealt with during 1914, but nothing was done after the outbreak of war, until Sept. 1918, when the British took possession of the islands to protect British interests. Since then they have been assigned to Norway.

Damages Awarded the Steamship Harlem.

The further supplementary estimates for the year ending Mar. 31, 1922, passed at the Dominion Parliament's last session, contained an item: To pay for damages claimed for s.s. Harlem, not exceeding \$100,000." We are officially advised that this claim arose from a collision, on April 22, 1917, just outside of New York harbor, between the s.s. Durlay China, belonging to the Railways Department, and operated in connection with the Canadian Government Rys., and the British s.s. Harlem, owned by the Harlem Steamship Co., in which the Durlay China was sunk and the Harlem was damaged considerably. The Durlay China had sailed from Halifax on April 19, 1917, in ballast, bound for Norfolk, Virginia. The Harlem had a cargo of munitions for the French Government.

The Dominion Government brought action against the Harlem for damages for the sinking of the Durlay China, and the owners of the Harlem instituted a cross action against the master and second officer of the Durlay China. The case was tried by the Judge of the Nova Scotia Admiralty District, who held that the Durlay China was alone in fault for the collision and gave judgment against her master and second officer. An ap-

peal was taken from this decision to the Supreme Court of Canada, which dismissed the appeal and confirmed the lower court's decision. The owners of the Harlem claimed that in view of the judicial finding of fact in favor of the navigation of their ship, and against that of the Durlay China, the Dominion Government should admit responsibility for the damages suffered by the Harlem. These damages were assessed by the District Registrar at Halifax at \$130,329.36. After considerable negotiations, the Government decided to follow the British practice in such cases, which is as follows: "His Majesty's Government, in cases in which damage has been done by His Majesty's ships to private ships, pay ex gratia the amount of damages sustained by the privately owned ship, although there is no legal liability on the Crown to do so, with the limitation that where if the Government owned ship had been privately owned the private owner would have been able to limit his liability under the Merchant Shipping Act, the Crown makes no payment in excess of the limited liability of the ship." This limitation of liability will reduce the amount which the Government will have to pay to approximately one-half of that assessed by the District Registrar.

Marine and Fisheries Department Salaries Estimates.

The estimates for the year ending March 31, 1922, passed by the House of Commons recently, contain the following items for the principal officials' salaries:—

Marine.	
Deputy Minister	\$6,000.00
Assistant Deputy Minister	4,140.00
Chief Naval Architect	4,500.00
Chief Naval Architect	4,500.00
Commissioner of Lights	3,960.00
Superintendent of Agencies	4,360.00
Chief Accountant	3,480.00
Chief Registrar of Shipping	3,180.00
Secretary Clerk	3,360.00
Supt. Masters and Seamen	3,600.00
Dominion Wreck Commissioner	3,600.00
Purchasing Agent	3,900.00
Assistant Commissioner of Lights	3,000.00
Junior Departmental Selector	3,240.00
Accountant	3,120.00
Director, Pilotage Branch	3,780.00
Superior of Harbor Commissions	3,200.00
Chairman S. S. Inspection Board	4,000.00
Assistant Purchasing Agent	2,800.00
Principal S.S. Inspectors: 2 at \$3,840	7,680.00
Assistant Naval Architect	2,500.00
Assistant to Commissioner of Lights	2,040.00
Editor	3,200.00
Senior Inspector	2,100.00
Secretary of Wreck Commissioners Court	2,100.00
Secretary to Executive	2,100.00
Junior Purchasing Agent	2,100.00
Senior Assistant Engineer	2,940.00
Assistant Mechanical Engineer	2,340.00
Chief Draughtsman	3,000.00

Fisheries.	
Assistant Deputy Minister	\$4,500.00

Howe Sound Navigation Co. Ltd. has been incorporated under the B.C. Companies Act, with \$100,000 authorized capital, and office at Vancouver, to take over the business of J. R. T. Dinahen, shipping and general broker, Vancouver, and the s.s. Britannia, and to carry on the business of towing, shipwrecking, transportation by land and water, forwarding, etc. The s.s. Britannia was built at Vancouver in 1902, and is screw driven by engine of 33 h.p. Her dimensions are,—length 104.8 ft., breadth 22.4 ft., depth 6.9 ft.; tonnage, 326 gross, 222 net.

A small floating drydock has been established at Port Stanley by O. Smith and N. S. Cornell.

Questions About Montreal Dry-docks and Ship Repairing Ltd.

The following questions were asked in the House of Commons recently by W. Duff, Lunenburg, N.S., and answered by the Minister of Marine and Fisheries:—

Q. "Was a concrete tug sold to the Marine and Fisheries Department during the last three years by Montreal Dry Docks & Ship Repairing Ltd., or by interests associated with the said company, and if so, what was the tonnage and price paid for the said tug, and when was she built?" A. "One concrete ship was bought from Montreal Shipbuilders Ltd., in 1918. Tonnage 320 gross, 176 net. Built 1917. Price paid was \$76,269.63, being actual cost of construction as determined by A. K. Fiske Skelton Co., chartered accountants, without any allowance for interest during construction, or profit."

Q. "Has Montreal Dry Docks & Ship Repairing Ltd. done all the repairs of Government ships at Montreal since 1917? If not, what other company had the repairing of those ships during that period? How much has been paid Montreal Dry Docks & Ship Repairing Ltd. since 1917 for repairs, and all other work done to Government ships?" A. "In so far as the Marine and Fisheries Department is concerned the following firms have made repairs to its ships at Montreal since 1917—1917, Marconi Wireless Telegraph Co., \$117; 1917, Canadian Vickers Ltd., \$4,857.50; 1917, Canadian Vickers Ltd., \$18,881; 1919, Montreal Dry Dock & Ship Repairing Co., \$18,279; 1920, Hall Engineering Works, \$162.87."

Q. "Is Thos. Hall, President and General Manager of Montreal Dry Docks & Ship Repairing Ltd., and if so, what relationship does he bear to the Minister of Marine and Fisheries?" A. "No. John Lumsden, of Ottawa, is president and Mr. Hall is Managing Director. The late Mrs. Thomas Hall, who died nine years ago, was a sister of the present Minister of Marine and Fisheries."

Havana Harbor Conditions Returning to Normal.

H. A. Chisholm, Canadian Trade Commissioner at Havana, Cuba, wrote recently as follows:—From the middle of January one heard remarks, everywhere where business men were gathered, commenting on the remarkable speed with which the energetic measures taken by the Government were succeeding in relieving port congestion. Today one can walk along the harbor front and see no more than two or three lighters unloading at a single wharf, compared with 20 or 30 loaded lighters waiting for weeks and even months for their turn to unload. For example, last December, when I returned to Havana I counted 28 loaded lighters crowded around a single wharf in the harbor. Yesterday there was not a single lighter tied to this wharf, all the lighters being out in the harbor loading up.

The difference accomplished within the last two months along the docks and warehouses is almost unbelievable to any one who saw the congestion of last December. Three months ago, huge piles of merchandise cluttered up the wharves and warehouses, and extended out into open spaces and streets required for the

handling of drays and trucks. Today these open spaces are entirely clear, and within the last few days I have seen stretches of wharves without a single bale of goods on them. The present situation is, then, that goods are being cleared practically as soon as they are landed. If goods are not claimed immediately by their consignees, they are forthwith transported by the port authorities to open spaces outside the city, where the consignee may be able to claim them. Every shipping man in the city tells me that the port situation has practically returned to normal and that any ship entering Havana harbor can be certain of clearance papers within a few days, whereas last year the same ships were taking several weeks for clearance. In short, port congestion has disappeared as a factor retarding Cuba's export and import business.

The British Empire Steel Corporation's Steamships.

The statements submitted to the stock exchanges recently, in connection with the listing of this corporation's stock, contained the following:—"One of the Dominion Coal Co.'s earliest investments was in the Black Diamond steamships, and the carriage of coal by water has ever since been one of the most important branches of the company's business. The fleet now owned by the Dominion Iron & Steel Co. and the Nova Scotia Steel & Coal Co. consists of 14 ships, the carrying capacity having grown from 6,000 or 7,000 tons to 73,000 tons. Up to 1914 this was done principally by chartered ships. In the future it will be done by ships owned or controlled by the companies which compose the new corporation. Most of these ships are new and large. Two of them are rated at 12,000 tons d.w. carrying capacity. Four others average over 7,800 tons. Apart from their value as accessory to the companies' operation, they constitute a most important item of the assets of the united enterprise."

The Clarke Steamship Co., which started steamship services out of Montreal and Quebec recently, along the St. Lawrence, is operating the steamships Aranmore, Tremblay and Labrador. The s.s. Aranmore, which is sailing from Quebec, to ports along the north shore from Franklin to Harrington, has been chartered from the Dominion Government, while the company's s.s. North Shore, formerly the British s.s. Nova Zembla, is being overhauled and repaired at Montreal, following damage by fire at Quebec, June 9. She is expected to be ready to resume her service about the end of August. The s.s. Tremblay is only operated by the company, being owned by Jos. Tremblay, Ste. Anne de Chicoutimi, Que., and sails from Montreal, in conjunction with the s.s. Labrador, calling at Quebec, and then along the south shore and the Gaspé coast from Cap Chat to Paspébiac. The s.s. Labrador was owned formerly by the Gulf of St. Lawrence Shipping & Trading Co., Montreal, now in bankruptcy. The s.s. North Shore is in charge of Capt. Jos. Boucher as master, and E. Bolduc as chief engineer; and the s.s. Labrador's master is Capt. A. Brie, with J. B. Hamelin as chief engineer. J. F. Bouchard, Quebec, Que., is Manager of the company, and Ed. Bouchard is agent at Montreal.

Thames Ship Repairing, Etc.

Harland & Wolff, of Belfast, Ireland, are opening a ship repairing and engineering branch on the River Thames in England, having made a contract with the Port of London Authority, taking over its engineering repairs and constructional work, and to construct buildings of a permanent character of not less than £300,000 in value, as well as two slipways for ship repairing, and perhaps for ship building purposes. The firm has agreed to engage for its own services all the Authority's foremen and workers. It is to have absolute preference on the Authority's work. Where it is found necessary to give such to other firms, Harland & Wolff will be paid a commission. It is understood, however, that the firm will devote a large amount of its attention to the overhaul and repair of vessels trading with the Port of London, particularly of the large steamships belonging to the liner firms with which Lord Pirrie is associated.

Harland & Wolff's advent to the Thames will obviously add enormously to the present facilities for ship repair work. The number of dry docks on the Thames is considerable, and while there are no docks as large as those in Liverpool, good accommodation is available for all ships, except the very largest Atlantic liners. During the war an enormous volume of work was carried out in London repairing yards, including some jobs of marked interest. To mention only one case: one repairing firm joined together the more or less undamaged halves of two different destroyers, thus turning out a complete new vessel, the Zubian, and consisting of a half of the destroyer Zulu and half of the destroyer Nubian. Hospital ships, paddle sweepers, mine layers, mine sweepers, destroyers, troopships, armed merchant steamers, armed merchant cruisers, armed boarding steamers, fleet sweepers, and other types of war craft were fitted out and repaired in London, the extent of approaching 8,000, and this record of work gives some idea of the value of the ship repairing yards on the Thames to the country during the past crisis.

The American Association of Port Authorities' executive committee met at Montreal, July 15, to arrange for its annual convention at Seattle, Wash., in October. Those who attended were taken on a trip on the Montreal Harbor Commissioners' steam tug Sir Hugh Allan. M. P. Ferguson, M.L.A., Secretary of the Montreal Commissioners, is also Secretary, American Association of Port Authorities.

Halifax Graving Dock Expropriation. The Supreme Court of Canada has dismissed the Halifax Graving Dock Co.'s appeal against the award of the Exchequer Court's award in regard to the amount to be paid by the Dominion Government for the expropriation of the company's property, and has denied the company's claim for an amount over and above that provided by the Exchequer Court's award.

Great Lakes Levels.—The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for June, as follows:—Superior 602.42 ft.; Michigan and Huron, 580.58 ft.; St. Clair, 575.69 ft.; Erie, 573.02 ft.; Ontario, 246.61 ft. Compared with the May levels, Superior was 0.31 ft. higher; Michigan and Huron, same level; Erie and Ontario, 0.07 ft. lower.

Australian Commonwealth Government's Steamships.

Canadian Trade Commissioner D. H. Ross has reported to the Trade and Commerce Department from Melbourne, Australia, as follows:—Considerable newspaper controversy has been revived throughout the Commonwealth as to the policy of the Government in building a number of steamships in Australia when, it is stated, new tonnage could be obtained in Great Britain at much less cost. The recurrence of this hostile criticism is considered to have been raised through the influence of powerful London shipping interests, which view with much trepidation the progress made by the state owned fleet of cargo carriers. It is generally admitted that it is to the advantage of the Commonwealth to have established shipbuilding and naval construction yards, so as to make this island continent self contained in an industry in which every primary producer is vitally concerned, besides which the value of these yards in times of stress and emergency is fully recognized.

The Commonwealth line of steamers is undoubtedly competing with the huge fleets controlled by the "London Shipping Ring," who, professing to ignore it, are apprehensive of its development. Determined efforts are therefore being made, particularly at what is considered to be this opportune time, when Australia is experiencing a period of marked financial stringency, to discourage the enlargement of the Government fleet and to educate hostile public sentiment against it. While it is conceded that the building costs of steamships constructed in Australia are higher than the quotations received recently from the United Kingdom, yet there are the compensations of endeavoring to establish a permanent industry of paramount importance to the country, and of ultimately producing within the Commonwealth all the steel plates and other materials required, besides finding remunerative employment for skilled artisans.

During the war, the Government steamships carried wheat to England at a freight rate of £4 15s. (say \$23.12), while other lines were obtaining a minimum of 46 3s. (say \$30.10) a ton of 2,240 lb. and, in many cases, considerably higher rates. It is claimed that if it were not for the state owned steamships the freight rates to and from London would be considerably higher than are now ruling. Obviously, when state and privately owned interests clash, widely divergent views will continue to exist.

In addition to the steamships now under construction in Australia, contracts were placed in 1920 for five turbine steamships of 12,500 tons for construction in the United Kingdom, and the building of some equally large steamships at Sydney is now engaging the Government's consideration.

A few days ago, the General Manager of the Commonwealth Government's line of cargo steamships made a statement in London and Australian newspapers to the effect that the gross profit of the line to June 30, 1920, was £3,182,000, and the net profit £2,201,000, after allowing £1,000,000 for interest on the original outlay on purchases and for depreciation and renewals, besides placing £450,000 to the credit of underwriting. The first half of the current fiscal year has shown a substantial profit, and the second half ending June 30, 1921,

promises a moderate profit. The line is developing beyond expectations, notwithstanding unprecedented dullness of trade, and it is considered that the steamships are of a more economical class than the average ocean liner.

Auction of French Wooden Steamships.

The French wooden steamships *Boxwood*, *Houzonville*, *Cattendon* and *Cernay*, four of the five built by Three Rivers Shipyards, Ltd., Three Rivers, Que., were offered for sale by public auction at the Louise Basin, Que., July 16, but no sale was made. They are described as full powered wooden barges, length overall 204½ ft., length b.p. 195 ft., beam moulded 39 ft. 8 in., beam extreme 40½ ft., depth of hold 15 ft., draft loaded 16 ft., cargo capacity 1,400 d.w. tons, coal bunker capacity 130 tons, coal consumption 13 tons, speed 9½ knots. Equipment, 2 vertical inverted direct acting compound engines, each developing 275 i.h.p. at 175 r.p.m.; 2 Scotch marine boilers, 2 furnaces, Morison type, 180 lb. working pressure; electric light; wireless telegraph; 6 cargo feed water tanks, each 1,500 gall.; 2 drinking water tanks, 1,000 gall. combined capacity; steam steering engine, steam windlass, independent pumps and general auxiliaries.

Steamship Company's Liability for Lost Baggage.—In the Quebec Superior Court recently judgment for \$200 and costs was given against the Canadian Pacific Ocean Services for loss of a fur scarf. Miss Ethel M. Scott, who sued by her father, was a passenger on the s.s. *Empress of France*, from France to St. John, N.B. On arriving at St. John her baggage was sent to the company's sheds for examination by customs officers. While there one box was lost, and when it was found the fur scarf was missing. The company contended that the box containing the scarf was part of the plaintiff's cabin baggage, and was never under its control, and further that by a clause on the passenger's tickets the company's liability was limited to \$25. Justice Martineau dismissed these contentions and held that the company's obligation for the safety of its passengers' baggage continued as carried until after examination by the customs officials.

The Hydroglider.—A new type of high speed, shallow draft, boat has been introduced into Canada by Norman A. Yarrow, General Manager, Yarrow's Ltd., Victoria, B.C. The hull consists of five separate pontoons, with air spaces between, with a bow similar to that on a punt or scow, where the rudder is placed. There is also a two-bladed aerial propeller, driven by a 230 h.p. 9 cylinder radial aeroplane engine. It has a speed of about 50 miles an hour, in perfectly smooth water, and can carry 7 persons, including the driver and mechanic. The boat was developed by the Comte de Lambert, Paris, France, who was the first aviator to fly round the Eiffel tower, and who has been experimenting with boats of this type for several years.

Proposed London Tunnel.—A London, Eng., cablegram states that it is proposed to build a tunnel under the River Thames, between Gravesend, on the south side, and Tilbury, on the north side, and to connect therewith such lines as will give direct through connection between Dover and the eastern midland and north-eastern counties of England and with Scotland. The tunnel is estimated to cost £2,500,000.

Store-Door Service From New York State Barge Canal.

A plan for store-door delivery service at Buffalo and New York has been adopted by the Inland Marine Corporation and the Transmarine Corporation operating on the New York State Barge Canal. The Canal Carriers' Association states that merchandise handled from New York City to Buffalo by canal will be delivered direct to the warehouse of the consignee at a net cost 20% lower than the railway rate. At New York City, where it is impracticable for the canal lines to operate delivery trucks, an allowance of 7c. per 100 lb. will be made shippers to cover the cost of delivery to and from canal terminals. Shippers at New York and Buffalo have complained that the cost of trucking to and from the canal terminals exceeded the saving in the rate. It is expected that the new arrangement will influence a large volume of tonnage.

Telegraph Chart of Gulf of St. Lawrence and Maritime Provinces.—The last edition of this chart, which is published by the Naval Service Department's Hydrographic Branch, is dated 1917, and Canadian Railway and Marine World has been informed that while every attempt is made to get the chart out annually, the King's Printer is not able to keep up with the work, and several charts are considerably behind date. This is a chart that certainly should be issued annually. Since the 1917 edition was got out, a number of radiotelegraph stations have been established, and various changes have been made. If the King's Printer's Department is not sufficiently equipped, or manned, to get out charts on time and not to cause a delay of four years, the Department should arrange for their printing in some outside office.

Peace River & Fort Norman Navigation & Oil Development Co., Ltd., has been incorporated under the Dominion Companies Act, with \$12,000 authorized capital, and office at Montreal, to own and operate steam, sail, or gasoline propelled boats, aeroplanes, etc., and to carry on a general navigation and oil development business. The incorporators are: R. F. Craig, Peace River, Alta.; A. G. F. Ross, C. M. Cotton, Westmont, Que.; T. J. Duggan, Montreal, and W. U. Cotton, Cowansville, Que.

The Fletcher Ship Repairing Co. Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital and office at Levis, Que., to carry on the business of shipbuilders, ship carpenters, etc., and to build ships of every description. The incorporators are: W. I. Bishop, contracting engineer; W. F. Fletcher, naval architect, Montreal; C. A. Chauvee, A. Marchand and A. Rivard, Quebec, Que.

B. Ram Steamship & Financial Agents Ltd. has been incorporated under the Quebec Companies Act, with \$40,000 authorized capital, and office at Montreal, to carry on a general steamship agency, and to act as ticket agent for steamships and railways, real estate agent, etc. The incorporators are: L. and A. Millman, L. Marcovitch, M. Setz and J. Skeith, Montreal.

St. Clair Tunnel.—The Sarnia, Ont., Hydro Electric Commission is reported to be having a report prepared on the possibility of supplying the city of Sarnia for the operation of this G.T.R. tunnel.

Canadian Railway and Marine World

September, 1921

American Railway Association, Mechanical Division, Committee Reports.

As announced previously, in Canadian Railway and Marine World, the American Railway Association's Mechanical Division, which embraces the former American Railway Master Mechanics' Association, and the Master Car Builders' Association, decided, in consequence of the financial stress and serious business conditions in the United States, not to hold the annual convention which had been scheduled for Atlantic City in June, but to have instead a two days business meeting in Chicago on June 15 and 16, the usual exhibits by manufacturers to be omitted. On June 10 it was announced that, owing to the unusual conditions, and the inability of members to attend, the meeting had been postponed to June 29 and 30, and on June 21 it was further announced that it had been again postponed

and that owing to the uncertainty as to the conditions for the next few weeks, no date had been set, and the probability now is that no meeting will be held this year.

The reports prepared by standing and special committees for presentation at the meeting were fewer than usual, and there were no individual papers. The principal reports of the various standing and special committees are given on this and following pages, either in full or in abstract. Since the annual meeting was postponed the general committee has approved the reports of the following committees:—Specifications and tests for materials, train brake and signal equipment, car construction, tank car, loading rails, brake shoe and brake beam equipment, and they will be submitted to the

members by letter ballot. The arbitration and the labor and prices committees' reports were approved by the general committee for submission to the American Railway Association's executive committee for approval, with the exception of the arbitration committee's recommendations for changes in interchange rules 32, 43 and 70.

As no annual meeting was held the general and the nominations committees' reports were not dealt with and the 1920-1921 officers continue, viz.:—W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., Chairman; J. Coleman, Assistant to General Superintendent of Motive Power and Car Departments, Grand Trunk Ry., Vice Chairman; and V. R. Hawthorne, Secretary.

Specifications and Tests for Materials Committee's Report.

The committee, of which F. M. Waring, Engineer of Tests, Pennsylvania System, was chairman, reported as follows:—Sub-committees have been appointed and are actively engaged in work on the subjects assigned, viz.:—Co-operation with Rubber Association of America on preparation of specifications for mechanical rubber goods. Co-operation with Equipment Painting Section in preparation of specifications for painting materials. Specifications for welding wire. Specifications for water gauge and lubricator glasses. Revision of present specifications for galvanized sheets. In addition to the above the chairman has had some correspondence with the chairman of the Train Brake and Signal Committee, on the subject of tolerances for air brake and signal hose gaskets and gauges for gaskets and couplings, with a view to improving present practice in these particulars. Further work should be done on these subjects during the coming year.

Subjects referred to the committee by the General Committee.—(a) "The proper fibre stress to be employed in the design of helical springs of different diameters of steel wire from $\frac{1}{2}$ in. to $1\frac{1}{2}$ in. in diameter. The original spring table calls for 80,000 lb. per sq. in. throughout for all sizes, but it is well known that this is not the manufacturers' practice, and, in fact, in many cases it is impossible to obtain a proper spring with the smaller sizes of wire." A sub-committee was appointed to report on this question, and after investigating the available data on spring design and manufacture, has reported that, in its opinion, tests should be made to develop information on various grades of steel and different heat treatments. It has not been practicable for your committee to arrange for such tests, nor does it seem at all feasible to make any such arrangements under present conditions or in the near future. The number of variables affecting spring design, in addition to that of variation in diameter of wire, such as quality of steel, workmanship

and heat treatment, makes the whole subject a very indefinite one and one that would require long and expensive investigation, probably without satisfactory results. Your committee will keep this matter before it and will take such action as may be possible.

(b) "Heat treated axles and crank pins. Has the process of heat treatment decreased the number of failures to any appreciable extent?" Your committee feels that it does not have sufficient information to reply to this question, and is endeavoring to obtain the views of other members of the Association by means of a questionnaire.

(c) "Revision of specifications for lumber, if such revision is needed, representatives of the Purchases and Stores Division to be requested to co-operate with the Committee on Specifications and Tests." No action has been taken on this subject. Your committee desires the benefit of advice from all interested members, on What use, if any, is being made of the present lumber specifications? Suggestions for revising the specifications so that they might be of greater use.

Co-operation with Car Construction Committee.—In its report to the Association in June, 1920, the Car Construction Committee made certain recommendations regarding the desired quality of steel for forgings and castings for railway use, and gave an outline of what, in its opinion, constituted certain fundamental requisites for specifications. Chief among these was the requirement of the elastic limit as a base determination, and specifying the elongation of 2 in., and the reduction of area to be controlled by the elastic limit and given constants.

Other requirements covered chemical composition and annealing and the recommended constants for tensile properties of two grades of steel, with 26,000 and 32,000 lb. per sq. in. elastic limits, respectively. Your committee has spent most of its time at recent meetings in the endeavor to satisfactorily carry out these recommendations of the Car Con-

struction Committee, which have been approved by the Association, and desires to say that it has not been entirely successful, partly because of the large amount of work involved in revising the specifications, and partly because of differences of opinion that have arisen between members of our committee and representatives of the Car Construction Committee as to the practicability of certain of the latter's recommendations. The question of standardizing methods of tests so that results obtained in different laboratories will be comparable is one that is engaging the attention of your committee at this time, and will require its best efforts for some time to come, and also the assistance of all members with laboratories who may be willing to help with the work.

Recommendations. — As a result of conferences with representatives of the Car Construction Committee, your committee offers the following specifications and recommendations:—1. A revision of the Standard Specifications for Carbon Steel Axles for Cars, Locomotive Tenders and Engine Trucks. 2. A revision of the present Specifications for Steel Castings for Cars and Locomotives, combining these two into one specification. (Editor's note. Want of space prevents the publication of these specifications.) 3. It is recommended that the present Specifications for Axles and Steel Castings be retained without change and that both of the above proposed specifications be printed in the Proceedings as tentative specifications until further action is justified by the experience of the members in working to them. Your committee feels that this action is warranted by the newness of the proposed method of expressing physical properties, as shown in the Steel Casting Specifications, and the many changes that have been made in the Axle Specifications, as well as to the necessity of having both the consumers and manufacturers become thoroughly familiar with these specifications before they are made obligatory.

Specifications for Heat Treated Knuckle Pivot Pins to be revised as shown in exhibit C. This increase in the range of both carbon and manganese is recommended to cover the usual grade of steel used for this purpose, as it has been found by experience that the present limits are unnecessarily close.

Your committee does not recommend advancing any of the present Recommended Practice Specifications to standard, for the reason that some changes may have to be made in a number of these if the proposed changes in the method of expressing tensile test requirements develop satisfactorily.

The frequent, sometimes yearly, revision of specifications has been severely criticized by both purchasers and manufacturers, and is clearly an undesirable state of affairs. Therefore, it is recommended that the Association should give serious consideration to establishing a definite time limit for revisions of specifications and other standards which

will appear in the Manual, this limit to be preferably three years, during which no changes should be allowed, except for reasons important to the interest of the Association and then only if the proposed changes receive at least two-thirds vote at the Division's annual meeting.

The committee also presented the following supplementary report:—

The unsatisfactory condition of class D bolster springs for trucks of 100,000 capacity cars has been brought to the attention of the Committee on Car Construction, which has prepared designs for alternate springs L, M, N and O, to be substituted for present standard springs, classes B, C, D and H. The committee on car construction has requested that the committee on specifications and tests for materials prepare specifications covering their alternate special springs. Your committee has prepared tentative specifications for chrome molybdenum steel springs, as requested. The committee has not been

able to develop any satisfactory information regarding what service may be expected from springs made of chrome molybdenum steel, but agrees with the committee on car construction that the matter is of importance and that such springs should be made and tested in service, in order to develop whether they are an improvement over the present carbon steel springs, which have been found to give very unsatisfactory service. Your committee recommends that the following specification for chrome molybdenum alloy steel helical springs be adopted as tentative for one year, or until further action is recommended by the committee.

[Editor's Note.—Want of space prevents the publication of the specifications. Persons desiring a copy should apply to V. C. Hawthorne, Secretary, American Railway Association, Mechanical Division, 431 South Dearborn St., Chicago.]

Train Brake and Signal Equipment Committee's Report.

The committee, of which T. L. Burton, Air Brake Engineer, New York Central Rd., was chairman, reported as follows: Your committee submits the following report on subjects which have been considered by the committee during the past year:

Brake Power and Brake Beams for Freight Equipment.—Pursuant to action taken at the last annual meeting, the committees on brake shoe and brake beam equipment and train brake and signal equipment have jointly considered the recommendations contained in the car construction committee's report of 1920 on brake power and brake beams for freight cars, which will be covered in the report of the committee on brake shoe and brake beam equipment.

Retaining Valves for Freight Equipment.—The question of retaining valves for freight equipment cars referred to in this committee's report of 1920 has been made the subject of special investigation by a sub-committee, which outlined and arranged for a series of tests on grades ranging from 1½ to 3½%, with retaining valves of various capacities. Owing to the serious business depression now generally prevailing, the tests were discontinued before sufficient information had been collected to permit the committee making definite recommendations.

Automatic Hose Connectors for Freight and Passenger Equipment.—The question of automatic hose connectors for freight and passenger equipment was referred to a sub-committee, which reports that, "it has examined all of the data received in reply to circular of inquiry sent out by the committee appointed in 1919." The circular of inquiry was sent out Feb. 20, 1920, to all United States railways. There were 39 answers to this circular; four roads reporting experience with automatic connectors. Of these, there is only one which has any considerable number of cars equipped, or which are in any representative service. The committee learned that there were some automatic connectors used in Canada, which were not included in the answers to the circular, and endeavored to find what information could be obtained from this trial; but was unable to get any great amount of information. A number of drawings and information with regard to special

designs of automatic connectors were submitted to the committee, all of which were carefully considered. The committee is unable to find in the reports of automatic connectors now in service a

committee has further considered the matter of air brake cylinder packing made of leather substitutes. It has also been recently suggested that specifications be prepared for brake cylinder

Fig. 1.—Packing Ring Gauge.

Openings A and a are for gauging max. and min. (external) diameter of packing ring flange.

Openings B and b are for gauging max. and min. (external) diameter of projecting wall or face portion of ring.

Slots C and c are for gauging max. and min. thickness of flange and bevel on surface of flange.

Slots D and d are for gauging max. and min. over all depth of ring at face.

Slots E and e are for gauging max. and min. thickness of projecting wall or face portion of ring.

Rings must enter all sections of gauge marked "max." and must not enter any section of gauge marked "min."

design that would seem to lend itself to general use, and for the lack of such information is, therefore, unable to make any specific recommendations at this time.

Air Brake Cylinder Packing.—The

packing. The information which the committee has is very meager, but it will solicit the assistance and co-operation of the committee on specifications and tests for materials in preparing suitable specifications, after which it will

be in position to submit definite recommendations.

Brake Wheels.—Attention has been called to the desirability of improving the design of hand brake wheel as applied to freight equipment cars. This subject is being investigated, and the committee will submit recommendations to the car construction committee on the design of a standard or recommended practice wheel.

Mechanical Sanders.—At the suggestion of a member, your committee has considered the question of connecting mechanical sanders to the engineer's brake valve in a manner that will automatically sand the rails when the brake valve is placed in emergency position, but as this is largely a local matter that should be handled by individual roads, the committee has no recommendations to make.

Life of Air Brake Hose.—This subject has been investigated by a sub-committee, which has reviewed all data available. It would seem that unless the period for removal of air hose in service was extended to at least 30 months, a large number of hose would be removed which would last for a much longer time; also, that the fixing of such a period for removal from service would not provide for removing a large number of hose which fail within this period. The committee believes that instead of establishing a maximum life it would be preferable to consider revising the present specifications to provide a better quality of hose, and suggests that this be considered by the committee on specifications and tests for materials. The committee again wishes to call attention to the importance of applying the soap suds test, as called for in the present rules governing the maintenance of freight brakes.

Stenciling Brake Cylinders.—Attention has been called to difficulty experienced in stenciling brake cylinders, with standard letters 1 in. high, with the suggestion that the letters should be 1½ in. high. The committee believes that the height of the letters should be increased as recommended, and has so advised the arbitration committee.

Extra Heavy Pipe and Nipples for Air

Brake Train Line.—A member has requested that consideration be given to using extra heavy wrought iron pipe and nipples, exclusively, for repairs to all freight car equipment, regardless of age, and that prices for material be revised accordingly. The committee finds that this practice is in effect on several large roads, and while extra heavy wrought iron pipe is unquestionably superior to steel or standard weight pipe, in view of the decided difference in first cost, it does not feel justified in recommending a change at this time. It is suggested, however, that standard weight nipples be used at the angle cock with either extra heavy or standard brake pipe.

Location of Angle Cocks on Locomotives.—At the request of the general committee, the question of "recommended practice for location of angle cock at rear of tender and front of engine to prevent manipulation by unauthorized parties" has been considered. In view of the fact that this subject was investigated during the period of Federal control by the Railroad Administration's committee on standards, assisted by several members of your committee on train brake and signal equipment, without being able to develop a solution for the problem, the committee does not believe it is now in position to develop anything new on the subject.

Triple Valve Test Requirement.—The standard test code covering the function requirements of freight triple valves appears under the caption "Air Brake Test," which does not harmonize with the text of the code, and the committee recommends that the Secretary be authorized to change this caption to read "Triple Valve Test Requirements for Freight Service."

Air Brake Hose Couplings, Packing Rings for Air Brake and Signal Hose Couplings and Gages for Couplings and Packing Rings.—The committee on specifications and tests for materials has recommended that suitable gauges be developed for checking the dimensions of hose couplings when new, that consideration be given to changing the form of present standard gauge for hose coupling packing rings, and the tolerance dimensions for packing rings be made to

conform to the tolerances shown in its report for 1919, circular S III-23. With one exception the tolerance dimensions referred to are practically the same as is now provided for in the standard gauge for hose coupling packing rings, the exception being that the gauge provides for no tolerance in thickness of packing ring flange. Originally, the committee on train brake and signal equipment was not in favor of tolerances for the ring flange. On further consideration, however, it believes it desirable to provide for tolerances for all dimensions, which, if occurred in, will require a slight modification in the packing ring gauge; it is therefore recommended that the gauge drawing be revised to conform to the accompanying fig. 1. It is suggested that the question of gauges for hose couplings be made the subject of investigation by this or a similar committee during the coming year. The committee on specifications and tests for materials, we believe, concurs in this suggestion and has consented to furnish a sub-committee, if necessary, to assist in such an investigation.

Adjustment of Hand Brake Power on Freight Cars.—On account of the present business depression in railway service, the test which was scheduled to be made early this spring in connection with the adjustment of hand brake power on freight cars has, with the approval of the general committee, been indefinitely postponed.

The committee recommends submitting to letter ballot for adoption as standard, the question of revising the hose coupling packing ring gauge as shown in the accompanying fig. 1.

The committee acknowledges its indebtedness to officers of the Pennsylvania System, Northern Pacific Ry., Atchison, Topeka & Santa Fe Ry., Westinghouse Air Brake Co. and New York Air Brake Co., for their valuable assistance to the sub-committee on retaining valves in making a number of retaining valve tests in grade service on the roads mentioned, also to the Baltimore and Ohio, Norfolk and Western, and the Western Maryland Railroads, for permission to continue the test on these roads, should it later be considered desirable to do so.

Car Construction Committee's Report.

The Committee on car construction, of which W. P. Kiesel Jr., Mechanical Engineer, Pennsylvania System, was chairman, presented the following report:—

Salt Water Drippings.—Conference has been held with representatives of the principal interests using brine valves and it is the opinion that the various devices now used will, with proper maintenance, perform their functions, that the users of such devices are fully advised as to the necessity of same and should be notified that they must have all cars with brine tanks equipped by Jan. 1922, and that no further extension of time will be granted after that date. It is recommended that paragraph F of Interchange Rule 3 be modified to correspond with the above.

End Doors for Box Cars.—In the report of 1920 the following recommendation was overlooked, when preparing the sheet for letter ballot: "In 1913, the Master Car Builders' Association adopted as recommended practice, that end doors must be so constructed that, when

closed, they lock automatically by means of a lock accessible from the inside of the car, thus avoiding the necessity of taking seal records. Sheet 30 shows a design of inside fastening which is not automatic, and your committee recommends that recommended practice adopted in 1913 should be advanced to standard, and that the design of inside latch shown on sheet F should be removed, and a note substituted that the fasten-

ing should lock the door automatically from the inside of the car." It is recommended that this be now submitted to letter ballot.

Materials for Car Construction.—In co-operation with the committee on specifications and tests for materials, this subject has been fully discussed from both design and test standpoints, and the committee will report the recommended specifications.

Minimum Thickness for Backs of Journal Bearings.—Requests to fix a minimum thickness, because, at times, too much wear is allowed before removal, led to issuing a circular asking whether such limits are necessary, and, if so, what the limits should be. According to the majority of replies received, it is desired to fix a standard minimum thickness for backs of journal bearings, as follows:

Class of Bearing	A	B	C	D	E	F
Size of Journal (inches)	3 1/2 x 7	4 1/2 x 8	6 x 9	8 1/2 x 10	6 x 11	6 1/2 x 12
Minimum thickness of back (inches)	1 1/2	9/16	3/4	11/16	3/4	13/16

It is suggested that this be adopted as recommended practice.

Gauges for Bearings and Wedges.—Attention was directed to a growing demand for these gauges and that standards should be provided. The committee's recommendations for such gauges are shown in figs. 1 and 2 and it is suggested that these be adopted as recommended practice, the present separate gauges to remain as standard.

Dust Guards.—Since pressed or cast steel and malleable iron journal boxes with round bottom dust guard cavities have come into more general use, it is advisable, in order to avoid duplicating reserve stock for repairs, to make the bottom of all dust guards semi-circular. Such dust guards can be used in either

showing journal boxes C, D, E and F, recommending that they be substituted for the present standards. The bottom of dust guard pocket has been made semicircular, to reduce the cost of box. The angle of lid face has been made the same for all boxes. Various minor, or unimportant, dimensions, have been uni-

table under T is minimum. Section of any box may be made either circular or square, below center line. The metal may be cast iron, malleable iron, pressed steel or cast steel, provided all of the essential dimensions which affect interchangeability and the proper fitting of contained parts, are adhered to. When

Fig. 1. Gauges for Bearings and Wedges.

Fig. 2. Gauges for Bearings and Wedges.

square or round bottom dust guard cavities. The committee recommends that the dust guard shown in fig. 3 be made standard. The dust guards illustrated show the round bottom, and otherwise were changed in dimensions to better fit the standard journal boxes.

Journal Boxes.—To meet various suggestions for change, and to increase uniformity of standards, we submit fig. 4,

fied. No changes affecting interchangeability, or serviceability, have been made.

Specifications for Fig. 4. — Arrow heads, without figures, indicating radii, represent 1/4 in. radius. Dimensions for tolerances underscreed are plus or minus 1/16 in.; lesser tolerances are given with the dimensions. Other dimensions of lesser importance may vary, plus or minus, 1/8 in. Metal thickness given in

used with side frames of such design that the bottom tie bar is omitted, or is not an essential strength member for carrying the load, the bottom box lugs may be omitted. When used in connection with other side frames, the bottom box lugs must be equivalent, both in location and strength, to those shown. If the method of manufacture does not permit the placing of letters ARA on the

side of the journal box, they may be placed on the top, between the hinge lugs and the seat of truck sides. The lid face of box should be reasonably straight and smooth. For journal boxes used on passenger train equipment, a machine fit is recommended.

Springs—Complaints relating to the unsatisfactory results from standard springs have been increasing rapidly. The causes of the trouble, according to the analysis of your committee, are:—1. Unsatisfactory process of manufacture. 2. Quality of material. 3. Irregular surface of spring ends. 4. Improper application of shims under or over springs to raise the car body to normal height. The result is that many springs either break or take a permanent set.

ternate spring P be added for use with 2/F trucks.

That railways try out these springs thoroughly, in order to be in position to vote later on their adoption as standard. That interchange rules be formulated to protect the alloy steel springs against being replaced with ordinary springs. The Secretary has referred this to the committee on specifications and tests for materials, requesting preparation of specifications.

Fundamentals.—Enquiry relating to fundamentals, and their meaning, indicated the necessity of describing those pertaining to minimum areas more in detail. The minimum area between rear followers of the center sill construction is the whole area in compression under

of 27% in. would prevent the use of roller, ball or rocker side bearings.

The dimension given refers only to flat truck side bearings.

The committee's intention is to make designs that will establish fixed conditions, permitting the use of detail designs standardized by the Association, or the substitution of other parts preferred by the individual railway, singly or in groups, provided these parts, or group of parts, are the equivalent in strength and safety of, and interchangeable with, the standard part or group of parts replaced. This will permit using any special detail such as top side bearing, which is interchangeable with, and equal in strength to, the side bearing that may be standard, of special top and bottom side bearings, which as a group are similarly interchangeable with the standard top and bottom side bearings as a group.

The standards should be made attractive for use by being as good or better than parts that may be substituted, rather than by making their use compulsory.

Truck Design.—A sub-committee of the committee on car construction, in co-operation with the truck committee of the Manufacturers Association, is engaged in the design of cast steel side frames and bolsters. It has considered the limits of dimensions fixed at the last meeting of the Mechanical Division and has given full consideration to the previously recognized dimensions of the M. C. B. Association, and to the designs that were put into effect by the U.S. Railroad Administration.

The manufacturers' committee has met with the sub-committee on two occasions, each time submitting for consideration designs in detail representing various ideas in view, but up to this time no single design has been brought out that could be presented as a recommendation for standard. It is possible that more than one design will have to be considered, with alternates.

Standard Car Design.—Pending the development of complete A. R. A. car designs, freight cars according to the essential standards of the American Railway Association may be ordered from any car builder according to the following:

CLASSIFICATION OF GUARD	SIZE OF JOURNAL	A	B	C	D	E
C	5 X 9	8	9 $\frac{1}{2}$	4 $\frac{1}{2}$	6 $\frac{1}{2}$	4 $\frac{1}{2}$
D	5 $\frac{1}{2}$ X 10	8 $\frac{1}{2}$	10	4 $\frac{1}{2}$	6 $\frac{1}{2}$	5 $\frac{1}{2}$
E	6 X 11	10 $\frac{1}{2}$	10 $\frac{1}{2}$	5 $\frac{1}{2}$	7 $\frac{1}{2}$	5 $\frac{1}{2}$
F	6 $\frac{1}{2}$ X 12	11	11 $\frac{1}{2}$	5 $\frac{1}{2}$	7 $\frac{1}{2}$	5 $\frac{1}{2}$

Fig. 3. Recommended Standard Dust Guard.

The remedy recommended is:—1. To improve the method of manufacture by better control of heating and tempering for more uniform results, and to obtain greater uniformity of coiling. 2. To use alloy steel. 3. To grind the ends of the springs to present a flat bearing surface of at least two-thirds the circumference at right angles to the axis of the spring. 4. To prescribe that shims, placed under or over the springs, shall consist of metal plates with parallel surfaces. 5. To design the springs for a unit stress, when solid, of closely 100,000 lb. per sq. in., using the present diameters of bars, thereby materially increasing the capacity and range of deflection.

These changes should result in: 1. Material decrease in shock on side frames. 2. Increased life of springs. 3. Decrease of maintenance cost and car delay.

It is recommended that the springs classified L, M, N and O, as illustrated in figs. 5 and 6, be adopted as alternates for springs B, C, D and H, and that al-

len force, without deducting for rivet and other holes, which are filled with metal.

In the formulae on which former requirements were based, pg. 772, line "e," under heading "For center sills between rear followers," the word "tension" should have been omitted, making it read: "The minimum area = 2.5 T.

The tension and bearing area requirements, but not the shear area requirements, shall be governed by the value of the steel. For bearing area between surfaces of different grades of steel in contact, the value of the lesser grade of steel shall govern. For grade A steel, for which the product of elastic limit in pounds multiplied by the elongation in per cent. is not less than 700,000, the areas given are required. For grade B steel, for which the designated product is not less than 850,000, the given areas may be reduced by 12 $\frac{1}{2}$ %.

It was stated that the adopted height from rail to top of truck side bearings

Type.	U.S. Std. Spec. No.
Single sheath box	1001
Steel box	1341
55-ton hopper	1005
70-ton hopper	1007
70-ton gondola	1255
50-ton gondola	1004
40-ton truck	1274
50-ton truck	1275
70-ton truck	1241

The height of center plates should be specified as 23 $\frac{1}{2}$ in., as more fully described in American Railway Association, Mechanical Division, circular S 111-189. This increased height of center plate introduces eccentricity as between the line of shock and the axis of the center sill sections, which changes the ratio of stress to end load, to offset which it is necessary to add two bottom angles to the center sills if the sectional area of the center sill desired to be 30 sq. in. This would add about 500 lb. to the weight.

The height of sides of car, A. R. A. standard is 8 $\frac{1}{2}$ ft. minimum inside. In event cars are ordered to the height shown in the drawings, 9 ft., no change in drawings is entailed. For the minimum height of 8 $\frac{1}{2}$ ft., dimensions affected by the height, including the dimensions of box car doors, must be changed accordingly.

Tank Cars Committee's Report.

The committee on tank cars, of which A. W. Gibbs, Chief Mechanical Engineer, Pennsylvania System, was chairman, reported as follows:—

During the past year the work of the committee on tank cars has been mainly the continuation of its efforts to secure improvement in certain details of construction, principally the safety valve, bottom discharge valve, dome closure arrangement and anchorage of tank to underframe. In this work the committee has had the benefit of the cooperation of the Bureau of Explosives, American Petroleum Institute and the National Petroleum Association.

that the escape is always on one side, indicating a tendency of the valve disc to cock. Special guides have been tried to restrain this tendency to cock, and special springs have been made in an effort to secure true closure, but so far without success.

Some of the valve manufacturers are willing to make other modifications, but before asking them to do this, the committee is endeavoring to get from the oil trade some definite information as to the extent of the losses which can be properly charged to the safety valve. The available data indicates that with straight refinery products the losses are

valves gave a discharge capacity of 40,000 lb. an hour. An investigation of the formula for discharge, in which the calculated flow was checked by a recording flow meter, indicated that the formula so far used has not been as far off as it was thought might be the case, because of the abnormal lift of the tank car type of valve.

The committee has approved some slight modifications in the details of the design of the valve, to reduce foundry losses and to facilitate machining. These changes do not affect the functioning of the valve, or the interchangeability of the parts, and the committee recommends that they be incorporated in the standard design of valve.

Bottom Discharge Valves.—This question has been assigned to a sub-committee composed of Messrs. Purcell, Owsley, Smith and J. E. Grant, special agent of the Bureau of Explosives, as chairman. This subcommittee is working in close co-operation with a similar committee of the American Petroleum Institute. There have been about 25 designs submitted, 11 of which are being tried under observation in service. These trials of necessity take some time, but it is hoped that another year will demonstrate the correct principles on which satisfactory designs must be based.

Reports show that a large part of the unsatisfactory performance of existing valves is due to failure to keep the tanks, and consequently the valve seat, clean. Attention was called to this condition in a circular issued by the Association in Dec. 1919, but there does not appear to have been any improvement.

Extensions to Bottom Discharge Outlet.—There have been a number of protests against the requirement adopted last year that: "No nipples, valves or other attachments shall project below the bottom outlet cap, except while car is being unloaded." These protests emphasize the lack of confidence in the present bottom outlet valves, in that it is claimed that the cocks attached to the bottom cap are necessary to enable the consignee to tell whether the outlet valve is closed, and that if the valve is not properly closed the removal of the cap would permit the uncontrollable discharge and loss of the contents of the tank. The trouble is really due to man failure rather than design failure.

Interstate Commerce Commission regulations require that the bottom cap shall be removed when the tank is loaded, and if this is done it will ensure the valve being properly closed and there will be very little danger of its being unseated in transit. The one exception is where water from gasoline leaks past the valve into the outlet pipe and freezes, which may result in unseating the valve, or breaking the outlet pipe or both. The overcoming of this is one of the features of the problem of a satisfactory valve.

The dangers from extensions to the present outlet cap are so obvious that the committee can see no reason for modifying the rule. On the contrary, the committee believes a further step should be taken to guard against the danger of breakage of the outlet pipe by limiting the distance which the outlet projects below the sills to that required to operate a wrench in applying and removing the cap. It is, therefore, recommended that: "Effective July 1,

Fig. 1. Journal Box. See report on page 458

The following are the specifications:—

Safety Valves.—Additional tests have been made at Altoona of the experimental designs submitted by manufacturers of locomotive safety valves, which had been modified as the result of the tests referred to in the 1920 report; and also of other modifications of the standard design, including changes in the dimensions of the valve discs, non-corrosive seats, etc. The committee can only report progress, for the reason that no valve has proved absolutely tight at pressures at or near the popping point (25 lbs.). Observation of the leakage prior to popping has shown

not large; also that with insulated tank cars the loss with casinghead blends is slight, but the question of safety valve leakage assumes importance because the uninsulated car may carry very volatile products, some of which are constantly under pressure.

The tests have shown conclusively the large discharge capacity of the standard valve—about 31,000 lb., equal to 4,800 gall. of gasoline per hour—so that an 8,000-gall. tank with its two safety valves would be discharged in about 50 minutes, with very little rise in the pressure. One of the experimental

1922, in the case of new cars and of replacements on existing cars, the bottom outlet pipe, when applied to tanks of cars having center sills, shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap." The committee is now gathering information from car builders and petroleum shippers as to the least extension that will be practicable under this requirement.

The presence of a cock on the bottom of the discharge pipe is not necessarily objectionable, provided it complies with the proposed requirement.

Dome Closure Arrangement.—The Bureau of Explosives takes strong ground against the ordinary screw type

to provide only such cars with another form of cover, but this is not the case, as in an emergency, at least, any car may be loaded with these products. The attention of car builders has been called to the matter, and a number of them are endeavoring to work out satisfactory designs. Two general types meet the requirements, viz.: (1) An internal cover, supported by a screw and yoke against an internal flange of the dome ring. Such a cover cannot be removed while there is internal pressure. (2) An external cover, held in place by a number of hinged bolts, the nuts of which engage lugs on the cover, so designed that the cover cannot be removed as long as there is internal pressure against it.

patent which expires in Aug. 1921. Because of this patent, builders have been allowed considerable latitude in their designs of this type of anchorage. Some of these designs have proved unsatisfactory in service, and a number of cases have been reported of tanks going adrift, with breakage of outlet pipe and loss of contents. So far these failures have been confined to the bolted anchorage, and are traceable to bad design or workmanship, or both. The principal causes have been the use of rough bolts in unreamed holes, instead of turned bolts in reamed holes, as required by the specifications; and the use of wooden fillers, prohibited by the specifications, between the anchorage and the underframe, so that the bolts are in flexure

Fig. 6. Springs.

(See report on page 459.)

Fig. 5. Springs.

of dome cover, particularly for cars carrying liquid normally under pressure. It was expected that the escape of gas through the vent holes at the top of the screw portion of the cover would give adequate warning to a man of ordinary intelligence that internal pressure existed and that the dome cover should not be removed until this pressure had been relieved. The numerous casualties which have occurred because of the removal of the cover, in spite of this warning, show that a better form of cover is necessary. There are also appreciable losses of contents in the form of gas, due to lack of tightness of the screw cover, even where soft gaskets are used. With cars assigned permanently to these very volatile products, it would suffice

It may be necessary, eventually, to require that all new cars shall be equipped with some form of cover which cannot be removed until internal pressure is relieved. The committee believes that a beginning should be made with cars carrying casinghead gasoline and its blends, and recommends that paragraph 6 (c) of the Class IV Specification be amended to read: "For cars built after July 1, 1922, the dome cover, if internal, shall be secured by bolts; or if internal, by yoke and screw." The committee feels that the external cover is preferable because of the greater probability of good workmanship and because its operation is simpler.

Anchorage.—The center anchorage for tank cars is the subject of a basis

instead of in shear. In a number of cases, the bolts were threaded so far down that the shearing value was that of the root of the thread instead of the body of the bolt, while the bearing value was but that of the top of the threads. This matter was taken up with all of the tank car builders, and where it was found desirable to change the designs it was willingly done. The approved designs of all of the builders now provide connections materially in excess of the minimum requirements of the specification, and it is believed that no failures of these anchorages will result with any reasonable handling.

Heater Pipes.—The committee can only report progress upon this subject.

Number and Class of Tank Cars.—The

growth in the number of tank cars is shown by a recent tabulation from Boyd Tank Car Circular, which shows a total of about 137,000 tank cars in service, of which 125,500 were of private ownership and 13,500 of railway ownership. This compares with figures for Jan. 1, 1913, given in one of the I. C. C. reports, viz.: 30,000 of private ownership and 9,150 of railway ownership, a total of 39,150.

Of the present five classes of cars, Classes I, II and III are general service cars; Class IV is an insulated car for handling very volatile products where losses from evaporation are especially objectionable and costly; and Class V, of which there are very few in service, is an insulated car for handling dangerous products normally under considerable pressure. Welded tanks are required for the Class V car to secure absolute tightness, which is necessary because of the toxic character of the lading. Classes I, II, III and IV cars have riveted tanks.

Welding.—In its 1912 report the committee called attention to the desirability of the welded tank, and in 1919 provision was made in the specification to permit the experimental construction of tanks for Class III cars. Several welding concerns have given the question attention, but so far the cost of tanks welded by the forge welding process has been so high as to be prohibitive. Recently one of the large pipe manufacturing concerns proposed the use of its forge welded pipe for this purpose. If this proposition assumes definite form, your committee will be prepared to take up the question of this construction as an alternative to the riveted tank.

Various overtures have been made to permit the use of autogenously welded tanks, but the committee is not prepared to recommend the acceptance of such tanks in advance of definite proof of the reliability of this method of welding. At present there are too many uncertainties as to the character of the welds made by different operators, and particularly as to the ability of such welds to stand the alternating bending stress to which tank cars are subject.

The one exception which has been made is in the case of anchorages on welded Class V tanks. It was originally provided that this should be forge welded, and during the war a number of tanks for the Government were so welded, but the results were unsatisfactory. Owing to the nature of the lading, exposed anchorage rivets are objectionable and the latest construction approved by the committee consists of riveted anchorages with the rivet heads on the inside covered by autogenously welded cup shields.

In this connection the attention of the committee has been called to the fact that in some cases cracked shells have been repaired by autogenous welding and that the result has not been satisfactory. Your committee recommends that, for the present at least, repairs to shells of tanks shall not be made by autogenous welding.

A. R. A. Standards and Recommended Practice.—The specifications for Classes I, IV and V tank cars, under the head of Couplers, Brakes and Trucks, prescribe A. R. A. Standards and Recommended Practice. It has developed that this, in connection with the Rules of Interchange, makes the standards and recommended practice mandatory in the case of tank cars, where they are not so

in the case of freight cars generally. It was not the committee's intention to single out tank cars for greater compliance with the standards and recommended practice than is required in the case of other kinds of freight cars, and the committee recommends amending this requirement to read: "A. R. A. Standards and Recommended Practice as in the case of other classes of freight equipment cars."

Brakes.—Question has been raised as to the difference in the wording of the brake requirements for Classes I and II cars, reading: "Each car shall be equipped with air brakes of a capacity equal to not less than 70% of the light weight of car, and at least one hand brake operating the brakes of both trucks"; and those for later classes of cars, reading: "A. R. A. Standards and Recommended Practice."

When the general revision of the specification was made in 1916 the committee, in accordance with its policy of avoiding as far as possible retroactive requirements, did not recommend any change in this respect so far as Classes I and II, which were the existing cars, were concerned. The difference is more in form than in substance, the original in form than in substance, the original 70% brake power being based on 60 lb. pressure due to emergency application, while the 60% is based on the 50 lb. due to equalized service application. As there is so little difference in the final results, it is believed that the situation can be satisfactorily covered by adding, in the case of Classes I and II cars: "When any change is made in the brake arrangement it shall be made to conform to A. R. A. Standards and Recommended Practice."

Tank Cars for Hydrochloric Acid.—Certain products such as hydrochloric (muriatic) acid, vinegar, etc., because of their chemical reaction, cannot be successfully handled in the ordinary metallic containers. In the case of hydrochloric acid, which is extremely corrosive, it has been handled in wooden tanks mounted on flat cars. The tank car committee has not, so far, recommended any specification for such cars, but, at the suggestion of the Bureau of Explosives, in view of complaints as to leakage with existing designs of cars, the question of developing a standard specification has been taken up, and a sub-committee of five representatives of the largest acid shippers, in co-operation with the Bureau of Explosives, is engaged in experiments with steel and wooden tanks with glass and rubber linings, and with wooden tanks enclosed in steel shells insulated by plastic bituminous materials.

Summary of Recommendations.
Safety Valve.—Spring case, fig. 10-A. Make outside face of top rim straight instead of recessed as at present.

Spring case, figs. 9-A and 10-A.—Increase overall length of spring chamber from 6 1/4 to 6 3/4 in. In spring case, fig. 10-A, vertical height of ports to be increased by same amount (5/8 in.) and bridges of ports widened so that area of ports will remain the same.

Valve disc, fig. 9-A.—Add fillet at junction of wings and disk tapering from 1/2 in. radius at the central boss to 1/4 in. at the rim, the thickness of wings to remain 3/4 in.

Valve disc, fig. 9-A.—Carry top contour out straight to a thickness of 1/4 in., with small top radius at the outside edge.

Valve plug, fig. 9-A.—Make straight

cylindrical portion 1/4 in. wide instead of 3-16 in. as at present.

Bottom Outlet.—Classes III and IV cars, sec. 7 (c), first paragraph.—Omit sentence: "Additional attachments thereto having threads of other dimensions may be used," so that paragraph will read: "The bottom of the main portion of the outlet valve casting, or some fixed threaded attachment, shall have external V threads 5/8 in. in diameter, and a pitch of 4 threads to the inch."

Classes III and IV cars, sec. 7 (d).—Change first paragraph to read: "Effective July 1, 1922, in the case of new cars and replacements on existing cars, the bottom outlet pipe when applied to tanks of cars with center sills shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap."

Bottom Outlet.—Classes I and II Cars. Insert new paragraph in sec. 7 (d) as follows: "Effective July 1, 1922, in the case of replacements on existing cars, the bottom outlet pipe, when applied to tanks of cars with center sills, shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap."

Dome Closure Arrangements.—Dome cover, class IV car, sec. 6 (c).—Substitute for first and second paragraphs the following: "For cars built after July 1, 1922, the dome cover, if external, shall be secured by bolts; or, if internal, by yoke and screw."

Welding.—That repairs to shells of tanks shall not be made by autogenous welding.

Couplers, etc.—Couplers, sec. 15; brakes, sec. 16; trucks, sec. 17; classes III, IV and V cars.—Add: "as in the case of other classes of freight equipment cars" to the requirement of A. R. A. Standards and Recommended Practice.

Brakes, classes I and II cars, sec. 16.—Add: "When any change is made in the brake arrangement it shall be made to conform to A. R. A. Standards and Recommended Practice."

Miscellaneous Committee Reports.

Loading Rules.—The committee, of which R. L. Kleine, Assistant Chief of Motive Power, Pennsylvania Rd., was chairman, and of which E. J. Robertson, Superintendent Car Department, Minneapolis, St. Paul & Sault Ste. Marie Ry., was a member, reported that it had given consideration to a number of proposed modifications in existing rules. Conferences were held with steel shippers of the Bedford, Indiana, district, to consider suggestions offered by them for changes in the rules. Trial shipments of twin loads of structural steel over 5 ft. high, and having the center binder omitted, were sent out at request of steel shippers to determine the necessity for center binders. The information obtained through these trial shipments was not conclusive and the trial has been further extended. The committee submitted a number of changes in loading rules for approval.

Arbitration.—The committee, of which T. H. Goodnow, Superintendent Car Department, Chicago & Northwestern Rd., was chairman, reported as follows:—During the season 1107 to 1183, inclusive, were decided and copies sent to members. A copy of these decisions

is made part of the report. A vote of concurrence in the decisions is requested by the committee. With the approval of the general committee, your committee has continued the rendering of interpretations of such questions as have been asked by the members re-

garding the rules of interchange. The more important of these interpretations have been issued to the members in Supplement 1 to the 1920 Rules of Interchange. All recommendations for changes in the rules of interchange submitted by members, railway clubs,

private car owners, etc., have been carefully considered by the committee and, where approved, changes have been recommended. Full particulars of changes in the rules of interchange recommended by the committee are appended to the report.

Brake Shoe and Brake Beam Equipment Committee's Report.

The committee, of which W. J. Bohan, Assistant General Mechanical Superintendent, Northern Pacific Ry., was chairman, and of which G. E. Smart, General Master Car Builder, Canadian National Ry., was a member, reported as follows:—

The 1920 brake shoe and brake beam committee, in its report presented at the last annual meeting engaged for the 1921 committee to give attention to eight subjects. These have been given careful consideration and are herein-after reported on as follows:

1. Development of a Gauge to be Used for the Purpose of Determining the Hanging Heights of Existing Beams.—The committee believes the value of such a gauge is insufficient to warrant

association with the request that each give it careful consideration and submit his criticism to the committee to assist it in the final development of a standard practice that will satisfactorily meet the requirements.

3. Advisability of Introducing Into the Specifications Some Form of Brake Head Strength Tests.—This subject was referred to a sub-committee of engineers of tests, which conducted some laboratory tests on 21 different types and capacities of brake beams, representing the products of 7 different manufacturers, at the Collinwood laboratory, New York Central Lines, and submitted the report which is incorporated herein as a progress report. The conclusions reached by the sub-committee read in

their careful study and investigation by the committee.

4. Advisability of Increasing the Initial Brake Shoe Thickness from $1\frac{1}{2}$ to $1\frac{3}{4}$ in.—In view of the adoption as standards of the association, of brake heads of the A, B and C depths last year, to take care of existing brake beam clearance conditions, the committee deems it advisable that no changes be made in the standard brake shoe thickness of $1\frac{1}{2}$ in. at this time.

5. Details of Contour for Top and Bottom Head Lugs and the Recesses in Brake Shoes Adjacent Thereto.—This subject refers to the recesses in the top and bottom brake head lugs which receive the top and bottom brake shoe lugs. The standard drawing does not

the expense incident to its development and manufacture for general distribution, for the reason that the old types of cars on which wide variations of hanging heights exist, and which prompted the idea of such a gauge, are gradually being eliminated, and there is an increasing demand and tendency to standardize brake beams and hangings, which will eliminate the necessity for such a gauge.

2. Code of Instructions Governing Brake Beam Maintenance Practices.—The committee considers this subject to be one of first importance, not only in the interests of efficiency and economy, but in being consistent with present standard practice, and recommends, as the first progressive step in this direction, the early adoption of a standard practice covering the reclamation of brake beams in such a manner that they will meet the standard specifications used in the purchase of new brake beams. A sub-committee was appointed to submit a tentative standard practice and has submitted one which is quite in detail and deserving of the careful consideration of the association. It is submitted herewith as a progress report and it is recommended that the report be submitted to the members of the

part as follows: "Tests of brake-beam heads do not appear necessary if the load in service always comes upon the center lugs. However, if in the opinion of the brake beam committee, the load is not always restricted to the center lugs, but is frequently carried principally on the toes, then a standard strength of head, and standard method of test for determining same, is desirable."

The committee believes that all of the stress on brake heads is frequently sustained by the top and bottom lugs, and that brake head strength tests are a proper and reasonable requirement and should eventually be incorporated in the specifications. Accurate and practical methods of making such tests are, however, still obscure and will require fur-

show all of the dimensions and manufacturers were conferred with to determine the practice. It was found that the depth of the recesses is uniformly $1\frac{1}{4}$ in. from the $17\frac{3}{4}$ in. radial line; the width at the opening is in practically all cases $1\frac{1}{2}$ in. and at the bottom varies from $1\frac{1}{4}$ in. in the majority of cases to $1\frac{1}{2}$ in. Inasmuch as the width of the recesses at the bottom is $1\frac{1}{4}$ in. in the majority of cases in practice, and that this dimension provides ample clearance, the committee recommends that section CC, sheet M. C. B. 17, be revised to show the dimension $1\frac{1}{4}$ in. as the width of the bottom of the recesses adjacent to the top and bottom brake head lugs, and that the secretary be so authorized.

Recommended Brake Beam No. 2 and No. 2 plus capacity.

6. **Brake Shoe Key Design and Details Involved in the Fit of Shoes, Head Face and Key.**—This subject was referred to a sub-committee for investigation and its report is submitted herewith as a progress report with the understanding that the investigation will be continued by the committee.

7. **General Brake Beam Hanging.**—This subject was referred to a sub-committee for investigation, and its report was forwarded to the committee on car construction, which has the matter under consideration in connection with standard truck design.

Reversible Strut.—This subject is still under consideration and the committee has nothing to report at this time.

Standard Depth of Brake Head.—Last year there were adopted as standards three depths of brake heads designated as A, B and C, to meet clearance conditions obtaining on various cars. It seems to the committee that but the one designated A should be standard, and the others permissible for use only when the standard cannot be applied, maximum depth head that can be applied to be used in all instances. The committee recommends that heads B and C be removed from the standards and their use be permitted as alternates where the standard A head cannot be applied.

Status of No. 2 and No. 2 Plus Standard Brake Beams.—The status of the no. 2 and no. 2 plus standard brake beams, as regards the weights of cars to which each should be applied, has received special consideration at different times during the year. The train brake and signal committee and the brake shoe and brake beam equipment committee were requested by the car construction committee to submit their joint recommendations on this subject. The joint meeting of the two committees referred to was held at New York on April 5, 1921, and the following motion was carried by a majority, but not unanimous, vote:

"The brake shoe and brake beam equipment and the train brake and signal equipment committees have considered the matter of no. 2 and no. 2 plus brake beams, and recommend that these beams be used on cars of the following weights for four-wheel trucks:

Brake beam.	Car weight.
2.	35,000 to 48,000 lb.
2 plus	48,000 to 58,000 lb.
3.	Over 58,000 lb.

"In the case of six-wheel trucks, the above weights should be increased 50% for the beams specified."

Report of this action was submitted to the car construction committee.

Formula for Brake Power on Freight Cars.—The car construction committee, in its last year's report, recommended a new formula for brake power on freight cars as follows:

$$\frac{(W - w)}{4} = 0.1W - 0.3w$$

but not more than 0.75w
in which W = loaded weight of car, maximum.
w = empty weight of car.
W - w = maximum allowable load.

The association requested the train brake and signal equipment and the brake shoe and brake beam equipment committees to submit the joint recommendations of their committee on this subject. The joint meeting was held Nov. 18, 1920, and a proposal to change the brake ratio as suggested was unani-

mously disapproved. The following report was submitted to the car construction committee:

"The purpose of the proposed change in braking power, is to make the percentage of braking power more uniform on partially loaded cars, in which there is a wide range in the ratio of light weight to loaded weight. While the proposed change will accomplish in a small measure the object sought, it will do so only by sacrificing the uniformity of braking power on empty cars. As the factor of retardation is highest when the cars are empty, it is essential that uniform braking power be maintained for empty cars."

"The adoption of the proposed braking power formula will result in increasing the percentage of braking power on high capacity cars, such as 70-ton hoppers having 6 x 11 journals, to a point in excess of the capacity of standard 10-in. freight brake equipment, and for comparatively low capacity tank cars the application of the formula will in some cases reduce the effectiveness of the hand brake."

"It also provides for a lower percentage of braking power on refrigerator cars having approximately 55,000 lb. and having 5 x 9 journals. As a rule, such cars are handled in short, high speed trains. Because of the relatively high speed at which these cars are handled and the character of lading carried by them, a reduction in braking power is not considered desirable, especially in view of the fact that they are handled in short trains in which a high percentage of braking power is less obtainable than in the case of long trains."

"In view of the foregoing, the committee does not consider it advisable to adopt the proposed formula for braking power and brake beam capacities."

"The matter of necessary changes in the Rules of Interchange to take care of the no. 2 and no. 2 plus brake beams, having 12,000 and 15,000 lb. capacity respectively was then considered. In view of the fact that the status of the 12,000-lb. and the 15,000-lb. brake beams has not been established as regards their application, it was not possible for the committee to submit definite recommendations to the committee on car construction at this time."

"This docket was considered jointly by the car construction committee on train brake and signal equipment and the committee on brake beam and brake shoe equipment, and the Secretary was instructed to advise the committee on car construction that the report prepared by the sub-committee, above referred to, was the unanimous opinion of these two committees."

Standardization of Brake Beams Having Central Head Hangings.—The committee believe that a standard should be made to standardize brake beams having central head hangings only, and having a maximum depth of brake head of 6½ in. and a maximum depth of brake beam of 7½ in., and wishes to submit to the Association as recommended practice the accompanying drawing showing such a beam of the no. 2 and no. 2 plus capacity.

Accompanying the report were the following appendices: Recommended practices on brake beam reclamation and repairs; report of sub-committee on brake beam head strength tests; brake shoe key design and details involved in the fit of shoes, head faces and key.

Labor and Material Prices Committee's Report.

The committee on labor and material prices, of which A. E. Calkins, District Master Car Builder, New York Central Rd., was chairman, and of which I. N. Clark, Master Car Builder, Grand Trunk Ry., was a member, reported as follows:

During the past year your committee has made certain investigations, and as the result of same submits the following report on Freight Car Rules 101, 107, 111 and 112, and Passenger Car Code Rules 21 and 22:

The material prices set forth in the accompanying recommendations for 1921-22 rules are based on the average prices paid by five large representative roads during 1920, supplemented by numerous current quotations from several large railway supply houses. As in the present code, all material prices include suitable allowances to cover freight transportation charges, direct and indirect store expense, fabricating labor when involved, and interest on stock investment, based on average monthly inventory balance multiplied by interest rate and result divided by total annual material disbursements. In recommending many of the material prices, due consideration was given to the fact that the roads had stocked up on materials at prices effective before the decline, and therefore the full effect of the recent decline in prices will not be represented in the prices recommended for next year. In establishing prices for practically all second-hand materials, the same percentage of cost new as prevails in the present rules was used. Scrap material prices were averaged and current market prices less transportation charges to scrap plant were set up as credits.

Labor allowances shown in hours and tenths are substantially the same as those in the present code, which were based on time studies in 1915 and 1916, one of the most important exceptions being the fact that certain allowances for silks, bolsters, etc., which in the present code include jacking of the car, have been modified so that the jacking cost is omitted and is to be added as a separate operation where consistent. It is felt that this will be of considerable advantage to bill clerks throughout the country, in that there will be removed the necessity for deducting, under certain combinations, the jacking price heretofore included in two out of three of the operations in the combination.

The principal labor rate per hour (item 172, rule 101), is recommended at \$1.20, the same as authorized in the existing rules. As noted above, no changes have been made in the labor allowances as a whole, nor in the rates per hour, this for the reason that overhead studies made by our representative roads during Oct. and Nov. 1920, also investigations made in February and March, 1921, as to actual time consumed on these roads in performing the work as compared to the arbitrary allowances authorized under the rules, indicate that the roads of the country, on the average, are being fairly compensated under the rules for the work performed by them on foreign cars. Your committee therefore feels that if its recommendations in the annexed report are adopted it will be possible throughout the coming year for all roads to handle repairs of foreign equipment without losses to the repairing line.

New Sleeping Cars, Canadian National Railways.

Additional passenger equipment, delivered to the Canadian National Rys. during this year included 18 sleeping cars, 12 dining cars, and 20 baggage cars, specifications for all of which were given, in connection with the information as to the placing of orders, in Canadian Railway and Marine World for May, 1920. The sleeping cars' general dimensions, etc., are as follows:—

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.
Length over buffing (approximate)	82 ft. 4½ in.
Width over side sills	9 ft. 9½ in.
Width over all at eaves	10 ft. 1½ in.
Width at clerestory	5 ft. 11¼ in.
Height, track to roof at centers	14 ft. 2 in.
Height over lamp jacks, approx.	14 ft. 5 in.

center sills. The body center bearings are of cast steel, and equipped with the Coleman center pin locking device to lock the truck to the body of the car.

The pressed steel floor carriers referred to above are 1-16 in. thick, and support 6 fir floor stringers, securely fastened to the steel plate by ¾ in. carriage bolts. Between the stringers, next to the 1-16 in. plate, is red rope paper, a course of 3 ply salamander, a 7-16 in. air space, and a ½ in. layer of Keystone hair felt, the top of this being even with the tops of the floor stringers. On top of this is another layer of red rope paper, throughout, then no. 22

lower deck. The hood roof boards are of basswood. Roof and hood covering consists of national standard roofing canvas for both decks; copper gutters are provided over vestibule side doors. Roof insulation consists of one course of 3-ply salamander, applied to the back of deck panel plates, and, back of all, agasote head lining.

The interiors are finished in Mexican mahogany throughout, except above the vainscoting in men's and women's saloon, lavatory and drawing room annex, which is finished in poplar, and the deck sill moulding and upper deck finish, which are steel. The upper portions of men's

Sleeping Car, Canadian National Railways.

Height, rail to eave moulding	11 ft. 2½ in.
Height, track to sill at end	3 ft. 7½ in.
Height, track to sill at center	3 ft. 9 in.

They are of steel underframe, steel superstructure construction, with steel plate exterior and wood interior, and follow closely the Canadian National standards of design. The cars are 73½ ft. long over the end sills, carried on 6-wheel trucks, the interior arrangement consisting of 12 sections and one drawing room.

The underframe construction consists of a built-up center sill 26 in. deep, made up of two 5-16 in. plates, having 6 x 4 x ½ in. angles on the outside at the top, and 3 x 3 x ¾ in. angles both inside and outside at the bottom. The side

galvanized steel chanarch, and finally a layer of flexolith composition flooring ¾ in. thick.

The side and end framing closely follow C.N.R. standard practice, consisting of posts of pressed steel riveted to the side sill Z bars at the bottom, and to plate Z bars at top, to the top part of which Z bars the carlines are riveted. Pressed sections are used for the window casings. The end framing door posts are of I beam section, and the corner posts are built up of angle irons riveted to Z bars. A continuous steel rail extends the length of the car body. The open hearth steel plates are 3-16 in. thick below the belt rail, and at the ends,

and women's saloons, lavatory and drawing room annex are painted a light color and varnished. A feature of the interior finish is the absence of any sharp corners against which passengers might injure themselves.

The mahogany body end doors, are painted on the outside to match the interior of the vestibule, and on the inside to match the interior finish. All interior doors are of wood, to match the interior finish. The end doors are equipped with drop sash, arranged with a latch so that the sash can be dropped to give an opening of about 2 in., with the next stop arranged so that the sash will be half-open. Anti-pinch end door hinges

Floor Plan, Sleeping Car, Canadian National Railways.

sills are 5 in. x 11.6 lb section Z bars with a 2½ x 3 x ¼ in. angle attached to the same with ¾ in. rivets. The side and center sills are fastened together by ¾ in. pressed steel pans, forming the body bolster, securely riveted to side and center sills. In addition, tie-straps ½ in. thick, are riveted to the lower side of pressed pans, lower angles of built up center sill, and center sill filler. In the center of the car are two cross bearers, built up of 5-16 in. pressed pans, connected to the plates forming the sills by ¾ in. rivets. For carrying the flooring, pressed steel pans, spaced 2 ft. apart, are securely riveted to side and

and the portions above the belt rail, and the letter boards, are ¾ in. thick. All cars are equipped with the latest standard anti-telescoping device. Superstructure insulation consists of an outer course of 3 ply salamander, and an inner course of ½ in. Keystone hair felt, applied to sides and ends of car, and securely attached to the frame of car by clips.

In the roof construction, the carlines are of pressed steel, with yellow pine furrings bolted to them for the application of the wood roofing. The roof boards are 13-16 in. poplar, 3¼ in. face in the upper deck, and 2¼ in. face in the

are applied. The window lay-out is clearly shown in the accompanying illustrations. All sashes are double, the outside sashes being of mahogany, the inside sashes matching the interior finish. The cars are completely fitted with the latest arrangements of weather stripping, brass frame and copper wire sliding screens, sash locks and metal window deflectors. The end doors are fitted with one light of 3-16 in. plate glass in the drop sash, 14 x 24 in. The cars are well equipped with mirrors, there being one 28 x 52 over washstand in smoking room; one 28 x 38 in. over washstand in women's lavatory; one 28 x 52 in. over sofa in

smoking room; one 16 x 30 in. over dresser shelf in drawing room annex; one 20 x 60 in. on partition in drawing room; one 12 x 60 in. on entrance door to saloon in women's lavatory, and 13 section mirrors 3½ in. x 27 in.

The portieres and draperies are of C.N. standard quality, with window shades of no. 77 silk faced pantasote. Berth curtains are of green mohair, and luminous berth numbers are sewn on the upper and lower curtains for each section. Seats are of metal frame, with standard seat slides, with wooden ends to match the interior finish, and covered in short nap plush frieze. The smoking room and women's lavatory each contain a comfortable chair, the smoking room contains two upholstered chairs and sofa finished in Spanish leather, and the drawing rooms contain standard sofas. The berths are of the latest standard design. The cars are equipped with 2-compartment water coolers, paper cupping machines conveniently located, and half gallon silver plated thermos

cated under the cars, in such a way that there is no liability of condensation blowing on to the axle generator, thus removing a common cause of belt slipping. The steam train line is of 2 in. extra heavy steel pipe, and the heater coil pipes are extra heavy lap welded wrought iron, of C.N. standard design.

Ventilation is provided by 21 Mudge peerless ventilators, with slope conforming to contour of roof, 8 in body of car, 4 in smoking room, 4 in drawing room, 2 in women's lavatory, and one in each of 3 saloons.

The floor covering is rubber tiling ¼ in. thick, with standard 1½ in. red and green squares, in smoking room, men's saloon and passageways, with high quality carpet of C.N. standard pattern throughout the remainder of the car.

The electric lighting system includes a ball bearing, body-hung generator, belt driven from axle, of 3 k.w. capacity, and 350-amp. hr. batteries. The cars are fitted with luminous push buttons and

has two valves. The brake pressure cord is red and the signal pressure cord is white, and these cords extend from each end of car to bulkhead partition, and not through the body of the car.

The car bodies are mounted on Commonwealth 6-wheel cast steel trucks, with an 11 ft. wheel base, equalized as shown. Miner type H-445 side bearings are used. Wheels are C.N.R. standard 36½ in. steel tired, with M.C.B. standard axles and 5 x 9 in. journals.

The cars were built by the Canadian Car and Foundry Co., Montreal from specifications prepared by the C.N.R. They are operating between Toronto and Ottawa, and in main line service out of Montreal, and are numbered 1541 to 1558 inclusive, and named after Canadian towns and cities. The names in accordance with the above numbers, consecutively are, Ottawa, Portage-la-Prairie, Dauphin, Canora, Yale, New Westminster, Neepawa, North Bay, Somerset, Bathurst, Chaudiere, Bridgewater, Souris, St. Jerome, Yarmouth, Strathcona, Rideau and Borden.

Sleeping Car, Canadian National Railways.

bottles in each drawing room. Each drawing room annex is equipped with a white metal single bowl washstand, with dental faucet. The women's lavatory is equipped with a 2-bowl washstand, with combined dental bowl, and the smoking room contains a 3-bowl washstand with 2 dental howls. Fittings are nickel plated, and sanitary towel holders are applied throughout.

The cars are equipped with the C.N.R. standard air pressure water system, with 26 x 96 in. water tank and metal tank box; also a temperature control device for heating water, and 1¼ in. pipe applied around the upper part of water tank to prevent freezing, in addition to the loop of 1¼ in. heater pipes. The Vapor Car Heating Co.'s system of heating is used, and is arranged with 5 pipes 1½ in. diam. on each side of car, controlled by 2 valves, one controlling 2 pipes and the other 3, thus permitting convenient regulation of the heat, as 2, 3 or 5 pipes can be cut in as desired. The exhausts from the steam traps are lo-

switches to the berth lights, in upper and lower berths, and annunciators and all wiring, and switchboard installation details, are in accordance with the railway's standard practice.

Miner friction draft gear, type A-5-p, and Sharon couplers, are used, together with the Chaffee drawbar centering device. The vestibules are of the latest standard steel construction wide type, the end sheets of which are solid and contain no glass. The vestibules are of wood and contain a 25 x 28½ in. sheet of ¾ in. polished glass. The vestibule diaphragms are of C.N. standard design.

The air brake system is the Westinghouse schedule single LN-18-12, with K-1 slack adjuster, designed for 105 lb. brake cylinder pressure, a feature being the use of American Steel Foundries' clasp type brakes. Braking power is 75% of light weight of car, with brake cylinder pressure 50 lb. per sq. in. Each car is fitted with two conductors' valves, type B-3/A; the air signal system is Westinghouse schedule K, and each car

Reduction of Live Stock Freight Rates.

Following the conference at Ottawa, on July 19, between some members of the Board of Railway Commissioners and freight officials of the principal railways, the following letter was sent on July 26 by W. B. Langan, Freight Traffic Manager, C.P.R.; E. J. Watson, General Freight Agent, G.T.R., and Geo. Stephen, Freight Traffic Manager, Canadian National Rys., to the Chief Commissioner:

"The carriers have given very careful consideration to the different representations made. In reply they must emphasize, as was shown by the schedules submitted, that the present rates cannot of themselves be considered as unduly high or unreasonable. The carriers, however, appreciate the importance, from a national standpoint, of their co-operation at this critical stage of the live stock industry; the necessity for preserving the breeding, dairy and feeding herds on Canadian farms; the maintenance of the fertility of the land; the development of agriculture, and the necessary conservation of feed supply. Subject to the concurrence of the interested parties, and relying on your assurance that rate reductions on live stock for the furtherance of these objects would be regarded by your Board as dictated by the national necessity of preserving a basic industry, and therefore not as a precedent in connection with tolls on other commodities, we beg to advise that the carriers will publish rates as follows:

"Western Canada and British Columbia, restore rates in effect prior to Sept. 13, 1920.

"Eastern Canada locally, restore rates in effect prior to Sept. 13, 1920.

"Western Canada to Eastern Canada, i.e., to Montreal, Toronto and west:—From Winnipeg, 85c.; Moose Jaw, \$1.10½; Saskatoon, \$1.12½; Prince Albert, \$1.13½; Calgary and Edmonton, \$1.14½ per 100 lb. in each case, with corresponding reduction from other points.

"It is the carriers' hope that this assistance will help to tide the industry over the present crisis, and preserve the breeding, dairy and feeding herds of Canadian farms until the industry resumes, as it undoubtedly will, a more profitable basis."

Railway Operating Revenues, Expenses, and Other Statistics for May.

Steam railway operating revenues, expenses and other statistics for April are given very fully on page 482 of this issue. Since the pages went to press, the May statistics have been received, which show that the railways as a whole made a slight improvement over April, in so far as operating ratio is concerned, although gross revenues continued to decrease. The latter show a decrease of \$734,217 from April, and a decrease of \$3,149,800 from May 1920, which, considered in connection with the higher rates prevailing in 1921, indicates the great falling off in traffic in May 1921 as compared with May 1920. The gross operating revenues of the Canadian Government Rys. decreased to \$3,071,611 in May 1920 to \$2,914,972 in May 1921; those of the Canadian Northern from \$4,718,730 to \$4,427,993; those of the C.P.R. from \$16,759,316 to \$14,122,538, and those of the G.T.P. from \$6,098,104 to \$5,957,778; while the Grand Trunk Pacific gross revenue increased from \$875,476 to \$956,762 in May 1921.

Although the total operating revenues decreased so materially, the operating expenses showed a better percentage of decrease, being 3% less than in April 1921, and 9% less than in May 1920. The greatest decreases in the expenses are in the amounts for maintenance of way and structures, and maintenance of equipment, but transportation expenses did not show much decline from April to May 1920. The most striking decrease in expenses as between May 1920 and May 1921 in C.P.R. expenses for maintenance of way, and maintenance of equipment. Maintenance of way cost \$2,681,145 in May 1920 and \$1,927,082 in May 1921, while maintenance of equipment cost \$3,573,093 in May 1920 and only \$1,983,998 in May 1921. The G.T. Pacific also cut its expenditures for maintenance of way, and maintenance of equipment, in a similar degree, as compared with May 1920. The figures for expenses throughout indicate that the railways are practising economies in all directions, and keeping expenditures down to a minimum.

That the railways, considered as a unit, are slowly, but surely, bringing the operating ratio down, is seen in the fact that the figure was 108 for Jan. 1921; 105.1 for February; 96.64 for March; 96.17 for April, and 95.29 for May. The latter figure is better than that for May 1920 when it was 95.55. An examination of the statistics shows, however, that the decrease in the operating ratio of the lines as a whole is largely due to the results being secured by the C.P.R.; all of the other large roads, except the G.T. Pacific, showing a more unfavorable operating ratio for May than for April. The C.P.R.'s operating ratio decreased from 121 for April to 76.57 in May, and the G.T. Pacific decreased from 181.24 to 142.23; the Canadian Government Rys. increased from 116.44 to 127.92, Canadian Northern from 126.71 to 129.67, and G.T.R. from 92.60 to 93.93 in May. These figures, however, are but logical results of the traffic conditions under which the various railways operate, in combination with the operating conditions obtaining. Only five of the large U.S. roads had a more favorable operating ratio in May than did the C.P.R.

The tons of freight carried decreased

from 8,589,270 in May 1920, to 6,856,505 in May 1921, the figure for April 1921 being 7,188,000. The average haul for May was 232.2 miles, compared with an average haul of 260.7 miles in May 1920, and 243.3 miles in April 1921. The ton mileage of revenue freight in May 1921 decreased 26.5% from that of May 1920. The passengers carried decreased 11%, from May 1920, and the average passenger journey decreased from 68.4 to 64 miles. This meant a decrease in revenue passenger miles of about 17% from May 1920. The number of passengers carried in May 1921 was 3,463,747, and in April 3,511,000, the average journey being 62.4 miles.

The average freight receipt per ton per mile for May 1921 was 1.372c., against 1.087c. for May 1921, an increase of 26%. The average receipt per passenger mile increased from 2.814 in May 1920 to 3.164 in May 1921, or 12%. The payroll was \$9,415,037 for May 1921, against \$23,076,014 for May 1920. In May 1920 the payroll was 64.54% of revenue and 67.55% of the operating expense; in May 1921 it was 59.55% of revenue and 62.49% of expenses.

As above noted, the Grand Trunk Pacific showed a remarkable improvement in May 1921, over May 1920, and the results as shown are of particular importance in illustrating the conditions which confront the G.T.P. and other Government roads. The G.T.P. transportation expenses in May 1920 were \$570,856, and for May 1921 they were \$670,164; in May 1920 the railway handled 49,892,015 tons miles of revenue freight, and in May 1921 it handled 89,245,788 tons miles. Passenger train miles increased in May 1921 over May 1920. On comparing the figures for transportation expenses and for freight tonnage handled, it is evident that the increase in revenue tonnage is much greater proportionately than the increase in transportation expenses; or, conversely, the additional tonnage handled by the G.T.P. was carried at a lower unit cost. The average receipt per ton mile was but \$0.799 in May 1921, against \$1.184 in May 1920. If the rate had been the same as in 1920 the operating ratio would have shown still more improvement than it did. The figures given illustrate the great necessity of this and the other Government roads — more traffic.

Joint Section Disputes Between C.P.R. and G.T.R. — In inference to the article on this subject published in Canadian Railway and Marine World for August, on page 432, we are advised that one point at issue is whether or not the C.P.R. has the right, under the agreement for its use of G.T.R. tracks between Toronto and Hamilton, to the use of the industrial tracks coming off what is known as the old belt line, on the joint section, and also the industrial spur at Swansen, and whether the Y at Burlington is part of the joint section. As stated previously, the matter has been referred to arbitration, J. T. Arundel, formerly General Superintendent, Ontario District, C.P.R., representing that company, and F. H. McGuigan, formerly Fourth Vice President, G.T.R., representing the latter company. The question of the C.P.R. right to handle express business on the joint section is being discussed.

Traffic Orders by Board of Railway Commissioners.

Carload Shipments of Fruit and Vegetables.

31,311. July 26.—Re application of the Dominion Agriculture Department on behalf of Ontario Fruit Growers' Association, Niagara Peninsula Fruit Growers' Association, Niagara Peninsula Fruit Growers' Limited, the Fruit Growers of the Niagara District, et al., for an order directing the suspension of regulation governing partial unloading of carload shipments of fruits and vegetables as provided in Canadian Express Co.'s tariff C.R.C. 1337, issued March 24, 1921, effective May 1, 1921, and Dominion Express Company's tariff 86, C.R.C. 4576, issued March 24, 1921, effective May 1, 1921. Upon hearing the application at Ottawa on May 17, 1921, the Dominion, Canadian and Canadian National Express Companies, the Express Traffic Association of Canada, the Dominion Agriculture Department, the Niagara Peninsula Fruit Growers' Association, and the fruit shippers being represented at the hearing, and what was alleged, the Board orders that the application be dismissed.

Grain Export Rates, Georgian Bay to Quebec.

31,313. July 26.—Re application of Quebec Harbor Commissioners, and Quebec Board of Trade, for an order under the provisions of the Railway Act, directing that export rates on grain between Georgian Bay ports and the City of Quebec be placed on the same basis as to Montreal. Upon hearing the application at Quebec, Feb. 3, 1921, in the presence of counsel for the Quebec Harbor Commissioners, the Quebec Board of Trade, the Grand Trunk, Canadian Pacific, and Canadian National Railways, and what was alleged; and upon reading the exhibits filed, and what has been submitted in support of and against the application, the Board orders that the application be dismissed.

Flax Rates to Port Arthur and Fort William.

31,314. July 27.—Re application of Winnipeg Grain Exchange, for an order disallowing tariffs filed with respect to bulk shipments of flax, western points to Port Arthur and Fort William, Ont., and for an order requiring the Canadian Pacific, Grand Trunk Pacific, and Canadian National Railways to file tariffs restoring the differential of 1c. per 100 lb. on bulk shipments of flax, Port Arthur or Fort William, over the rate on wheat. Upon hearing the application at Ottawa, Nov. 23, 1920, in the presence of counsel for Winnipeg Grain Exchange, Winnipeg Board of Trade, Montreal Board of Trade, Toronto Board of Trade, the Canadian Pacific, Grand Trunk and Canadian National Railways, and what was alleged; and upon the report and recommendation of the Board's Traffic Officer, the Board orders that the application be dismissed.

Nipissing Central Railway Passenger Fares.

31,317. July 27.—Re application of Nipissing Central Railway Co. for a general advance in tolls for the carriage of passengers. Upon hearing the application at Haileybury, Ont., May 14, 1921, in the presence of counsel for the Nipissing Central Ry., the Town of New Liskeard, and the Township of Buck, and what was alleged; and upon reading the

written submissions filed, the Board orders that the company be authorized to file with the Board a tariff providing for an average increase of 20% in existing passenger rates; and tariff to be effective thereafter on five days notice, posted in accordance with the requirements of the Railway Act, 1919; and the Board further orders that the company file with the Board monthly statements showing,

in detail, its earnings and expenses, and such other details, if any, as may be called for from time to time by the Board.

Classification of Office Furniture, Etc.

31,318. July 28.—Re application of Canadian Manufacturers Association, on behalf of the Office Specialty Co., for a reduction in the classification minimum weight of mixed carloads of office fur-

niture, filing cases, and supplies. Upon hearing the application at Ottawa, Dec. 21, 1920, the Canadian Manufacturers Association, the Canadian Freight Association, the Canadian Pacific, and Grand Trunk Railways being represented at the hearing, and what was alleged; and upon the report and recommendation of the Board's Traffic Officer, the Board orders that the application be dismissed.

The United States Railways' Financial Position.

The negotiations between the U.S. Railroad Administration and the railway executives, with a view to a speedy settlement of the financial relation between the Government and the railways, were reviewed in Canadian Railway and Marine World for August, up to the point to which they had then been carried, and further information in connection with the U.S. railways' financial position was given. The May operating figures showed a net representing a return of 2.41% on the capital invested in railway properties, but even though this was a vast improvement over May 1920, examination shows that this result was obtained only by cutting expenditures for maintenance of way and structures, and maintenance of equipment, by over \$89,000,000, compared with 1920. As the total net operating income was only \$37,000,000, it is evident that if maintenance had been kept up in accordance with former standards, the roads would have suffered a large deficit. The Transportation Act provided for a return of 6% to the holders of railway securities, but, taking the U.S. roads as a unit, it is evident that net earnings will have to be materially increased before such a return, the return which has been decided upon as reasonable and just.

The June earnings showed some improvement, the net operating income being \$51,778,000, representative of an annual return of 3.1% on the investment. However, to earn the 6% allowed by law, the railways should have earned a net \$47,000,000 greater than they did.

The result of the negotiations between U.S. President Harding and his advisers, on the one hand, and the railway executives, on the other, as reviewed in our August issue, and in which the Director General of Railroads and the War Finance Corporation's directors participated, was that the members of the Administration became thoroughly convinced of the advisability, in the public interest, of restoring railway credit by funding the debts of the railways to the Government, and of making arrangements for the Government, as represented by the Railroad Administration, to pay the railways what it owes them, as quickly as possible. As pointed out in our previous article on this subject, the railways have cut their purchases of new material and equipment to the absolute minimum, are laying up their bad order equipment, instead of repairing it, and in many cases have not been able to pay their bills for material and supplies secured previously, which has resulted in credit restriction, business stagnation and widespread unemployment. In a message to Congress dealing with the matter, and advising the funding of the debts of the railways to the Government, President Harding said: "In the case of the railways there is a contractual and moral obligation Railway solvency and efficiency are essential to our healthful industrial, com-

mercial and agricultural life. Everything hinges on transportation."

After further conference, a method of funding the railways' debts to the Government was decided upon, and the necessity of asking Congress for an appropriation with which to pay the Government's debts to the railways was obliterated. The Administration's proposal is that the railways be allowed to issue securities, bearing interest at 6%, for what they owe the Railroad Administration, for additions and betterments made by it during the period of Federal control, and charged to the railways. The railways would hand these securities over to the Railroad Administration. It is further proposed that the War Finance Corporation, which has large sums on hand, buy these securities from the Railroad Administration. This would furnish the Railroad Administration with the funds necessary to pay its debts to the railways, arising from the period of Federal control, and the 6 months' guarantee period immediately following. The War Finance Corporation, it is proposed, will hold the securities for the time being, and, when conditions become more favorable, will sell them to investors. Viewing the subject broadly, it is seen that the ultimate effect of the proposal is to have the public extend the necessary credit to the railways indirectly, instead of the Government doing so directly.

It will be remembered that great differences of opinion have existed between the Railroad Administration officers and the railway executives, as to the amounts which the Railroad Administration owes the railways, for alleged undermaintenance of the railway properties during Federal control. The railway executives based their claims largely on the inefficiency of labor during that period, and held that the accounting method of determining adequacy of maintenance, wherein the amount of money spent for labor and material served as the standard of maintenance, is unsatisfactory, and that actual physical condition is the only fair means of judging. The Railroad Administration has consistently taken the stand that these claims are excessive, and has been supported in this by a recent Interstate Commerce Commission judgment. It is, therefore, a condition of the funding privilege which it is proposed to extend to the railways, that these claims be modified considerably, and, so far as they are based on alleged inefficiency of labor during the period of Federal control, be dropped altogether. The figures in connection with the amounts owed each other by the railways and the Government were given in our August number. It may be added that if any railway convinced of the justice of its undermaintenance claims, there is nothing in the proposed legislation to prevent it from attempting to secure a favorable legal decision, but in doing so,

it would automatically lose the opportunity of taking advantage of the refunding proposition.

Bills to carry out the recommendations of President Harding and his Cabinet, as above outlined, have been introduced in both houses of Congress. That in the House was introduced by Chairman Winslow, of the House committee on interstate and foreign commerce, and provides that the amount which can be expended by the War Finance Corporation in purchasing the funding securities shall not exceed \$500,000,000. The Senate bill, which is to the same effect, was introduced by Senator Townsend, a member of the Senate committee on interstate commerce. In his message to Congress concerning the proposed legislation, President Harding further said: "I can readily believe that so simple a remedy will have your prompt sanction. The question of our obligation cannot be raised, the wisdom of affording early relief is not to be doubted, and the avoidance of added appropriation or liability will appeal to Congress and the people alike."

Hearings on the bill introduced by Senator Townsend were begun before the Senate committee on interstate commerce, one of the first witnesses to be examined being Eugene Meyer, Jr., Director of the War Finance Corporation, who expressed a favorable opinion of it. Director General Davis, of the Railroad Administration, also spoke in favor of it. It is stated that President Harding and his Administration are anxious that this legislation be passed with as little delay as possible. It may be safely said that the proposed legislation is fully recognized as being highly desirable, and it is felt that with the return of adequate railway credit, and purchasing power, the cause of a great many economic ills will be eliminated, and that an important forward step will have been taken in the restoration of normal business activity. In view of the close relationship which has always existed between the economic situation in the U.S. and that in Canada, it may confidently be expected that this action in connection with the U.S. transportation industry will tend to favorably influence the Canadian situation.

The examination of various railway executives before the Senate committee of investigation into the railway situation, reported fully in previous issues of Canadian Railway and Marine World, has been completed. Examination of shippers and representatives of labor organizations before this committee has not been proceeded with, and it is not likely that it will be started until some time in September.

The Dominion Iron & Steel Corporation is negotiating with the Canadian National Rys. for running rights between the Sydney, Nova Scotia, for hauling raw materials, etc.

Consolidation of Canadian National and Canadian Express Companies.

The announcement made in Canadian Railway and Marine World for August, that the Canadian National and Canadian Express Co.'s were to be consolidated, and that John Pullen and W. C. Muir would be President, and Vice President and General Manager respectively, was confirmed by a circular dated Aug. 1, issued by D. B. Hanna, Chairman of Board of Directors, Canadian National Ex. Co. and H. G. Kelley, Chairman of Board of Directors, Canadian Ex. Co. as follows:—"Effective Sept. 1, the operation of the Canadian Ex. Co. and the Canadian National Ex. Co. will become consolidated and the combined business will be continued thereafter under the name of the Canadian National Express Co. Mr. John Pullen, heretofore President, Canadian Ex. Co., will be President, Canadian National Express Co., and W. C. Muir, heretofore General Manager, Canadian National Express Co., will be Vice President and General Manager."

The President, Vice President and General Manager, and other officials with jurisdiction over the company's entire system, have their offices at 95 McGill St., Montreal, known heretofore as the Canadian Express Building, and which is owned by the G.T.R. Co.

Jno. Pullen, as President, Canadian National Ex. Co., issued the following circular, post-dated Sept. 1:—"The management of the Canadian National Ex. Co. and the Canadian Express Co. having been combined, the business of those companies, on and after Sept. 1, will be carried on in the name of the Canadian National Express Co. Announcements of the official organization are being made, and instructions are being issued by heads of departments. Until otherwise instructed, all employees in the service of the two companies will continue their present duties. Until new forms and book records can be printed and distributed, agents will continue to use the present stock. The joint tariffs and classifications issued by the Express Traffic Association of Canada, or other traffic agencies, and by the two express companies, also the general rules and instructions, will be continued in effect. The management has every reason to know and appreciate the faithful services of the employees in the past, and confidently expects the same loyalty and efficiency in the future."

General Officials—President Pullen also issued another circular, post-dated Sept. 1, announcing the following appointments of officials for Canadian National Ex. Co. effective that date.

W. W. Williamson, heretofore General Auditor and Superintendent of Tariffs, Canadian Ex. Co. to be General Auditor, Office, Montreal.

W. H. Bryce, heretofore Superintendent, Money Order Department, Canadian Ex. Co. to be Manager, Money Order Department, Office, Montreal.

J. H. Sonne, heretofore Assistant Treasurer, Canadian Ex. Co. to be Assistant Treasurer, Office, Montreal.

The circular also stated that the following Canadian National Rys. local treasurers will also act in the same capacity for the Canadian National Ex. Co.:—S. J. Potter, Toronto, W. L. B. Ross, Winnipeg, C. E. Buckley, Vancouver.

W. W. Williamson, General Auditor, issued a circular, post-dated Sept. 1, announcing the following appointments of officials for Canadian National Ex. Co., effective that date.

J. G. Swallow, heretofore Auditor, Miscellaneous Accounts, Canadian National Rys., Toronto, to be Assistant General Auditor, Office, Montreal.

J. A. Hill, heretofore Auditor, Canadian National Ex. Co., Toronto, to be Auditor of Revenues, Office, Montreal.

The circular added "All instructions from these officials concerning the auditing of the company's accounts should receive prompt attention. Waybill statements and abstracts, and all correspondence connected with auditing of waybills and money orders, should be addressed to Auditor of Revenues, Montreal."

Vice President and General Manager Muir issued a circular, post-dated Sept. 1, announcing the following appointments of officials for Canadian National

John Pullen.

President, Canadian National Express Company.ments of officials for Canadian National Ex. Co.

C. E. Bellerose, heretofore Assistant to General Manager, Canadian National Ex. Co., Winnipeg, to be Assistant to General Manager, Office, Montreal.

W. C. Webb, heretofore Claim Agent, Canadian National Ex. Co., Winnipeg, to be General Claim Agent, Office, Montreal.

W. P. Stericker, heretofore Claims Agent, Canadian Ex. Co., Montreal, to be Assistant General Claim Agent, Office, Montreal.

J. H. Moore, heretofore Line Inspector, Canadian Ex. Co., Montreal, to be Superintendent of Equipment and Supplies, Office, Montreal.

District and Division Officials.—F. N. Wiggins, heretofore Superintendent, Canadian National Ex. Co., Toronto, to be General Superintendent, Eastern District, Territory east of Cochrane, Ont., Joliette, and Chaudiere, Que. Office, Montreal, N.B.

H. C. Creighton, heretofore Superintendent, Atlantic Division, Canadian Ex. Co., to be Claim Agent, Eastern District, Office, St. John, N.B.

H. R. Hauch, heretofore Assistant to Superintendent, Canadian National Ex. Co., Toronto, to be Superintendent, Maritime Division, Eastern District, Territory, Edmundston and Campbellton, N. B., and east. Office, Moncton, N.B.

C. L. Bowles, heretofore Assistant Superintendent, Canadian National Ex. Co., Winnipeg, to be Superintendent, Quebec Division, Eastern District, Territory, east of Cochrane, Ont., Joliette and Chaudiere, Que., to, but not including, Edmundston and Campbellton, N.B. Office, Quebec, Que.

W. E. Norman, heretofore Superintendent, Western Division, Canadian Ex. Co., Toronto, to be General Superintendent, Central District, Territory, east of Armstrong, and Port Arthur, Ont., to, and including, Cochrane, Ont., Joliette and Chaudiere, Que. Office, Toronto.

F. Gillespie, heretofore Claim Agent, Canadian National Ex. Co., Toronto, to be Claim Agent, Central District, Office, Toronto.

A. J. Seaton, heretofore Superintendent, Eastern Division, Canadian Ex. Co., Montreal, to be Superintendent, Montreal Division, Central District, Territory (including Belleville Subdivision), Chaudiere and Joliette, Que., and west to and including Scarboro Jet, Ont., to, but not including, Orillia, Scotia Jet, and North Bay, Ont. Office, Montreal.

A. F. Stillman, heretofore Travelling Agent, Canadian National Ex. Co., Belleville, Ont., to be Assistant Superintendent, Belleville Subdivision, Montreal Division, Central District, Territory, Bidou Jct. and Brockville, Ont., and west to and including Scarboro Jet, Ont., to, but not including, Orillia, Ont. Office, Belleville, Ont.

R. H. Jones, heretofore Assistant Superintendent, Western Division, Canadian Ex. Co., Toronto, to be Superintendent, Toronto Division, Central District, Territory (including North Bay Subdivision), east of Armstrong, Port Arthur, Owen Sound, Durham, Palmerston, Stratford, Paris, Norwich Jct., Simcoe and Port Dover, Ont., to, and including, Cochrane, North Bay, Scotia Jet, and Orillia, Ont., to, but not including, Scarboro Jet, Ont. Canadian National Rys. Toronto-Washaga section included. Office, Toronto.

S. H. Bullett, heretofore Route Agent, Canadian Ex. Co., Toronto, to be Assistant Superintendent, North Bay Subdivision, Toronto Division, Central District, Territory, east of Armstrong and Port Arthur, Ont., to, and including, Cochrane, North Bay, Scotia Jet, and Depot Harbor, Ont., to, but not including, Parry Sound, Ont. Office, North Bay, Ont.

G. J. Bothwell, heretofore General Agent, Canadian National Ex. Co., Winnipeg, to be Superintendent, London Division, Central District, Territory, Owen Sound, Durham, Palmerston, Stratford, Paris, Norwich Jct., Simcoe and Port Dover, Ont., and west. Office, London, Ont.

C. A. Cunningham, heretofore Superintendent, Canadian National Ex. Co., Winnipeg, to be General Superintendent, Western District, Territory, Armstrong and Port Arthur, Ont., and west. Office, Winnipeg.

C. A. Mulligan, heretofore chief clerk, Claim Department, Canadian National Ex. Co., Winnipeg, to be Claim Agent, Western District, Office, Winnipeg.

F. Norlan, heretofore Superintendent,

Northwestern Division, Canadian Ex. Co., Winnipeg, to be Superintendent, Winnipeg Division, Western District, Territory (including Saskatoon Subdivision), Armstrong and Port Arthur, Ont., and west, to but not including, North Battleford, and Battleford, Sask., Butze, and Sibbald, Alta. Office, Winnipeg.

B. A. Latta, heretofore Traffic Supervisor, Canadian National Ex. Co., Winnipeg, to be Assistant Superintendent, Saskatoon Subdivision, Winnipeg Division, Western District, Territory, east of North Battleford and Battleford, Sask., Butze and Sibbald, Alta., to and including, Tisdale, Regina, Northgate and Radville, Sask., to but not including, Canora and Melville, Sask. Luxton-Estevan, Luxton-Radville, and Regina-Melville Sections are not included. Office, Saskatoon, Sask.

Z. M. Midland, heretofore General Agent, Canadian National Ex. Co., Vancouver, B.C., to be Superintendent, Edmonton Division, Western District, Territory (including Vancouver Subdivision), North Battleford and Battleford, Sask., Butze and Sibbald, Alta., and west, including steamship routes. Office, Edmonton, Alta.

W. C. Cranston, heretofore Agent, Canadian National Ex. Co., Saskatoon, Sask., to be General Agent, Vancouver Subdivision, Edmonton Division, Western District, Territory, Resplendent, B.C., and west. Steamship routes, Vancouver-Stewart and Anyox, including Prince Rupert, for steamship traffic only. Office, Vancouver, B.C.

The following statement was also issued:—In announcing the appointments of its operating officials, the Canadian National Ex. Co.'s management states that it has had constantly in mind the improvement of the express service rendered to the public, and the selection and promotion from the ranks of men of proven ability and experience. The recognition of the public needs is demonstrated by clothing its general superintendents with large local administrative authority, and placing them in centers of large population, where they may be readily accessible to the company's patrons, and where they will be in the closest touch with the operating officials of the railways who have in their charge the service of trains which carry the express. With these general superintendents, having jurisdiction over large districts, there will be associated superintendents, directly in charge of smaller territories or divisions, the extent of the mileage being only such as can frequently be traversed, for the purpose of inspection and careful instruction of the numerous employees who are called upon daily to handle the hundreds of thousands of parcels representing as many commercial transactions between the public. It is only by this close personal supervision that a well trained staff can be developed and thereby the public service perfected. These supervising operating officials will further be assisted by claim agents, who, having only comparatively small territories under their care, may be able to give close and prompt personal attention to the investigation and adjustment of claims or irregularities which are inevitably connected with such large number of small transactions. Small and numerous though these shipments be, they are by the public considered to be of the largest importance, and so long as the cause of claims is not prevented, they provoke much irritation, disappointment and loss to the company's

patrons. It is therefore the intention to carefully analyze the cause of such claims and remove the cause where possible; but, in any event, to pay such lawful claims with business like promptitude, as soon as the liability has been established. All these officers, of whatever grade, reporting upwards through their next superior, officer come indirectly, but none the less certainly under the observation of the chief operating officer, the Vice President and General Manager, located at executive headquarters, where he is at all times easily accessible, and where he can, by means of telegraph, telephone, mail, and personal contact, direct the numerous and intricate details of the administration of the express operations over 22,000 miles of railway.

European Organization.—At the time of writing no official information is available as to the Canadian National Ex. Co.'s organization in Great Britain. The

W. C. Muir,
Vice President and General Manager, Canadian
National Express Company.

Canadian Ex. Co. has heretofore been represented by F. C. Salter, European Traffic Manager, London, who was also European Traffic Manager, G.T.R.; E. J. Wearing, General Agent, Liverpool, also General Agent, G.T.R.; and J. M. Walker, General Agent, Glasgow, also General Agent, G.T.R. Canadian Railway and Marine World has reason to believe that it is probable that the work in Great Britain will be carried on under the direction of Wm. Phillips, European Manager, Canadian National-Grand Trunk Rys., London. F. C. Salter is said to be being transferred to Canada, but his position has not been announced. E. J. Wearing will probably, it is said, be appointed European Agent, Canadian National Ex. Co., and it is said that a clerk will be attached to Mr. Phillips' London staff, to give his whole time to express matters. It is also said that the Express Accounting Department will be in Liverpool, and that it will be kept entirely separate from the Canadian National-Grand Trunk Rys. Freight and Passenger Departments.

Standard Colors.—The Canadian National Ex. Co. has adopted royal blue as its standard color for wagon, motor and station truck equipment, in place of the Canadian National Ex. Co.'s present orange, and the Canadian Ex. Co.'s green and red. Specifications have been distributed to the company's officials, with instructions to have the new color adopted as standard, as rapidly as the equipment is put through the shops for repairs. It will take a few months before this work can be completed.

Biographical information respecting Messrs. Pullen and Muir is given on page 497 of this issue.

Co-ordination of C.N.R. and G.T.R. Offices and Staffs in England.

The co-ordination of the Grand Trunk Ry. with the Canadian National Rys. is in the hands of a committee of two directors from each board. D. B. Hanna, President, C.N.R., and A. J. Mitchell, Vice President, C.N.R., who is also a G.T.R. director, represent the C.N.R.; and Sir Joseph Flavell, Chairman of the Board, G.T.R., and H. G. Kelley, President, G.T.R., represent that company, Sir Joseph Flavell being Chairman of the Committee.

A. J. Mitchell visited England recently in connection with the co-ordination of the C.N.R. and G.T.R. European offices and staffs, and on financial business, and a number of changes in the staffs which resulted are given under "Transportation Appointments," on another page of this issue. Wm. Phillips, heretofore European Manager, C.N.R., who has been appointed European Manager, Canadian National-Grand Trunk Rys., is moving from Orient House, 42-45 New Broad St., London, to the former G.T.R. offices, 17-19 Cockspur St., London, S.W.

The G.T.R. has a lease of Dashwood House, 9 New Broad St., London, where its former Chairman, Sir Alfred Smithers, and the Secretary and other officials are located. It is expected that after the G.T.R. arbitration is concluded these premises will be sublet, and both the C. N.R. and G.T.R.'s financial business will be concentrated at Orient House, 42 New Broad St., London. The G.T.R. Co.'s head office has already been removed from London to Montreal. The present G.T.R. Secretary, Deer, who probably retire; W. Harding, now Local Secretary, Canadian National Rys., will probably be Local Secretary, Canadian National-Grand Trunk Rys., and there are likely to be two assistant secretaries in London, viz., A. H. Coneybeare, now Assistant Secretary, Canadian National Rys., to deal particularly with C.N.R. matters, and W. H. Hamerton, now Assistant Secretary, G.T.R., to deal particularly with G.T.R. matters.

The Minneapolis, St. Paul & Sault Ste. Marie Ry., which is a C.P.R. subsidiary, has been authorized by the Interstate Commerce Commission to acquire the Wisconsin & Northern Rd. and to issue \$2,671,000 of its first consolidated 5% mortgage bonds, to be used in part payment therefor. The W. & N. Rd. extends from a junction with the M. St. & S.S.M. Ry. 6.3 miles from Grandon, Wis., to Appleton, Wis., 114.3, miles, with a branch of 10.7 miles.

The Canadian Ticket Agents' Association will hold its 35th annual meeting at Ottawa, on Oct. 11, instead of Sept. 20, as fixed originally.

Mainly About Railway People Throughout Canada.

W. A. Allan, of Allan & Fleming, died at Ottawa, Aug. 16, aged 73. His firm carried out several large construction works, notably those of the locks at the entrance to the Sault Ste. Marie Canal, and other marine public works, on the St. Lawrence River.

W. R. Baker, C.V.O., formerly Assistant to the President, and Secretary, C.P.R. Co., has resigned the presidency of the Royal Montreal Golf Club on account of ill health, after occupying the position for six years, and has been asked to become Honorary President. He is also President of the Canadian Seniors Golf Association.

Urie Barthe, who died at Quebec, Que., Aug. 3, following an operation, was secretary of the Quebec Bridge Co., which started to build the first Quebec bridge across the St. Lawrence, a portion of which collapsed.

E. W. Beatty, K.C., President, C.P.R., has given \$5,000 towards the construction of a rink at Kingston, Ont., as a memorial to the late J. J. Hart, formerly Vice President and General Manager, Canadian Locomotive Co.

Hon. M. E. Bernier, who died at St. Hyacinthe, Que., July 29, was born there, Sept. 28, 1841, and became a notary in 1867, and a member of the Quebec Notarial Board. He took an interest in farming, owned a farm near his birthplace, and was, for several years, president of the local agricultural society, and also connected with local industrial and banking concerns. He was a member of the House of Commons from 1882 to Jan. 1904, and Minister of Inland Revenue from 1900. In Jan. 1904 he was appointed Deputy Chairman of the Board of Railway Commissioners, for 10 years, and retired at the end of 1913.

C. B. Brown, Engineering Assistant, Canadian National Ry., Toronto, returned Aug. 20, from Youghall, N.B., where he and his family spent a few weeks, while he recuperated from his recent illness.

Lt. Col. George Cantlie, D.S.O., formerly General Superintendent, Car Service, C.P.R., has returned to Montreal, from England.

Senator James Donville, who died at Rousesay, N.B., July 30, was associated with the Central Ry. Co. of Canada, a project which did not materialize, and was also responsible for the building in 1898 of the s.s. James Donville, which is claimed to have been the first steamship flying the British flag, to navigate the Behring Sea to the Yukon.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal; G. H. Duggan, L.L.D., President, Dominion Bridge Co., Montreal; A. R. Ross, E.E., consulting engineer, Montreal; and T. Kennard Thompson, consulting engineer, New York, all of whom are doctors of science of Toronto University, were entertained at dinner recently in Montreal, by the Montreal Branch, Engineering Alumni of Toronto University.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal, and President, Engineering Institute of Canada, was the chief guest at the Institute's Sault Ste. Marie Branch annual meeting recently.

Brower G. Gesner, who died at Moncton, N.B., July 20, aged 62 after having been in poor health for some two years,

was born at Halls Harbour, N.S., and had lived in Moncton for about 45 years. He was in the Intercolonial Ry. service for some 25 years, as locomotive man and afterwards as Air Brake Inspector, and subsequently was the Galena Signal Oil Co.'s Mechanical Expert and Eastern Sales Representative, for some 17 years, retiring on pension May 1, 1920. He had pronounced literary tastes and was especially interested in astronomy, and had probably the largest telescope in eastern Canada.

Grant Hall, Vice President, C.P.R., returned to Montreal, towards the end of August, from a western trip.

D. B. Hanna, President, Canadian National Ry., accompanied by Mrs. Hanna, returned to Toronto, Aug. 18, from a western trip.

Sir Herbert Holt, one of the C.P.R. directors, returned to Montreal, from England, Aug. 18.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, is the father of

William Phillips,
European Manager, Canadian National-Grand
Trunk Railways.

two twin boys, born Aug. 23.

C. T. Knowlton, Superintendent of Car Ferries, Canadian Government Ry., Moncton, N.B., is on indefinite leave of absence.

Sapper Douglas Gordon McCowan, aged 22, who was drowned at Laurentia Beach, Lake Manitoba, July 17, was a son of Andrew McCowan, Master Car Builder, Canadian National Ry., Winnipeg, and had just completed his apprenticeship in the railway shops. He was boating, with his brother Charles, and T. Clegg, Air Brake Supervisor, Western Lines, C.N.R., when the boat was capsized by a sudden gust of wind. It was nearly two hours before the accident became known, and when a rescue party arrived C. McCowan and T. Clegg were found clinging to the boat, in a very exhausted condition, but no trace could be found of Douglas McCowan,

who had started to swim, resting on an oar. His body was found July 20, by a search party from the C.N.R. Fort Rouge shops in Winnipeg, who were assisted by the Provincial Police. He was buried in Winnipeg July 22.

Major Jas. McGregor, formerly Superintendent Engineer, Halifax Ocean Terminals, Canadian National Ry., who was Major of the 3rd Battalion 1916-1919, has, since leaving Canada in 1920, been Chief Engineer for Stewart & McDonnell, which firm is composed of Major General J. W. Stewart, C.B., C.M.G., and Col. the Hon. Angus McDonnell, both of Vancouver, B.C., their London office being in Westminster. He has had charge for them of the harbor surveys in the Gold Coast Colony, Africa, in collaboration with Vice Admiral Sir John F. Parry, K.C.B., late Chief Hydrographer of the British Navy, both in the colony, and afterwards in London, where the plans were prepared and approved for the Takoradi deep sea harbor, railway connecting line and terminals, and new townships, etc., for which Stewart & McDonnell have been appointed consulting and constructional engineers to the Colonial Government, and on which it is probable that construction will be begun this autumn. Considerable information about this contract was given in Canadian Railway and Marine World for April, 1921, pg. 196. In writing Canadian Railway and Marine World, while at sea on the R.M.S. Akabo, near Sierra Leone, a short time ago, Major McGregor said: "I was careful to arrange for copies of your valuable paper to be forwarded to me regularly, both to London and the Gold Coast, and month by month have greatly enjoyed your most interesting and instructive reports and articles on the Canadian transportation systems. Please continue to send me copies of your paper."

A. J. Mitchell, Vice President, Canadian National Ry., and one of the G.T.R. directors, returned to Toronto, Aug. 21, after a business trip to England.

Hon. W. B. Nantel, Deputy Chief Commissioner, Board of Railway Commissioners, has been ordered, by the county judge at Ottawa, to pay that city \$214 income tax for 1920, the judge holding that the salary is not exempt from municipal taxation.

G. O'Flaherty, chief clerk to Superintendent of Transportation, G.T.R., Toronto, was killed near Aldershot, between Toronto and Hamilton, Aug. 6, when the automobile in which he was riding turned over.

William Phillips, who has been appointed European Manager, Canadian National-Grand Trunk Ry., and Canadian Government Merchant Marine, London, Eng., was born at Toronto, Jan. 31, 1870, and entered transportation service Apr. 1886, since when he has been to, Mar. 31, 1896, in G.T.R. offices, Toronto; Apr. 1, 1896, to Feb. 28, 1902, Northwest Agent, Northwest Transportation Co., Winnipeg; for a portion of this time he was also General Agent, Chicago Great Western Ry., and from Apr. 1, 1900, also Northwest Agent, Northern Navigation Co.; Mar. 1, 1902 to May 1911, General Eastern Agent, C.N.R., Toronto; in Nov. 1906, he was also appointed General Freight and Passenger Agent, Canadian Northern Ontario Ry., and in Apr. 1910,

also acting Traffic Manager, Canadian Northern Steamships, Ltd., and in April 1911, his last position was changed to General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May 1911 to May 1912, he was General Freight Agent, Canadian Northern Ontario Ry., Central Ontario Ry., Bay of Quinte Ry., Ironclad, Bancroft & Ottawa Ry., and Niagara, St. Catharines & Toronto Ry., and Navigation Cos., and also General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May 1912 to Nov. 1914, European Traffic Manager, C.N.R., London, Eng., and from Nov. 1914 until the absorption of Canadian Northern Steamships, Ltd., by the Cunard Steamship Co., European Railway and Steamship Manager, C.N.R., and Canadian Northern Steamships, Ltd.; Nov. to Dec. 1916, Freight Traffic Manager, Eastern Lines, Canadian Northern Ry., Toronto; Jan. 1, 1917 to March 1, 1920, Canadian Representative, Cunard Steamship Co., and director, Robert Bedford Co., Montreal; March 1, 1920 to Aug. 1921, European Manager, Canadian National Ry., and Canadian Government Merchant Marine, London, Eng.

Samuel Rea, President, Pennsylvania Rd., celebrated recently the fiftieth anniversary of his association with the company. He entered the Pennsylvania service as a rodmán in 1871 and was promoted through the various grades of the engineering department until in 1899 he was appointed Fourth Vice President. He became President in 1912, succeeding James McCrea.

Alex. C. Ress, who died at Montreal, July 30, was at various times associated with transportation interests in the Maritime Provinces. He was born at Margaree, N.S., May 29, 1857, and in his earlier years, was engaged, with his father, in opening up the first submarine coal area in Cape Breton, now controlled by the British Empire Steel Corporation. For some time after, he was a ship broker, and acted as Lloyd's agent in connection with the salvaging of wrecked ships, and at one time he owned a passenger steamboat which plied between Sydney and North Sydney. He promoted the Dartmouth Ferry Co., the Plant Line between Halifax and Boston, the Cape Breton Electric Tramways & Ferry Co., now Cape Breton Electric Co. and owned coal properties, acquired later by the Inverness Ry. & Coal Co.

Angus Sinclair, railway contractor, Toronto, died there, Aug. 24 after a long illness. He was born at Chatham, N.B., in 1849, and was educated at Campbellton and Dalhousie, N.B. After studying practical engineering, he was engaged on the Western Extension Ry., between St. John, N.B. and Bangor, Me., and in 1869 entered Intercolonial Ry. service, and supervised the completion of a portion of the line between Bathurst, N.B., and Matapedia, Que. He entered C.P.R. service in 1875, and served for three years in the neighborhood of Port Arthur, Ont. In 1878 he commenced business as a contractor, he built sections of the C.P.R. between Thamesville and Windsor, Ont., and another section east of Toronto, in partnership with W. Doehny, and in partnership was A. R. McDonnell, built sections of the C.P.R. through Maine, a section of railway at Walkerville, Ont., and a section of the Maine Central Ry., between Portland and Hazen Jet., N.H. From 1898 he was continuously engaged on Canadian Northern Ry. contracts, until 1903 in Nova

Scotia, and from 1903, in Ontario. He also had an excavation contract in connection with the C.N.R. Mount Royal tunnel. He was buried at Toronto, among the pall bearers being D. B. Hanna, President, Canadian National Ry.; Sir William Mackenzie, formerly President, Canadian Northern Ry.; A. J. Mitchell, Vice President, Canadian National Ry.

Josiah Gershon Sing, C.E., District Engineer, Dominion Public Works Department, Toronto, died suddenly of heart failure while walking in Meaford, Ont., on July 29. He was born there, Sept. 3, 1857, and was an Ontario and Dominion Land Surveyor. In 1881 he was appointed to survey the Dominion Government lands in the Northwest Territories, along the projected C.P.R., and later did considerable land survey work for the Government along Georgian Bay. Among other works, he supervised the construction at the western channel, Toronto; harbor improvements and C.P.R. lake terminals at Port McNicoll, Ont., and harbor improvements at Tiffin, Midland, Hamilton, Cobourg, Owen Sound and Sault Ste. Marie, Ont. He was also supervising harbor work at Toronto, and with the consent of the Public Works Department, acted as Consulting Engineer for the Toronto Harbor Commissioners. He was a past President of the Engineers' Club, Toronto.

V. M. Smith, M.L.A., Camrose, has been appointed Minister of Railways and Telephones, in the new Alberta Government. He is a native of Prince Edward Island.

E. Spens, Vice President, Traffic, Chicago, Burlington & Quincy Rd., Chicago, Ill., visited Vancouver, B.C., in August.

A. F. Stewart, Chief Engineer, Canadian Government Ry., Moncton, N.B., who was operated on for appendicitis early in June, and who left the Royal Victoria Hospital, Montreal, on July 22, for the Laurentian Mountains, is now further recuperating at Halifax, N.S.

Hugh Sutherland, formerly Executive Agent, Canadian Northern Ry., Winnipeg, is to be married there on Sept. 3, to Miss Constance Denholm, a newspaper society editor. They will spend a year travelling abroad. Mr. Sutherland was born at New London, P.E.I., Feb. 22, 1845.

J. L. Thomson, station ticket agent, Canadian National Ry., Charlottetown, P.E.I., has retired on the Provintial Fund, and has been succeeded by W. M. Flynn, heretofore Station Agent at Souris, P.E.I.

William Stewart Tilston, who died at Montreal Aug. 2, following two operations for strangulated hernia, was born at Manchester, Eng., Apr. 14, 1877, and entered railway service in 1889, in the Division Freight Agent's office, G.T.R., Toronto, and served there as secretary, rate clerk and chief clerk to Oct. 1, 1906, when he was appointed chief clerk, Import Freight Agent's office, C.P.R., Montreal, resigning in Aug. 1909 on appointment as Manager of the Montreal Board of Trade Transportation Bureau. The funeral took place at Toronto, Aug. 4.

Herbert Vanderhoff, President, Vanderhoff Advertising Agency, Chicago, who died Aug. 7, aged 46, after a year's illness, did considerable business for Canadian railways, handling U.S. advertising for the Colonization and Development Department, C.P.R., also copy for U.S. magazines for the G.T.R. He founded the Canadian Monthly Magazine, Vanderhoff, B.C., on the Grand Trunk Pacific Ry., was named after him.

Fred. H. Williams, Mechanical Designer, Mechanical Department, Canadian National Ry., Moncton, N.B., has been given the degree of master of science, by McGill University, Montreal.

Electric Storage Battery Car on Canadian National Ry.

The electric storage battery car which is being tried by the Canadian National Ry., was fully described and illustrated in Canadian Railway and Marine World for June, together with its initial trip from Toronto to Trenton, Ont., and its work between Trenton and Belleville was dealt with in our August issue, with some preliminary information as to its transfer to the Bathurst Subdivision, Campbellton Division, Maritime District, and its operation between Bathurst and Campbellton, N.B., 62.96 miles. We are advised that its operation between these points is proving profitable and showing most favorable results. Car mile costs are somewhat higher than they were when it was operating between Trenton and Belleville, Ont., because the power cost, 3.5c per k.w.h. on the Bathurst Subdivision, is higher than at Trenton, and also because it has been found necessary to supply a brakeman for the car in addition to the conductor and motorman. It was considered advisable to do this on this run for the sake of safety, the line being one of heavy traffic, consisting of three regular passenger trains and four freight trains daily in each direction. The cost per car mile is now running at between 35 and 40c., this figure including an adequate allowance for interest and depreciation.
